LIMITS:

FOR TICKETS SOLD	GOING TRANSIT LIMIT IS	AND FINAL RETURN LIMIT
April 25th to May 18th, inclusive.	July 26th.	July 31, 1907.
June 8th to 15th, inclusive.	August 26th.	August 31, 1907.
June 20th to July 12th, inclusive.	September 10th.	September 15, 1907.
June 22nd to July 5th, inclusive.	September 10th.	September 15, 1907.

STOPOVER PRIVILEGES

GOING TRIP—Going trip must begin on date of purchase of ticket and stopovers may be had at any point enroute prior to midnight of "Going Transit Limit" as shown above.

RETURN LIMIT—The Joint Agent at destination of ticket (or at any intermediate Pacific Coast point where joint agency may be maintained) will make good ticket for return passage by attaching validation certificate, for which service a fee of 50 cents will be collected. After ticket is validated, stopover may be had at any point enroute within the "Final Return Limit," as shown above. Passengers desiring to stop off, should notify conductors when presenting ticket.

BAGGAGE—The usual free allowance of baggage (150 pounds on full tickets and 75 pounds on half tickets) may be checked going or returning to any point at which stopover is permitted.

FREE SIDE TRIPS

To holders of tickets via Union Pacific R. R. to Ogden or Granger, sold at rates named herein, following free side trips will be given:

From Denver to Colorado Springs or Pueblo and return. (Apply to Union Depot Ticket Agent or to General Agent, 941 17th St., Denver, Col.)

Ogden to Salt Lake City and return. (Apply to conductor into Ogden or to Union Depot Ticket Agent, Ogden.) In connection with this side trip, free Pullman seat checks will be furnished passengers holding Standard Pullman car tickets.

YELLOWSTONE PARK SIDE TRIP

Side trip tickets from Ogden or Pocatello to and through Yellowstone Park, including five and one-half days' hotel accomodations as well as railroad and stage transportation, will be sold for $55.00. Side trip tickets covering rail and stage transportation only will be sold for $28.00. Park season will be from June 10 to September 19. Apply to Ticket Agent either at Ogden or Pocatello. Passengers holding through sleeping car tickets will be furnished sleeping car stopover checks on application to the Pullman conductor.

OPTIONAL ROUTES

All tickets reading via the Union Pacific Railroad to Ogden or Granger will be honored via Julesburg Line and Denver or via the direct line through Cheyenne, at option of holders.

Proportionate rates from all points East. Be sure to buy your ticket over **THE UNION PACIFIC RAILROAD** known as the **Overland Route**, and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

Farming Lands in California can be bought from $25 to $40 per acre. Printed matter free. Write to

GEORGE L. McDONAUGH,
Colonization Agent
UNION PACIFIC RAILROAD
Omaha, Neb.

JUST LATELY

Clipping from the San Francisco Call.

The California Northeastern, a branch of the Southern Pacific from Weed, will be opened for another 20 miles from Grass Lake to Orrs Lake about July 15. This will complete the road across the mountains and the line from there on to Klamath Falls will be over a comparatively level country. A few miles beyond Orrs Lake is Butte Valley, where a new settlement is being laid out there and colonized by Dunkards, who will name their town Macdoel. About 100 have already settled there. They expect to raise cattle, vegetables and grain, establish sawmills and develop the resources generally of that rich valley. Ultimately this will be a part of a through line to Portland, extending along the eastern slope of the Cascade Mountains, either near Eugene or farther north in connection with the Corvallis and Eastern, which has been purchased by the Harriman lines. This runs from Yaquina Bay through Albany to the summit of the pass in the Cascades. The acquisition of this line and the construction of the line from Drain to Marshfield on Coos Bay; the ownership of terminals in Portland, and the construction of a line into Seattle and Tacoma give the Harriman interests complete control over or access to every harbor of importance in the northwest. It is reported that the line to Klamath Falls will be extended to a connection with the Oregon Short Line near Ontario.

OTHER THINGS

A telephone company has been organized in Butte Valley with sixteen phones to be installed at once and several others to follow soon; the electrician at the Prather Ranch will see that the instruments are properly installed. The active, wide-awake people of Butte Valley propose to be in touch with the world and this will certainly make the connection. The organization is H. F. Maust, president; Mr. Burger, vice-president; Mr. Allen, secretary; Mr. Haines, treasurer.

Eld. D. C. Campbell has set out five hundred apple trees on his farm according to the suggestion made in the last few copies of the INGLENOOK. If you haven't read those few articles on our advertising pages do so at once. Others are arranging to set out apple trees at the first opportunity. This country is in the very best apple belt in the world, and he who gets an orchard started early will be the first to enjoy the products of the orchard which will bring him the highest prices.

Mr. Burger's portable saw-mill is doing work rapidly and is very much appreciated by all. On Tuesday, June 11, Messrs. Hufford and Wagoner received the first load of lumber from this saw-mill, with which to construct a temporary home until they can have time to build a better one. They are very busy with other work. A church is to be built, a railway depot, and many residences. Mr. Snyder has a large stationary saw-mill on the road here and will soon be here and then timber will be converted into lumber at a very rapid rate. It is fortunate that there is an inexhaustible supply of timber which makes the finest kind of building material in and around the Valley, for there will be hundreds of homes to build here.

John Campbell has 40 acres of very fine spring grain. Everybody thought back East that John went too late to get out spring crops, but it doesn't take long to clear the ground of sage brush and then the land is in very fine condition to sow. We told you last week that Mr. Maust had 80 acres of very fine wheat. Others are putting out spring crops, but of course spring is late everywhere this year, and with building houses, entertaining visitors, building a church and putting out spring crops, they have been wonderfully busy. Keep your eye on this Valley and mark the rapid progress the people are making. Watch our page every week, and read the news from there. All questions cheerfully answered.

MT. HEBRON, CALIFORNIA

Beyond Human Help

was the conclusion they arrived at. The doctors had done their best and failed. It was not a verdict, however, that was calculated to inspire a feeling of good cheer in the hearts of those around her. Mr. Frank Loskot, 943 Fairfield Ave., Chicago, Ill., tells a vivid story of his mother's sufferings and her ultimate recovery through the medium of a plain household remedy. He says: "My mother was in a terrible condition. Her ailment seemed to be a peculiar one. The doctors gave it various names, but she suffered greatly with pains in her stomach. We had three doctors attending her, without benefit. At times the pains would seize her so that we thought surely her end was at hand. Finally the doctors declared that she was beyond human help, and that there was not a spark of hope for her. Everything else having failed, we decided to try the BLOOD VITALIZER, of which we had heard so much. I obtained some of this remedy and commenced giving it regularly, according to directions. It was not long before we noticed its good effect. She continued to use it, and inside of a month our dear mother was so much better that she was able to be up a little. After a while, she was entirely well and has remained so ever since. Her ailment has never returned. We are very grateful for what the BLOOD VITALIZER accomplished."

NEARING THE EIGHTY MARK.

San Antonio, Tex., May 17, 1906.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—I never like to be without the **Blood Vitalizer** as it has done me so much good. I suffered greatly with my stomach and kidneys but I am cured through the use of your remedy the **Blood Vitalizer.** If I had had your medicine about 30 years ago I would not have been doubled up as I am through gout and rheumatism. I am like an old crippled tree that cannot be straightened any more. I am 77 years old. With kindest regards, I remain

Yours very truly,

305 Division St. Anna Zuercher.

THE DOCTORS GAVE UP.

Garrison, N. D., Jan. 29, 1906.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—I have a son, 12 years old who has been sick for three years. Two years ago, when we lived in Russia the doctors there gave him up as incurable. They said there was no hope for him at all. When I came to this country a Mr. Barth told me to get your **Blood Vitalizer,** which I did. My boy is now well although nobody ever believed that he could regain his health. We are very thankful to you. Yours sincerely,

G. Steinwand.

Dr. Peter's Blood Vitalizer

is known as a plain household remedy. It comes in a plain bottle encased in a plain carton, but there is the element of cure in every bottle. No one is so low with disease but what this remedy gives hope, and no one so well but what it will still do good.

Do not ask for the BLOOD VITALIZER in drugstores. It is not a drugstore medicine, but is supplied direct to the people through local agents appointed in every community. Should you know of no agent in your neighborhood, write at once to the sole proprietors,

HAND-MADE HOODS

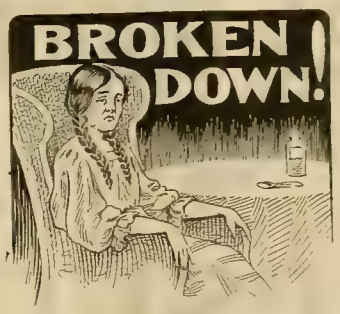
WARM AND ALL WOOL.

These Hoods are hand-made by an experienced woman, who knows exactly what is wanted by our Sisters when it is too cold for the bonnet to be worn. We assure you that they are perfect in every particular. There are no seams and every stitch is made by hand. They fit the head. For neatness, warmth and durability they cannot be equaled anywhere. You will find them exactly as shown in cuts. Read description carefully.

OUR UNLINED HOOD

No. 21C3000.— We show here in this cut a very neat hood made of all wool zephyr. It is crocheted in a close stitch making a lining unnecessary and the edge is finished with a shell scallop giving a very pretty effect to the hood. This is a hand-made hood, made of the best quality wool yarn and comes in three colors: black cardinal and navy. Sizes No. 15 to 18. Without ribbon the price of this hood is 48 cents. Postage 4 cents.

THE LINED HOOD.



No. 21C3003.— For a warm and at the same time a pretty hood this number answers splendidly. It is made of a fine Saxony yarn in a fancy stitch finished around the edge with a narrow ruffle of yarn. The lining is of good wool yarn, making the hood as warm as is desired for winter. The cut shows this hood very nicely, and will give you a correct idea as to the style. In black only. Sizes No. 19 to 20. Without ribbon the price for this hood is 98 cents. Postage 6 cents.

AN ICE WOOL HOOD.

No. 21C3005.—We also have the same style of hood as the one described above, the top being made of Ice Wool instead of Saxony. A very fancy stitch is used and you will find that this hood will give splendid satisfaction. In black only. Sizes No. 16 to 20. Without ribbon this hood will cost you $1.10. Postage 6 cents.

Note Carefully.—We will put two yards of No. 22 taffeta ribbon for bow and ties on each hood for 20 cents extra. The Best quality of ribbon.

ALBAUGH BROS., DOVER & CO.,
Dept 21. Chicago, Ill.

Is this your picture Mother, Sister? Is your Nervous System broken down and you can hardly drag along? Brawntawns, The Victor Tonic, was made for you as it builds broken down systems, restores appetites, strengthens the digestive organs. If you have tried other tonics don't despair until you try Brawntawns, The Victor Tonic, for it will build you. Thirty days' treatment delivered to your home for 50c.

The Lord Our Righteousness

By Elder S. N. McCann,
Missionary in Indja.

This little volume contains eighteen chapters filled with food for thought. It all points to the end sought—"The Lord is Our Righteousness." It is a most excellent work and everyone ought to have a copy and give it a careful and prayerful reading. Enough is said to lead any Christian to a higher and nobler life and to turn sinners to repentance.

The book contains 128 pages and is bound in cloth.

Price Reduced.

We have only a limited number of the second edition of this book which we will furnish as long as they last for ouly 35 cents per copy.

Address,

BRETHREN PUB. HOUSE,
Elgin, Ill.

Lomita California

It requires considerable courage to pioneer anywhere, but the beginnings at Lomita are very easy as compared with those encountered by our forefathers. Right near Lomita are building materials now at reasonable prices. At this writing dimension lumber is $24 to $26 per M. There is work, will be work. Cement curbs, and sidewalks, oiled roads, reservoirs, pipe lines, houses, barns, fences, must be built; trees, shrubbery, and seeds planted. Men, money and muscle will be needed. Idleness and homesickness never yet made a home. These are not in our catalog. A grocery, and lumber yard and all kinds of building materials are now in demand. Openings for business are here. But you should come now.

Farmers, fruit raisers and laborers, who have more regard for honest toil than for "get-rich-quick" methods, are cordially invited to become members of this settlement. English walnuts and deciduous tree-fruits, berries and vegetables will grow and reward the patient and honest laborer. Do not ask us what **you** can do or make. No one here can tell. **You** must demonstrate your own ability. The good soil, the needful moisture and the free sunshine are here. It is up to you to show what you can do with these great elements. The mind, muscle and money applied belongs to you.

From the very first, the church or religious interests were carefully considered. Our Mr. M. M. Eshelman was recommended by his experience in helping to colonize Lordsburg, Inglewood, Laton and other places, now all prosperous communities. Of course no colony can be built by any one man, but by the combined efforts of persevering men and women; but the "first ones" are very necessary to clear away the brush of wildness and show what may be done.

John the Baptist came and made straight paths for the Christ; so the pioneers try to make straight paths for those who come later.

It is our purpose to build up a model community, hence each deed will contain a clause prohbiting the ground to be used to deal in intoxicating beverages and to play pool. We want those 1600 acres to contain a clean people, an industrious and frugal people. We believe the Brethren are such, hence offer them these opportunities.

It is to be hoped that enough members will become identified with Lomita to organize a church in the near future. M. M. Eshelman informs us that so soon as two or three families are on the tract, there will be Sunday school and preaching. This does not sound like sloth hung up to Christianity.

Watch this column. Reasonable questions will be answered here. It is not our purpose to make you restless or to dislike your present home, but if you are thinking of a change to Southern California, you are cordially invited to Come and Investigate Lomita Intensive farming, or a high state of cultivation on a few acres, has proven profitable and enjoyable. The 200 acres of corn now growing on this land without rain or irrigation speaks more than our words. It has been successfully raised and no doubt will be again

A Great Opportunity

FOR THE

HOMESEEKER

180,000 ACRES UNDER THE CAREY ACT

Now Ready to File On

This tract is on the North Side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho

These lands are sold at 50 cents per acre and the water right $30.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms, crops of all kinds are grown to perfection. Fruit growing is a success ,as well as the growing of sugar beets. To see these lands take the Oregon Short Line R. R., to Minnedoka; there change cars for Milner.

Homeseekers' Round Trip Tickets

will be sold to points in Idaho on 1st and 3rd Tuesdays in May and June 1907.

BRETHREN and others returning from the annual conference at Los Angeles, via Portland through Idaho over the Oregon Short Line R. R. should stop and see these lands.

EXCURSION TICKETS will be sold from points east over the O. S. L. R. R. to Seattle and Spokane, Wash., June 20th to July 12th inclusive. Final return limit Sept. 15th, 1907. Stopovers allowed on going and return trip.

Independence Bell

John H. Nowlan

THE deed was done. The die was cast.
The Rubicon was reached and passed.
While traced the quill each deathless name
Upon our country's roll of fame,
Which to their royal master gave
The challenge of a defiant slave,
Above their heads the swinging bell
Was sounding tyranny's death knell.
'Twas long ago; and though it broke
Beneath that sturdy hammer's stroke,
That joyful peal of liberty,
Proclaiming all the land is free,
Is ringing yet and ne'er shall cease
Till dawns the universal peace.
And as I viewed that silent bell,
This is the tale it seemed to tell:
"Ye are the country, ye the state,
The good alone are truly great,
Thou art thy brother's keeper now;
The curse of Cain is on thy brow
If thou thy brother's life betray,
Or lead him into paths astray,
The curse is thine if thou oppress
Thy weaker brother in distress.
Lay bare thine arm for truth and right,
Oppose the power of greed and might.
As thou wouldst men should do to you
Unto thy brother thou shouldst do.
Strike for the slave of greed or rum,
Or cease to pray, 'Thy kingdom come,'"
When lowly reeds and grasses wave
Above my long-forgotten grave,
I pray each rising sun may see
A people soul and body free.

Mulberry Grove, Ill.

A Musical In Jerusalem

Marguerite Bixler

DURING my sojourn in Jerusalem, Palestine, I was very fortunate in receiving an invitation to what is considered the city's best annual musical. A musician from France and I were the guests of Mr. and Mrs. Huges from whose large hotel floats the Union Jack. To be sure, I was delighted with my good fortune, and it was a little trying not to say anything about it, to our party, and especially to "the boys," until after my return; for they would have insisted on going along, and I really could not take them! It was raining, but the closed carriage was comfortable, and as we were all lovers of music we were soon enjoying a lively discussion of the world's musical affairs; but just as I was saying, "Yes, that is true, but do you not know that America has made European schools famous, because of the musical material she has given them?" our carriage door was opened and we were quickly and quietly ushered into the St. George's Collegiate Church where we listened to the following programme under the directorship of Mr. Haydn Righton.

Grand Festival Overture, ... Richmond
Nocturne, ... Chopin
Organ Sonata, ... Mendelssohn
Cornet Solo—"Nachtgruss," ..... Anton
Mons. Laurent.
Anthem—"Thine, O, Lord, is the Greatness,"..... Kent
The Boys' Choir.
Larghetto Sostennto Assai, ... Cramer
Tenor Solo—"But Thou Didst Not Leave,"..... Handel
Mr. R. Hughes.
Minuet, ... Felix Borowski
La Meditation, ... Haydn Righton
Fantasia, ... Guilmant

This programme was given by the performers with an easy, graceful dignity, and received by the audience with a refined, quiet and reverential appreciation. To me the most beautiful number was that given by the Boys' choir. While their sweet treble voices and innocent faces told the wondrous story—"Thine O Lord, is the greatness," I was wondering about an-

other choir—a children's choir of voices innumerable—in another city, another Jerusalem, where they too sing, "Thine O Lord is the greatness, Hosanna, to Thee, our King." How exquisitely sweet must be the music that plays around the throne of God! If there is one place more than another in Heaven's domain of song, where I sometime want to be, and see, and hear, it is in the children's choir—the place where sin ne'er entered in. If the Christian people of every clime would *awake* and *train the children to sing*, I believe the time would soon come when reform schools and state prisons would need no remodeling, no enlargement. God, humanity, music, possibility! Thus did I muse and worship.

Physically rested, spiritually uplifted, musically enlightened, once more we stepped into the waiting carriage. The storm had passed. Through a rift of dark clouds gleamed the soft moonlight. The boundless dome of blue bent o'er us, as methinks it must have done when the Psalmist sweetly sang: "The heavens declare the glory of God; and the firmament sheweth his handiwork. Day unto day utterth speech, and night unto night sheweth knowledge."

And so from the City of David, I looked up through the cloud-rift, beyond the dome of blue, up to the throne of power, of peace, of love—and my soul was filled with song.

CLASS SONG.

[This song was a part of the commencement exercises of the "School of Travel and Research." According to promise the writer of the article now gives it to our readers.—The Editor.]

Hurrah! Hurrah! for the Murray Company,
Hurrah! Hurrah for the things that you will see;
When you join the School of Research and a student be—
Touring ocean, land and sea.
Hurrah! Hurrah! for the Murray Company,
Hurrah! Hurrah! for the sights that you must see,
When you join the School of Research, and too curious be,
Traveling, I, II, III!

NEVER did class song ring out with a heartier, jollier good vim, than did this one as sung by our party at the close of the graduating exercises described in a previous article, while our gallant ship was braving the storm-tossed waters of the Atlantic, each moment bringing us nearer the shores of the brightest and best land, this old world can claim—*our own America.*

The repetition of the chorus—tune, "Marching through Georgia," was written for the benefit of those whose "III classe" curiosity could be calmed only by practical experience! Later on the result of this experience prompted the following parody. However, we caution those who attempt to sing it to do so in *sotto voce!*

O where, and O where is my watch of silver gone?
O where, is my drinking cup and fountain-pen gone?
They have gone to join the jack-knife and with the
Bedouin roam;
And it's oh! in my heart how I wish I were at home!

East Akron, Ohio.

HOW WE HAVE SUCH A VARIETY.

MAGGIE M. WINESBURG.

VARIETY in reading matter is often due to the fact that each writer sees the place or scenes with different eyes, and also different feelings. Let half a dozen writers describe the same place, and you will have a half dozen different articles, each of them according to the writer's way of looking at things.

One writer will catch all the delicate shades and coloring, whose glimmer hides all of the rugged and unsightly spots, and makes you feel the mystic throbbing of nature, and the pulsing life in the air, while they thrill your very soul with musical sounds from the wind and waves, and enthrall your senses with the subtle witchery of mingled sun and shade.

Another writer will see all that is grand and inspiring in the scenes, and cause you to read with bated breath while he, or she, robes each hill and crag with a sublime power, and turns the ripple of the waves into a roll of thundering sounds—sweeping the chords of nature until they reverberate with inspiring music.

And still another writer will catch all the mirth provoking elements and surround the hills and crags with a humorous guise, and see a song and a laugh in the air and sunshine, and a merry jubilee in the wind and waves.

Then another will see all that's unsightly and gloomy, and chill your blood with a somber description. He will rob the sunshine, wind and waves of their beauty and music, and give us a dirge instead, while he hunts up the snakes and bugs in the meadows, and shows up all the deformities of nature in general.

Then again there are other writers, who catch a little of all the different phases of nature and blend the many colors and sounds into one pen picture. There is a rosy tint here, a grand anthem there, with a laugh and song bubbling up at odd places, and just a fleeting glimpse of the somber and ugly.

Then comes the cold, hard fact writer, who must regulate every bit of nature to its proper place and sitting, one who looks at everything with a practical eye, and science in his finger tips. Is it any wonder, therefore, that one often reads so many different descriptions of the same place?

CARNEGIE'S EARLY BUSINESS CAREER.

WHILE in a reminiscent mood, Andrew Carnegie recently told how he started in his business career and how he found that wealth really added but little to his happiness. His words are worth the thoughtful consideration of all young men who are now starting on their business careers. Said Mr. Carnegie:

"I never cared so much for salary as for position. I remember when I was a boy, one Saturday, when we went for our pay, all the other boys got theirs, and I was passed over. I was nearly heart-broken. I thought I was discharged. Then I was told: 'You're worth more than the other boys. You're to get $13.-50 instead of $11.25.' Talk of your millions!

"I ran all the way home. I told my brother, and no one else. I gave my mother the $11.25, and then on Sunday I said, 'Mother, I have got something more.'

"I am glad I was born to poverty. I would not exchange it to be the son of the richest millionaire on earth. What does he know of his father and mother? How is he off beside the boy who has in his mother his nurse, his teacher, his cook, his seamstress, his angel, his saint? There are no servants between them. His father is his guide, philosopher, and friend.

"I speak honestly. I have lived both lives. People say that the life of poverty is dreadful and the life of riches corrupting. What do they know about it? They only know one side of the shield. I have lived both lives. I know how little there is in riches to increase happiness. I think it decreases it. As I have said before, billionaires who laugh are rare."

'Twixt Leaf and Sheaf Time

Richard Braunstein

Stilled are the brook songs that were wont to stir
The rugged hill-hearts with their dulcitude,
When madcap May, with blossoms million-hued,
Set all things singing at the step of her.
O'er wood-haunt's dusk, where blithe chorister
Ravished the noons with rippling interlude,
A silence broods, as sacred and subdued
As that which wraps some moss-grown sepulcher.

This is the hush the toil-worn year deems best—
This soulless space between the green and gold
Of leaf and sheaf time when tired Nature seems
Outstretched and still, to seek repose and rest;
And soothed with thoughts of harvests manifold
To drowse, content, and yield herself to dreams!

Cairo, N. Y.

The Glensonsie Celebration

John H. Nowlan

THE little village of Meadville had been having a celebration each Fourth but as is often the case the day was marred by the boisterous and quarrelsome conduct of a few parties.

The town had no saloons but enough liquor was always brought from neighboring villages to spoil the day.

Two of the town's citizens were discussing this unpleasant state of affairs when one of them said, "I tell you what I think. I believe the church people are partly to blame for our trouble here each year. The boys think it is a day for noise and if the elder people encourage them they usually supply more than enough confusion."

"True," replied the other, "and that suggests something I have been thinking. Why not get all the churches and Sunday schools to unite, go out to the woods and have a celebration fitting the day?"

That was the beginning. The result was that the Glensonsie Grove was secured as the place for holding the meeting.

It is an ideal spot. Several acres are covered with forest trees, their branches interlacing, but not thickly enough to prevent the blue grass making a dense growth below. To the south the land slopes rapidly for a short distance then gives place to a level meadow which terminates at a small creek.

From the south bank the land rises in high wooded bluffs shading the waters flowing over the rocks.

In the shade of a dense clump of oaks a platform and seats had been erected, and here the people came to spend the day.

Prayer was offered, and was followed by reading the Declaration of Independence. This document is worthy of a careful study, as in it claims of humanity are set forth convincingly.

One of the ministers spoke from Lev. 25: 10. The year of jubilee came once in fifty years to the Jews, but with us it should be an annual event.

At the close of his talk the company adjourned for dinner. You know what a dinner in the woods means. Of course the ants get into the butter and grasshoppers bathe in the milk. Bugs and spiders frighten the nervous young ladies and sometimes an outraged colony of yellow jackets claim a priority right to some shady nook, but what a fine appetite you always bring to these woodland feasts.

After dinner the boys played ball in the meadow while their elders watched them from the shade of the trees, the smaller children searched for the few remaining flowers, and the professor took the high school class to the creek to search the rock quarry for fossils.

I wish the INGLENOOK readers could have been there to have seen the display of fossils and heard his explanation of their occurrence.

At the ringing of a bell (to imitate the Liberty Bell) the people reassembled and for an hour were entertained by recitations by the children, the recitations being interspersed with a few original songs sung to well-known tunes.

Not a case of drunken or disorderly conduct occurred to mar the day, and the people went home feeling that the day had been well spent.

If you think the plan a good one give it a trial next year.

Mulberry Grove, Ill.

BY THE SWEAT OF YOUR BROW.

W. C. FRICK.

"I WOULD have such and such an improvement made if the cost of labor were not so high," is an expression one often hears. Man loves beautiful things. He loves a beautiful home, he loves to see his wife and his children dressed beautifully and he usually gratifies these desires if he can afford to do so and sometimes does gratify them when he can't afford so to do.

There are perhaps few cities of as great importance where conditions along various lines are so bad as they are in Chicago. Much of her street-car-service is most wretched, many of her steam railroads are as yet not elevated, hundreds of her streets are poorly paved if paved at all and in numerous other ways, both municipal and private, conditions are far from what they should be.

And as I passed by a force of men the other day whose business it was to be laying sidewalks, and saw some of them lounging about, smoking and laughing, some ambling toward the saloon for their beer and some perhaps now and then turning a shovelful of mortar or stone, I was made to think how much less it would cost the contractor (and consequently the owner of the adjacent property) or how much more improvements he could make with the same outlay of money if every man did a day's work in a day's time. "Make the work last as long as you can," is too often the motto of the man who works by the day. Evidently some people think if they complete a certain piece of work in one day there will be nothing to do next day. Just give the man who desires to make the improvement a chance and see if the above is true. Man is willing to spend his money to help support the

honest laborer but he rebels at the idea of supporting idlers. God's plan was that man should earn his bread by the sweat of his brow. If some people were paid according to the amount of sweating they do, beggars would not be able to live, nor would some people who are not beggars.

At the worst, man's work is not very hard now-a-days, so why should he not give in return an equivalent for the compensation he receives. Maybe his failure to do this is one reason why wages are so low. Man should learn that he gains nothing by shirking the work alotted to him.

There are people who think that the introduction of labor-saving machinery is a detriment to the welfare of the laboring man. This is an erroneous idea. Possibly it was the means in a measure of reducing wages but it reduced the cost of living in more or less proportion at the same time.

Surely if everyone did his duty this earth would be a much more beautiful spot upon which to live, and God will never allow so many people to live in the world but that when all is carried on as he wills there will be work and plenty for each and all.

Chicago, Ill.

HIGH AND LOW IDEALS.

One of our readers inquires whether, in our judgment, a person who accumulates a great fortune and who though moral and law-abiding, is distinguished by nothing else than the possession of this wealth, can rightly be regarded as making a "success" of life.

Riches, if justly and honorably acquired, may become, in the hands of a man of true and upright heart, a blessing to many. If amassed by unrighteous means, however, they are a curse to their possessor. We have seen men in business who, by extraordinary diligence and enterprise, piled up huge fortunes, using methods which even the most critical would find it difficult to condemn. Such men, if destitute of high ideals of the spiritual quickening simply become mechanical accumulators—mere money-getting machines. Certainly, their lives cannot be regarded as successful from any reasonable view-point, if we are to accept the rule that wealth is a trust committed to us, to be applied to the noblest uses.

If we are to assume that money-making is not, after all, the main purpose of life, and that the happiness which wealth can buy is only a tawdry counterfeit of the genuine article, which has its foundation in the heart and not in the pocket-book, then the career of such a man as our correspondent describes, however faultless it may be in the estimation of the world, must still be classed as a failure. In sacrificing his energies and abilities to the desire for wealth, he dwarfs and degrades his own better nature, checks or stifles noble impulses, loses sight of the higher duty he owes to others, and fails to realize the opportunities that come to every man who is seeking to make the best use of his life.

Our educational methods have been largely to blame for the exaltation of the art of money-getting. In our schools, our colleges, and our other institutions of learning, it ought to be shown to our youth that the way to true success in life leads to something better, higher, and nobler than the selfish accumulation of riches at the expense or all the qualities which make the individual a benefit to his fellow-men. When our pulpits and our schools unite to win men and women away from the cultivation of mammon-worship, and when they inculcate high ideals, and those qualities and virtues that make manhood and womanhood pure, sweet and helpful to the world, as God meant they should be, and as Jesus taught, then the higher education on the plane of a common Christianity will have begun in earnest.—*Christian Herald.*

THIRTEEN THOUSAND MSS. A YEAR.

The publishers of *Everybody's,* in the July issue, contribute some interesting data regarding the question of what chance the unknown writer has with the magazines. They say:

"With about twenty items to a monthly table of contents, we use in a year only 240 contributions. And when we tell you that a stream of something like 13,000 manuscripts not directly solicited by us flowed into our office last year, you may think that all we needed was a dipper. But it isn't really so easy.

"These manuscripts are read by editors who know a good story or a good idea whether it bears the name of John Smith or Booth Tarkington, and who, above all else, are perpetually hopeful of making 'discoveries.' When they find something that they consider good, they pass it on to the rest, each editor voting. If the final decision is negative, the writer gets a courteous and interested letter, and an invitation to try again. This is one way to keep the stream flowing. If the manuscript is *almost* good enough, the editor becomes a volunteer prescribing physician, and suggests a way to make it right.

"Names alone do not count, and a good percent of our best contributors have been 'dipped' up when their names had no value. More than twenty per cent of the stories that we bought from May, 1906, to May, 1907, and thirty-three per cent of the poems, were by unknown authors. That doesn't agree with the picture of editors flipping the stories of obscure writers back into the mail-basket, does it? Yet, since we want the best material obtainable, we must seek out, too, the trained writers. But we seldom order a story, and never without the provision that it may be returned if not up to our standard."

LOWLY BUT CROWNED; OR, SYBIL THE OUTCAST

A Story by Sadie Brallier Noffsinger

Chapter X.—Sibyl Makes a Resolution.

THAT footstep caused Liz to turn about and a flush gleamed through the dirt upon either cheek as she confronted Mrs. Chester. Her eyes fell while she tried to apologize:

"She's the wust girl 'at ever drawed a breath 'an the deceitfulest. I wuz jist chastisin' her because she said as you wuz proud an' 'at you try to make her be stuck up like."

"Oh Liz! you know I never said that lie! Oh Mrs. Chester!" And Sibyl bounded forward like some angry animal and would have clutched the other's throat, but Mrs. Chester laid a hand upon her arm and said: "No, Sibyl, it is not kind in you to strike your sister."

Instantly she withdrew her arm and burst into a flood of tears.

"Oh" she sobbed, "I'm wicked an' bad an' I know 'at I'm a sinner like everything, but Mrs. Chester! I never said 'at you wuz proud nor 'at you tried to make me be stuck up!"

"Well, dry up now," retorted Liz, "and don't make yourself 'pear wickeder thun ever; or Mrs. Chester 'll never forgive you, I doubt."

"Girls," said Mrs. Chester, and her voice trembled and tears stood in her eyes,—"there is One who looks deep down into our hearts and knows all our thoughts and hears all we say and sees all we do. When we do wicked things we must ask forgiveness of him, for it is he whom we offend. Let us kneel and pray to him."

They all knelt together while Mrs. Chester prayed: "Oh, God, I know that thou dost love these girls. Wilt thou, therefore, keep their lips from falsehood and their hearts from sin? Help them to love each other that they may sometime be with thee. Forgive us all and save us all for Jesus' sake. Amen."

Brief and simple as were the words, they were uttered not in vain. Both girls were weeping now and Mrs. Chester's tears were falling also. There was a solemn pause, and Sibyl was the first to speak.

"Oh, I wish as you knowed how terrible I want to be good. I can't pray as purty as you ken, but I often lay awake at night and ask God to keep me from gettin' mad an' help me to love people. I know as I em better nor I wuz at first, fer now I allus ask God to bless Liz an' everybody; only George Macdonald,—I never prayed fer him because he has made us all so miserbul. After you told me as we must pray for our worstest enemies I tried to pray fer him, but sumthin choked me an' I couldn't say the words."

"Do what you can, Sibyl, and God will do the rest. In the meantime," added Mrs. Chester, in a cheerful voice, "I wish to see your father. Is he at home?"

She had not observed the senseless form stretched at full length in a corner behind the stove. Sibyl directed her attention thither, saying:

"He has been layin' there since yesterday evenin'. He don't know nothin'. It's the drink," she added in a hoarse whisper, vainly wondering what Mrs. Chester's errand with her father might be. Mrs. Chester noted the inquiring look and said:

"I shall call again in a day or two. In the meantime, Sibyl, remember God and keep his commandments, one of the greatest of which is this: 'Thou shalt love thy neighbor as thyself.' That means Elizabeth, it means your worst enemy, it means even George Macdonald! For," added Mrs. Chester, smoothing the shaggy head and clasping the dirty hand still closer within her own, "'If a man sayeth he loveth God and yet hateth his brother, he is a liar,' and all liars shall have their part in the lake which burns with fire and brimstone. Oh, Sybil, think how terrible that would be!" Saying this she departed. But through the open door and out into the street rang the burning cry: "I'll never do no wicked thing no more. Oh, Mrs Chester! I'll be good forever!"

Chapter XI.—The Dunker and the Drunkard.

ANOTHER day passed, and yet another ere Mrs. Chester sought that home again. John Deane had rallied from his drunken stupor and sat busily engaged at his trade,—cobbling. John Deane was not a lazy man and the time was when he honored his calling and when the products of his labor made him an independent man who prided himself in his strong arms and honest heart. It was in these glad days that he wooed sweet Bessie Gordon and made her his happy wife. But that was long ago and many changes had come since then. Perhaps he was thinking of all this now, for there was a yearning expression on his face and his eyes beamed kindlier than usual. Mrs. Chester thought as she noted how he dropped the awl and sat with folded hands, yearning,

perchance for something that should never come again.

He was sitting in a little patch of ground which answered the purpose of back yard and lay just outside the kitchen door. Mrs Chester now stood facing him. "Good morning Mr. Deane," she said.

The man started, then mechanically folded his arms again. He was not accustomed to hearing himself addressed as Mr. Deane. He was always called Old John by his familiar comrades, and those who were not so intimately acquainted with him usually spoke of him as "Deane, the Drunkard."

"Good morning, Mrs. Chester," he answered. Then quickly added, "Please don't move nor speak another word. I wuz jest a thinkin of days gone by, an' wen I saw you, sort o' suddent like, I thought it wuz Bessie's face come back again, your face is so bright an' youthful like, jest like hern wuz; not wen she went away," he continued sadly, "fur it wuz sorrowful an' old an' faded then; but wen we wuz first wedded an' wen both of us wuz happy."

Tears were actually in his eyes now. Such is the softening influence which even the remembrance of love does have. It were well for us if we reverted more frequently to our love even though it be but a charred coal, smouldering among the embers now. Had John Deane done this oftener, he might have been a better man.

"Yes, Mrs. Chester," he continued, "them wuz sunshiny days. Please don't move nor speak but let me look at you an' fancy as it is Bessie standin' there with me. We used ter have sich quiet talks an' loved each other so! But Mrs. Chester, I know I broke her heart. My God! I can't hardly bear it!"

Mrs. Chester tried to say some soothing word, but he interrupted her.

"Please don't speak, Mrs. Chester," he implored. "Suthin' makes me feel 'at Bessie's very near, an' if you speak or move I am afeared the speil will break."

The poor man unconsciously stretched forth his arm and muttered something in an inaudible whisper. Perhaps no one had ever dreamed that Deane, the Drunkard, was capable of so much love and so much suffering. No wonder Mrs. Chester strove in vain to keep the tears from falling. Who knows? the angels may have wept as well.

"Ay, Mrs. Chester," he continued after a long and solemn pause, "it wuz the drink what done it. I rekilect the fust time I went inside that door yonder,—that door what has the foamin' goblet on the yallow sign board. Macdonald pertended to be great friends to me, an' one day he purswaded me to take one glass. He would n't take no money fer it because it wuz fur friendship's sake, he said. That wuz the fust time, Mrs. Chester! I can't drive it out o' my mind how sad poor Bessie looked an' how she pled at me to never go in there no more. I kissed her purty cheek an' promised her 'at the saloon should never come twixt her an' me. I meant to keep my word, Mrs. Chester. But temptations cum upon me thick an' fast, an' wen the drink monster gits his iron grasp on you, you can't rise up no more nohow.

"What passed after this, Mrs. Chester, is too sad to relate on. It wuz from bad to worse on the downward road. I can't bear to think 'at the time come wen I laid hands on Bessie. I can't bear to think how her face faded an' faded away till the time come wen I saw it no more. My God! I wish as I had never saw the light o' day!"

"Nay," said Mrs. Chester, speaking for the first time and laying a gentle hand upon the withered forehead, "it is wrong to regret our existence. It is a hard doctrine which teaches us that the past is beyond our voice and reach. But even if that be true, believe me that with the deeds and struggles of the present, we are afforded the opportunity of building for ourselves a bridge which shall span the waste and bear us into that blessed and redeeming future where there shall be no past."

"Ah," murmured the bowed man as he clasped the hand and rained tears over it, "you are too young 'an' good to be grieved by the sins 'an' sorrows uv a wicked un like me,—you who life has never brung no sufferin' to."

"Yes," replied Mrs. Chester, "I have had some sorrow but much joy; more, I think, than I deserve. God has given me so many dear and precious gifts and I have returned so few to him. Although the nature of our weaknesses may assume different aspects, Mr. Deane, believe me, I am constantly in need of the diviner strength as well as you."

"God forever bless you fer sich words as them, Mrs. Chester! Since Bessie died, you are the fust one as ever spoke kind to me. I see it more clear now as how your face 'minded me o' hern to-day."

Mrs. Chester's words had indeed inspired hope and confidence in poor John Deane. A resolution to become a better man, rose up before him. It arose before him crowned with joys earthly and eternal. For one brief moment it tarried and then spread its wings for flight. But ere that resolution had flown away John Deane grasped it within his heart, although he said no word nor made no sign.

Then in a few cheerful words Mrs. Chester's errand was communicated and it was arranged that Sibyl should go to live at Shady Brook, as nurse for little Liby.

Just then a shadow flitted over the little patch of yard and George Macdonald passed. "The Dunker and the drunkard!" he muttered to himself: "a pretty contrast, I'll be blest!" He grinned a ghastly grin, but this was all he said as he hurried on to his place of business where he dealt in souls.

(To be continued.)

THE ORIGIN OF "AMERICA."

More than one ambitious singer has tuned his harp in the hope of producing something that would take the place of "America" as our national hymn, and while it is admitted that "America" is not perfect as a musical composition its spirit is so fine and patriotic that it holds its own year in and year out in the affections of the people. It is doubtful if a more perfect poetical composition could displace "America" because of the manner in which it has sung its way into the hearts of the people. Like most hymns and songs that have had an enduring fame "America" was written by its author on the inspiration of the moment, and was not the result of any labored attempt to produce a great song.

It is now nearly one hundred years since Samuel F. Smith, the author of "America," came into the world, for he was born in Boston on the twenty-first of October in the year 1808.

Twenty-four years later he was a student at the theological seminary in Andover, near Boston. He had in his boyhood been a student at the famous old Boston Latin School, which has its distinction of being the oldest school in America. After graduating from the preparatory school young Smith entered Harvard College, where he had for a classmate another young man who was destined to make his mark in the world of literature. This classmate was Oliver Wendell Holmes, who once referred to Smith in this way in one of his merry poems:

"And there's a nice youngster of excellent pith,
Fate tried to conceal him by naming him Smith;
But he shouted a song for the brave and the free,
Just read on his medal, 'My country, of thee.'"

It was on a dull February day in the year 1832 when Samuel F. Smith wrote "America," and the house in which he wrote it in Andover is still standing. It is a typical old New England house and was well along in years when Smith lived in it. He was a warm friend of Mr. Lowell Mason, one of the most conspicuous musical men of his day. Indeed, no other man did so much to advance the cause of music in our country. He was largely instrumental in having it introduced into our public schools.

Mr. Smith has said that when he wrote "America" it did not make much of an impression on him, but he sent it to Lowell Mason, who was much impressed by the fine and high spirit of patriotism in it and its poetic merit. Mr. Mason had the words set to music and it was sung for the first time in our country on the Fourth of July in the year 1832. The occasion was a Sunday School concert in the Park-street Church in Boston. The song met with immediate favor and was soon one of the most popular songs of the day.

Edward Everett Hale was a boy of ten years on that Fourth of July day when "America" was sung for the first time. He was playing on Boston Common near the Park-street Church and when he saw the people going into the church he left his playmates and wandered into the church to see what was "going on." Thus it was that he happened to hear "America" sung for the first time in public.

The author of "America" wrote a very large number of songs, some of them of real merit, but none that achieved the undying fame of "America," so that he will probably be known to posterity as the writer of a single famous song. But it was worth much to have written the national anthem of a country like ours, and to have the true spirit of patriotism that the young student had when he wrote:

"My country, 'tis of thee,
Sweet land of liberty,
Of thee I sing;
Land where my fathers died,
Land of the pilgrims' pride,
From every mountain side
Let freedom ring."

—*Epworth Herald.*

BIBLE READING IN SCHOOLS.

It is becoming clearly apparent to careful observers of things educational that the regular and systematic reading of the Bible in the public schools is falling into disfavor, or at least into disuse, among teachers. Time was when practically every school was opened with a reading from the Bible and the concert repetition of the Lord's Prayer. It would be difficult to obtain exact statistics, but the present writer is of the opinion that not more than half the schools now follow this time-honored and elevating custom.

This departure from an ancient land-mark is a pity and if allowed to continue will result in irreparable loss and damage to the country from two different standpoints. In the first place, the standard of our nation's morals is the Bible. This book underlies all law and is at the basis of all civic righteousness. The schools must train our future citizens in morality and patriotism if the nation is to endure. How can they do this if the greatest text book of morality and righteousness in the world be neglected? As Henry Van Dyke says, "Strange indeed is the theory of education that would exclude this book, which Huxley and Arnold called the most potent in the world for moral inspiration, from the modern schoolhouse." In the second place, the Bible is our supreme and unrivaled treasure house of pure English. No one can estimate the influence which the English Bible has exerted and is still exerting on English literature. So true is this that much of our greatest literature would not be understandable without a previous knowledge of this unique book. Great writers have modeled their style on it and have humbly acknowledged their indebtedness to its formative influence. Many such

writers could be mentioned, but it will suffice to name Carlyle, Ruskin and Abraham Lincoln.

Cardinal Newman, speaking of the unequaled beauty and marvelous English of the common version of the Bible, writes:

"It lives on the ear like music that can never be forgotten. . . . Its felicities often seem to be things rather than words. It is a part of the national mind, and the anchor of national seriousness. The memory of the dead passes with it. The potent traditions of childhood are stereotyped in its verses. The power of all the griefs and trials of a man are hidden beneath its words. It is the representative of his best moments, and all there has been about him of soft and gentle and pure and penitent and good speaks to him forever out of his English Bible. It is his sacred thing which doubt has never dimmed and controversy never soiled."

The great convention of the National Educational Association, in session July 11, 1902, at Minneapolis, Minn., unanimously adopted the following as part of their Declaration of Principles:

"It is apparent that familiarity with the English Bible as a masterpiece of literature is rapidly decreasing among the pupils in our schools. This is the direct result of a conception which regards the Bible as a theological book merely, and thereby leads to its exclusion from the schools of some states as a subject of reading and study. We hope for such a change of public sentiment in this regard as will permit and encourage the reading and study of the English Bible, as a literary work of the highest and purest type, side by side with the poetry and prose which it has inspired and in large part formed.

"We do not urge this in the interest of sectarian instruction of any kind, but that this great book may ever be the teacher's aid in the interpretation of history, of literature, law and life—an unrivaled agency in the development of true citizenship, as well as in the formation of pure literary style."

There are several reasons that may be given to account for the falling off of Bible reading by teachers to their pupils. One is the multiplicity of supplementary reading and story books of various kinds, from which may be furnished pabulum that is almost predigested. Another reason is hinted at above, the conception which regards the Bible as a theological book merely. But perhaps the strongest influence deterring teachers, especially young ones, from making use of this source of inspiration and power, is the fear of offending patrons. They are afraid that they may unwittingly read something which could be construed as sectarian or dogmatic, and thus subject themselves to hostile criticism from thin-skinned patrons.

The Schoolman is pleased to note that there are signs and symptoms now appearing which point unerringly to a coming renaissance of Bible study. Most encouraging is the present output of books dealing with the Bible from the literary standpoint, and the present disposition to read it and enjoy it, not as a quarry of dogma and disputations material wherewith to beat out the brain of adversaries, but rather as a collection of great literature in its various forms.—*The Inter-State Schoolman.*

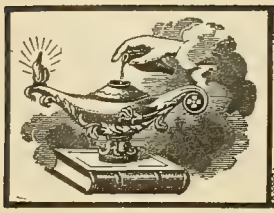
ASSOCIATION OF YOUNG AND OLD.

BETWEEN an older and a younger person there is chance for most satisfying friendship. An elder person really belongs to every well regulated collection of friends when you are young, and when you yourself are old you need at least one devoted young person.

"If the young knew, if the old could," runs the famous French saying. A friendship between old and young helps to equalize things. To the old come enthusiasm and renewed vigor; to the young comes the wisdom of experience.

You do not know what you are missing, young maid or mistress who lacks a white-haired friend. You do not know until you try how perfectly she can sympathize with you, how beautifully she understands you—understands you without the telling from you, and anticipates your thoughts and wishes; how delightfully she helps you to decide when it is difficult to decide, how she explains things that are hard to explain, and clears away the clouds from many dusky circumstances.

Tell her all you know, tell her all you hope for, tell her how you feel and what you dream and plan. Your secrets will be buried in a sepulcher and all your dreams will be clarified. And when you talk of less serious affairs she has years full of romantic experience to draw from for her anecdote and argument.



You meantime continually are refreshing her. It is a pleasure to contact your youthful spirit, your young unwisdom and hardihood, and to drink in its vitality and assist its development.—*Chicago Tribune.*

THE only happiness a brave man ever troubled himself much about was happiness enough to get his work done.—*Thomas Carlyle.*

NOTHING was ever reformed from outside. Reform, as Carlyle said, comes from the heart outwards, not from the mouth inwards.—*London Outlook.*

Do your own work well, whether it be for life or death; help other people at theirs, when you can, and seek to avenge no injury; be sure that you can obey good laws before you seek to alter bad ones.—*Ruskin.*

I HAVE not the time to waste in making money.—*Agassiz.*

THE QUIET HOUR

SERMONETTE.—Jesus the Living Bread.

NELSON SHIRK.

"I am the living bread which came down from heaven."

ALL mankind knows the need of temporal bread for physical sustenance. Jesus recognized it only the day before he uttered the words of the above text, when he fed the multitude with the five barley loaves and two fishes. It is a matter of every day. Bread sustains mortal life which in turn is consumed largely in providing for one's food.

When Jesus fed the multitude the people were impressed with him in a special way. He had touched them at an important point. He showed his power to supply a great want and they are now seeking him with increased earnestness. But Jesus came to earth for a purpose much higher than that of filling men's mouths. He came to supply our highest needs,—those of the soul. To do this he gave himself, his life, that we might be saved from our dead condition. And now, just as the body is nourished by bread, so the wants of the soul are supplied by Jesus himself. Thus closely is he related to our spiritual regeneration, that in explaining himself to the people, he could truly say that he was the living bread from heaven. Our peace, our freedom and our strength, come from him.

Although food promotes human life, our bodies eventually die and decay. Not so with the spiritual life which comes from Christ. That is continually renewed. None but Jesus and the Father have power over it. How much better then is it to labor for the meat "which abideth unto eternal life." At another place Christ tells us to seek first his kingdom and his righteousness and the temporal things shall be added unto us. Infinitely great is the opportunity to come to one who will supply our every need. To be in Christ means not only to have life but to have it abundantly. John 10: 10. For this purpose he came to earth. For it he died and now lives—our true Shepherd who knows each of us not only by name but also in individual needs. Shall we then go in want? Shall our spiritual existence be impoverished or shall we be hungry and dwarfed when our heavenly Father has a full supply in store for us? No, we need not and will not unless we so choose. If we are famished and weak, it is not because God is not able to make us strong. If we are vexed and weary, it is not because Jesus is not able to give us peace and rest. The reason lies with us. We are not fully abiding in him with his words abiding in us. Let our will for life be what the Lord's will is, then let us feed on him and great shall be our strength and joy.

WHAT IS PRAYER?

RICHARD SEIDEL.

PRAYER is the sincere breathing of the soul to God, and is not confined to language. It is the means through which the soul seeks the blessing and protection of God. What an example of faith in prayer taught by our Savior when surrounded by cruel enemies. "Father forgive them, for they know not what they do." It is the true spirit of prayer that leads us to approach the All-wise "Not as I will, but as thou wilt." Until we can feel this perfect resignation to the will of God we have not learned how to pray.

It is a humiliating but a soul-exalting gift, a shield against temptation. Jesus often retired alone to the mountain, where no eye could see, no ear could hear, and poured forth the anguish of his soul unto God, for strength to drink the bitter cup.

One of the greatest hindrances to our spiritual growth is the lack of perfect honesty in our approaches to God. We draw near with our lips, when our hearts are far off. When we learn to be thoroughly honest in our prayers, realizing the mockery of mere lip service to him who searches the heart, we shall no longer complain that our prayers remain unanswered.

As a little child looks to a father for strength, and yearns for the tender embraces of a loving mother, so does the soul in need bow to God for strength to hold, wisdom to direct, and for that charity, love and care, which only the baptism of the Holy Spirit can impart. Through prayer we are enabled to find access to God. It fills the soul of the seeker after righteousness with a satisfaction no words can express. When we consider our dependence upon a supreme guidance, we pray earnestly and unceasingly to be preserved from all evil. The more spiritually enlightened the soul, the more prayerfully interested concerning the things of God. Prayer is indeed the Christian's armor, a never-failing source of strength and encouragement.

A DOUBLE REBUKE.

"Is she a Christian?" asked a celebrated missionary in the East of one of the converts who was speaking unkindly of a third party.

"Yes, I think she is," was the reply.

"Well, then, since Jesus loves her in spite of that, why is it that you can't?"

The rebuke was felt, and the fault-finder instantly withdrew. Some days later, the same party was speaking to the missionary in a similar spirit about another person. The same question was put, "Is she a Christian?"

In a half-triumphant tone, as if the speaker were beyond the reach of gunshot this time, it was answered, "I doubt if she truly is."

"Oh, then," rejoined the missionary, "I think that you and I should feel such tender pity for her soul as to make any harsher feeling about her quite impossible."—*Family Treasury.*

BIBLE IN THREE HUNDRED AND SIXTY LANGUAGES.

SOME people may try to persuade themselves that the Bible is not an extensively read book, but since a translation of it by Rev. F. H. Price into the language of the natives of Guam was accomplished, the book may be read in 360 different languages. Until the Guam translation was started the total was 359.

The language of the natives of Gaum is called Chamerre. It is one of the most difficult of the South Sea dialects, which always have proved difficult for the white man's tongue. By hard labor Rev. Price mastered the Guam tongue sufficiently to undertake the Bible translation, so that the pupils under him might read in their own language. Guam became a possession of the United States after the Spanish-American War, and is connected with this country by a cable line.

When it is taken into account that few persons can name fifty languages offhand, the fact that the Bible has been translated into 360 is evidence of the wide scope of missionary work.

It is estimated by members of the American Bible Society, which will publish Rev. Price's translation in Chamerre, that more than 1,000,000 copies of the Bible were printed and circulated during 1905. Since the invention of printing the Bible has been "the best-selling book," and last year the British Foreign Bible Society distributed 1,000,000 Bibles in China alone.—*Exchange.*

THE RELIGION OF JESUS—

MAKES people pay their debts.

It makes them stop living only for themselves, and begin to live for others.

It reveals to them God in their own hearts as a Father and a Savior.

It kills envy.

It stops fault finding.

It makes people charitable toward the faults of others.

It makes people happy where without it content would be impossible.

It brings prosperity to individuals and to nations.

It puts new songs in the mouth, and new joys in the heart.

It drives the devil out of the heart and out of the life, and gives the soul a foretaste of heaven.

It reconciles enemies, and makes people love mercy.

It gives power over sin, and makes the law of life the delight of the soul.

It brings gentleness and love into the home.

It takes people out of the mire, puts their feet upon a rock, and establishes their goings.

It puts a light in the grave, and brings heaven so near that its music can be heard.

It robs death of its sting, and takes away from the grave its victory.

It gives to the children of men a birthright in the kingdom of God.

It fills the heart with love for all men, and makes the hands and feet willing to work for their good.

Have you got it?

SPECIFIC PRAYER.

JUSTIN MARTYR says that the sophists of his time told men that it was useless to pray. There are sophists to-day who are ready to say as much, and those who have not learned to pray seize the idea with remarkable readiness.

The best defense of prayer is prayer. Experience is argument enough, and science cannot shake the faith of a man who has *seen* and *heard* and *proved.* No hypothesis can create a doubt in the heart that has been brought into contact with God by way of prayer.

Andrew Murray, in his remarkable book, "With Christ in the School of Prayer," has said, "It is one of the terrible marks of the diseased state of Christian life in these days that there are so many who rest content without the distinct experience of answer to prayer. They pray daily, they ask many things, and trust that some of them may be answered, but know little of direct, definite answer to prayer as the rule of daily life." Paul appealed to the church at Ephesus to pray always, and "watch thereunto." He knew the trial of faith and what it was to wait, and be denied, and then to pray and pray again until, through the storm, the sunlight came. He knew something of what it was to "watch thereunto," and the walls fell down wherever he set up a siege. To pray specifically and then to await the award—this was Paul's secret; it was Muller's secret, and it is the citadel of every strong life.—*Selected.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

AMERICAN LIBERTY.

AMERICA and liberty are two words which because of their long and close association would seem to be a part of each other. In fact, in the minds of most patriotic citizens of this country and in the minds of many citizens of foreign countries any consideration of either word alone is bound to show the influence of the other because of this association. To many of other lands with their consciences numbed from long perversion and their talents held in abeyance to tyrant rulers, A-m-e-r-i-c-a spells liberty and they know nothing of the meaning of the latter word in any other connection.

And what does this expression, "American liberty," mean? If we are to pay any attention to the many signs of unrest, dissatisfaction and even rebellion that are apparent on all sides, we must conclude that it must possess in some measure the nature of the apples of Sodom,—very pleasant and attractive to the eye at a distance but revealing the opposite qualities by contact. Whether this is really the case or not must be determined by a closer study of the question than that afforded by surface appearances.

And a closer study leads us to one of two conclusions. Either the institutions that once gave us the liberty for which our fathers bled and died have been perverted,—desecrated,—made so complicated that the sum of their working results in galling bondage and oppression; or our once lofty natures that clearly comprehended the unselfish and charitable elements of genuine liberty have given place to the lowest and most selfish in the carnal man. We still clamor for liberty and insist upon the unhindered use of that which it offers, but all the time it is license and not liberty that we desire. The reign of liberty demands self-control and regard for the rights of others. But self has been given full rein and its wants, looked upon as rights, have multiplied so that it is impossible to look beyond them. And whenever we experience any difficulty in giving them full sway we raise the cry of injustice and oppression.

To which condition must we lay the present unrest? Perhaps it is a combination of the two. Both can be traced to the innate selfishness of the individual, and it is here that we must begin our work of reform if there is to be any reform made. As long as the individual is not satisfied with the privileges and enjoyments that may be shared in the same measure by his neighbor, he may expect to live under the curse of oppression. The question resolves itself into an individual matter where each one must adjust himself in conformity to the principles underlying the foundations of our government, the principles handed down by the One who presides over the nations of the earth. When we shall have done this, dissatisfaction will give place to peaceful enjoyment and we will realize not only the cost of American liberty, but its beneficent elements of forbearance and mercy and its inspiring elements of equality and justice. Then we can enter into the spirit of our fathers whose stirring words and noble deeds have put within our grasp the greatest blessings vouchsafed to any people of the earth, and with our hearts, as with our voices, we can say with them, "Liberty and union, now and forever, one and inseparable."

THE GLORIOUS FOURTH.

OUR present manner of celebrating the birthday of our nation presents a forceful illustration of the strange workings of fate (what a relief to load our responsibilities on that pitiless developer of causes!), by which we are bound to customs, the observance of which brings us hardly less sorrow and suffering than the condition which preceded our existence as a nation. The glorious Fourth has come to be the gory Fourth with no thoughts of an honorable cause to salve the wounds that are made. When the Declaration of Independence was still a doubtful issue the prophetic mind of the immortal Patrick Henry drew a word-picture of the celebration of its victory, familiar to every schoolboy. He spoke of the bonfires and illuminations, and our eyes and ears can testify that in that he was indeed a true prophet. He said also, "On its annual return they will shed tears, copious, gushing tears, not of subjection and slavery, not of agony and distress, but of exultation, of gratitude and of joy." Here it would seem that he has overdrawn the picture,—has given us credit for nobler sentiments than we seem to possess. While there are doubtless many that are moved to tears by a contemplation of all that the Declaration of Independence has made possible in this glorious land, there are many more who have been bowed down in the agony of their grief over the results of the reckless, foolish turn this celebration has taken.

This reckless, barbarous-like spirit seems to crop out in almost everything we undertake to do in a "big way" these days, and it is cause for deep concern

which should show itself in some emphatic reforms. Just to prove that *we* in no way approve of the dangerous folly engaged in by many under the guise of observing the day, let us have nothing to do with that part of it. There are many things we can do in keeping with a patriotic observance of the day that will endanger the life and limb of no one, and will mark us at the same time as being at least several generations removed from barbarism. The glorious Fourth will be so in truth only as it perpetuates in its program that quality of the original event. To add to that glory, as the years go by, would only be a natural result of our boasted national progress.

BEGIN AT HOME.

MANY people are inclined to look upon the present disclosures of corruption as indicating a most deplorable condition of our morals, unequaled in any previous time. While it is true that we are shocked by the revelations that are made on all sides, their existence does not argue that we are on the down grade, —that the world is growing worse.

For two reasons we may take an optimistic view of matters as revealed by this condition. First the fact that the public is shocked by these crimes shows that it is more sensitive to wrong-doing and therefore lives by a higher ideal than in times past. Second, it is a characteristic of the present time, with the reign of the daily newspaper, that everything shall be published abroad, and so crimes that once flourished in secret are now held up to the public gaze.

But there is one thing that must be observed if this work of reform is to have the most salutary effect. In his work of reform the reformer should begin at home. He should see first that his efforts to expose any crooked work originate in an honest desire for better conditions, for a higher ideal, and he should be sure that his own life and his dealings with his fellow-men are in perfect harmony with that desire. Nothing will so surely destroy the good effects of a move for reform as the discovery that the would-be reformer has an ax to grind, and is himself as corrupt as the one he would bring to justice.

"First cast out the beam out of thine own eye; and then thou shalt see clearly to cast out the mote out of thy brother's eye." And not only can you see better, but you will convince the public that your motive is a pure one, and they will the more readily give their efforts to the cause. With all our admiration for the gift of eloquent speech and diplomatic skill, the simple virtue of being honest still holds a place second to none in its convincing power. It will win us allies when all other means fail.

THE PROCEEDINGS OF ANNUAL MEETING.

THE Annual Conference of the Brethren church for 1907 is a thing of the past. Many of us were not able to attend the meeting. We missed the inspiration and strength that comes from the association of those working in the same cause. The loss is one that in its way we cannot fully cover. But while we must do without the inspiration that comes from such a meeting, we need not do without that which may come from a perusal of its proceedings. And we ought to have some knowledge of these, too, for the sake of keeping in touch with that which concerns the church as a body. We may secure a full report of the meeting, gotten out in the usual form, at the usual rate of twenty-five cents. The work of publishing the report is completed and orders are promptly filled.

WORTH REPEATING IN THIS ISSUE.

Thou art thy brother's keeper now;
The curse of Cain is on thy brow
If thou thy brother's life betray,
Or lead him into paths astray.
—John H. Nowlan.

IF the Christian people of every clime would awake, and train the children to sing, I believe the time would soon come when reform schools and State prisons would need no remodeling, no enlargement.—*Marguerite Bixler.*

GOD'S plan was that man should earn his bread by the sweat of his brow. If some people were paid according to the amount of sweating they do, beggars would not be able to live, nor would some other people who are not beggars.—*W. C. Frick.*

WITH the deeds and struggles of the present we are afforded the opportunity of building for ourselves a bridge which shall span the waste and bear us into that blessed and redeeming future where there shall be no past.—*Sadie Brallier Noffsinger.*

IF we are famished and weak, it is not because God is not able to make us strong. If we are vexed and weary, it is not because Jesus is not able to give us peace and rest. The reason lies with us.—*Nelson Shirk.*

ONE of the greatest hindrances to our spiritual growth is the lack of perfect honesty in our approaches to God.—*Richard Seidel.*

"EVEN if it hadn't turned out so splendid," the Lesser Chum confided to his mother, jubilantly, "we were all glad we didn't make our fun out of anybody's stuff but our own."—*Hattie Preston Rider.*

Echoes from Everywhere

THE annual report of the stockholders of the Pennsylvania railroad shows the gross earnings for 1906 to be something over $46,000,000. The tonnage increased over fifteen per cent and the passengers carried over twelve per cent. It was voted to increase the age limit for persons entering the employ of the company from thirty-five to forty-five years. This action follows a similar step taken by the other companies of the Pennsylvania system.

TINOL is the substance used in a new method of soldering brought out by a German company at Bonn. The solder is in the form of paste and is more or less consistent according to the needs. A feature that recommends it lies in the fact that no acid is needed to clean the parts, as it contains the cleaning substance itself. The paste is spread upon the metal surfaces and these are heated with the iron or by a lamp or furnace. Tests show the mechanical and electric resistance to be in favor of the new method.

THE delivery of rural mail has been a good deal delayed by the fact that the carrier had to count the pieces distributed to his route before setting out on his work. It has now been ordered by the post-office department that carriers will not be required to count the number of pieces of mail delivered and collected by them after July 1 on routes where the records show that five thousand or more pieces of mail per month were handled during each of the three months included in the quarter ending June 30, 1907.

THE opponents of the introduction of the metric system, says the *Scientific American,* have asserted that its use would involve endless confusion in our mills, machine shops, and other industrial establishments in which the operatives have been accustomed all their lives to the English measurement. The Baldwin Locomotive Works, however, has proved that in this case, at least, "an ounce of fact is worth a ton of theory," for they have recently completed twenty locomotives for a railroad in France, which were built entirely from the drawings made on the metric system. The locomotives not only came up fully to the requirements of the specifications, but the officers of the company were favorably impressed with the working of the system.

OKLAHOMA has elected T. P. Gore for her first United States senator. Mr. Gore is blind and has been since he was eleven years old, yet he has won his laurels in politics and law. His character is portrayed by the following incident: When told by his father that he must prepare to attend a school for the blind, he replied: "I will go to school here," and he did. He had his books read to him, and relied entirely on his memory, and took first honors in his class.

PROFESSOR FOREST RAY MOULTON, astronomer for the University of Chicago, in a lecture delivered to students recently on the "Earth's place in the Universe" declared that it was hopeless to believe that communication could be established with Mars. He doubted if the planet is inhabited, but said that if it was it was by a race of much higher intelligence than that of our own. He advanced the theory that Venus, whose surroundings are similar to that of the earth, is inhabited.

THE amateur photographer will have to go slow in Germany. By a law which is in force after July 1, the right of all persons to the exclusive reproduction of their own portraits, or those of their houses or belongings, is made absolute. The amateur, or professional photographer who snapshots some one or something without previously arming himself with permission from the owner is liable to heavy fines. Even when requested by a friend to take a photograph of a room with its contents, the danger is great, for the room may contain pictures and if these are recognizable in the photograph, the photographer is liable to prosecution by the artist.

FAMILIARITY with the popular automobile does not tend to decrease the number of fatalities occurring in the reckless use of them. On the contrary they seem to be on the increase. In Germany an accurate record of motor accidents and their causes is kept. For the six months ending last September the total number was 2,290, more than one-fourth of which caused injury to persons. The number of persons killed and wounded amounted to 1,570, injuries in fifty-one cases ending in death. Where the causes could be determined, it was found that about eighty per cent was due to carelessness of chauffeurs and most of the remainder to carelessness of persons on the street.

THE exports of canned beef from the United States declined from $5,298,289 in the nine months ending with March, 1906, to $1,251,284 in the corresponding months ending with March, 1907. In spite of the fact that the exports of canned beef have fallen off three-fourths in a year, the prices of beef, veal, mutton and pork are advancing, and therefore the great decline in the sale of packing-house products does not seem to be working any injury to farmers and stock raisers. By some this latter condition is thought to be due to the fact that stockraising is not so largely engaged in as in the past, and to the increase in consumers by immigration.

FOR some time the people of southern France who make their living by growing grapes which are converted into wine have found themselves in an unfair competition with the northern manufacturers who make their wine from other and cheaper ingredients. The southern grape growers asked for protection by the government and because it has not been given, their trouble has taken the turn of a rebellion and troops have been called to restore order. While the government has made some promises, they appear so vague to the wine-growers that they are not fully persuaded to give up, but will continue the movement in a quiet way until full satisfaction is attained.

SUFFICIENT heat can now be developed by electricity to enable the blacksmith to improve on the work of the old forge. Feats which were once difficult, if not impossible, are rendered comparatively easy. It is now claimed that by the new process lead can be welded to steel, iron to brass, iron to nickel, aluminum to gold, tin to zinc and to lead and to many other metals. Electricity is all the time being put to new uses, and one of the latest is for the heating of glue pots in a large book-bindery in Boston. The electric pots have proved a great advance over the steam-heated pots that were in use before. The embossing presses in the same plant are also heated by electricity.

IN some of the great European cities the cellars which are too dark and unhealthful for other purposes are used for growing mushrooms. In some instances the growers make use of the deserted galleries in quarries which have long since fallen into disuse. The mushroom is considered a great delicacy in many parts of the world and has an especially ready sale in Europe, so that every available space for its cultivation is utilized. In Edinburgh, Scotland, there is a single tunnel three thousand feet long running under the streets and buildings, and sheltering beds which bring forth five thousand pounds of excellent mushrooms every month. It is said that one thousand six hundred men burrow around under Paris making their living growing these fungi.

ARKANSAS has been interested lately in Xenophon O. Pindall, acting governor of the State and the youngest man who ever held that office. He went into office within an hour after he was sworn in. His predecessor forgot to transmit the bills which he had approved to the secretary of state. Mr. Pindall opposed one of these and vetoed the measure. This is probably the first time that a man ever has gone into a governor's office and vetoed a bill which had been signed by his predecessor.

A NUMBER of other schools throughout the country have been trying the experiment made in Springfield, Mass., a year or two ago. At that time a set of school examination papers of the year 1846 were discovered. These were submitted to local school children in order to compare their ability with that of their forefathers of 60 years ago. It was found that the Springfield children of the present handled the questions better than did those of 1846. The experiment was tried on some children in Nashville, Tenn., recently, with the same result. The Nashville children were younger, too, than the ones in Massachusetts to whom the questions were originally given in 1846. The Springfield *Republican* remarks that "this comparison naturally attracts widespread attention. It is both an advertisement of the alert intelligence with which our local schools are conducted, and, so far, a reassuring answer to those who cavil at the methods of modern education."

ONE of the serious problems that the railroads have to solve is keeping down the weeds alongside the tracks. The Union Pacific has built a gasoline weed-burner which is doing the work very successfully at a moderate cost. The gasoline weed-burner is in reality an automobile mounted on railroad car wheels and equipped with the weed-burning apparatus. The car carries the fuel for the burners, as well as for its own power, and its operation is so simple that it is a comparatively easy job for one man to handle the machine. In fact, in nice weather, a trip through the country on the weed-burner is a very pleasant ride. Attached to the car are a number of tanks carrying the supply of gasoline sufficient for the day's run on the road. This gasoline is forced into a system of burners carried on the back of the car, making a very hot flame close to the ground, and extending out several feet on either side. This kills the weeds. The machine is capable of burning from twenty to twenty-five miles a day, running about three to four miles an hour. Three men compose the "crew" of the car, which is handled on the road under orders as a regular train. Where weeds are cut by hand it requires approximately sixteen men to cut one mile of track a day, hence the machine does the work of about three hundred men.

The Small Philosophies of a Pair of Chums

Hattie Preston Rider

VII.—Fun.

THERE was a large vacant lot next the Ludfords', which the Lesser Chum and his companions had used for a playground from time immemorial. It was too small for a baseball diamond;—in fact, to the great grief of the boys, there was not a spot within a mile suitable for that delightful sport except a small park in the next block, which, also, might as well have been situated in Timbuctoo, since its obdurate head commissioner stubbornly refused to allow its use as such. All vacation the boys eyed its velvety turf askance, and growled about "that contrary old Sam Burns!" But it availed them nothing, and they were obliged to content themselves with smaller fields of operation, like the one next the Ludfords'.

A new neighbor had moved into the house on the other side of it, a thin, bent little old lady with a bird-like voice and sharp black eyes. She made no friendly advances, but once or twice the Lesser Chum caught her watching a game of hop-scotch or holly through her slanted shutters. So, when according to their time-honored custom they began their patriotic preparations there on the evening of July third, he was somewhat surprised to see the black-eyed old lady bustle down her back steps and approach the group.

"What be you boys thinking of doing there?" she demanded, suspiciously.

"We're just getting ready for the Fourth," Bert Lester explained.

The little old lady's eyes snapped.

"You don't mean that you're laying to fire firecrackers and things right here under my nose?" she demanded.

The boys stared. Harry Moss got up from the sand fort he was building, whence a thousand squib cannon, more or less, should belch thunder on the morrow.

"We always bring our Fourth of July things here, and have 'em together," he said. "It's safe from setting fire, you see."

"Safe!" snorted the little old lady. "*Safe?* And my house right here to catch every spark?"

"It doesn't ever get a-fire, Mrs. Daly," the Lesser Chum reassured her.

"No more it won't, by my letting any boys shoot them ornery racket-makers so close to't!" she rejoined, with asperity. "Now you just take every one of your fixings straight off that lot, and don't you let me catch you bringing anything of the kind there, unless you want the police called!"

The boys stood aghast, as she turned and whisked nimbly back up the steps.

"How long has she been running this whole town, I wonder?" Harry asked, resentfully.

"'Tain't *her* lot!" the Lesser Chum growled. "Come on; let's ask mother;" and a committee of the whole was presently in session on the Ludford steps.

"No!" said the Greater Chum, herself staggered by the calamity, for the moment; "she has not the tiniest bit of right to order you off, so long as you were not molesting her, and the city officials have given permission to use fire-works. We are safe and snug inside the law, but that isn't really and truly the question. If we are going to have a good time, we don't want to spoil any one's else, do we?"

Wry faces and groans were a discouraging answer.

"There are six strong, healthy brains on this porch," went on the arbitrator. "If they can't think out some way to fix this right for all parties, they don't deserve to have a Fourth of July for two years!"

"There's our other side lawn," her son suggested, doubtfully. He knew his mother loved a well-kept turf. The other boys looked up in renewed hope.

"We couldn't have sand forts," Bert objected.

The Greater Chum was frowning with the earnestness of her mental effort.

"How about an older play?" she asked. "I think it will be a fine night. Would you like to put up Allan's tent and have a regular sentry, like soldiers do? You could take turns, the ones off duty sleeping in the tent. There's room in the back garden for a little camp-fire, and you can cook your supper and breakfast there. I should like to have you send off a salute of

six fire-crackers every hour, for a signal that you are getting along all right."

The Lesser Chum leaped to the ground with a whoop, and the other four joined him in a war-dance at the foot of the steps. Then they set eagerly to work.

Only eight other boys wanted to share the fun; but the ten proved inelastic beyond the accommodation of six at a time, not counting the sentry on duty. The Greater Chum sent the remainder away with the promise that they should bring over their "stuff" at daylight. So the Lesser Chum and his small compatriots laid rugs and blankets, and stored ammunition and provisions. They hung a lantern to the ridge-pole, for an emergency, and Bert brought over a couple of Chinese Joss-sticks, which he lit at dark and fastened in the tent, their sweet, pungent incense to drive away mosquitoes. At the rear they stacked every toy gun that could be mustered, in true military fashion. If the soldiers' rations from the camp-fire supper were cooked "to average" between burnt and raw, they were still delicious to patriotic palates.

A salute of six "whistling bombs" was fired at sunset, and six crackers every hour thereafter, for the Greater Chum's benefit; and in the velvety dark, punctuated, now and then, by a far-away "bang," more than one of the little lads, as he paced his sentry's beat, felt something swelling within him akin to the old, self-devoted spirit of those heroes who made the time for him a joyful holiday. It was a red-letter night, and a red-letter day following.

On the morning of the fifth, when the Lesser Chum came down to a late breakfast, he found Mrs. Daly chatting with his mother in the dining-room. He was in fairly good repair, considering the occasion, one eye being swollen not more than half shut, and only two fingers in bandages. Remembering the little old lady's late hostilities, he was rather inclined to curtail his greeting; but his mother gave him no chance.

"Mrs. Daly came to call on you before you were awake, Allan.—He got through the ordeal very well; don't you think so, Mrs. Daly?"

"As I hope he always will," the old lady answered. She stopped short with a queer choking sound in her throat. "I've come over to apologize to you, laddie," she said; and somehow the Lesser Chum understood that the harshness in her voice was to cover up what it hurt her to say. "I truly am afraid o' fire; but I'm a hundred times more so of Fourth of Julys. Fifteen years ago yesterday the only boy I ever had was killed by a cannon blowing up, in a big celebration."

The Lesser Chum laid down the napkin he had been unfolding, and stared at her, his one available eye full of softened awe. His mother leaned over, and covered the wrinkled hand nearest her with a warm, sympathetic one; but the little old lady slipped hers from beneath, and drew it away.

"Don't pity me!" she said, brusquely. "I can't stand it, even after so long." She turned to the Lesser Chum with a birdlike movement. "It ruther surprised me, your not getting saucy or anything, night before last. I haven't ever lived alongside of children like you and them others, before.—Well, I must be going."

She got up and crossed the dining-room in her quick, nimble way, pausing with her hand on the doorknob.

"Is it true what I hear, that you boys have always wanted a piece of that Cedar avenue park for a base-ball ground?" she asked the Lesser Chum, abruptly.

"Yes'm," he answered, in a puzzled tone, "but Mr. Burns don't want the grass spoiled."

The little old lady sniffed.

"*Don't* he, indeed!" she inquired, satirically. "Sammy Burns is my nephew, and lived with me till he was grown up. Many's the sound spanking I've given him, for his contrary ways." She shot a glance of comical determination over her shoulder. "I guess I'll go down and remind him of 'em, after dinner."

Next morning the Lesser Chum and his amazed play-fellows saw two workmen measuring off a fair portion of the coveted territory, which they directly proceeded to lay out into a regulation diamond. In a week everything was in shape, and baseball going finely. The boys waited on the little old lady in a body, and tendered her their heartfelt thanks for her intervention.

"Even if it hadn't turned out so splendid," the Lesser Chum confided to his mother, jubilantly, "we were all glad we didn't make our fun out of anybody's stuff but our own!"

THE AMERICAN HOME.

FORTIFY the American home. It is the father's kingdom; the child's paradise; the mother's world. Home is the golden setting in which the brightest jewel is "Mother," a true, dear, faithful wife and mother. It is the place where the great are sometimes small and the small often great, where souls relax and life ebbs easily. Home is the center of our affections around which our heart's best wishes twine; the only spot on earth where the faults and failings of fallen humanity are hidden under a mantle of charity; the place men are treated best and grumble most; a world of strife shut out and a world of love shut in; the jewel casket containing the most precious of all jewels—domestic happiness. "May God bless and protect every home" should be the silent prayer of every teacher, parent and citizen. Let the homes and schools be greatly improved, then will civilization receive its greatest impulse toward progress.—*Selected.*

THE first step toward curing a crooked world will be to straighten your own glasses.—*Technical World.*

RECIPE FOR SOUTHERN BATTER BREAD.

Batter bread, as Southern people make it, is very soft, and is meant to be served with a spoon. It is one of the simplest forms of corn bread. It should be borne in mind that Southern people never use wheat-flour in combination with corn-meal. Corn bread with them means bread made entirely of corn-meal, and the meal used for this purpose is invariably fine and sweet; it is ground by the old water-mill process, which means that the entire grain of corn is used, including the kernel. It is the kernel which gives the sweet flavor to corn-meal; this is not obtained in meal ground by the patent roller-process, as the kernel is eliminated.

Following is the recipe, which makes a pan of bread sufficient for four or six persons, according to how liberally it may be served: one cup of corn-meal, two heaping teaspoonfuls of baking-powder, one-half teaspoonful of salt, two eggs, and three cups of milk.

To the cup of corn-meal add the baking-powder and salt, mixing them well through the meal. Break and stir the eggs into the meal *without* beating them; then add the milk slowly at first, until the meal is thoroughly wet and free from lumps; add the remainder of the milk; stir quickly once or twice, and put into a hot oven and bake just twenty minutes. This mixture should be stirred as little as possible, in order that it may be very light. It should be of the consistency of cream when put into the oven, and should be baked in a deep pan, as it will rise to more than twice its original height. Served hot with butter, it will literally melt in the mouth.—*The Circle.*

THE DAILY BATH.

Nowhere is a bath room more needed than on the farm, or in the home of the man who does manual labor, yet nowhere is it more seldom to be found. When men and boys work out in the hot sunshine all day, with perspiration oozing from every pore, they become covered with a coating of dust from without, and effete matter from within, and in order to insure health and comfort, this coating should be removed before one lies down to sleep. If no room can be spared for this purpose, there should be provisions made outside the house, and this can be in the form of a small shed, leanto, or even a tent made of common muslin. But it would be much more satisfactory to have a small building, or shed, where tub, towels, soap and brushes could be kept, and where plenty of water could be stored in a barrel, or small cistern, with an old stove, or other means of heating the necessary amount of water, so that every member of the family could indulge in cleanliness. Such provisions will pay, not only in comfort of the moment, but in improved health. When the men or boys come in from their work, by the time the chores are attended to and the supper eaten, the temptation is very great to at once lie down, or go to bed, and if the bath things are not convenient, they will hardly take the trouble to get them together, heat the water and then take the "wash off." But the sense of refreshment that follows the bath will remove much of the exhaustion, and it should by no means be neglected. One mother used, when her sons were at home growing up, to have the fresh clothes laid out, and the boilerful of water on the stove, and before the supper was eaten, the bodies were washed and the clean clothes put on. The rank smell of the day's perspiration did not offend at the table, and every one felt better. The clothing that was removed was thrown into a tub of water, and left until the next morning, when a few turns at the washing machine made them ready for the tub in which they were scalded, and it was but little work to put them on the line, clean and ready for the evening again. I do not think this added much, if any, to the regular wash-work, for by this means the tablecloth, towels, and bed furnishings kept much cleaner, and much hard rubbing was saved. Ironing? I do not think she ironed the work-shirts; would you have done so? If the boys and girls are to be kept on the farm, they must have the conveniences and comforts, as far as it is possible, that tend to make country life attractive, and for reasons of health, the bath is as necessary as the breakfast. Fuel is not very costly on most farms, and, anyway, the improved health and self-respect of the man and boy who will keep themselves clean will by far outweigh all costs.—*The Commoner.*

SELECTED HOUSEHOLD HINTS.

Add half a cup of milk to water in which old potatoes are to be cooked. The potatoes will be dry and of a nice flavor.

Place lemons on a shelf with a jelly glass over each one. In this way they will keep fresh for a great while.

After washing and drying a comforter, roll it up tightly and beat with a rolling pin or a rug beater, or a tennis racket. It will make it soft and fluffy.

Cream that is too thin to whip can be made to do so nicely by adding the unbeaten white of an egg before beginning to whip. It will become stiff as the richest kind of cream.

Wash lettuce in warm water. The little green bugs will immediately fall off, while cold water makes them cling closer. Dip the lettue leaf by leaf, then plunge into cold water. It will not wilt unless you soak it. This applies to all greens. Spinach and kale easily are done in this way, and all grit is removed.

THE best lemonade is made from lemon syrup. Into the juice of twelve lemons grate the rind of six. Let stand over night. Make a thick syrup of six pounds of white sugar and when cold strain the juice into it. A tablespoonful added to a glass of water makes a delightful drink. A smaller quantity may be made by using half of recipe.

WHEN preserving time comes around rub the bottom of your preserving kettle with two or three drops of olive oil, and the contents will not stick. Catsups and fruit butters that require long cooking can thus be cooked without danger of burning.

PEOPLE find that, though they put plenty of sugar into a fruit pie it is not sweet when baked. The ordinary cane sugar is converted into grape sugar when heated with any acid, and that sugar has only about one-third the sweetening power of cane sugar. But if a little baking powder is added, to the fruit, so as to neutralize the acid, the sugar will retain its sweetness in the cooking.

AN excellent substitute for ice is to take a large, flat bottom bowl of earthenware or granite ware; half fill with cold water; in this set your vessels of milk and sauces; cover with napkins, with their covers dipping down in the water; set the whole thing in a draft if possible. The evaporation keeps everything cool and sweet. Turn a saucer upside down in the water, and set your butter on that, then turn a common flower pot over the butter. It is well to change the water in the middle of the day.

For the Children

THE NAUGHTY BLUEJAY.

"I DO wish I was pretty, like Cousin Eleanore," Dora Bell said wistfully, as she looked at her own plain little face in the mirror.

"My little girl must remember that 'Handsome is as handsome does,' though," Dora's mother answered, smilingly, as she carefully brushed the brick-red curls.

"Yes, but I'd like to be 'handsome is' and 'handsome does' both," Dora said, very decidedly.

Mrs. Bell tenderly kissed the little upturned face.

"But if you want to choose, dear," she asked, "would you rather be good or be pretty?"

Dora was silent. She was thinking very hard.

"Don't answer me now. Tell me to-morrow morning," her mother said.

She finished dressing the little girl for school, and then she told her a nice surprise.

"Grandpa's downstairs, and he's going to walk to school with you this morning."

"Oh, oh!" cried Dora, delightedly.

A few minutes later her grandfather and she started merrily down the street.

It was nearly half a mile to the schoolhouse, and before they had gone a quarter of the distance something happened which Dora will never forget as long as she lives.

They were passing a high brick building, when they suddenly saw a beautiful bird perched upon the branch of a mapletree ahead of them.

"Oh, Dora! look at the pretty bluejay," grandpa said, quietly.

It was a bird not quite so large as a dove, perhaps, but very handsome.

Dora, who dearly loved beauty in all its forms, feasted her eyes upon it. Its feathers were an exquisite shade of blue, just the shade Dora liked, and, oh, what a dear little crest adorned its head! Suddenly the bird flew restlessly to another tree, and then to another, and back again.

"The noise is alarming those sparrows," grandpa said, softly, as he pointed upward. "Look! Look!"

Almost before the words were out of his mouth the thing was happening. The bluejay had discovered the sparrows' nests on the window cornices of the high building. Quick as lightning it flew up to them and began tearing them down. The father and mother sparrows were crazy with grief and fear. They chattered and scolded and pleaded; but the bluejay was relentlessly cruel. It tore down nests, destroyed eggs, tumbled out unfeathered birdlings to the pavement, and killed right and left without mercy. When it had done all the harm it could do there, it flew off in search of other mischief.

"The bluejay is one of the most cruel birds we have," grandpa said, as he and Dora resumed their walk. "He has no friends among birds. He has one useful trait. Like nearly all birds, he does destroy many injurious insects. He is a great coward, fights only with weaker birds than himself, and runs even from his equals. He spends nearly his whole time looking for the nests of birds smaller than himself. When he has found them he does just what you saw him do this morning. Whenever you notice a bluejay make his appearance in the neighborhood, you will presently hear all the other birds cry and scream with fright."

"What a hateful thing!" Dora exclaimed, indignantly.

"He's very beautiful," grandpa said, admiringly, as the bluejay flew in front of them again.

"I think I'd rather be good than beautiful, though," the little girl replied softly under her breath.—*Southern Churchman.*

THE RURAL LIFE

HE'S NONE THE WORSE FOR THAT.

What though the homespun suit he wears.
Best suited to the sons of toil—
What though on coarsest food he fares,
And tends the loom, or tills the soil—
What though no gold-leaf gilds the tongue,
Devoted to congenial chat—
If right prevails, and not the wrong,
The man is not the worse for that.

What though within his humble cot
No costly ornament is seen—
What though his wife possesses not
Her satin gowns of black and green—
What though the merry household band
Half naked fly to ball and bat—
If Conscience guides the heart and hand,
The man is none the worse for that.

True worth is not a thing of dress—
Of splendor, wealth, or classic lore;
Would that these trappings we loved less,
And clung to honest worth the more!
Though pride may spurn the toiling crowd,
The faded garb, the napless hat,
Yet God and Nature cry aloud —
The man is none the worse for that.

—Scrap Book.

THOUGHTS ON STACKING AND THRESHING GRAIN.

D. Z. ANGLE.

In the community of small farms where wide diversity of crops is practiced as is the case here in Southern Illinois, stacking before threshing grain is preferable to threshing from shocks. By this means the farmer can do a large amount of his own work, without hiring so much help. Then when threshing is in progress rain will not cause so much delay as when time must be given for shocks to dry off. Shock threshing also requires many more teams; among them maybe some scary colts which require extra care and watchfulness detaining work around the machine. Only a team or two is necessary to use, sometimes none needed in threshing stacks, if grain is emptied in bins close to machine.

Where crops are extensive and especially in dry seasons it probably pays best to thresh direct from shock which means handling grain about once instead of twice. But in wet weather or a rainy season, there is better chance for each farmer to stack his grain between showers and get it under cover than for men of a whole neighborhood all combined threshing one job in field, all to be stopped for hours or days by rain. Thus threshing can go on more rapidly from stacks than when scattered over fields, and so much more time is required for it to become fit to haul and thresh. The shocks present a wider surface or area to the rain and do not shed the water and protect the grain so well from the rain as properly built stacks.

We usually put three to six loads of grain in stacks. But size of stack depends somewhat upon size of crop. Small stacks are more easily built, especially easier on pitcher, but large ones shield better and protect more grain, and may save time in building, because requiring but one topping out, for possibly double the amount of grain the small stack may contain.

The foundation of a stack should be placed on level ground, but if on sloping ground, we build up the lower end or side with extra layers of sheaves until it is as high or a little higher than the other side, keeping middle of stack up level if below bulge, slightly oval above bulge, and regularly laid and bound with sheaves same as outside layer. We usually bulge stacks from the ground five to seven feet up and outward at an angle of eighty to ninety degrees. Under this bulge the long end of sheaves of each outside layer are turned upward in laying. Above bulge as high as desired turn sheaves of outside layers so they will shed water and draw in gradually. In a stack of five loads we usually put two loads under the bulge. The stack should be topped when it is drawn in to a width of three or four feet, depending some on length of sheaves.

In topping begin at end farthest from where machine is to set, lay two or three sheaves down lengthways of stack so as to form a sharp ridge or cone. Now shock on each side of these sheaves two rows of straight sheaves with their heads meeting over ridge, their lower ends extending to outer edges of stack. These sheaves should be placed firmly together and over them lay two or three layers or rows of cap sheaves. Continue this operation of laying down straight sheaves in middle and parallel with stack, followed by shocking of straight sheaves and caps until top is completed and rendered sufficiently oval or roof-like to turn off the rain.

Mt. Vernon, Ill.

THE OWNER OF THE SOIL.

THE following is the opinion of Edward Everett Hale, the cultivated and scholarly American clergyman, professor, lecturer, diplomat and statesman. Anyone who owns a farm or loves the soil will appreciate his words:

The man who stands upon his own soil, who feels that, by the law of the land in which he lives, he is the rightful and exclusive owner of the land which he tills, feels more strongly than another the character of a man as lord of an inanimate world. Of this great and wonderful sphere, which, fashioned by the hand of God, and upheld by his power, is rolling through the heavens, a part is *his*—his from the center to the sky! It is the space on which the generation before moved in its round of duties, and he feels himself connected by a visible link with those who follow him, and to whom he is to transmit a home.

Perhaps his farm has come down to him from his fathers. They have gone to their last home; but he can trace their footsteps over the scenes of his daily labors. The roof which shelters him was reared by those to whom he owes his being. Some interesting domestic tradition is connected with every enclosure. The favorite fruit-tree was planted by his father's hand. He sported in boyhood beside the brook which still winds through the meadow. Through the field lies the path to the village school of earlier days. He still hears from the window the voice of the Sabbath-bell, which called his fathers to the house of God; and near at hand is the spot where his parents lay down to rest, and where, when *his* time has come, he shall be laid by his children.

These are the feelings of the owners of the soil. Words cannot paint them—gold cannot buy them; they flow out of the deepest fountains of the heart; they are the very life-springs of a fresh, healthy and generous national character.—*The Pathfinder.*

"GREATER NATIONAL DAIRY SHOW."

Oct. 10-19, 1907.

THE decision of the executive committee in locating the next meeting of the National Dairy Show at the Union Stock Yards in the great exposition building, was an official act of the greatest importance and shows conclusively the sagacity and good judgment of the men on whom was placed the responsibility of directing the affairs of the National Dairy Show Association.

This decision meant much to the dairy interests of the country and will be regarded as a cause for congratulation on the part of everybody who is in any way interested in this great industry and its farther development.

This place is ideal for many reasons. The size of the building, its exhibit space, its seating capacity, its arena for cattle judging, its large assembly hall, its many committee and lecture rooms, its comfortable and convenient cattle stalls, its convenience to feed for stock, its side-track facilities for shipping and unloading live stock and merchandise right at the show, the splendid hotel accommodations within a block of the building and its accessibility to and from all parts of the city through the most complete transportation advantages, all combine to make the place an attractive one and will be a strong and prominent factor in the success of the second national dairy show.

The building is 600x310 feet, there will be 30,000 square feet (exclusive of aisles) substantially prepared and arranged for exhibits of all kinds of modern appliances and improved machinery used in the dairy, on the farm, in the creamery, in milk plants and ice cream factories, as well as such as are used as adjuncts or in close relationship to dairying.

Among the many interesting exhibits, there will be working dairies, sanitary milk plants and educational exhibits made by the U. S. Department of Agriculture and the National Association of Dairy Instructors and Investigators.

The location of this building is 43rd and Halstead Sts., and the facilities for reaching it are probably not exceeded by any other point in the city of Chicago. All car lines that do not go direct there, make connections with some car line that does and a transfer can be obtained, making the cost of getting to the exposition building from anywhere, within the city limits of Chicago by street car, five cents. In addition to this, there is elegant steam car service from the La Salle St. station. It is assured that the elevated railroad will be running within a block of the building by the time the show opens.

The National Corn Exposition will be held at the same time and will co-operate with the National Dairy Show Association to secure special low rates on all railroads and the two shows combined will bring more agriculturists to the city than have ever been congregated there at any one time. Every corn grower is interested in dairying and every dairy farmer should learn more about growing corn.

Information desired may be had by addressing E. Sudendorf, Secretary, National Dairy Show Association, No. 154 Washington Street, Chicago, Illinois.

AMERICAN FARMERS ON THE CANADIAN PRAIRIES.

THE part which the American settler has played in the discovery of Western Canada as the land of opportunities is a frequent subject of discussion in the press both of the United States and Canada. Certain writers for United States publications with a weakness for picturesque effects have represented the "American invasion" as the sole cause of the transformation. This is, of course, an exaggeration, pardonable under the circumstances. The current of

American immigration has been a potent factor in the West's development, but it has been induced, encouraged, directed, and utilized by Canadian governmental and railway agencies for the furtherance of great plans. It has given Canada over a quarter of a million of settlers with the highest average of efficiency. They, almost without exception, have sufficient capital to make a good start, a most important consideration in a new country where money is scarce and dear. Akin to the Canadians in race, language, political and social customs, they become a part of the community just as naturally as one stream flows into another at the same level.

These settlers have also brought with them fifty years' experience in prairie farming, and by their example have enormously affected agricultural methods. Large districts which had been tabooed by the Canadian settlers have become prosperous and populous because the American newcomer showed himself competent to raise immense harvests upon land erroneously regarded by the first settlers as semi-arid. The greatest business which has been accomplished in the West was the purchase five years ago of hundreds of thousands of acres of land of this character by an American land syndicate from a Canadian railway and the Dominion Government at from $1.00 to $1.50 an acre. This land ran for one hundred miles on both sides of a railway, yet after nearly twenty years it remained a wilderness. Free homesteads within this belt offered by the government met with no takers. This district is now one of the best-settled parts of Saskatchewan, and land is held at high prices. This syndicate of American speculators found their knowledge of western land a highly remunerative asset.—*From "Western Canada: Its Resources and Possibilities," by John W. Dafoe, in the American Monthly Review of Reviews for June.*

GROWING SWEET HERBS FOR PROFIT.

It was the thrifty sage plants in my garden that first made me decide to grow herbs for profit, and it was with sage that I made my first success.

Every fall and winter when the farmers about, killed their pigs, the wives came to me for sage to season sausage. None of them seemed able to grow sage, although I had often given them plants from the long row in my garden.

They thought me very stingy when I hinted that the stores would pay twenty cents a pound for the dried leaves, but I sold one year's entire cutting to the stores and they had to buy it there at about double the price they were willing to pay me for it.

The mistake most women make in growing herbs is in planting them along walks and fences, where they cannot be cultivated, and in never sowing or striking fresh cuttings to renew the rows. They are apt, too, if they are very anxious to succeed, to make the soil too rich.

My sage is grown in rows along the center of my garden in full sun, where I can have it plowed and hoed when the vegetables are cultivated. It forms by the second and third years great bushes two and three feet high. The third year I sow a fresh lot of seed and divide some of the old plants to form new rows. When these are large enough to clip I pull up the old plants and throw them away.

I cut my sage twice in a season only; once in spring, when the young shoots are about three inches long, and again in September just before frost. The leaves are dried carefully in the shade and then packed in pound and half-pound boxes.

Most of the other herbs can be grown just as sage is. A few of them, like peppermint, love moist, sunny places, and these I have growing around a meadow spring.

But in my sunny, hilltop garden grow rosemary, thyme, southernwood, wormwood, hoarhound, balm, lavender, sweet basil, tarragon, spearmint, English pennyroyal, tansy and other less important herbs. Nearly all of them can be cut twice and sometimes three times a year. Next to sage, lavender is most profitable, then the mint, tarragon and tansy. The lavender I put up in fancy ways for sachets. It is harder to grow than some other herbs until well established.

Most herbs and aromatics draw their nurture directly from clay, sand and chalk. Rich vegetable soils do not seem to suit them as well as fields where little else will grow. In deep, fertile earth the plants grow large and leafy but yield far less volatile oil and are not so fragrant or strong in flavor. A dressing of sand, sifted coal ashes, or spent lime is good for herb beds.

Sage and other herb plants should be set in showery spring weather, in rows fifteen inches apart, thinning them, as they grow to stand about a foot apart.

Herb beds can easily be grown from cuttings before hot, dry weather comes on, if watered and shaded well until the cuttings root.

Pinch out the buds of shorts for straggling growers, to make full, shapely, leafy plants. To have good plants year after year cut out the tender top and side shoots, and cut just before flowering for kitchen use and about ten o'clock when the leaves are dry and full of aroma. Dry the leaves in the shade and keep them in paper bags or close tin boxes. Dealers prepare herbs by grinding them to a powder, saving by this method every fragment usable. For her own use, the housewife will find it better to keep the leaves uncrushed, as they lose strength when powdered.—*Hannah Talcott, in Vick's Magazine.*

STUPID CELEBRATION.

Is it wise to train the small boy to take selfish delight which inflicts needless and cruel discomfort upon others? Is it wise to encourage him in the invasion of others' rights—and this on Independence Day, the day of all days in the year sacred to the principle of equality of individual rights under the law?

The stupidity of a celebration consisting of mere noise is becoming clearer year by year. The pistol and the cannon have been outlawed. Next year, perhaps, the vulgar explosive cane will go, and then the loud and dangerous firecracker. Unnecessary noise in a great city is brutality—even on the Fourth.—*Milwaukee Evening Wisconsin.*

EVERY duty we omit obscures some truth we should have known.—*John Ruskin.*

FUNNYGRAPHS

WATER MILLION TIME, COME ON!

Roses has all faded like a dream,
Sunflowahs is liftin' foh to bloom;
Grain crops gathered an' de hay is down,
Fireflies a-twinklin' in de gloom.
Cawn all tasseled an' de crabgrass grown.
Mornin' glories bloomin' in de cawn;
Something is a-missin' f'om de summer scene—
Water million time, come on!

Doan yuh be bashful now. What yuh waitin' foh?
Why you a-tarryin' jes' behin' de hill?
Come on, an' greet you' frien's waitin' in de shade,
Come, we're a-grievin' with longin' fit to kill.
Roastin' ears a-goin' to get here almost any day,
Garden sass is faded now and gone.
I's a-peerin' an' gazin' down the dusty road;
Water million time, come on!

—Selected.

USUAL CASE.

"Hello, Blinks! You're looking awfully run down, old man. You really ought to take a vacation."

"Huh! I'm just getting back from it. That's what's the matter with me."

BRIGHT HOPES.

"Our baby is goin' to be one o' them big financiers," remarked Mrs. Simplissimus.

"What makes you think so?" asked the proud father.

"He's got an ache caused by swallowing the string that I tied to his rattle, and if that ain't a case of undigested securities I don't know nothin' about this financial game."

Optician—"I cannot sell your spectacles for your husband. He must come for them in person. What is the nature of his visual defect?"

Woman—"A 5-cent piece looks bigger to him than a $5 bank note to other people."

DID NOT KNOW HIS MOTHER.

Scottish folk are proverbially canny and prudent in money matters, and the following shows that the younger generation is no exception to the rule.

A teacher in a Lowland school was taking mental arithmetic with a class of boys. She asked one urchin:

"How much would your mother give you to buy four pounds of tea at one and six a pound?"

"We ne'er get sae much at ainee as that, mem."

"Never mind that. Four pounds at one and six?"

"But we canna afford the one and six, mem. We always hae the one and twa."

"Answer the question. What would she give you to pay for four pounds of tea at—"

"Naethin', mem."

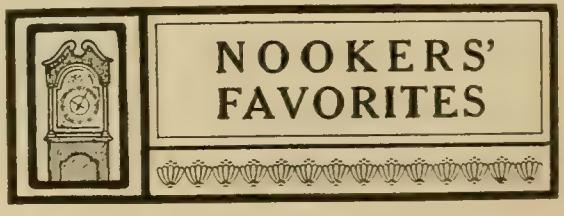
"What do you mean by 'nothing?'"

"She'd na' gi'e me ony bawbees. She'd tell me tae ask the man tae pit it doon."

"Oh, dear! Oh, dear! But supposing she did?"

With a pitying smile came the reply: "A' can see y've ne'er met ma mither, mem."

"Freddie, you shouldn't laugh out loud in the schoolroom," exclaimed his teacher.



"I didn't mean to do it," apologized Freddie. "I was smiling, when all of a sudden the smile busted."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED.—Active young members to build up a church and make homes at Lomita, Cal.—M. M. Eshelman, Wilcox Bldg., Los Angeles, Cal.

"KENTUCKY BELLE."

We had moved to the cornlands, stranger,
Up from the Tennessee;
We had made a home on the prairies,
A home like this you see.
Yet it never seemed like home, sir;
It never would to me,
For I kept longing, longing,
For the hills of Tennessee.

O, for the sight of water,
The shadowed slope of a hill!
Clouds that hang on the summit,
A wind that never is still!
But the level land went stretching
Away to meet the sky—
Never a rise, from north to south,
To rest the weary eye!

From east to west, no river
To shine out under the moon;
Nothing to make a shadow
In the yellow afternoon
Only the breathless sunshine,
As I stood out, all forlorn,
Only the "rustle," "rustle,"
As I walked among the corn.

NEFF'S CORNER

Had I space here sufficient, I could give the testimonials of many people who have come to Pecos Valley and have done well. Below I give space to one. Others may follow at some future time. The town Hagerman mentioned in the letter is 9 miles north of Lake Arthur. The letter follows:

"I came to the Pecos Valley four years ago, more on account of the health of my family than anything else. I bought an improved farm of 170 acres close to the town of Hagerman and have found it a profitable investment ever since. Our health has been restored and we feel this place is good enough for us.

"My farm was all seeded to alfalfa and the first year of my residence here we harvested something over 800 tons, going over the ground four times; this hay sold from $8 to $11 a ton. The second and third seasons did practically as well in the hands of a renter, who was willing to pay $9 cash rent per acre.

"Last year I set out 35 acres of apple orchard which I think in a few years will pay better than alfalfa. There is no place on earth where apples can be raised so well and easily as in the Pecos Valley.

Mrs. Nellie Y. Brown."

Where such conditions as above indicated prevail, wise investments in either town property or agricultural lands are likely to be very profitable. For further information address:

JAMES M. NEFF,
Lake Arthur, New Mexico.

FREE SAMPLE

Send letter or postal for free SAMPLE HINDOO TOBACCO HABIT CURE

We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford Indiana. We answer all letters.

CAP GOODS

Sisters, when in need of Cap Goods remember you can be accommodated by the undersigned. Satisfaction guaranteed. Send for samples and Price List FREE. I make a discount to the Aid Societies. Mention the Inglenook.

MARY A. BRUBAKER,
Box 331. Virden, Illinois.

JOSEPHUS

Complete works of Flavius Josephus, the learned, auth :tic Jewish historian and celebrated warrior. To this are added seven dissertations concerning Jesus Christ, John the Baptist, James the Just, God's Command to Abraham, etc. This is the translation of Wm. Whiston, A. M., with an introduction by the Rev. H. Sebbing, D. D.

Gospel Messenger to January, 1908,	$0.75
The Other Half of the Globe,	1.50
Brethren Family Almanac,	.10
The three are worth,	$2.35
All to new Subscribers for only	.95

We want to add 5,000 new subscribers to our list. We can do it if you will help us. If you are not a subscriber, send your subscription to-day. If you are, then tell your friend who is not a subscriber of this offer. The Book alone is worth much more than we ask for the combination. If you have a copy of the Book, you can tell them of its value.

The Other Half of the Globe

BY

D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

When I fell sick with pining,
We didn't wait anymore,
But moved away from the cornland;
Out to the river shore—
The Tuscarawas, it's called, sir—
Off there's a hill, you see
And now I've grown to like it
Next best to the Tennessee.

I was at work that morning;
Some one came riding like mad,
Over the bridge and up the road—
Farmer Rouff's little lad.
Bareback he rode; he had no hat;
He hardly stopped to say:
"Morgan's men are coming, Frau;
They're galloping on this way.

"I'm sent to warn the neighbors,
He isn't a mile behind;
He sweeps up all the horses—
Every horse that he can find.
Morgan, Morgan, the Raider,
And Morgan's terrible men,
With bowie knives and pistols,
Are galloping up the glen!"

The lad rode down the valley,
And I stood still at the door;
The baby laughed and prattled,
Playing with spools on the floor.
Kentuck was out in the pasture;
Conrad, my man, was gone.
Nearer, nearer, Morgan's men
Were galloping, galloping on!

Sudden I picked up baby
And ran to the pasture bar.
"Kentuck," I called; "Kentucky!"
She knew me ever so far.
I led her down the gully
That turns off there to the right,
And tied her to the bushes;
Her head was just out of sight.

As I ran back to the loghouse
At once there came a sound—
The ring of hoofs, galloping hoofs,
Trembling over the ground.
Coming into the turnpike,
Out from the White Woman glen,
Morgan, Morgan, the Raider,
And Morgan's terrible men.

As near they drew and nearer,
My heart beat fast in alarm;
But still I stood in the doorway,
With baby on my arm.
They came, they passed with spur and whip,
In haste they sped along.
Morgan, Morgan, the Raider,
And his band, six hundred strong.

Weary they looked and jaded,
Riding through night and through day;
Pushing on east to the river,
Many long miles away,
To the border strip where Virginia
Runs up into the west,
And ford the Upper Ohio
Before they could stop to rest.

On like the wind they hurried.
And Morgan rode in advance;
Bright were his eyes, like live coals,
As he gave me a sideways glance.
And I was just breathing freely,
After my choking pain
When the last one of the troopers
Suddenly drew his rein.

Frightened I was to death, sir;
I scarce dared look in his face,
As he asked for a drink of water
And glanced around the place.
I gave him a cup, and he smiled;
'Twas only a boy, you see;
Faint and worn, with dim, blue eyes,
And he'd sailed on the Tennessee.

Only sixteen he was, sir;
A fond mother's only son,
Off and away with Morgan
Before his life had begun!
The damp drops stood on his temples;
Drawn was his boyish mouth;
And I thought me of the mother
Waiting down in the South.

Oh, pluck was he to the backbone
And clear grit through and through;
Boasted and bragged like a trooper,
But the big words wouldn't do.
The boy was dying, sir, dying,
As plain as plain could be;
Worn out by his ride with Morgan
Up from the Tennessee.

But when I told the laddie
That I, too, was from the South,
Water came in his dim eyes
And quivers around his mouth.
"Do you know the Blue Grass country;"
He wistful began to say;
Then swayed like a willow sapling
And fainted dead away.

I had him into the loghouse.
And worked and brought him to.
I fed him and coaxed him,
As I thought his mother'd do.
And when the lad got better,
And the noise in his head was gone,
Morgan's men were miles away,
Galloping, galloping on.

"Oh I must go," he muttered,
"I must be up and away!
Morgan, Morgan is waiting for me!
Oh, what will Morgan say?"
But I heard a sound of trampling,
And kept him back from the door—
The ringing sound of horses' hoofs,
That I had heard before.

And on, on came the soldiers—
The Michigan cavalry—
And fast they rode and black they looked,
Galloping rapidly,
They had followed hard on Morgan's track;
They had followed day and night.
But of Morgan and Morgan's Raiders
They had never caught a sight.

The rich Ohio sat startled
Through all those summer days,
For strange, wild men were galloping
Over her broad highways;
Now here, now there, now seen, now gone,
Now north, now east, now west,
Through river valleys and cornland farms,
Sweeping away her best.

A bold ride and a long one!
But they were taken at last.
They almost reached the river
By galloping hard and fast;
But the boys in blue were upon them
Ere ever they gained the ford,
And Morgan, Morgan, the Raider,
Laid down his terrible sword.

Well, I kept the boy till evening—
Kept him against his will—
But he was too weak to follow,
And sat there pale and still.
When it was cool and dusky—
You'll wonder to hear me tell—
But I stole down to that gully
And brought up Kentucky Belle.

I kissed the star on her forehead—
My pretty, gentle lass—
But I knew that she'd be happy
Back in the old Blue Grass.
A suit of clothes of Conrad's,
With all the money I had.
And Kentuck, pretty Kentucky,
I gave to the wornout lad.

I guided him to the southward
As well as I knew how.
The boy rode off with many thanks
And many a backward bow,
And then the glow it faded,
And my heart began to swell,
As down the glen away she went,
My lost Kentucky Belle.

When Conrad came in the evening,
The moon was shining high;
Baby and I were both crying—
I couldn't tell him why.
A battered suit of rebel gray
Was hanging on the wall,
And a thin old horse with drooping head
Stood in Kentucky's stall.

Well, he was kind and never once
Said a hard word to me.
He knew I couldn't help it—
'Twas all for the Tennessee.
But after the war was over,
Just think what came to pass—
A letter, sir, and the two were safe
Back in the old Blue Grass.

The lad had gone across the border,
Riding Kentucky Belle;
And Kentuck, she was thriving and fat,
And hearty and well.
He cared for her and kept her,
Nor touched her with whip or spur.
Ah, we've had many horses, sir,
But never a horse like her'

—**Author** unknown.

Fifty acres of the best corn land in Iowa or Illinois.

An absolutely certain yield from it every year of 60 bushels per acre (supposing some yet undiscovered fertilizer were applied which would make this yield certain.)

A price guaranteed by government of 40c a bushel, paid right on the farm.

This would make an income of $24.00 per acre, or $1200 on the 50 acres.

Suppose the price to be $100 per acre, which would be cheap enough for such land, or $5000 for 50 acres. Any corn man would jump at such a chance.

This income of $1200 is the very highest that could possibly be expected. It is several shades above the average, especially when considering occasional poor crops, freight charges, etc. And yet, even considering these things, this corn land is among the best land in the world and millions of dollars are made on it every year. If a man has a good corn farm in Iowa or Illinois he thinks he is pretty well fixed.

OR

20 acres of Hazelwood irrigated land.

An absolutely certain yield (with irrigation) of from 6 to 8 tons of alfalfa per acre in 3 cuttings. (One cutting of 2 1-2 tons has already been raised without irrigation.)

A price of from $10 to $12 per ton in the stack, owing to its being only a two hours' wagon haul to Spokane. (It has never been less and often more. Alfalfa is retailing now in Spokane for $15 to $17 per ton.)

Taking 6 tons per acre (the lowest yield) at $10 per ton (the lowest price), the income on 20 acres would be $1200.

Price $250 per acre, or 20 acres for $5000.

This income of $1200 on alfalfa is bedrock, the very lowest that can be expected, if the land is properly handled. That makes it an absolutely safe investment. It is as certain as 2 per cent on government bonds.

By raising fruit or vegetables several times as much can be made. From $300 to $500, and even as high as $700 per acre, has been made on land no better than this, and, considering the market, not so good.

The leading nurseryman of the northwest has bought 20 acres at Hazelwood for a nursery, as he considers it the best fruit land in the state.

Only 4 1-2 miles from Spokane, one of the best markets in the world. A sure market and no freight to pay.

Which is Better?

The **lowest** income on Hazelwood land equals the **highest** income on the corn land. If farmers get rich on the corn land, what can they do at Hazelwood? Write us and we will mail you a fine lithographed map, showing where this land is and all about it. EASY TERMS.

Elgin, Illinois.

You Can Easily Operate This Typewriter Yourself

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos— or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on **any** kind, size or thickness of paper, and **space** any way you want on

The OLIVER Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the **simplified** typewriter. And you can see every word you write. About 80 **per cent more durable** than any other typewriter, because it has about 80 per cent **less wearing points** than most other typewriters.

80 per cent **easier** to write with than these other **complicated, intricate machines** that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-size documents except you buy expensive **special** attachments requiring experts to operate.

You can adjust the OLIVER to any **reasonable space**—you can write on **any** reasonable size and thickness of paper, right out to the very edge, without the aid of **any expensive attachment** or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the **simplified** features of the OLIVER.

E. RINEHART, M. D.
Cancer Specialist.

CANCER

CURED WITHOUT SURGERY OR PAIN

Our latest book which we will send free of charge tells all about Cancer and all chronic and malignant diseases, and how they can be cured at home quickly and at small expense. Reference, patients cured in every State and Territory, ministers and bankers. Office, No. 50 West Walnut Street.

Address, Drs. Rinehart & Co., Lock Box 20, Kokomo, Indiana.

DR. J. S. FLORA,
Ex-U. S. Examining Surgeon,
Specialist in the Cure of Chronic Diseases.

Scirrhus Cancer of the Breast.

Has been cured for four years and no signs of return. I had a lump the size of a walnut in my left breast for over a year which gave me a great deal of annoyance from sharp pains darting in and around the lump. Seeing that something must be done I consulted several physicians, some advising me to have it removed with the knife, To this I never could consent. While thinking the matter over I learned of Drs. Rinehart & Co. curing cancer without pain. I used three months of their treatment and can truthfully say for mankind that I am perfectly well. I suffered no pain in the least while under their treatment not even breaking the skin. Hoping this will be of some benefit to suffering ones,

Most respectfully,
Mrs. Sarah Miller,
Waupecong, Ind.

Mrs. Sarah Yoder, of Cora, Oklahoma, cured of Cancer of right cheek.

John Slabah, of Conway, Kansas, cured of cancer of the upper lip.

Sherman Hollingsworth, of Russiaville, Ind., cured of cancer of the right cheek.

D. D. Boyd, of Armstrong Ave, Kokomo, Ind., cured of cancer of the neck.

Mrs. Henry Reiber, of Kokomo, Ind., cured of cancer of the nose.

Noah Troyer, Kokomo, Ind., cured of cancer of the back.

Cancer of the Breast Cured.

In behalf of the people who may be afflicted with cancer as I was, and are in need of a real cure by honest physicians, I will say that I had that dreaded disease for about five years. The last year of this time I suffered from a sharp gnawing pain extending from my left breast in all directions and a large lump was formed the size of a half dollar and an inch in thickness.

Words could not express the pain that extended down my arm, but thanks be to God after taking treatment from Drs. Rinehart & Co. for about four months the lump in my breast was entirely gone. The pains also left my breast and I feel so thankful to the Doctors, and the good Lord that I am entirely well. I assure the people and all concerned that this is my true and voluntary statement. I feel that I must tell to those afflicted with Cancer that Drs. Rinehart & Co. cured me without pain or even breaking the skin. This is a true statement of my case and am willing to help anyone to a cure,

Respectfully,
Mrs. Ida C. Dinius,
Dec. 26, 1905. 64 Main St., Huntingdon, Ind.

Michael Troyer, of Twinsburg, Ohio, cured of cancer of the cheek.

Mrs. Rev. Daniel Miller, Greentown, Ind., cured of cancer of the nose.

Mrs. A. R. Rife, of Amboy, Ind., cured of cancer of both sides of the cheek and nose.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

For particulars and cheap rates apply to

Corresponding rates to other points in related territory.

Favorable stop-over privileges at and west of Pocatello, Idaho.

Stop-over of five days at all points in California **except San Francisco and Los Angeles** on tickets to California destinations.

STOPOVER PRIVILEGES

GOING TRIP—Going trip must begin on date of purchase of ticket and stopovers may be had at any point enroute prior to midnight of "Going Transit Limit" as shown above.

RETURN LIMIT—The Joint Agent at destination of ticket (or at any intermediate Pacific Coast point where joint agency may be maintained) will make good ticket for return passage by attaching validation certificate, for which service a fee of 50 cents will be collected. After ticket is validated, stopover may be had at any point enroute within the "Final Return Limit," as shown above. Passengers desiring to stop off, should notify conductors when presenting ticket.

BAGGAGE—The usual free allowance of baggage (150 pounds on full tickets and 75 pounds on half tickets) may be checked going or returning to any point at which stopover is permitted.

FREE SIDE TRIPS

To holders of tickets via Union Pacific R. R. to Ogden or Granger, sold at rates named herein, following free side trips will be given:

From Denver to Colorado Springs or Pueblo and return. (Apply to Union Depot Ticket Agent or to General Agent, 941 17th St., Denver, Col.)

Ogden to Salt Lake City and return. (Apply to conductor into Ogden or to Union Depot Ticket Agent, Ogden.) In connection with this side trip, free Pullman seat checks will be furnished passengers holding Standard Pullman car tickets.

YELLOWSTONE PARK SIDE TRIP

Side trip tickets from Ogden or Pocatello to and through Yellowstone Park including five and one-half days' hotel accomodations as well as railroad and stage transportation, will be sold for $55.00. Side trip tickets covering rail and stage transportation only will be sold for $28.00. Park season will be from June 10 to September 19. Apply to Ticket Agent either at Ogden or Pocatello. Passengers holding through sleeping car tickets will be furnished sleeping car stopover checks on application to the Pullman conductor.

OPTIONAL ROUTES

All tickets reading via the Union Pacific Railroad to Ogden or Granger will be honored via Julesburg Line and Denver or via the direct line through Cheyenne, at option of holders.

Proportionate rates from all points East. Be sure to buy your ticket over **THE UNION PACIFIC RAILROAD** known as the **Overland Route,** and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

Farming Lands in California can be bought from $25 to $40 per acre. Printed matter free. Write to

GEO. L. McDONAUGH, Colonization Agent,
UNION PACIFIC RAILROAD,
OMAHA, NEBRASKA.

Title to Lands in Butte Valley

As some inquiries have been made of the California Butte Valley Land Company in regard to the title to the land in Butte Valley and also in regard to the form of deeds made by Mr. William H. McDoel and delivered through the California Butte Valley Land Company, a short statement covering these questions may be of interest to those contemplating the purchase of land.

In the first place the title is not merely a good merchantable title, but it is, in fact, and without doubt, a perfect title. It is a perfect title because it comes from the United States Government, and all parties appearing at any time from the records to have any interest in the property, have conveyed such interests, so that no claim of adverse title to any of this property subsists in any one.

Patents were issued to nearly all of this land by the United States of America to E. H. Miller, Jr., of Sacramento County, California, on December 30, 1870. The legal title thus became vested in said E. H. Miller, Jr.

On December 18, 1893, a decree of final distribution was entered in the estate of said E. H. Miller, Jr., and by this decree the legal title was vested in Mary Elizabeth Holton, the daughter of said E. H. Miller, Jr.

On January 2, 1903, said Mary Elizabeth Holton conveyed all of said lands to A. D. Shepard of San Francisco, thus vesting in him the legal title.

It appeared from the records that B. B. Redding during his lifetime was the owner of an undivided one-seventh equitable interest. This interest was on December 5, 1892, conveyed to said E. H. Miller, Jr., by A. P. Redding who had acquired his father's title through proper probate proceedings

It also appeared in the probate proceedings in the estate of the late United States Senator Leland Stanford that he held an undivided five-twenty-eighths interest. His title, however, was merely an equitable, as distinguished from a legal, title. This equitable interest was vested in the widow, Jane L. Stanford, who conveyed to the trustees of Leland Stanford Jr. University and they, in return, conveyed it to the said A. D. Shepard.

In addition to this, deeds were obtained from all other parties holding any equitable interest or title, but of whose interest or title nothing appeared of record.

The parties last mentioned have been among the most prominent in the history and development of the State of California and are as follows:

H. E. Huntington and Arabella D. Huntington, Crocker Estate Company, Edward F. Searles and Thomas H. Hubbard, Pacific Improvement Company.

The various fractional equitable interests thus conveyed added together made up the entire equitable interest so that at the time of the conveyance by said A. D. Shepard to William H. McDoel on January 31, 1907, the entire equitable, as well as the legal, title to said land was vested in said A. D. Shepard and by him conveyed to William H. McDoel.

After the contract for the purchase of this land was made with A. D. Shepard, the California Butte Valley Land Company had the title examined by Messrs. Knight & Heggerty, one of the leading law firms of San Francisco, and they pronounced the title free from all objection.

The Title Insurance & Guaranty Company of San Francisco, one of the safest and largest Title Insurance Companies in California, issued a guarantee policy of insurance to Mr. McDoel at the time of the transfer of title to him. Before doing so the Title Insurance & Guaranty Company had the title carefully examined by their corps of skilled and experienced attorneys who make a specialty of California titles and devote all their time to matters of this kind. Had they found any defect in the title, the Company would, of course, have declined to issue a policy and make the Company liable for a great many thousands of dollars, as it is a well known fact that Title Insurance Companies always refuse to issue guarantee policies where there is any substantial defect in the title.

In addition to this Mr. Lewis W. Parker, of the law firm of Parker & Hagan, of Chicago as the personal counsel of Mr. McDoel, went to California for the purpose of investigating the title and spent several weeks in San Francisco and Siskiyou County in making a most thorough and painstaking examination. It is needless to say that the result of Mr. Parker's investigation was entirely satisfactory, otherwise he would not have paid the purchase money to Mr. Shepard and taken a conveyance of the land to Mr. McDoel.

The form of deed used in making conveyances from Mr. McDoel to purchasers is the usual and customary California deed of grant, bargain and sale. This is the highest and best form of deed in California and holds the same relative position in California that the ordinary form of warranty deed holds in the central and eastern states. It is the same form used in the deed from Mr. Shepard to Mr. McDoel. Warranty deeds are not used in California, and the books of the Recorder of Siskiyou County, and other counties of California, are especially prepared for the recording of Grant, Bargain and Sale deeds. That is, the printed portions of these deeds are printed in these record books. In preparing the form of printed deeds for our purchasers we were careful to use this same form.

The form of acknowledgment is that provided by Section No. 1189 of the Civil Code of California.

Under the laws of California a wife has no dower interest in the property of her husband. There are two classes of property recognized by the California law called "separate" property and "community" property. A wife has the right to convey her separate property without the consent of her husband and the husband has the right to convey his separate property without the consent of his wife.

Section No. 172 of the Civil Code of California provides that the husband has absolute power to dispose of, sell and convey community property, the only limitation on this right being that he cannot give it away without the consent of his wife.

For these reasons it is neither necessary nor customary in California to require a wife to join with her husband in a conveyance of real estate, or to inquire whether said real estate is separate or community property, where the consideration or purchase price is shown in the deed.

Where a deed is acknowledged before a notary public, no witnesses are required by the laws of California. As the land is located in California, all questions of title, form of conveyance, form of acknowledgment, etc., are governed entirely by the laws of California without regard to whether the grantor and grantee, or either of them, reside in California or in some other state or country.

The Title Insurance & Guaranty Company have in every instance, where requested, issued a policy of insurance to purchasers guaranteeing the title in the purchasers on deeds executed by Mr. McDoel. If these deeds were not in proper form, properly signed and acknowledged, and if they did not in every respect comply with the laws of the State of California, the Title Insurance & Guaranty Company would not have issued said policies.

Printed copies of the original abstract of title are now furnished by the Company to each purchaser.

The Lord Our Righteousness

By Elder S. N. McCann,
Missionary in India.

This little volume contains eighteen chapters filled with food for thought. It all points to the end sought—"The Lord is Our Righteousness." It is a most excellent work and everyone ought to have a copy and give it a careful and prayerful reading. Enough is said to lead any Christian to a higher and nobler life and to turn sinners to repentance.

The book contains 128 pages and is bound in cloth.

Price Reduced.

We have only a limited number of the second edition of this book which we will furnish as long as they last for only 35 cents per copy.

Address,

BRETHREN PUB. HOUSE,
Elgin, Ill.

Lomita, California

So long as there is unsold land in this colony, those who purchase acreage of us, can have it to raise corn and barley at the usual rentals, but the parties should take it before Nov. 1. These crops require no irrigation.

The city of Los Angeles recently voted overwhelmingly to issue $23,000,000 to build a canal 246 miles in length, to bring the waters of the Owens River for its use. It will take five years to build this conduit, and assuredly the many thousands of men who will build it will require vegetables, fruits and meats. Suppose you come to Lomita and help raise these supplies!

Do you know how we grow in Southern California? The number of children of school age between five and seventeen in this county is 82,237. The net gain the past year is 6,313. The total number of children under 17 is 108,707. Of this number 105,910 are native born. Manufactures, railway developments, and productions of the ground and mining have been vast in extent, and the per cent of increase of population in Los Angeles has far outstripped Columbus, New Orleans, Kansas City, Omaha, Minneapolis, Louisville and Milwaukee the past 26 years.

In these parts of the United States the raising of crops is not a five months' proposition as in the East, but nearer a twelve months' reality.

There is scarcely a time when something can not be grown for the markets. What is land worth that does business for you ten or twelve months in a year? You cannot expect it to be purchased for the price of land that brings you only one crop in the year.

We expect the "knocker" and the misrepresenter. In fact, he has been here from the forenoon sun already. He is a negative quantity anywhere, so we expect to grow without him. In this world there are three classes: Workers, beggars and thieves. The latter two live on the labors of the workers. Among the workers are the useful workers, the jerkers and the kickers. The first is God's selection. Lomita is seeking useful workers. There is great room for them. Such build good homes, develop the soil, build schoolhouses and honorable churches.

Scarcely two places in Southern California are just alike.

Places only a few miles apart differ. Distance or nearness to the sea, elevation above the ocean, closeness to and contour of mountains, rivers, trees, soil and heat, all have influence on productions.

On account of these differences between places, the descriptions differ. If you know one place you do not know the other place even near by unless you give it study. Hence in describing Lomita we do not describe Covina, and in describing Covina we do not describe Downey, and Downey's description does not fit Lordsburg. For this reason there are strictly citrus fruit conditions, alfalfa places, berry regions, etc. We claim Lomita to be a berry region, good for alfalfa, corn, vegetables, walnuts and peaches and possibly apples. Come and help develop and make yourself a nice home amidst a genial climate free from destructive storms and rigorous winters. There is no winter at Lomita. We have spring and summer only.

Markets are good and are likely to continue good. Each year about 50,000 people make their way into Southern California, thus increasing the demand for food stuffs and each year the area of productive land grows less because of subdivision into town lots.

In no year has there been enough raised in our country to feed the people, hence considerable food stuffs are brought from the East. The stuff will grow here,—what is needed are more industrious farmers and gardeners.

One should have from $1,000 or more to begin at Lomita. The more the easier to make rapid progress. Please get the right thoughts about our lovely Lomita, give it a careful look-over, and if you see your way clear to become one of us, we shall be glad to take the next best step—sell you some acres.

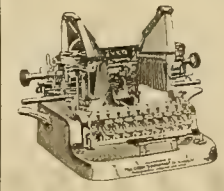
OUR LEADER

SUNDAY SCHOOL REWARD CARDS

Having secured a large lot of beautiful cards at a bargain price, we offer them to you at a very low rate. These cards are especially adapted to Sunday school use. The designs are entirely different from anything we have ever offered and we are sure that they will please. All we ask of you is to order one pack. That will insure future orders.

Size of cards, 3½ x 4¼.



Scriptural Texts in colors.

Twelve designs and 50 cards to pack.

Price, only 25 cents.

BRETHREN PUB. HOUSE,
Elgin, Illinois.

You Can Easily Operate This Typewriter Yourself

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos— or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on **any** kind, size or thickness of paper, and **space** any way you want on

The OLIVER Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the **simplified** typewriter. And you can see every word you write. About 80 per cent **more durable** than any other typewriter, because it has about 80 per cent **less wearing points** than most other typewriters.

80 per cent **easier** to write with than these other **complicated, intricate machines** that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it **is** impossible to write abstracts, insurance policies, or odd-size documents except you buy expensive **special** attachments requiring experts to operate.

You can adjust the OLIVER to any **reasonable space**—you can write on **any** reasonable size and thickness of paper, right out to the very edge, without the aid of **any expensive attachment** or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the **simplified** features of the OLIVER.

A Great Opportunity

FOR THE

HOMESEEKER

180,000 ACRES UNDER THE CAREY ACT

Now Ready to File On

This tract is on the North Side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho

These lands are sold at 50 cents per acre and the water right $30.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms, crops of all kinds are grown to perfection. Fruit growing is a success ,as well as the growing of sugar beets. To see these lands take the Oregon Short Line R. R., to Minnedoka; there change cars for Milner.

Homeseekers' Round Trip Tickets

will be sold to points in Idaho on 1st and 3rd Tuesdays in May and June 1907.

BRETHREN and others returning from the annual conference at Los Angeles, via Portland through Idaho over the Oregon Short Line R. R. should stop and see these lands.

EXCURSION TICKETS will be sold from points east over the O. S. L. R. R. to Seattle and Spokane, Wash., June 20th to July 12th inclusive. Final return limit Sept. 15th, 1907. Stopovers allowed on going and return trip.

THE INGLENOOK

VOL. IX. JULY 9, 1907. No. 28.

Clouds and Sunshine

Hettie Stauffer

FOR the benefit of those people who can see blessings in the flitting cloud that occasionally crosses their illumined pathway, may we not in common, compare both our hours of trial and our times of prosperity with the shadows and sunlight of nature, with the thought that there is a possibility of enlightening those persons in the fact that it is by a wisely-directed Hand that they can realize these beautiful words of Longfellow,

> "Into each life some rain must fall,
> Some days must be dark and dreary."

To do this we must meditate upon, and study carefully, the wonders about us in all their perfection and grandeur, which is in a measure the result not only of the life-giving rays of the sun, but likewise is effected by the cheerless cloud that has repeatedly stolen its march over the earth, and dimmed for a season this great luminary of the day. There is nothing more inspiring, nothing that can lift the very soul and emotions higher above the discouragements of this life, than to study and admire some of the products not made by human hands.

By imagination, may we not enter some garden spot of earth and enjoy the sublime grandeur of the works of God? It is an early hour of the morning. In any direction may be seen the growing plants, upon which sparkles the crystal dew, and which justly claim the benefits to be derived from the mild rays of the great morning star as it seemingly wends its way from the East to cheer all life, and then calmly takes its exit beneath the western horizon; on either side tower the rugged mountains whose sloping sides are covered with the most thrifty vegetation—from the creeping vine and the budding wild-flower, well content in their humble place, for they seem to know that

> "Full many a flower is born to blush unseen
> And waste its sweetness in the desert air,"—

to the loftiest tree that proudly waves its branches in the whispering breezes as if to defy any antagonistic spirit that might arise from its more humble companions.

Stealing from the rocks near the summit may be seen numerous streamlets as their waters gently ripple among the ferns and mosses and then enter the river below; while in the valley proper is seen the well-cultivated field of the farmer, the nodding wheat, the corn with its verdant streamer leaves and waving tassels, the clover blossoms unselfishly giving the air their sweet fragrance and the meadow with an occasional peeping dandelion or violet; in the distance lies the placid lake on whose bosom the swan and duck quietly repose, while the water of the flowing river reflects the light of the sun that has moved slowly on until it penetrates every available nook and crevice.

Perhaps unbidden there steals over us an inner consciousness that simultaneously—from the tiniest grass-blade to the rustling forest leaf—there are sent forth emotions that seem to whisper, "Our life is not all sunshine." We stop and reflect, true this vegetation is aware of the fact, that at no other time does it present a more sublime appearance, yet it seems to breathe forth gratitude that it may at times see the dark cloud arise from the distant horizon, the immediate result of which will be to hide from it the smiles of the sun, yet it seems to realize that to enjoy future growth it must endure an occasional cloud—it realizes that all sunshine would soon convert the beautiful valley into a desert.

Since God's best means for developing nature is to give both clouds and sunshine, the truth that it is the common lot of man to experience both times of prosperity and times of adversity should also confront us as being the best and only means for the growth of true manhood. Could we more fully realize this, the hours that we so often consider as clouds to dim our future happiness, would be to us the source of the elements of true greatness, and we, as the vegetation, could look forward to them with a more hearty welcome, knowing that their chastisement, however severe, is the only thing that saves our lives from being barren and unfruitful. "Fear not the darkness, for it may be the spring of the water of life." "As some

herbs need to be crushed to give forth their sweetness, so some natures need to pass through dark clouds to bring out the excellence that is within them." This fact is made evident when we notice that the most noble characters are often those who have experienced the darkest days, but they have bravely stemmed the tide, knowing that there is no cup so bitter that it is not attended by blessings to those who submissively drink it.

One of the saddest things that comes to us in life is the thought that in this bright, beautiful world there are so many shadowed lives, simply because there are so many persons who are not willing to let the clouds pass away even after the sun puts forth every effort to shed its rays in their pathway. Mountains may be climbed to such a height that the clouds are below and looking upward may be seen the continual rays of the sun. The same is true in life. True, all disappointments can not be evaded, but there is a possibility of rising above the adversities and looking forward to brighter days and letting the prospects of the same brighten our rugged pathway. Life in a great measure is what we make it. To learn to count its blessings instead of its reverses is one of the things that must be done by him who expects to be happy. By doing this, he will not only be cheerful himself but from his countenance will beam such endless rays of sunshine that his presence will often dispel the clouds that may be hovering over the pathway of a fellow-traveler. In any hour of trial, during the shadows of any cloud, however so dark, may we ever strive to allow the sun to burst forth and brighten our landscape with a more glorious light because of the storms that have threatened our footsteps.

Arcanum, Ohio.

WHAT MATTERS IT?

RICHARD BRAUNSTEIN.

What matters it that all the skies were dark,
And black the night and tense?
With morning came the singing of the lark
And joy for recompense!
What matters it that ever, day by day,
Up rugged slopes we fare—
Do not Love's roses blossom by the way
And sweeten all the air?

Life's pathway is a toilsome one, I know,
Thick-strewn with many a thorn;
But O, the joyance of the noontide glow,
And rosy smile of morn!
Full oft the footsteps falter in the road,
And slacken near the goal,
But one clear bird song seems to lift the head
And cheer the fainting load.

And so what boots it though the skies be dark
And black the night and tense;
Since morning brings the singing of the lark
And joy for recompense?
One day of golden summer amply pays
For winter's storm and sting;
One brief hour of pleasure well outweighs
Long weeks of sorrowing!

"The Secret of Life"

J. D. Reish

In him was life, and the life was the light of men.—John 1: 14.

Life is divided into three distinct classes, viz., vegetable, animal and spiritual.

They all alike contain a fundamental principle called a germ of life which causes the object within which life has been implanted to grow or develop, as we say, but they are distinctly separate one from the other.

Nature's law says: "Like produces like," hence a vegetable cannot partake of animal life except new life is imparted to it from that higher life, nor can an animal enter or even see the spiritual kingdom until spiritual life from the one great spiritual giver, Jesus Christ, be given it.

We say death is a profound mystery. So is life. It is a mysterious, unfathomable something which Divinity alone, the Creator of it, can expound.

Oh life! thou great, unfathomed sea of mystery,
Whose waves are threatening on the shores of time,
Hast thou, through all thy dark and turbulent history,
Been rolling subject to an awful chaos sublime?
Or hast thou by omnipotent hand been bounded?
Thy shores been circumscribed, limited, and defined?
Thy utmost depths by a creative hand been sounded?
Thy billows only thought waves for an almighty hand?

* * * * *

I harken and listen and hear only the sobbing
Of despairing waves dashing onward to death,
The thunder of conflict, and sorrow's deep throbbing
And the wail of the inflow and ebbing of breath.
—From "Unanswered Questions."

The professor of biology holds a little brown seed in his hand and says: "I know exactly the composition of this seed. It contains hydrogen, carbon, and nitrogen. I know the exact proportions. I can make a seed which will exactly resemble this seed but if I plant the two the difference will become apparent for the seed which I formed will lie dormant in the earth until it finally decays and mixes with the elements; but the God-made seed will spring up and become a plant because it contains that mysterious life-principle which the seed I formed has not."

As mysterious as is the life-principle in vegetable life so is it in both animal and spiritual life.

Consider the unfledged offspring of our aerial songsters lying helpless in its downy home. There is a germ of life though practically inactive, for the body which it is within has not ample strength to contain it were it extensively acting.

Or look upon the little innocent babe lying peacefully upon its mother's breast. Within that form is a germ of life though at present practically latent, for the little innocent is wholly dependent upon its parent for help.

But return in due time, after ample time has been given for the forms to fully develop, and behold! they are changed. What has caused the change? Simply the God-implanted life-germ within, which though seemingly simple, is more than mortal can explain.

There is also a mysterious growth in the spiritual life. The new-born child of God is not as fully developed along spiritual lines as the aged gray-haired soldier of the cross who has followed in the footsteps of his blessed Master ever since the days of his youth.

The form that has life must grow, for to live means to grow and to cease growing means decline and death.

For ages man has endeavored to fathom the mystery of life by science trying to answer such questions as: What is it? Whence comes it? etc., but they sit down in despair with the problem unsolved.

But why all this study and despair over a question that has been solved ever since the advent of our blessed Lord and Savior Jesus Christ?

The answer is simple, containing but four short words: "In him is life," but it contains the whole secret, the very essence of true living.

It is because the Godhead lives that any or all forms of life can exist, for the Book says: "In him we live, move, and have our being." Acts 17: 28.

The pessimistic man says:

"What is life? it seems to me,
'Tis toil and pain and drudgery."

But on the other hand the optimistic replies:

"What is life? 'Tis God's kindness to me,
That I may exist all his goodness to see."

Man, the animal that may become spiritualized by going through the necessary operations, contains a life, or soul, that cannot die, because God, the creator of it, cannot die; but it may retrograde or recede to a worse state.

God creates or generates life and the evil one degenerates it. Was this the ultimate end man would indeed be in a deplorable condition; but thanks be to the crucified and risen Lord for the works of regeneration by which man, at his will may return to his original state which was in the likeness and image of the Creator, for thus was he created. Gen. 1: 27.

Christ says: "I am the way, the truth, and the life," which plainly answers the questions: "What is life?" and "Whence comes it?" If Christ is life, life must emanate from Christ, for "like begets like."

The next question that would naturally arise is: "How may we attain life?" John 20: 31 says: "But these are written, that ye might believe that Jesus is the Christ, the Son of God; and that believing ye might have life through his name."

We learn from this that we must believe that Christ is life; then he will impart life unto us for we are then, and not till then, ready to receive it.

We have now learned what life is, from whence it comes, and how we may obtain it.

Are we simply eking out our existence upon this terrestrial ball or are we living, truly living? Christ would ask: "Is not the life more than the meat?" Matt. 6: 25.

Have we received a spark of divine life sent down from heaven and are we living accordingly? If not, why not?

PITY THE POOR RAILROADS!

Mr. A. B. Stickney, president of the Chicago and Great Western, recently discussed railway rates before the Transportation Club of St. Paul. Taking the complete statistics for 1905, he found that the average rate of interest paid on all the railroad bonds in the United States was 3.65 per cent, and the average rate of dividends paid on all the railroad stock was 3.02 per cent.

"Here," said Mr. Stickney, "is the average margin of profit of all the railroads in the United States. . . There is no other business in the country which is done on so small a margin of profits as 3.02 per cent dividend. No other invested capital gets such small returns as the capital invested in railroads."

Obviously, if the capital invested in railroads can now earn only a little over three per cent a year, railroad rates are as low as they ought to be. When anybody mentions freight rates, the railroads always trot out these average dividend statistics—and prove thereby that rates are already so low that there's no profit at all in railroading.

If anybody asks how much of the stock upon which average dividends of 3.02 per cent are paid is water and therefore entitled to no dividend whatever, they reply that there can't be any water because the capitalization per mile of American railroads is much less than that of the English railroads—which is exactly like arguing that Florida is an ideal summer resort because it is much less disagreeable than Panama.—*"The Cheat of Overcapitalization," in the July Everybody's.*

A Summer In the Rockies

Hattie Dell

On the first day of June, 1906, in company with Albert Hill and family, mother and I started for Grand Junction, Colo., where we were to spend the summer with my sister, Mrs. J. G. VanDyke. I have always had a longing for the mountains and looked forward to this trip with great joy.

There was nothing of much interest until the Rockies showed up like a dark cloud. We were not the only ones watching for them, for from all over the car we could hear, "O, look, there they are." We soon pulled into Denver, and such a crowd hurrying here and there. A little incident occurred here which I wish to give for the benefit of the Nook readers. When we got off the train and started for the depot, a young man came up and asked for my grip, I refused him, being a stranger. He walked off a few steps but came back and took the grip, not waiting to be refused again. He started for the depot and we kept in sight of him and saw where he put the grip down. He was gone before I could thank him, and I was truly very thankful. I know not what thought prompted this act of kindness, but one thing I do know, we ought always to keep our eyes open and on the lookout for an opportunity of doing some one a kind act.

A Street in Boulder.

We ran from Denver up to Boulder, a beautiful little city nestled at the foot of the mountains. Here we saw the State University and many fine dwelling houses, but what attracted my attention most of all were the pretty little streams of clear water running along the shady sidewalks over sand and pebbles. Some way there seems to be something very fascinating for me about clear running water, and it always gives me a strong desire to become better. One morning I was out for a walk before breakfast. I strolled along by a little stream until I came to Boulder Creek. This is quite a large stream and from it the city and surrounding country are watered; the water comes dashing rapidly down over large rocks that have washed down from the mountains. Our cousin drove us several miles up Boulder Cañon. The scenery is grand here.

I had my first experience at mountain climbing in Boulder Cañon. Before starting I pointed out a tree I wanted to reach. Paul Pair, a lad of nine, accompanied me on this climb. He reached the tree before I did and kept calling back to me to come on, but I insisted on taking my time to it, for it made the breath come short and fast; when you think you have a good footing the stones slip and let you back, and you feel like sitting down and giving up trying to reach the mark you had set out for.

How forcibly came to my mind our climb heavenward. When we think we are making good progress in the Christian life we make a misstep, become discouraged and think there is no use trying. But come, let us take courage and be more careful where we step next time. At last I, too, reached the mark, and sat down to rest. How much better I felt than if I had given up. Boulder is a fine place to spend the summer.

We spent three very pleasant days in this shady, delightful place, and then left for Grand Junction. At Denver we took the D. & R. G., leaving at eight o'clock P. M. This took us through "Royal Gorge" at night; also cut off our view of "Pike's Peak." The moonlight ride through "Royal Gorge" was grand. The moon was full and shone down in the cañon, giving such a soft, beautiful light to those monstrous walls, and the moonbeams dancing on the river as it hurried on to the sea, made one feel as though he were in another world. One cannot find words to express his feelings; they lie too deep for utterance. How satisfying to feel that God knows all our

thoughts, and how near he seems when we commune thus with him.

When morning came we were near the divide; it was snowing in June. We gathered our wraps closer about us and wished for the sun. The scenery was fine most of the way. We arrived in Grand Junction about noon and were soon on our way to our summer home.

This was "Aid Society" day for the sisters here. They had met with Sister D. M. Click, and as we drove up to their house they all came out to welcome us to Grand Valley. Sister Ida, and the girls had walked, so we walked home with them. We crossed the large irrigation ditch three times in a mile; once on a foot-log without anything to hold to. Mother ordered a wire put up before she had to cross there again, and I was glad she did for my head felt funny as I stepped on that log with the muddy water rushing under it.

But we soon forgot the foot-log as we came in sight of the home of our dear one. I was satisfied when I saw the large shade trees surrounding the house, for when one is raised among the trees he becomes very much attached to them. A large and cool lawn, many kinds of fruit trees loaded with fruit, and a good garden, made us feel we had not come to a desert country, although we could see miles of desert east of us. These outside things help to make a pleasant home, but what we most enjoyed was to be with our dear ones again. "Absence, with all its pains, is by this charming moment wiped away."

There were only thirteen of us (my brother-in-law and three children being here also), and the head of the family away. We kept things pretty lively on "Poplar Ranch." This was strawberry time, and strawberry short-cake and strawberries with sugar and cream were part of our daily menu. Or you could go to the patch and help yourself, but you had to be sure there is no one around to play a joke on you if you happen to get close to the waste ditch, for the Colorado girls enjoy seeing a "tender foot" step into the water or perhaps roll you in if they get a chance. In a short time Mr. VanDyke, or John as we call him, came home, and we gladly pushed our chairs closer at the table to make room for the one without whom a family is never complete.

John had been away all spring, eighty miles to the southwest, working in the copper mines in Sinbad Valley in which he has a share. He told some very interesting facts of the life of miners, and of the grand scenery along the road. When we were pretty well worked up, he asked how many wanted to go with him to the mines and bring the team back. We talked it over and decided there would five of us go. Will Pair, Archie Miller (William Miller and family were tenting under an apricot tree just outside the yard fence), Beth, and Cora VanDyke and myself. This was Monday morning, June 26, and we wanted to get back by the third of July, so we thought we had better start that evening if we could get ready.

On the Way to the Mines.

Necessary preparations were going on all day, washing, ironing, cooking, baking, and we made ice cream, too. We had quite a time deciding what to take along to eat, and how to pack things so they wouldn't get mixed before we were ready for them to, for John had told us something of the rough roads, but we found later on that the half had not been told.

The most important thing in taking a mountain trip is, to take plenty along to eat. Put in what you think you would eat and then that much more, for living in the open mountain air, walking and riding over rough roads will give you a wonderful appetite.

By six o'clock we were packed up and ready to go. Our provisions were'nt the only things that were packed. Just ask one of the party about it. We had a wagon with two spring seats. Fortunately, however, some of us were small and being a peaceable crowd,

(Concluded on Page 657.)

LOWLY BUT CROWNED; OR, SYBIL THE OUTCAST

A Story by Sadie Brallier Noffsinger

Chapter XII.—Time Glides On.

MRS. CHESTER had by no means jumped at the conclusion to admit Sibyl as a member of the household at Shady Brook. She had thought it over many times and viewed the question from both sides. She did not know when the idea first occurred to her; but it had taken root at some time within her heart and evidently grew and widened as the days went by. She consulted her husband about it, but he urged her to act upon her own judgment, adding that while in her present moral condition, she seemed hardly a fit companion for Lily, yet that he saw good traits in the neglected girl which proper cultivation alone could develop. "This cultivation she is not likely to receive in her own home and it is sad to contemplate that one of God's creatures should fall below its possibilities because of the withholding of assistance which is in the power of some fellow-creature to give. Of all persons in the world, dear, there is none whom I should deem more capable of drawing forth her better qualities than you. It will require much patience, perseverance and love to choke the weeds, but I am sure you possess all these."

Assisted by the kind and helpful words of Mr. Chester, the decision was arrived at and the task undertaken. That walk from the wretched alley to Shady Brook was an important epoch in the history of two lives. While it meant joy to Sibyl, it meant sacrifice to her benefactress. Mrs. Chester realized this, but casting her care upon Him who "sticketh closer than a brother," she committed the result to Him, trusting in his precious promise that "according to thy day, so shall thy strength be."

Mr. Chester greeted Sibyl kindly and Lily was delighted at her coming. She clapped her little hands and crowed and peeped from between the willows of her cradle, to the supreme joy and gratification of her appointed nurse.

Sibyl's wardrobe was tied in a red cotton handkerchief and consisted of one apron and a pair of stockings, the original color of which we will leave for the washer-woman to determine.

"I don't know how under the canody ob heaven the chile got dese tings so brack. I hab my own speckilations on de subjec ob takin' sech chillen into one's own house." And she cast a meaning look at Mrs. Chester, plying her strength upon the articles the while.

The third morning after Sibyl's arrival at Shady Brook, she failed to put in her appearance. Upon investigation Mrs. Chester learned that she was suffering from a high fever and sore throat. That day nor the next was she able to rise. A physician was called, who said the girl had taken a heavy cold. No one knew how; but Sibyl explained the case by declaring:

"It wuz the bath what Mrs. Chester gev me the evenin' I cum here. I know it wuz that what done it, 'cause I felt chilled like all that night." Then fearing that this might reflect upon Mrs. Chester she hurriedly added: "But it don't matter about the chills nohow."

"Are you not accustomed to bathing?" asked the doctor.

"It wuz the fust one I ever had in all my life; an' I liked it ever so good," she added, trying to look grateful in the direction of Mrs. Chester.

"Undoubtedly this solves the problem," gravely observed the doctor to Mrs. Chester as he took his leave.

Whereupon that good lady resolved to administer the bath process more gradually in the future; and meanwhile time glides on.

Chapter XIII.—Society Around Shady Brook.

THE society around Shady Brook was mostly of that industrious and sympathetic type,—industrious with other people's affairs and prone to bestow their sympathies where they were neither called for nor wanted.

They were mainly church-going people who measured their fellow-man's religion by the fact as to whether he addressed their neighbor as Brother or Sister So and So. Woe to the Christian who fell below this standard; for the society around Shady Brook pronounced that person as lamentably deficient in the higher graces. In matters of faith these religious people widely differed; but on this one great essential they stood unanimous.

It was the society which was rather Pharisaical in its character,—loud in its lamentations for the lost sheep of the house of Israel as well as absolute in its denunciation of those who reached out into highways and hedges to gather in the lambs which went astray.

Let it also be understood that these religious peo-

ple were of the "admonishing" type. Regardless of sect or creed they felt duty bound to tell their brother of his fault. And while they strictly adhered to what they termed "this divine injunction," they sometimes lost sight of the great command: "Judge not that ye be not judged."

So Mrs. Chester was not surprised when whispers came to her that she had done the unwise thing in establishing an individual from a suspicious alley into the neighborhood of Busy Homes. (It is probable that the suburb derived its name from the character of its populace.) And when she was openly upbraided for mingling with the publicans and sinners, she calmly replied to her inquisitors: "Let him that is without sin among you cast the first stone."

This was a heavy blow to the society around Shady Brook; but for the time each man held his peace and went his way.

OUR ANNUAL MEETING TRIP.

D. M. CLICK.

ON the 13th of May, my wife and I left our home and family near Grand Junction, Colo., and started for Annual Meeting. Our train started at four o'clock in the morning. We traveled by the Denver and Rio Grande from our place to Ogden, Utah. We made a half day's stop at the noted Salt Lake City, and visited some places of interest. The Mormon Temple and Tabernacle are the most interesting. The Tabernacle is the most wonderful structure. It is two hundred and fifty feet long and one hundred and fifty feet wide and eighty feet high. The roof is a single wooden arch. The guide told us that this great structure was put together without a single nail, wooden pins being used instead. It will seat eight thousand people and the acoustic properties of the building are so complete that one can hear a whisper from one end of the large room to the other, or even hear a pin drop.

At Ogden we stopped only long enough to change cars. From here to Portland, Oregon, we took a tourist sleeper and we found the accommodations all that we could ask for. We enjoyed the scenery through Idaho and Oregon very much. We noticed quite a few apple trees in full bloom and we were told by some who lived there that they would have a good crop of fruit.

One day was spent in Portland. This is a busy city. Here we enjoyed the fresh salmon right from the Columbia River. From here we took a run over into Washington and visited J. S. Reeves. On this trip we were accompanied by Eld. John Early, of Montford, Montana. Here we had a very pleasant visit and enjoyed the hospitality of our friends. We returned to Portland and fell in company with Bro. J. E. Smith and family, of North Dakota, who were on their way to Annual Meeting. They proved to be excellent traveling companions. Passing over hills and through valleys clothed with plants and vegetation of all kinds and flowers in grand profusion, we were made to feel that our heavenly Father had richly blessed us in spreading out before us the beauties of nature to cheer our weary hearts.

At Oakland, Cal., we entered upon the Large Ferry and sailed over the bay to San Francisco. This ferry boat is immense, our whole train with several others were carried over at one time. In San Francisco we noticed that much of that great city is still in ruins caused by the earthquake one year ago. We took the Coast Line from San Francisco to Los Angeles and at many points we could see the great Pacific Ocean, which was a treat to us.

Sunday morning we reached Los Angeles and went direct to the auditorium where the Annual Meeting was held. Here we met a large crowd of dear brethren and sisters. We soon found a comfortable lodging place, and now we were ready to enjoy the great Annual Meeting with our people, and truly we had a feast of good things together. Surely the Lord was with his people, and the best of feeling seemed to prevail through the entire service.

The weather was delightful.

The Conference closed on Thursday, May 23, and many of the brethren and sisters left for their homes.

The next day in company with my brother, N. S., who has been in California all winter, we went to Lordsburg where we enjoyed a pleasant visit with our kind brethren and sisters. Here we enjoyed several public religious services. Monday morning in company with my brother Frank, who lives in Arizona, we started for home over the Santa Fe R. R. On our homeward journey we passed several Indian villages and each time many of the natives would crowd around the train to sell their beads and earthenware to the travelers.

We reached home May 30, having traveled nearly four thousand miles, through which the Lord kindly kept and brought us safely to our loved ones again.

"Bless the Lord, O my soul, for all his wonderful works toward the children of men."

THE IDEAL GRADUATE.

HARVARD University aims to send forth men who will seek the truth passionately and further it bravely; who love freedom in thought and action, and promote it steadfastly; who are trained for efficiency in their callings; and who aspire through that efficiency to serve well their fellow men.—*Charles W. Eliot.*

Brown.

THE college, as distinct from the university or the technical school, should aim to produce men of cultivated mind and altruistic spirit. All specific

attainments rest upon and presuppose such cultivation and such spirit.

A cultivated mind is one that has, by long and constant exercise under wise teachers, become so elastic, receptive, appreciative, and strong that it at the same time absorbs the best in nature, literature, science, and art, and can be concentrated effectively on any problem to be solved, or task to be performed. The cultivated man is, by contact with great minds, past and present, set free from pettiness, prejudice, and passion; is sustained and comforted by the vision of eternal truth; is admitted to the fellowship of the sages, poets, and teachers of the world, and is gifted with insight into the things that are worth while.

Even more important is it that education should release a man from his native selfishness and make him a coöperating member of the social body. The ideal scholar is no longer the bookworm, or the anchorite, or Browning's "Grammarian." He is a man who lays his learning on the altar of the commonweal. A man cannot live selfishly through four college years, and then begin to live for humanity. The college itself must be shot through with altruistic impulse, and students must live lives of social service. This is the benefit of "team work" in athletics, and in the meaning of genuine "college spirit." Such "spirit" is not clannishness or snobbishness; it is the determination to live for the college as a rehearsal of a later living for the world.—*W. H. P. Faunce.*

The City of New York.

THERE is a fable of a showman and a chameleon. The showman spread a blue cloth, and the chameleon turned blue; then a green cloth, and it turned green; but a bystander put down a Scotch plaid, and the chameleon died attempting to match its motley colors.

This fable has its moral in its exposition of the folly of that training which is seeking always to adapt to the near, the economic, environment, instead of developing that fiber and character in a man which will make him increasingly independent of his immediate environment, and give him the environment of the race. The timidly practical or the timidly susceptible chameleon is not the kind of college man that the country needs. Of course, the product must depend upon the raw material, the freshman. Education is not alchemy, though the change wrought in a youth by a college training seems sometimes to be the transmuting of a base into the precious metal. The standardization of the product from this diverse material has been sought by requiring in its preparation certain knowledges and disciplines. These are, however, now so varied, with the growth of sciences, the lengthening of history, the adoption of elective systems, and the wide margins between the borders of deficiency and honors, that there is no longer a considerable body of knowledge common to college graduates. The standardization cannot well be of digested fact; it should be of spirit.

Every man who goes out from college should be a confirmed idealist, purposeful to conform, and not to be conformed. This product is not to be made by courses of study, but by vital teachers, by such men as Professor Palmer of Harvard has recently defined as ideal teachers, men of vicariousness, of accumulated wealth of knowledge, of power to vitalize facts, and of readiness to be forgotten. The college is under obligation to make men who will, so far as their abilities allow, embody and express the best aspirations of the race. It is not to be concerned primarily with fitting them to earn a livelihood; but to carry them to those bounds of life made by the greatest and noblest minds, and to give them discipline to go still beyond.—*John H. Finley.*

Princeton.

IT seems to me that a college should produce, not men whose gifts and vision are narrowed to a particular task or calling, but men whose eyes have become accustomed to being lifted to a general view of the world and a general comprehension of their duty in it. For this purpose, the studies of the college should cover those subjects which reveal, not only bodies of knowledge, but also the sources of motive, and accustom men to perceiving the relations not only of bodies of knowledge, but also of men themselves in the complicated field of history and individual action. This is the real argument for a "liberal" education.—*Woodrow Wilson.*

Chicago.

The kind of man a college should produce depends of course partly upon what the college can do in the way of affecting the individual, and partly upon the material with which the college has to work. The latter of course is not altogether at the discretion of the college authorities. Some kinds of people may be excluded from entering college courses. There remains, however, a considerable variety of natural endowment with which the college has to deal.

I do not believe that the college should aim at any one kind of product. There should be diversity of results, as there is a diversity of natural traits. No college should aim to put its hall-mark upon all men in such a sense as to expect that all will be substantially alike.

That the college man should have broad intelligence, goes without saying; that his mind should be quick and subject entirely to the control of his will, certainly is vital; that he should learn tolerance of different kinds of life and different modes of thought, is important; and that he should be democratic in the widest sense of that term,—that is, that he should be above all clannishness and all false class ideas,—is as clear; that he should have high respect for honest

work in whatever form may be necessary, is equally essential. Above all, he should scorn any form of pretense. If, then, he is honest, intelligent, clear headed, and industrious, he will be worthy of his *alma mater*. No college can do more than this; no college should be satisfied with less.—*Harry Pratt Judson.*

Yale.

Our colleges should produce men who will use their brains for the benefit of the public.

This is the object which distinguishes collegiate training from technical or professional training. In a a professional school a man is taught to make a living,—to use his brains primarily for his own benefit. Our social arrangements are such that in so doing he will, to a considerable extent, serve and benefit others also. But experience shows that something more than this is necessary for the welfare of a nation, and particularly for a selfgoverning nation. We must have public spirit,—readiness to work for national ends instead of individual ones. There is no great danger that the American people will fail to produce and distribute the material things that are wanted; but there is great danger that in so doing they will work apart instead of working together, and that they will sacrifice higher and more permanent ideals for lower and more immediate ones.

It is the business of our colleges to face this danger, and to train men who will meet it.—*Arthur T. Hadley.*

Northwestern.

The present generation is devoting itself to the task of bringing the forces of a complex political and industrial life into harmony with an indeal of social service. Such an ideal makes three fundamental demands upon the individual citizen; first, physical force to withstand the constant strain of a complex civilization; second, intellectual power to steer a straight course amid a maze of bewildering detail; and finally, a moral devotion to the welfare of mankind. Such is the interpretation which the twentieth century places upon physical, intellectual, and moral completeness; such is the equipment with which the college should aim to provide each and everyone of its graduates.—*A. W. Harris.*

Stanford.

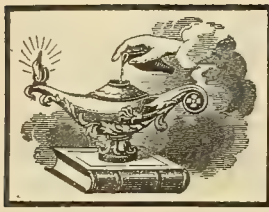
It is the business of the college to give the young man the secret of power. It should train him to be efficient, self reliant, and capable of team work; to make the most of his actual abilities in the conduct of life. We have faith that with efficiency and self respect most of the manly virtues will be included, and we have little belief in the value of any kind of culture or of erudition which does not have efficiency as its final aim.

Alfred Mosely is reported as saying recently, "What strikes me most (in America) is that your workshops are filled with college bred men. In England a varsity man is educated into frock coat and gloves. Here he is educated into overalls. The keynote of American education is efficiency."

I am in full sympathy with this observation. The purpose of higher education is not to fit men to fill a prearranged station in life, it is not culture for culture's sake, and for the most part not knowledge for knowledge's sake; but for the sake of what can be done with it. Doubtless the American graduate feels at home in frock coat and gloves, or in the conventional dress suit, when these styles of garb are in place; but he is equally at home in overalls, where he has to face the elemental problems of dealing with the forces of nature in the presence of oil or dust or mud. Education should make a man at home anywhere where his duty takes him. The college man should be trained along the lines that will give to him the greatest abundance of life and the greatest individual and social efficiency.

For these reasons the freedom of divergence characteristic of the American university is perhaps its most important distinctive feature. As no two men are quite alike in natural powers and resources, so no two should require exactly the same course of studies for the best final result. The university man in America is not a man who has escaped the necessity of work by rising to a place in a cultured leisure class. He is a man who has been trained to do his part in the work of the world to the best possible advantage.—*David Starr Jordan.*

A SUMMER IN THE ROCKIES.



(Concluded from Page 653.)

we did not complain if we were packed in tight; we were off for a good time.

I wish to say right here that when we are going on an outing with a party, it would be a good idea to leave our feelings at home, or at least keep them hidden. If each one would insist on the other having the best, there would be no hard feeling toward each other. Well, our party was this kind, but perhaps a proposition we made on the start is what kept us "good." Any one of us that did not keep in a good humor was to get a ducking. How much we love to be with cheerful, hopeful, loving individuals and just as much dislike a sour, grumbling, fault-finding one. Our greatest need is love; when the heart is filled with pure love there will be no room for these meaner things. "Love one another" is a command and it means much more than most of us think.

(To be Continued.)

He that does good for good's sake seeks neither praise nor reward, though sure of both at last.—*William Penn.*

THE QUIET HOUR

SERMONETTE.—Loving God.

PAUL MOHLER.

"Thou shalt love the Lord thy God with all thine heart and with all thy soul, and with all thy might."

Love that amounts to anything is a strong emotion, and more than emotion. Back of the emotion must be a strong determination to serve the one who is loved. The heart is the seat of the affections and more. It is the controlling power within that turns the life towards good or evil.

This being true, to love the Lord with all the heart and with all the soul, is to be filled with tender affection for him as well as to have every secret source of feeling, determination and action dedicated to him so that we may think as he thinks, feel as he feels, and work as he works, only on the smaller scale which is ours.

It is easy for those who love God with all their heart and with all their soul to love him with all their might. When we love anyone heartily we gladly give our strength in his service. No labor is too great if it benefits one dearly loved. Affection in the heart for God, causes thought and determination in the soul which directs the strength of the body to his service. This is the natural order.

But not always is this order established at once. Many times thought and determination to serve God precede tender affection, and indeed any strong feeling toward him. Men who felt nothing in their hearts but that which was cold and hard, have determined to believe on Christ, serve him, claim his promises, and, as they came, welcomed each tender feeling for him. One cannot continue such a life long without feeling strong interest and then warm affection for him. Let those who are not satisfied with the warmth of their love for God throw themselves into his service with all their mind and all their strength, and they will be astonished at the quickening of their love.

On the other hand the emotion of love is not enough. Christ values our love in so far as we keep his commandments—the proof of our love. Love that is not expressed in service soon cools into indifference.

"Thou shalt love the Lord thy God with all thine heart and with all thy soul and with all thy might" means that to the Lord we shall yield our affection, toward him we shall direct our thoughts and to him we shall devote our strength in service. To such love, God is entitled, for he first loved us.

Cando, N. Dak.

BEYOND THE GATES.

RICHARD SEIDEL.

"The things that are seen are temporal, but the things that are unseen are eternal."

The beautiful things that are unseen,
Robed in a glorious light,
Some day will dawn in a golden sheen,
And banish our darkest night.

No greener fields on the earth are known,
Neither fairer skies can be;
The stars that shine in our midnight zone
Are lamps on an unknown sea.

Breezes of heaven blow soft and sweet;
Across bright waters of gold,
And angels anthems of joy repeat,—
The love that never grows cold.

Leaves of the trees in emerald green
Reach out fair hands to the skies;
Rivers of life flow gently between
The hills where joy never dies.

We see not the flowers fragrant and fair,
That grace the land of the blessed,
Breathe not the fragrance that burdens the air,
Or know of the heavenly rest.

Jewels whose wealth can never belong
To weary travelers of earth,
Shine on the robes of a radiant throng,
Treasures of heavenly worth.

And stories we know that never were told
To a mortal's list'ning ear.
Songs that are sung, and never grow old,
Gems of the immortal sphere.

There music resounds we never have heard,
Sweet in melodious song
Joy to the souls of angels conferred,
Triumph of right over wrong

Things which we see will pass from our sight
When "all things new" are revealed,
Life-giving love will lead us aright,
When gates of pearl are unsealed.

The way may be long, the path may be steep,
To that rest so kindly prepared,
Courage, weary pilgrim, thou surely shalt reap
The harvest so many have shared.

Are you a Christian? Do you take the frost out of the bridle bits?—*Howard Miller.*

RELIGION AND HEALTH.

Is there no balm in Gilead; is there no physician there? why then is not the health of the daughter of my people recovered?—Jeremiah 8: 22.

THE thinking world has been interested of late in authentic reports of remarkable results in Christian mental healing obtained by two orthodox clergymen in Boston.

Making use of faith in God and his goodness as their first and most important attribute, and coupling with this the advice of reputable physicians and the practice of psychotherapeutics, these clergymen have succeeded in curing or relieving numerous well-defined cases of nervous afflictions. And their methods have won the outspoken approval of some of the most eminent medical practitioners in this country.

All of which seems to indicate that we may be approaching a revival of such religion as Jesus Christ taught and practiced during His earthly ministry; a "revival" that will doubtless stir up the religious world in a true and lively sense, and may bring many persons to their senses regarding certain fantastic beliefs which have to do with healing, and which are growing rapidly at present.

It is clearly the fault of the Christian church that these last-mentioned beliefs have had a chance to take root and grow, and while they are certainly productive of a measure of good, this measure is largely overcome by the vast amount of irrationality fostered by them.

It is only because the Christian church has wandered away from the prime purposes of its Founder, however, that any such schemes have been able to thrive. It is only because so-called Christians have been neglecting the real essence and spirit of Christianity that their organizations have come to be, as many of them now are, mere formal societies for the propagation of polite discourses once or twice a week.

To say or think that religion, or the faith upon which true religion must be founded, is applicable only to the soul, is to limit its benefits in a way which Jesus Christ by his whole life denied and disproved. A closer knowledge of his earthly ministry than most professing Christians possess, sad to say, shows that he applied faith to every sort of human need and want; that he made it a working part of the ordinary life of the ordinary person; that he counted it a medicine for the body as well as for the soul.

Now, if Jesus Christ did this, it was evidently the thing he intended his religion should foster through the ages. Has his religion done so? Why should it not do so, however?

Eminent physicians, who have spent years investigating the phenomena of diseases, tell us that the state of mind has much to do with the state of body, and that, in some cases, it has all to do with the latter.

These same scientists tell us that faith, in the common acceptance of the term, may be made a prime factor in the fight to resist the onslaught of disease through the mind, which is one of the spots most frequently selected by the enemy. Now, does it not appear reasonable and right that there be some closer connection between the Church and Medicine and Science than has heretofore existed; that instead of the Church withdrawing from these two branches of knowledge, it should come closer and make wise use of the beneficial attributes of each?

For all these years we have had Sin drilled into our brains until to-day asylums are partly filled with poor innocents who are there because of a morbid fear that they have committed the "unpardonable sin." If the pulpit generally would let up a little on Sin and its terrible consequences, and play a little stronger on the sunshine key, with variations on the power-of-mind-over-body part of the instrument, we might see a happier and healthier looking lot of Christians around us.

We would see it. And a healthier world cannot help being a better world, and that is what we are all working for, or, at least, what we claim to be working for.—*Selected.*

STRIKING SENTENCES FROM RECENT SERMONS.

"THE greatest slaves in the world are kings who do not serve."

"Once you admit that there is anything that God has not a mind upon and a holy thought about, and you have knocked out the corner stone of the eternal throne."—*The Bible Record.*

"The Bible was not inspired to inform people upon subjects that they would be able in course of time to acquaint themselves with without inspiration. God does not waste the Holy Spirit."—*The Bible Record.*

WHATEVER leads a man into larger life, whatever widens the circle of sympathies, his service, his knowledge, or enriches his mind and makes him worth more to the world, is truly religious. Whatever limits the life, narrows the soul, is from below. The Lord of Life did not set in man the law of growth into larger life with the intention of finding pleasure only in mocking and obstructing it. If man be in his likeness, who shall set the limits of his life? Into the glory from whence he came he must return.

THE every day care and duties which men call drudgery are the weights and counterpoises of the clock of time, giving its pendulum a true vibration and its hands a regular motion, and when they cease to hang upon its wheels the pendulum no longer swings, the hands no longer move, the clock stands still.—*Longfellow.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

MIDSUMMER MUSINGS.

WE have come to that season of the year when nature is making her supreme effort. The early crops are maturing and the later ones are at the height of their development. It would seem that the task set for her is a giant one, and it is, but she will do her part providing we do ours. In very many things nature works only as a partner with man. To be sure, she endeavors to do all her work even if he does less than half of his, but her efforts under such circumstances are a disgrace to her powers and what she can accomplish when unrestrained. In order that she may do her best by the crops we have entrusted to her, we need to give them an intelligent, studied care. This partnership plan is a most happy arrangement. It not only compels us to put forth some effort, but it encourages and inspires us to attain to the highest perfection. And this plan of working with a power greater than that which we can exercise is not confined to the growing of crops.

THE singing birds and humming insects which make up nature's orchestra, tend to soothe one's spirit and compose the energies already toned down by other influences of the season. With patient, continuous effort for a retrospective view and full harvests in prospect, we pause awhile to contemplate both. We take into account the way in which we used some opportunities and also the opportunities that were not used at all, and endeavor to calculate how the future would have been affected had all things been done perfectly. This is one of the ways by which we may "go on to perfection," whatever the line of endeavor may be.

For the most part we are a hard-hearted, unfeeling set, but the hardest of us cannot fail to be touched sometimes and by some things which nature uses to win us to better things. And our ability to understand her and read her messages and enjoy life in its fullest sense is commensurate with the surrender of ourselves to these influences.

"To him who, in the love of Nature, holds
Communion with her visible forms, she speaks
A various language: for his gayer hours
She has a voice of gladness, and a smile
And eloquence of beauty; and she glides
Into his darker musings with a mild
And healing sympathy, that steals away
Their sharpness, ere he is aware."

"BRAIN AND BODY."

IN the July number of *Everybody's Magazine* Dr. William Hanna Thomson gives a very clear and interesting study of the relations existing between the brain and the body. His treatment of the several subjects coming under that head is made in the light of the latest discoveries and conclusions of modern scientists in that field and in some respects possesses the nature of a revelation to those who are not close students in that branch of science.

The writer concerns himself first with the belief formerly held that the brain in its relation to the mind was one organ. That is, that it was the whole brain that saw, or heard, or felt, or thought. He shows how mistaken this idea is by illustrations leading to the conclusion that each faculty is controlled by a particular and separate part of the brain, and that even one's several accomplishments call for special and separate brain centers.

Another very interesting matter discussed is that of the quality and amount of brain matter. While the writer acknowledges the correctness of Huxley's demonstration that the human brain does not contain a single lobe nor convolution that is not present also in the brain of a chimpanzee, he declares that mentally man is as far removed from the highest apes as is a fixed star from the earth.

He further says that recent discoveries show that the brain is not the *source* of thought, but is purely the instrument of the thinker, just as the violin is the instrument of the musician who plays it. He concludes this subject by showing that the mental capacity of an individual bears no necessary relation to the amount of brain matter he has in his head,—that men who wear big hats are not therefore "brainy," as many of us who know little of science have learned.

Our limited study of physiology acquainted us with the fact that the brain is divided into two hemispheres or that we have a pair of brains, but perhaps we did not know that only one is developed, that the other remains thoughtless throughout life, and that the one to be developed is determined by the hand that is used most,—the left hemisphere being developed in the right-handed man and vice versa. In this connection the question of ambidexterity naturally comes up. In regard to this the writer says that we might as well expect our visual power to be increased by using both eyes, or our hearing by always listening with both ears as to expect any gain mentally if we thought with both hemispheres. He further argues that since brain

matter itself does not originate a single idea, nature had better not be meddled with, and gives an illustration where the speech centers seemed to be confused by the effort to change from the choice made by nature.

But of all the points discussed that concerning the will and its relation to the mind is the most interesting and most fruitful of further individual study. We quote several paragraphs from this part of the article:

"We are now face to face with the great executive in man, which is not the mind, but a power higher in rank than the mind, namely, the Personal Human Will. Like clay in the hands of the potter, so is brain matter fashioned by the Will, bit by bit, each small area made to acquire a mental faculty according to the purpose of this unmistakable creator.

"There is no word about which the fogs of metaphysics have gathered so thickly as about this word 'Will.' It is these misty conceptions that make it difficult for many minds to accept the facts which prove that a purely spiritual agency such as they imagine the will to be, could cause any definite material effects. A perfectly material thing, like a brain speech center, which can be destroyed by a pointed stick, must somehow, they think, be made by the brain itself, though how any other part of the brain can make a mechanism for words, without itself giving a sign of having a word in it, is hard to understand.

"But there are definite proofs that the will is a specific and positive stimulus to nervous matter, which are made plain when we learn what a specific nerve stimulus is. A ray of light, for instance, is a specific stimulus to the nerve cells of the retina, because no other nerve cells or fibers, except those mentioned, are affected by it. Now we can show that the will is a definite thing by just the same proofs which demonstrate that the actinic ray in a sunbeam is a definite thing, namely, by its effects. Though we cannot see either the actinic ray nor the will, both these agents produce three specific kinds of effects, physical, chemical, and physiological."

Then the writer gives illustrations showing how these three effects may be produced by the actinic ray, and also how the will may produce them, and proceeds: "But the will does much more than bring about such changes; for its right is to rule the mind in its thinking, just as the mind in turn rules the body; in other words, the will should not only direct but control thought. This is but in keeping with the great law of organization of a nervous system, where we constantly meet with structures whose particular office is to restrain and to check the workings of other nervous structures or functions.

"But nowhere is restraint and direction so needful as when the mind is thinking. Thoughts pour into the mind from every direction, and the faster the weaker we happen to be. Let a man be prostrated by a fever and he finds it hard to keep his mind from running to the ends of the earth, until he may actually 'wander' in delirium. In ordinary life desultory thoughts are not only of no use, but may be as injurious as they are worthless. When, as in worry, they are of a disturbing nature, they may jar the mental machine till it wears out by its own friction. The paramount need, therefore, is for some great steadying governor, as that part of a steam engine is well named, or, in other words, we need a will too strong to be diverted by any thoughts from its purpose. Any one who thinks, speaks, and acts only according to purpose, is a giant among scatterbrains, because it is the will only that achieves. We are ever meeting men with brilliant mental gifts who are sad failures merely because they lack tenacity of purpose, which means lack of will-power. To exert influence over his fellows, a man must have a constant inner power of self-control, while he who goes about 'half-cocked' shoots and brings down himself oftener than any one else.

"As the best statement of what one really amounts to, and also of what one most needs in this risky world, we would quote from that old Hebrew collection, the Book of Proverbs:

"'As a man thinketh, so is he,' and 'He who hath no rule over his own spirit is like a city that is broken down and without walls.'"

WORTH REPEATING IN THIS ISSUE.

Leaves of the trees in emerald green
Reach out fair hands to the skies;
Rivers of life flow gently between
The hills where joy never dies.
—Richard Seidel.

I WISH to say right here that when we are going on an outing with a party it would be a good idea to leave our feelings at home, or at least keep them hidden.—*Hattie Dell.*

WE must believe that Christ is life, then he will impart life unto us, for we are then, and not till then, ready to receive it.—*J. D. Reish.*

Life's pathway is a toilsome one, I know,
Thick-strewn with many a thorn;
But O, the joyance of the noontide glow,
And rosy smile of morn!
—Richard Braunstein.

IT is sad to contemplate that one of God's creatures should fall below its possibilities because of the withholding of assistance which is in the power of some fellow-creature to give.—*Sadie Brallier Noffsinger.*

LET those who are not satisfied with the warmth of their love for God throw themselves into his service with all their mind and all their strength, and they will be astonished at the quickening of their love.—*Paul Mohler.*

LIFE in a great measure is what we make it. To learn to count its blessings instead of its reverses is one of the things that must be done by him who expects to be happy.—*Hettie Stauffer.*

Echoes from Everywhere

THE United States has remitted the greater part of its portion of the Chinese indemnity as agreed upon between the powers after the Boxer uprising. This is in accordance with the plans of the late Secretary Hay. President Roosevelt recently received the personal thanks of the emperor of China through the Chinese minister.

THE cedar in lead pencils is soon to give way to a new German composition, says the *Scientific American*. The principal ingredient of the substitute is potatoes. The pencils are now being manufactured and soon will be on the market. It is estimated that the making of these pencils will take about half the time required to make cedar pencils.

GOVERNOR HUGHES, of New York, has vetoed the bill readjusting salaries of New York teachers, on the principle of equal pay for equal work, which had been passed over Mayor McClellan's veto. In his message, the governor says that the measure, if good, should apply to all cities of the state alike, and should be extended logically to all departments of the public service, but he does not think this bill was considered in the light of these implications.

OZONE is, as chemists know, an active form of oxygen. The Japanese, ever alert to apply science in their behalf, make use of ozone in the army to sterilize the water. It is a natural antiseptic and the plan was carried a step farther and applied to the preservation of meats. In a hermetically sealed chamber the meat is subjected to the action of ozone under pressure, after which it remains good, at a moderate temperature. for several weeks. This form of oxygen seems to kill the germs of putrefaction and combines with something in the meat to form a comparatively stable antiseptic.

WHEN the new submarine cable between Iceland and the Shetland Islands is completed, there will be a far wider area which can be covered by the system of weather prediction. By utilizing the Iceland cable and the reports from the Central Physical Observatory, at St. Petersburg, covering the vast stretch of Siberia, the United States Weather Bureau hopes hereafter to possess a knowledge of the state of the atmosphere completely around the earth in the Northern Hemisphere.

THE International Society for the Prevention of Smoke held their meeting in Chicago a short time ago. Among other things the society is finding that the varied ordinances against the smoke nuisance are quite a hinderance to the effectual doing away with it, as many as twenty different ones holding good in the same state. The aim is to have a state law and the laws of the several states to harmonize. Since there is a sure preventive of smoke, a number of delegates contended that the uniform legislation should provide that the mere fact of smoke issuing from a stack was sufficient to prove the violation of the law.

WIDE interest is being taken in the execution of the "Lord's Day act" which recently went into effect in Canada and which is the most stringent Sunday-rest measure adopted by any country in recent times. This law forbids all public Sunday amusements for which money is paid, prohibits the printing or circulation of Sunday newspapers (including the American Sunday "yellows" which have gone so widely into Canada), and stops even the running of Sunday trains except under special restrictions. The law so far is being more or less evaded, and there is much room for difference of opinion as to how far it goes, but test cases are being brought which will soon settle its scope.

MOST people have been amazed while standing in a bank at the rapidity and accuracy with which some of the clerks can count out the coins of all denominations. But even the great speed attained by the human hand directed by a quick mind is not sufficient to meet the demands of the present commercial progress. A machine has been brought out which does this work automatically, counting the coins and rolling them securely in a paper wrapper. There is a kind of hopper at the top of the machine into which the coins are emptied, and they come out below counted and wrapped, the work being done as fast as six men could do it. It is claimed that the machine cannot make a mistake. It is operated by an electric motor.

At a sitting of the first committee of the peace conference, June 28, Joseph H. Choate, the American delegate, made an eloquent speech supporting the American proposition made to the conference in 1899 in regard to exempting all private property, except contraband, from capture on the high seas. In his survey of the subject he showed how America had supported this doctrine by treaties with different countries, and had in practice followed it for over a century. From the manner in which his speech was received it is thought that the proposition which at the former conference was only taken for consideration will this time be approved unanimously.

According to a report rendered by the medical corps of the British army in India the inoculation against typhoid fever has worked well in the army. The report says one hundred and fifty men were inoculated when they started for India, twenty-three of them refusing to take a second inoculation. Fever broke out a few weeks after they arrived in India, and between the fall and the following June there were sixty-three cases and eleven deaths in the regiment to which the inoculated men belonged. Only two cases occurred among the men who had taken the preventive treatment and both of these were men who refused the second inoculation. Both recovered.

For the purpose of securing a rail that will more nearly meet present demands and thus lessen the number of railroad wrecks by a large per cent, a joint meeting of leading railroad officials and railmakers was held June 27. No definite action was taken, as the joint committee of experts, appointed by the American Railway association and the makers of steel rails, who are to ascertain whether any defects in rails resulted from the processes of manufacture, have not yet made their report. The railmakers express their desire to make a rail that will meet the present demand, but say that a heavier rail will necessitate an advance in price, while the railroad officials maintain that the present price is sufficient to include the necessary improvement. The public, of course, has no say, but it is pleased with the prospect that something is to be done to remedy present conditions.

It is not generally known that for two years the government of Canada has been actively engaged in the building of a military road of great importance. The road begins at Edmonton, Alberta, covering a stretch of seven hundred miles to Fort St. John on the Peace river, thence, in an almost direct course, crossing the Rocky mountains in a stretch of two hundred miles to Fort Graham, in British Columbia, and ending up at Atlin, in the Yukon territory, seven hundred miles to the northwest. The road lies through a region as yet for the most part in the hands of nature, and at places she opposes its opening with her sternest barriers. The road is only eight feet wide; at intervals of twenty miles log houses are erected for halting stations. It is expected to have the road completed before winter.

The publication by the interstate commerce commission of its uniform system of accounts for railroads shows it to be one of the most drastic steps toward strict federal supervision since the passage of the rate law. The system goes into effect July 1, covering operating expenses and revenues and requiring the railroads to file monthly reports. The chief accounting officer of every railroad will be held personally responsible for the accuracy of the accounts. The construction accounts are to be so drawn that a current record of the physical value of the railway property is always accessible. Among the chief virtues of the new system will be that of giving to the investor and shipper knowledge of some of the inner secrets of railroad management hitherto guarded with secrecy. The public will know how each railroad in the United States has earned its revenue, how it is spent, and the methods and efficiency of each corporation will be held up in plain view for inspection and comparison.

I LOVE YOU.

I love you, and the little arms
  Around my neck are are softly stealing,
And wistful eyes with all their charms
  Are lifted up to mine appealing,
And velvet cheeks to mine are pressed—
  O, that the bliss could last forever!
Sure to be ever thus caressed
  Elysium one would ask for never.

I love you, and across my face
  Soft fingers pass (where time is sealing
The stamp of years) as if to trace
  And smooth it out by touch and feeling;
While two sweet lips are pressed to mine
  They set my heartstrings all a-ringing—
Sure, child-love must be near divine
  Such comfort to my soul 'tis bringing.

I love you and upon my breast
  Above my heart, her heart is beating
And baby darling takes her rest,
  While sunny summer hours are fleeting.
My heart goes out to God above,
  While gazing on her dainty form,
That he has given baby-love
  To be a comfort in life's storm.
—E. H. Foss, in "Methodist Recorder."

VEGETABLE DIET IN WARM WEATHER.

SELECTED BY CLARA MYERS.

Despite arguments of vegetarians, who are probably not so numerous as they were forty years ago, the people of this country continue to be the greatest flesh consumers in the world. Meat is generally the most expensive food in proportion to its nutritive value, and our large area and fertile soil enable people to afford in daily use what is regarded as a luxury for holidays in most parts of Europe. Most people have heard the story of the Irishman lately over, who was directing his employer to write a letter to friends at home. "Tell them," says he, "that we have mate three times a week here." "But," responded the employer, "you know we have meat here every day." "Yes," replied Pat, "but they won't belave it if I write we have mate every day in the wake." Even in times when economy is enforced by lack of employment or reduced wages, few workmen deem it possible to dispense with the meat ration. They believe that it gives more strength than farinaceous food or fruits. It is probably more stimulating, and in food, as well as in drink, stimulation with many is thought more of than nutrition.

From its rapidity of increase, and the cheapness with which it can be grown and fattened, the hog furnishes much the largest amount of the meat used in this country. Our pork is generally corn-fed, and made much too fat to be healthful for those with weak digestion. And whether for weak or strong, fat pork or fat of any kind is not wholesome; it is deficient in those elements that give strength, ranking, however, in this, with finely-bolted wheat flour. Each of these contains only carbon, one in the form of fat, the other in that of starch. Carbon is excellent for heat-giving, and therefore appropriate food for cold weather; but it is out of date when used in summer. Most persons instinctively decrease the amount of animal food used as warm weather approaches. The bulk of slaughtered animals are killed in winter. In the great majority of rural homes nearly all the meat used on the table in summer is salted fat pork. Now as the experience of thousands has shown that meat is needless at this season, even for hard workers, why not dispense with it and use more suitable, because more nutritious, food in its place?

But meat, even fat pork, will not be set aside unless something really better is substituted. Many who plead for vegetarianism have done lasting injury to the cause they advocate by their absurd ideas about the values of certain vegetables and fruits. We have been told that apples were even more nutritious than potatoes, and that an entire fruit diet in its season was not only consistent with health but the vigor and strength that should accompany it. This is nonsense. Fruit, healthful enough in its place, cannot be made exclusive food without enervation of both body and mind. There is much difference, also, in the kind of vegetables in their effect in promoting bodily and mental vigor. Some are mainly farinaceous or starchy, others, even in the green state, contain material for giving strength and building up bone and sinew. We mistake, probably, in making the potato so largely a portion of our daily diet. It is too starchy, and has too small a proportion of albuminoids and phosphate. Peas and beans are much better. It was probably on these that the Hebrew children were fed during their captivity, as related in Daniel. We are told that at the end of ten days' probation on pulse and water, the countenances of Daniel and his three companions

were fairer and fatter in flesh than all the children which did eat the portion of the king's meat. This diet was continued three years, in which time God gave them knowledge and skill in all learning and wisdom, and Daniel had understanding in all visions and dreams. They were all physically and mentally superior to those who had been fed on the king's meat and wine.

It was doubtless neither accident nor miracle that produced this result. If pulse were beans and peas, one or both, no better diet for promoting mental and bodily vigor than these could be desired. They abound in albumen, and have enough phosphate of lime to furnish bone matter for growing children. The healthfulness of grapes as food lies in the fact that they contain a greater variety of nutrition than most other fruits, and in easily digested form. We cook dried beans and peas mainly with fat meats; but green they are equally good and healthful, and better adapted to use during the warm weather.

The popular disfavor into which vegetarian ideas have fallen is due to eccentric objections by their advocates to articles that are the products of animals, but essentially healthful and nutritious. Milk, butter and cheese, eggs, and even honey, have been thus set aside as unfit for food, because they come from animals. Tested by either chemistry or experience, these substances are among the most healthful and valuable articles of diet. If honey, the nectar of flowers, is not fit for human food, it can only be from the fact that men are not fitted to appreciate its excellence. For the making of bone and muscle and repairing of nervous exhaustion, milk and eggs are specific. All of these can be substituted in place of meat with advantage during the summer months.—*American Cultivator.*

FINICAL CHILDREN.

"I SIMPLY cannot eat turnips," announced the elderly matron. "I have never been able to bear them since childhood." "Dear Johnny never eats any meat but beef," says the fond mother, "and, of course, that makes it rather tiresome for the rest of us." And so it goes.

The habits we acquire in childhood stick to us through life, those of the choice of food as well as any other kind. It is nonsense to give in to every whim of a child, founded on a moment's imaginary like or dislike. Still, there is a sweet medium, and in many cases it seems real cruelty to go to the other extreme and force a child to eat food which sometimes seems actually to nauseate him. The best plan is to let him alone and make no fuss over his refusal. In time he will probably come back to a reasonable view of things, or, if he does not, a little moral suasion later will cure him soon enough.

Where a child is actually over-particular and eats very few things indeed, the first thing to do is to ascertain the condition of his health. If this is good, there are still remedies left. Absolutely prohibit eating between meals, and bar such things as candy and cakes. If he is still finical force must be resorted to.

One little girl, however, was cured by a course at a cooking school. There she was obliged to eat everything the pupils cooked, and in time the pride of creation made her anxious that the family should share the things she made—when, of course, she had to join them. And herein lies a useful hint for boys as well as girls.—*North American.*

A HEALTHY POSTURE.

IN a very great many instances, carelessness in walking and sitting, as well as the manner in which we breathe, are responsible for the poor figures, weak vital organs and consequent ill-health, both of body and mind, among women. Narrow-chested women are seldom happy, or cheerful women, and there certainly is nothing attractive in a bowed back and short chest-measure. "Good looks" are not dependent upon regular features or faultless complexion. To get the best out of life, you must learn to hold yourself up—to breathe deeply and regularly, and to exercise all the muscles of the body, internal as well as external. Do not allow yourself to "lop"; it is the most tiresome, as well as ungraceful posture you can assume. When at your sewing, writing, reading, or any other occupation requiring you to bend forward, do not neglect to keep your backbone straight, and do not allow your chin to loll forward onto your collar-bone. If you must assume the stooping posture in order to do your work, do not neglect to straighten up as much as possible, and to hold your head well back, that the neck muscles may act with the muscles of the back in maintaining a straight position of the body.—*Selected.*

TOMATOES AS A FOOD.

No fruit or vegetable is more valuable as a food than the tomato. Tomatoes do not convey very much nutrition to the system, but their effect upon the stomach, liver, and bowels is most salutary. They may be eaten either raw or cooked, as preferred.

There is one caution that ought to be observed, however. If sugar or vinegar is used, it should not be used too freely. The good effect of the tomatoes upon the digestive organs is destroyed by the enormous amount of sugar and the over-amount of vinegar used.

Ripe tomatoes, sliced, and sprinkled with salt and pepper, are appetizing and wholesome.

Tomato-soup is an excellent food for the sick. There are in market good samples of tomato-soup

already cooked that can be procured for such a purpose. The only fixing necessary is simply the addition of hot water. But it would be better for the housewife to make her own tomato-soup. It can be given to the sick in any stage of any disease. It has a soothing effect upon the fever patient; it will not endanger the bowels in cases of typhoid fever, and altogether it is much more refreshing and sustaining than the beef slops and beef-tea that are generally fed to sick people.

When vinegar is used on the tomatoes it ought to be diluted with water. It is a very good way, when vinegar is desired, to use three parts of water to one part of vinegar, and add the salt and pepper to the water and vinegar before it is poured upon the tomatoes.

If sugar is preferred to either of these, it ought to be used sparingly. The sugar counteracts in a great measure the very excellent effect the tomatoes have upon the stomach.—*Medical Talk for the Home.*

BERRY RECIPES.

An Easy Berry Pie.—Make a light pie crust and line a deep tin with it. Mix the berries with sugar and stir in half as much fine bread crumbs or stale cake crumbs as you have fruit. Fill the open crust with this mixture, bake, and when done spread with a meringue made of the beaten whites of two eggs and powdered sugar. Set in the oven to brown lightly. Serve cold.

Blackberry Blanc Mange.—Stew the berries slowly in a little water, strain, and sweeten to taste, set over the fire again to boil, thicken with a little corn starch wet up with cold water, stir all the time until thick enough, then pour into cups wet with cold water, and set in a cold place. Serve with cream and sugar.

Blackberry Pudding.—Butter a pudding dish and place a layer of berries, one and one-half inches deep over the bottom. Pour over this a batter made of one cup of sugar, one egg, one cup of milk, two cups of flour, two tablespoons of butter, two teaspoons of baking powder, flavor with nutmeg. Bake until a light brown, turn from the dish with the fruit on top, and serve with sweetened cream or spice sauce.

HASTY PICNICS.

Perhaps the mother suggests having a picnic or the father comes home a little early with a tempting looking bundle under his arm, or one of the children wants to go to the woods—no matter how it starts there is a joyful planning when the Canbys have a hasty picnic. They all like to go to big affairs where there are speeches and singing and swings and games, but privately they confess to liking their own little picnics best. To start with, there are no starched best dresses and new shoes to be careful of, and if one wants to wade in the brook for minnows, one can find plenty of company at the hasty picnics where such sport would be frowned on at the larger affairs.

I am afraid the people who like frosted cakes and elaborate salads and ice cream and four kinds of pie on the picnic table, would not like these little hasty picnics, but that is neither here nor there. They might object to the newspaper table cloth and napkins to match, but Mrs. Canby never goes to a picnic tired out from getting ready, so the boys and girls enjoy the fun all the more. All the children have a hand in the preparations and all enjoy that part as much as the supper or dinner that comes later.

In this house there is a regular picnic outfit, which consists of paper plates from the meat market, several small, bright tin cups, a large bottle for the lemon juice and sugar, paper napkins cut from newspapers, several old knives, forks and spoons, three old school satchels, some old towels and a salt and pepper shaker.

One of the children makes the great pile of sandwiches, another gets the lemons ready, a third boils the eggs and the baby of the flock lends a hand everywhere. The mother plans the food and packs the basket which is to go in the cart with the baby, and then they all set out for the woods or the river or the tiny park. The children have fishing tackle though they seldom catch a fish, and there are various small articles tucked into the wagon. A ball and bat sometimes accompanies them and often whittling is the sole sport of the afternoon. The mother reads or sews or helps with the games, and the father enjoys the quiet of the pleasant shade. Often neighbors or little friends go with them and then the fun is doubled.

And what do they have to eat? Well, piles and piles of bread and butter always. They enjoy baked beans, cold ham, chicken, chopped steak fried in small cakes, veal loaf, cold tongue and various other picnic dishes, but always there is plenty of plain bread and butter. The mother may bake beans while she is getting dinner or prepare a veal loaf for the occasion, but often they know nothing of the picnic at dinner time. Then they always have lots of fruit. Cherries, peaches, apples, grapes, plums and other varieties of fruit are taken along to be eaten in the natural state and thus save the trouble of getting pies and sauces ready.

Usually there are cookies, but the cooky jar in that home is seldom empty so these healthy cakes make little extra work. If they have the picnic near a farm house they buy milk to drink, but the lemon bottle goes to almost every picnic. The juice is squeezed out and mixed with sugar, so that lemonade is prepared by simply adding water. Nothing in the way of soft puddings or stewed fruits is ever taken,

and there is no danger of upsetting the food into something else. Pies are unknown at the hasty picnics but nobody seems to mourn for them when fresh fruits, are abundant.

"What is the use of going to all that trouble?" asked a friend as she watched the children hurrying to get ready for an afternoon's pleasure. "My children have a nice yard to play in and I don't intend to wear myself out going to the woods no matter how much they tease."

"Come with us this afternoon and see if it pays," said wise Mrs. Canby, and sitting on the grass with a pillow at her back and a bit of sewing in her hands, the friend had to admit that it did pay.

The happy children played by the brook, gathered pebbles, sang their little songs, ate the good food and enjoyed every moment of the time thoroughly. They were like birds suddenly turned out from cages, and the mother felt her selfishness in resisting their pleadings so long. She looked at the simple lunch that had cost less than an hour's preparation and remembered how many times she had said it was "too much trouble" to get up picnics. True, the children were in old clothes and looked anything but tidy, but the return trip was to be made in the friendly dusk of evening. She looked at Mrs. Canby's happy face and wondered how much these breathing spells had to do with her sweet temper and serene ways.

"I'm going to give my little ones some picnics too," she whispered penitently, as she watched them with tears in her eyes. I'm sorry for them."

"You'll never regret it," whispered back Mrs. Canby. "These frequent outings have done more for my health and temper than all the medicines I ever took. I wish we could have them all the year round."—*Hilda Richmond.*

LET us see that whenever we have failed to be loving, we have also failed to be wise; that whenever we have been blind to our neighbor's interests, we have also been blind to our own; whenever we have hurt others, we have hurt ourselves much more.—*Chas. Kingsley.*

DEFEND US, LORD.

Defend us, Lord, from every ill.
Strengthen our hearts to do thy will.
In all we plan and all we do
Still keep us to thy service true.

Oh, let us hear the inspiring word
Which they of old at Horeb heard.
Breathe to our hearts the high command,
"Go onward and possess the land!"

Thou who art Light, shine on each soul!
Thou who art Truth, each mind control!
Open our eyes and make us see
The path which leads to heaven and thee!

—John Hay, Late Secretary of State.

For the Children

RICHARD'S BIRTHDAY PRESENT.

RICHARD was standing at the front gate; rather, he was jumping around by the gate, hanging and swinging on it, and looking up and down the street as if he were waiting for some one.

The truth was, Richard knew something per-fect-ly beau-ti-ful. He had found it out only a little while ago; then he had told it to every one in the house, to all of his neighbors, and to the old black woman who lived in the alley.

But he wanted to tell it to some one else. There was a nice doggie coming along the street. Richard knew he was nice because he belonged to one of his friends. He caught little Fido as he came up, and whispered the secret in his ear; but Fido didn't want to stop, so he pulled away from Richard and went galloping down the street.

"Say, Fido, how do you like it? You can play with her, you know," called Richard.

Fido stopped a second and wagged his tail, as much as to say, "It's all right, Richard;" and away he went again.

After a while there was a pretty old lady coming. Richard liked her looks very much. She held some large pink flowers in her hand.

Richard stood waiting for her to come up. Then he said: "Oh, say, lady, do you know that it's my birthday, and that I've got a birthday present?"

"Why, no," said the lady. "I hope you like your present. Who gave it to you?"

"Why, why, of course I like it—I like it best of anything, for God gave it to me."

"Indeed?" said the lady.

"Yes, yes, indeed." Richard was talking as fast as he could. "Why, no one else could give it to me, you know, 'cause it's a baby sister!"

"Oh, oh!" said the lady; "I don't wonder that you are delighted. God was very good to send you such a present; and here, go in and give her these flowers. Tell mamma they are for the baby sister."

"Oh, thank you!" cried little Richard. "They'll be the first present she'll have."

"Oh, no," said the kind lady, "for when God gave you a sister he gave her a brother."

"Why, why"—Richard did not understand at first.

"Yes," replied the lady, stooping over to kiss him, "when God gave her to you, he gave you to her, see?"

"Why, yes, that's so," he said, as he started to run into the house; then he turned and called back, "I thank you very much."—*Western Christian Advocate.*

THE RURAL LIFE

LONGINGS FOR THE FARM.

D. D. THOMAS.

Sweet life of the farmer boy, buoyant and gay,
Chasing the butterfly over the way,
None of the cares of life harass his soul,
Few of the sins of life over him roll.
Thus may I be,
Thus may I see
My little ones growing up in the country.

Sweet life of the farmer girl, rosy and fair,
Who knows not of burdened life, thinks not of care.
Who now sings a ditty and now songs of praise,
Yet uniform freedom has blest all her ways.
Thus let me be
Thus may I see
My little ones growing up in the country.

Blest life of the farmer wife healthy and strong,
Breathing the summer air mingled with song,
Queenly and powerful in all the land,
Love to the chilly heart, strength to the hand.
Thus may I be
Thus may I see
My little ones growing up in the country.

Grand life of the farmer man, when shall I see
More nearly a model man trusted as he,
Free as the birds that fly, free as they sing.
Unharmed by the bands of men he stands a king.
Thus let me be
Thus let me see
My little ones growing up in the country.
Herring, Ohio.

COUNTRY LIFE NOWADAYS.

FRED V. KINZIE.

THERE is nothing so pleasant as for a city person to get out in the country, out from the hum and hustle and noise of the city, into the fresh air, with blue skies, Mother Nature's woods, hills and dales, and flowers and grass, into the little country home secluded from the "busy" world, and there take a "rest."

How jolly the boy or girl who has been cooped up in the city, the most if not all their lives, when they can get into the country, and enjoy the birds and flowers, fresh air and sunshine, and the stretches of meadows of grass and fields of grain. No such panorama can come before the eyes as the eastern heavens telling of the morning's dawn, or the western horizon at the close of a summer's day, or the stretches of God's green earth lying before your eyes any way you may look. No such music will ever strike the ear as that of the American songsters, heard from dawn till dusk, and from spring till autumn, or the warble of the brook, or the cackle, crow and gobble of the barnyard fowls.

But this is not all. Looking from a religious, an educational, a social, a recreation, a health restorer or a pleasure-seeking standpoint, we see the country boy and girl away ahead of those born and reared in the city. First, they have not the evil allurements that they would have if in the city. Second, Nature's teachings are far superior to those of any of our best educated professors, although the statement should be inserted that, along with this wonderful development of mind, the high school and even college education is very essential. Third, sociability among the country people differs in different communities, the same as in town, but when the people are of a sociable nature there are no more life-enjoying crowds than those who make up the many sleighing parties, husking-bees and other indoor as well as out-of-door games. Fourth, recreation and health are two things which can be gained only in the fresh, pure air which farm-life affords, from the facts that most of the eatables (those which have to be watched so close in the city) are homeraised and homemade, so there is no question as to their cleanliness or purity, also the quietness which generally prevails, enables one's nerves to build up, and the whole body to gain its full vigor and power.

Looking at both sides from all standpoints, we can see that the country boy and girl should count their blessings, and instead of leaving a good home when they are yet in their 'teens, and going to the city with nothing in view but a "good time," should stay on the farm until they know what they want to do. We do not say they should always stick right on the farm and never go to live or work in the city, but first see what you really want to do and be.

Elgin, Ill.

"GOD Almighty first planted a garden. And indeed, it is the purest of human pleasures; it is the greatest refreshment to the spirits of man; without which buildings and palaces are but gross handiworks: and a man shall ever see that, when ages grow to civility and elegancy, men come to build stately sooner than to garden finely; as if gardening were the greater perfection."—*Lord Bacon.*

FROM FARM TO FAME.

JOHN H. NOWLAN.

Robert Burns.

THE life of Burns was by no means a model one, but as perfection is not found here, let us heed the good in the lives of all men and shun the bad.

He was born at Ayr in 1758. Being the son of a poor, unsuccessful Scottish peasant his early life was spent in hard labor on a sterile Scottish farm.

His education was very limited, being such as he received from his father, who was a somewhat cultured man of a serious turn of mind and noble character. His love for poetry led him to read all that came his way, with the result that his poetical education far distanced his practical. This led him early to making rhymes, which were handed around in manuscript and gained for him local fame.

Being unsuccessful in his native land, he decided to emigrate to Jamaica, and published a small volume of poems to pay expenses.

The venture was successful, beyond his most sanguine expectations, and led to an offer for him to go to Edinburg which he accepted.

No poet was ever recognized as quickly as this uncultured peasant from the banks of the Ayr.

There he was given an almost royal welcome, and gave promise of a brilliant future, but the same temptations that to-day beset the rustic youth in the city worked his downfall. He was thrown into idle company and led into dissipation.

He married Jane Armour (Bonnie Jean) and built with his own hands a cottage at Ellisland, near Dumfries. Here as farmer, exciseman, and poet he led a busy life, but his appetite for strong drink caused him to neglect his farm, lose his position as exciseman, and brought on ill health, which caused his death in 1796, at the early age of thirty-eight.

Burns was a poet of the people. He knew their very life and had much to do with public affairs. Though he erred, and that often, yet his acts were not sordid or mean. He is a good example of good intentions without firmness sufficient for execution.

His poems show an intense love of freedom, justice, and truth, a sympathy for suffering, and an ardent hatred of oppression, hypocrisy, and dishonesty. They were written chiefly in the Scottish dialect which makes them somewhat difficult to read, but still they are worthy of a careful perusal.

Below are some quotations from his poems:

"But if I must afflicted be,
To suit some wise design,
Then man my soul with firm resolve
To bear and not repine.

"Where with intention I have erred
No other plea I have,
But thou art good, and goodness still
Delighteth to forgive."

"O man! while in thy youthful years,
How prodigal of time!
Misspending all thy precious hours,
Thy glorious youthful prime."

"Man's inhumanity to man
Makes countless thousands mourn."

"Know prudent, cautious self-control
Is wisdom's root."

Mulberry Grove, Ill.

HOEING AND PRAYING.

Said Farmer Jones in a whining tone,
To his good old neighbor Gray,
"I've worn my knees through to the bone,
But it ain't no use to pray.

"Your corn looks just twice as good as mine,
Though you don't pretend to be
A shinin' light in the church to shine,
An' tell salvation's free.

"I've prayed to the Lord a thousand times
For to make that 'ere corn grow;
An' why yourn beats it so an' climbs
I'd give a deal to know."

Said Farmer Gray to his neighbor Jones,
In his quiet and easy way,
"When prayers get mixed with lazy bones
They don't make farmin' pay.

"Your weeds, I notice, are good and tall,
In spite of all your prayers;
You may pray for corn till the heavens fall,
If you don't dig up the tares.

"I mix my prayers with a little toil,
Along in every row;
An' I work this mixture into the soil,
Quite vig'rous with a hoe.

"An' I've discovered, though still in sin,
As sure as you are born,
This kind of compost well worked in,
Makes pretty decent corn.

"So while I'm praying I use my hoe,
An' do my level best,
To keep down the weeds along each row,
An' the Lord, he does the rest.

"It's well for to pray, both night an' morn,
As every farmer knows;
But the place to pray for thrifty corn
Is right between the rows.

"You must use your hands while praying, though
If an answer you would get,
For prayer-worn knees an' a rusty hoe
Never raised a big crop yet.

"An' so I believe, my good old friend,
If you mean to win the day,
From ploughing, clean to the harvest's end,
You must hoe as well as pray."

—Unknown.

"Let us get up in the morning resolved that we will live a truer life than we did yesterday, make somebody happy, keep our temper, and do something to make the farm life richer and better."

THE ANGORA GOAT.

THE Angora, or mohair goat, comes originally from the Turkish "villayat" of Angora, the principal city of which is about two hundred miles south of Constantinople.

The first Angoras imported into this country were a part of the gifts from the Sultan to Dr. John B. Davis. In 1849 Mr. Davis visited Turkey at the Sultan's request to superintend attempts to raise cotton in the Sultan's dominions. His success so pleased the Sultan that he loaded Dr. Davis with favors and presents, a small herd of the finest Mohair goats being among the choicest of the treasures lavished, in the opinion of the Sultan.

From Dr. Davis' herd came the ancestors of the few and small herds in the United States just before the Civil War.

But there were no mills in this country at that time to make use of their hair, so the little animals were propagated because of their peculiar but pleasing appearance and their gentleness, which made them ideal pets.

When peace came again, the suggestion that, in time, the Angora might become a more valuable economic factor than the sheep or the fields of cotton, met with but slight attention. The whole country was in a state of transition, of reconstruction, and the raising of the Angora was still to remain an amusement rather than an industry.

In the early seventies, George F. Thompson, of the Bureau of Animal Industry—an expert—commenced the task of letting the farmers know the value of the Angora goat as a money-maker, how to breed this interesting little animal for profit, and where to breed it the most successfully. Meantime, strange as it may seem, the "pure bred" Angora had ceased to exist and there is, probably, now no such animal as the "pure bred" Angora in the world.

The reason for this is understood to be, in this country, carelessness. In Angora the cause, though slightly different, gave the same results. The discovery of new uses for the hair of the Angora goat caused the avaricious but short-sighted Turks to increase their herds of mohairs by interbreeding them with the more prolific Kurdish goats, thereby "outbreeding" the more valuable original Angora.

But in this country there were enough of the Angora traits still discoverable to give the hope of eventually breeding back to the Angora. These hopes have been almost realized, although, as yet, the purified Angora cannot truthfully be described as a pure Angora, however little it may retain of the outward signs of the Kurdish admixtures. But these are worth their weight in gold, frequently bringing prices that must be expressed by the thousands.

In Cape Colony, Africa, are over three million five hundred thousand Angoras. In the United States are still a few less than two million but they are valued at over four million dollars according to the latest estimates.

That the Boers are ahead of us in discovering the value of the Angora is due, no doubt, to the fact that the Angora is not a native of this soil; while it will live almost anywhere south of the Arctic Circle, in reality it cannot thrive in any but a warm, dry climate, nor will its hair have the same commercial value, its young be so healthy, its life so long. It only really thrives best on warm, dry, hilly places or on sandy levels. For this reason, any part of the "Great Mesa," in the Southwest, is especially adapted to Angora raising.

Geographically, the "Great Mesa," be it understood, is the northwestern part of Texas, the northern part of old Mexico, New Mexico, Arizona and parts of Colorado and Utah. Geographically it is a vast tableland, dotted by smaller mesas, surrounded by mountain ranges that shut from it the rain-bearing winds from the north, from the Pacific, from the Californian Gulf and the Gulf of Mexico. Its average altitude is 7,000 feet, though in many places it is three miles above sea-level. Underlying this entire region seem to be vast underground lakes, rivers and reservoirs, so that nearly everywhere on the "Great Mesa" artesian wells can be made at slight cost. On top of the surrounding mountain chains, the snow lies white the year around, though it is even more of a rarity than rain in the valleys. From this snow that is always falling, always slipping down where it will melt, come the rivers that cut gashes in the "Great Mesa," gashes that are too tremendous for words to express their marvels. From this snow, also, comes the water that is found beneath the soil. Probably, too, from this snow as much as because of its elevation, the "Great Mesa" ten months out of every year is the land of Springtime.

The mean average temperature is seventy degrees. It seldom gets much above ninety nor below forty. Here, the sun shines three hundred days out of the year and the other sixty-five days it is sure to be visible some portion of the hours of daylight.

Because of the dry, warm air, the continual sunshine and dry soil, the Angora's hair is soft, silky, glossy, the color of the hair of a human baby more than anything else to which it can be compared. A single hair is usually from one to two feet in length, finer than the thread spun by a spider, more delicate and lustrous than the line of a silk worm, as well as far more durable.

Out of the hair of the Mohair Angora are made rugs, "mouffton furs," blonde wigs, carpets, tapestries, plushes, "silk" thread, and silk webs, far more glossy and pretty than the fabrics made of the cocoons of the silkworm.

At present, the cost of a pair of ordinary Angora goats is trifling. A yearling ram brings from three to five dollars, a yearling doe, or ewe, a trifle less than the male. They breed the second year and can be sheared from then on, the hair weighing about five pounds to the goat and being worth from twenty-eight or thirty to fifty cents a pound.

Of course, the cleaner the hair, the finer, the softer, the longer, the better prices. I am speaking of the ordinary animals and ordinary prices.

That some goats' fleece is worth hundreds of dollars an ounce is a fact, but such goats and such fleeces are not too abundant. Some ordinary goats' fleeces, when the season has been favorable, are worth from three to seven dollars a pound.

The goats require a herder as they will not defend themselves, and they must be sheltered nights, for an Angora with wet hair will "chill" and die very quickly.

The Angora will eat anything, like the ordinary "William-goat" peculiar to Harlem heights, it will clear a quarter-section of brush and shrubs permanently and effectively. Though it must be kept dry and warm, it is in every respect an extraordinarily healthy creature, subject to few of the diseases that beset sheep and cows.

Its milk is rich, sweet and wholesome, supposed to be good for anyone not almost dead with tuberculosis, certainly it is very fattening and from it cheese and butter can be made to rival any of the Old World goat-cheeses and goat-butters.

The fact that the Angora is a healthier animal than the cow makes its milk an ideal food for babies, very old people, or feeble children.

Some of the goat-raisers say its milk will rival De Leon's Fountain of Youth, but this is, probably, an exaggeration.

At present, the Angora goat-raiser in the Southwest has the advantage of millions of acres of "free range," but the United States Government is rapidly cutting the ranges up into farms, irrigating these farms and giving them away to anyone who will take the land and live on it for five years.

To such a new-comer a small herd of Angoras is the best possible money-maker. The herd will clear and fertilize his land while he is putting up his house and his "shelter sheds." In five years his does will all have given him at least twenty-one descendants and about five dollars apiece yearly for their hair. As in this climate the Angora need not be stall fed, or sheltered (except at night) either Winter or Summer but will just "grow," Angora raising is as near to getting something for nothing as has yet been offered by Providence for the alleviation of the lazy man.

Among the Angora goats exhibited at the Louisiana Purchase Exposition were two prize-winners which, owing to the long fleeces they carried, attracted extraordinary attention. One was a doe and the other a buck—both being from New Mexico. The doe sheared fourteen pounds of fleece and the buck sixteen.—*James R. Shelton, in Vick's Magazine.*

FUNNYGRAPHS

A lady who was looking around in a bric-a-brac shop, with a view to purchasing something odd, noticed a quaint figure, the head and shoulders of which appeared above the counter. "What is that Japanese idol over there worth?" she inquired. The salesman replied in a subdued tone, "Worth about half a million, madam; it's the proprietor."

"Mama," said little Elsie, "do men ever go to heaven."

"Why, of course, my dear. What makes you ask?"

"Because I never see any pictures of angels with whiskers."

"Well," said the mother, thoughtfully, "some men do go to heaven, but they get there by a close shave."—San Francisco Monitor.

Matrimonial Agent—I can strongly recommend Mr. Softy. He's financially solid, and he neither drinks, smokes, nor takes snuff.

Applicant—Do you think I will marry a man I can't find fault with?—Fliegende Blaetter.

"But will your new medical preparation cure?"

"Hush! That's not the question. It will sell because the man who is going to write our advertising stuff can describe every symptom of illness man is heir to, and then make the reader believe he's got all of them."—Health.

"Well," said the uncertain citizen, "I failed on that examination to git in the government service—turned me down on geography, an' spellin', an' 'rithmetic, an' now I dunno whether to go to teachin' school, or practicing law, or editin' of a newspaper. I jes' can't decide which one o' the three to tackle!"—Atlanta Constitution.

RECIPROCATING.

"Your family plays the piano later every night," said the visitor.

"Yes," answered the suburban resident, "we're trying to keep the people next door up so that they will be too sleepy to mow the lawn in the morning. And they're trying to mow the lawn so early that we won't feel like playing at night."—Washington Star.

SAW NO ADVANTAGE.

"Oh, Edgar! Did you see in the paper the description of that new house where everything goes by electricity? Wouldn't it be fine if we could live in a house like that! All you have to do to get anything you want is to touch a button."

"That wouldn't interest you, my dear, it would be no improvement. Nothing could induce you to touch a button. Just look at this coat of mine!"—Rire.

NEFF'S CORNER

Now that I have spoken of vacant houses, some perhaps think that every thing is dead at Lake Arthur, everybody who invested here through Neff is "on his back" with a howl, dissatisfied with his investment and trying to get out, and perhaps some wise ones are patting themselves on the back for not coming in and saying, "I told you so." But wait a little, don't laugh too soon. Let me tell you more of the facts. I have not received one word of dissatisfaction. This warm weather people want to "spread out" some if they can possibly afford it, and hence just now there is not as good a demand as usual for the little two-room houses, though I rented one yesterday. All my three-room houses are rented except one that was finished only a few days ago, and that has been spoken for. Another with the roof not yet on is engaged.

Two additions to the town, one to the north and one to the west, have lately been laid out and on one, material is part on the ground for a fine concrete block residence, a pretty two-story residence closer in is nearing completion, the workmen are as busy as bees on the large brick business block at the corner of Broadway and Main, work is being pushed on the bridge across the Pecos, I have two three-room houses under way, and now at a season when most other towns are asleep, Lake Arthur is as lively as you please. A concrete block factory has a force of men busy at work and Lake Arthur is not dead.

To be sure I advised against the building of more houses for rent here at present, but it was not because this thing is overdone—it was because I don't want it overdone. The situation may so change soon that I will call on you for more houses; but whatever I propose, I will propose nothing except what I think will pay you and do good. I am still able to answer questions, so address your correspondence

JAMES M. NEFF,
Lake Arthur, New Mexico.

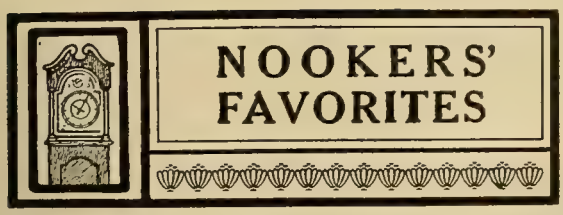
If you have a copy of the Book, you can tell them of its value.

The Other Half of the Globe

BY



D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

PAUL REVERE'S RIDE.

Listen, my children, and you shall hear
Of the midnight ride of Paul Revere,
On the eighteenth of April, in Seventy-five;
Hardly a man is now alive
Who remembers that famous day and year.

He said to his friend, "If the British march
By land or sea from the town to-night,
Hang a lantern aloft in the belfry arch
Of the North Church tower as a signal light,—
One, if by land, and two, if by sea;
And I on the opposite shore will be,
Ready to ride and spread the alarm
Through every Middlesex village and farm,
For the country folk to be up and to arm."

Then he said, "Good-night!" and with muffled oar
Silently rowed to the Charleston shore,
Just as the moon rose over the bay,
Where swinging wide at her moorings lay
The Somerset, British man-of-war;
A phantom ship, with each mast and spar
Across the moon like a prison bar,
And a huge black hulk, that was magnified
By its own reflection in the tide.

Meanwhile, his friend, through alley and street,
Wanders and watches with eager ears,
Till in the silence around him he hears
The muster of men at the barrack door,
The sound of arms, and the tramp of feet,
And the measured tread of the grenadiers,
Marching down to their boats on the shore.

Then he climbed the tower of the Old North Church,
By the wooden stairs, with stealthy tread,
To the belfry-chamber overhead,
And startled the pigeons from their perch
On the sombre rafters that round him made
Masses and moving shapes of shade,—
By the trembling ladder, steep and tall,
To the highest window in the wall,
Where he paused to listen and look down
A moment on the roofs of the town,
And the moonlight flowing over all.

Beneath, in the churchyard, lay the dead,
In their night-encampment on the hill,
Wrapped in silence so deep and still
That he could hear, like a sentinel's tread,
The watchful night-wind, as it went
Creeping along from tent to tent,
And seeming to whisper, "All is well!"
A moment only he feels the spell
Of the place and the hour, and the secret dread
Of the lonely belfry and the dead;
For suddenly all his thoughts are bent
On a shadowy something far away,
Where the river widens to meet the bay,—
A line of black that bends and floats
On the rising tide, like a bridge of boats.

Meanwhile, impatient to mount and ride,
Booted and spurred, with a heavy stride
On the opposite shore walked Paul Revere.
Now he patted his horse's side,
Now gazed at the landscape far and near,
Then, impetuous, stamped the earth,
And turned and tightened his saddle-girth;
But mostly he watched with eager search
The belfry-tower of the Old North Church,
As it rose above the graves on the hill,

Lonely and spectral and sombre and still.
And lo! as he looks, on the belfry's height
A glimmer, and then a gleam of light!
He springs to the saddle, the bridle he turns,
But lingers and gazes, till full on his sight
A second lamp in the belfry burns!

A hurry of hoofs in a village street,
A shape in the moonlight, a bulk in the dark,
And beneath from the pebbles, in passing, a spark
Struck out by a steed flying fearless and fleet:
That was all! And yet, through the gloom and the light,
The fate of a nation was riding that night;
And the spark struck out by that steed in his flight,
Kindled the land into flame with its heat.

He has left the village and mounted the steep,
And beneath him, tranquil and broad and deep,
Is the Mystic meeting the ocean tides;
And under the alders, that skirt its edge,
Now soft on the sand, now loud on the ledge,
Is heard the tramp of his steed as he rides.

It was twelve by the village clock
When he crossed the bridge into Medford town.
He heard the crowing of the cock,
And the barking of the farmer's dog,
And felt the damp of the river fog,
That rises after the sun goes down.

It was one by the village clock,
When he galloped into Lexington.
He saw the gilded weathercock
Swim in the moonlight as he passed,
And the meetinghouse windows, blank and bare,
Gaze at him with a spectral glare,
As if they already stood aghast
At the bloody work they would look upon.

It was two by the village clock,
When he came to the bridge in Concord town.
He heard the bleating of the flock,
And the twitter of birds among the trees,
And felt the breath of the morning breeze
Blowing over the meadows brown.
And one was safe and asleep in his bed
Who at the bridge would be first to fall,
Who that day would be lying dead,
Pierced by a British musket-ball.

You know the rest. In the books you have read,
How the British Regulars fired and fled,—
How the farmers gave them ball for ball,
From behind each fence and farm-yard wall,
Chasing the red-coats down the lane,
Then crossing the fields to emerge again
Under the trees at the turn of the road,
And only pausing to fire and load.

So through the night rode Paul Revere;
And so through the night went his cry of alarm
To every Middlesex village and farm,—
A cry of defiance and not of fear,
A voice in the darkness, a knock at the door,
And a word that shall echo forevermore!
For, borne on the night-wind of the Past,
Through all our history, to the last,
In the hour of darkness and peril and need,
The people will waken and listen to hear
The hurrying hoof-beats of that steed,
And the midnight message of Paul Revere.

—Henry W. Longfellow.

THE RAINBOW.

I sometimes have thought in my loneliest hours,
That lie on my heart like the dew on the flowers,
Of a ramble I took one bright afternoon,
When my heart was as light as a blossom in June.
The green earth was moist with the late fallen showers,
The breeze fluttered down and blew open the flowers,
While a single white cloud in its haven of rest,
On the white wings of peace floated off in the west.

As I threw back my tresses to catch the cool breeze
That scattered the rain-drops and dimpled the seas,
Far up the blue sky a fair rainbow unrolled
Its soft-tinted pinions of purple and gold;
'Twas born in a moment, yet, quick as its birth,
It had stretched to the uttermost ends of the earth,
And fair as an angel it floated all free,
With a wing on the earth and a wing on the sea.

How calm was the ocean, how gentle its swell!
Like a woman's soft bosom it rose and it fell,
White its light, sparkling waves, stealing laughingly o'er,
When they saw the fair rainbow knelt down to the shore;
No sweet hymn ascended, no murmur of prayer,
Yet I felt that the spirit of worship was there,
And bent my young head in devotion and love,
'Neath the form of the angels that floated above.

How wide was the sweep of its beautiful wings!
How boundless its circle! how radiant its rings!
If I looked on the sky, 'twas suspended in air,
If I looked on the ocean, the rainbow was there;
Thus forming a girdle as brilliant and whole
As the girdle of suns that the night skies unroll;
Like the wing of the Deity, calmly unfurled,
It bent from the cloud and encircled the world.

There are moments, I think, when the spirit receives
Whole volumes of thought on its unwritten leaves;
When the folds of the heart in a moment unclose,
Like the innermost leaves from the heart of the rose;
And thus, when the rainbow had passed from the sky,
The thoughts it awoke were too deep to pass by;
It left my full soul like the wing of a dove,
Fluttering with pleasure and fluttering with love.

I know that each moment of rapture or pain
But shortens the links in life's mystical chain;
I know that my form, like the bow of the wave,
Must pass from the earth and lie cold in the grave;
Yet O! when death's shadows my bosom uncloud,
When I shrink from the thought of the coffin and shroud,
May hope, like the rainbow, my spirit unfold
In her beautiful pinions of purple and gold!

—Mrs. Amelia B. Welby.

Fifty acres of the best corn land in Iowa or Illinois.

An absolutely certain yield from it every year of 60 bushels per acre (supposing some yet undiscovered fertilizer were applied which would make this yield certain.)

A price guaranteed by government of 40c a bushel, paid right on the farm.

This would make an income of $24.00 per acre, or $1200 on the 50 acres.

Suppose the price to be $100 per acre, which would be cheap enough for such land, or $5000 for 50 acres. Any corn man would jump at such a chance.

This income of $1200 is the very highest that could possibly be expected. It is several shades above the average, especially when considering occasional poor crops, freight charges, etc. And yet, even considering these things, this corn land is among the best land in the world and millions of dollars are made on it every year. If a man has a good corn farm in Iowa or Illinois he thinks he is pretty well fixed.

OR

20 acres of Hazelwood irrigated land.

An absolutely certain yield (with irrigation) of from 6 to 8 tons of alfalfa per acre in 3 cuttings. (One cutting of 2 1-2 tons has already been raised without irrigation.)

A price of from $10 to $12 per ton in the stack, owing to its being only a two hours' wagon haul to Spokane. (It has never been less and often more. Alfalfa is retailing now in Spokane for $15 to $17 per ton.)

Taking 6 tons per acre (the lowest yield) at $10 per ton (the lowest price), the income on 20 acres would be $1200.

Price $250 per acre, or 20 acres for $5000.

This income of $1200 on alfalfa is bedrock, the very lowest that can be expected, if the land is properly handled. That makes it an absolutely safe investment. It is as certain as 2 per cent on government bonds.

By raising fruit or vegetables several times as much can be made. From $300 to $500, and even as high as $700 per acre, has been made on land no better than this, and, considering the market, not so good.

The leading nurseryman of the northwest has bought 20 acres at Hazelwood for a nursery, as he considers it the best fruit land in the state.

Only 4 1-2 miles from Spokane, one of the best markets in the world. A sure market and no freight to pay.

Which is Better?

The **lowest** income on Hazelwood land equals the **highest** income on the corn land. If farmers get rich on the corn land, what can they do at Hazelwood? Write us and we will mail you a fine lithographed map, showing where this land is and all about it. EASY TERMS.

Webster's Unabridged Dictionary

This is the original Webster's Unabridged Dictionary, with supplement and revises by Chauncey A. Goodrich, of Yale College. An American dictionary of the English language, containing the whole vocabulary of the first editions and the corrections and improvements of later editions. To this is added a table of synonyms, peculiar use of words and terms of the Bible. If you do not care to spend $9.00 or $10.00 for Webster's International Dictionary, which is the latest and best made, then get this book, which, for nearly all practical purposes, will serve you quite as well. It is printed from good, clear type and contains 1,600 pages. Cloth, $1.25.

Brethren Publishing House, :: Elgin, Illinois

500 Scriptural Anecdotes

A Hand-book for Preachers, Teachers and Christian Workers.

COMPILED BY

HAROLD F. SALES

An entirely new collection of short, sharp Scriptural Anecdotes, invaluable to those who are being called on to conduct meetings and are compelled to prepare on short notice.

A large variety of subjects are treated, and it will be found more helpful than some collections costing four times its price.

The entire collection is carefully classified under fifty different subjects and arranged alphabetically.

SAMPLE ANECDOTES.

(As they appear in the book.)

The Obscured Light.

There was a great lighthouse out at sea. One night the men lighted the lamps, as usual. Some time afterward they saw that there appeared no light upon the water where ordinarily there was a bright lane of beams. They examined their lamps—they were burning brightly. But they looked outside, and there were millions of little insects on the glass, so thickly piled there that the light could not get through. In the morning they learned that a ship had been wrecked close by because the light had been obscured by the insects.

Glorified God in Our Homes.

A saintly bishop once said: "I never move about my home, I never step out of my house, I never pass along any street or path, I am never anywhere without being likely to be seen by some one who knows me. A knowledge of this fact always makes me watchful of myself and cautious. I want it to be so that whoever sees me, at any time, or anywhere, will be able to see nothing in me that is inconsistent with the character of a loyal and faithful servant of Christ." Such a spirit cannot help glorifying God wherever it is lived.

Price in limp cloth binding, 25 cents.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,

CHAS. B. WESTOVER, Pres.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

The Inglenook

A Weekly Magazine

DO not keep the alabaster boxes of your love and tenderness sealed up until your friends are dead. Fill their lives with sweetness. Speak approving, cheering words while their ears can hear them, and while their hearts can be thrilled and made happier by them; the kind things you mean to say when they are gone, say before they go. The flowers you mean to send for their coffins, send to brighten and sweeten their homes before they leave them.

Favorable stop-over privileges at and west of Pocatello, Idaho.

Stop-over of five days at all points in California **except San Francisco and Los Angeles** on tickets to California destinations.

STOPOVER PRIVILEGES

GOING TRIP—Going trip must begin on date of purchase of ticket and stopovers may be had at any point enroute prior to midnight of "Going Transit Limit" as shown above.

RETURN LIMIT—The Joint Agent at destination of ticket (or at any intermediate Pacific Coast point where joint agency may be maintained) will make good ticket for return passage by attaching validation certificate, for which service a fee of 50 cents will be collected. After ticket is validated, stopover may be had at any point enroute within the "Final Return Limit," as shown above. Passengers desiring to stop off, should notify conductors when presenting ticket.

BAGGAGE—The usual free allowance of baggage (150 pounds on full tickets and 75 pounds on half tickets) may be checked going or returning to any point at which stopover is permitted.

FREE SIDE TRIPS

To holders of tickets via Union Pacific R. R. to Ogden or Granger, sold at rates named herein, following free side trips will be given:

From Denver to Colorado Springs or Pueblo and return. (Apply to Union Depot Ticket Agent or to General Agent, 941 17th St., Denver, Col.)

Ogden to Salt Lake City and return. (Apply to conductor into Ogden or to Union Depot Ticket Agent, Ogden.) In connection with this side trip, free Pullman seat checks will be furnished passengers holding Standard Pullman car tickets.

YELLOWSTONE PARK SIDE TRIP

Side trip tickets from Ogden or Pocatello to and through Yellowstone Park including five and one-half days' hotel accomodations as well as railroad and stage transportation, will be sold for $55.00. Side trip tickets covering rail and stage transportation only will be sold for $28.00. Park season will be from June 10 to September 19. Apply to Ticket Agent either at Ogden or Pocatello. Passengers holding through sleeping car tickets will be furnished sleeping car stopover checks on application to the Pullman conductor.

OPTIONAL ROUTES

All tickets reading via the Union Pacific Railroad to Ogden or Granger will be honored via Julesburg Line and Denver or via the direct line through Cheyenne, at option of holders.

Proportionate rates from all points East. Be sure to buy your ticket over **THE UNION PACIFIC RAILROAD** known as the **Overland Route**, and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

Farming Lands in California can be bought from $25 to $40 per acre. Printed matter free. Write to

GEO. L. McDONAUGH, Colonization Agent,
UNION PACIFIC RAILROAD,
OMAHA, NEBRASKA.

To the Settlers of Butte Valley

Watsonville, California, June 18, 1907.

During my recent visit to your beautiful valley I have been particularly impressed with the splendid opportunities offered there to the settler and the favorable condition under which to make a start.

No insect pests, obnoxious weeds or fungus diseases to attack or destroy the growing crop. Pests that elsewhere cost the farmer and fruit-grower tens of thousands of dollars each year.

Here is an opportunity to commence, as it were, with a "clean slate."

Will you let this opportunity pass unheeded? Eternal vigilance is the price of liberty, here as well as elsewhere.

From personal experience and observation I know how very expensive, yes, disastrous, in some cases, the lack of a little foresight and some preventative measures have been. The great damage caused the farmers of a locality by the introduction of foul seed is only too well known.

However, the unique situation of the Butte Valley gives you a chance to prevent the introduction of such pests and disease as Johnston Grass, morning glory, Canadian thistle, pear blight, walnut blight, grain smut, rust and weevil. All varities of scale insects, codlin moth, wooly aphis, bitter rot and dozens of other enemies of our cultivated plants and trees.

To do effective work the Butte Valley farmers must organize and obtain the co-operation of the county officers. A committee should be appointed through which all purchases of seeds, plants or trees should be made, thus allowing careful inspection by the County Horticultural Commissioner, besides saving in cost.

Not an ounce of seed, not a box of fruit, not a single tree should be allowed to enter the valley without passing a rigid inspection.

No old boxes or sacks should be allowed at all.

Doubtless the Agricultural Department of the State University will do all in its power to help you, if its assistance is requested.

Co-operative buying, selling and shipping is another subject meriting the serious attention of your organization.

Good schools, buildings as well as teachers, good roads, farmers' telephones, all these and many other problems will engage your best efforts as the population increases.

You will be well prepared to meet them if you organize now on the broad principle of Democracy, "The greatest good to the greatest number."

Wishing you all success, health and happiness, I am

Yours sincerely,

F. L. Willehed MacDonald

Beyond Human Help

was the conclusion they arrived at. The doctors had done their best and failed. It was not a verdict, however, that was calculated to inspire a feeling of good cheer in the hearts of those around her. Mr. Frank Loskot, 943 Fairfield Ave., Chicago, Ill., tells a vivid story of his mother's sufferings and her ultimate recovery through the medium of a plain household remedy. He says: "My mother was in a terrible condition. Her ailment seemed to be a peculiar one. The doctors gave it various names, but she suffered greatly with pains in her stomach. We had three doctors attending her, without benefit. At times the pains would seize her so that we thought surely her end was at hand. Finally the doctors declared that she was beyond human help, and that there was not a spark of hope for her. Everything else having failed, we decided to try the BLOOD VITALIZER, of which we had heard so much. I obtained some of this remedy and commenced giving it regularly, according to directions. It was not long before we noticed its good effect. She continued to use it, and inside of a month our dear mother was so much better that she was able to be up a little. After a while, she was entirely well and has remained so ever since. Her ailment has never returned. We are very grateful for what the BLOOD VITALIZER accomplished."

NEARING THE EIGHTY MARK.

San Antonio, Tex., May 17, 1906.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—I never like to be without the **Blood Vitalizer** as it has done me so much good. I suffered greatly with my stomach and kidneys but I am cured through the use of your remedy the **Blood Vitalizer.** If I had had your medicine about 30 years ago I would not have been doubled up as I am through gout and rheumatism. I am like an old crippled tree that cannot be straightened any more. I am 77 years old. With kindest regards, I remain

Yours very truly,

305 Division St. Anna Zuercher.

THE DOCTORS GAVE UP.

Garrison, N. D., Jan. 29, 1906.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—I have a son, 12 years old who has been sick for three years. Two years ago, when we lived in Russia the doctors there gave him up as incurable. They said there was no hope for him at all. When I came to this country a Mr. Barth told me to get your **Blood Vitalizer,** which I did. My boy is now well although nobody ever believed that he could regain his health. We are very thankful to you. Yours sincerely,

G. Steinwand.

Dr. Peter's Blood Vitalizer

is known as a plain household remedy. It comes in a plain bottle encased in a plain carton, but there is the element of cure in every bottle. No one is so low with disease but what this remedy gives hope, and no one so well but what it will still do good.

Do not ask for the BLOOD VITALIZER in drugstores. It is not a drugstore medicine, but is supplied direct to the people through local agents appointed in every community. Should you know of no agent in your neighborhood, write at once to the sole proprietors,

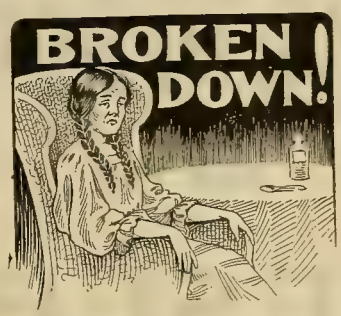
(Specimen of type)

10 Take heed now; for the LORD hath chosen thee to build an house for the sanctuary: be strong and do it.

No. 1114.—Bound in morocco grain leatheroid, round corners, red edges with 12 index maps. Size 3½x5½ inches.

Price single copy, ...56c
Postage extra, ... 8c
Price per dozen or more, f. o. b. Elgin, Each, ...50c



Sunday School Teachers

Here is a chance to supply your class with neat Bibles at a small cost. Don't miss this opportunity. This is a neat little Bible and will give you good service for a cheap Bible.

Send all orders to,

BRETHREN PUBLISHING HOUSE.
ELGIN, ILL.

Is this your picture Mother, Sister? Is your Nervous System broken down and you can hardly drag along? Brawntawns, The Victor Tonic, was made for you as it builds broken down systems, restores appetites, strengthens the digestive organs. If you have tried other tonics don't despair until you try Brawntawns, The Victor Tonic, for it will build you. Thirty days' treatment delivered to your home for 50c.

Address

B, VICTOR REMEDIES CO.
FREDERICK, MD., U. S. A.

CAP GOODS!

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

Our Goods are Reliable. Our Variety is Large. Our Prices are Low.

All orders filled promptly, postpaid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

R. E. ARNOLD, Elgin, Ill.

Notice to Subscriber

In changing your address from one post office to another, be sure to state what periodicals you are taking and if all are not sent in your name, mention that fact. Quite a good many of our subscribers write and say, "Change all my mail matter," etc., not designating what papers. We have, at least, seven lists of names for our various periodicals, and it makes a lot of extra work to go over all these lists when, perhaps, your name is only on two or three of them. Kindly remember to always state which of the periodicals you are receiving.

BRETHREN PUB. HOUSE,
Elgin, Ill.

Lomita, California

So long as there is unsold land in this colony, those who purchase acreage of us, can have it to raise corn and barley at the usual rentals, but the parties should take it before Nov. 1. These crops require no irrigation.

The city of Los Angeles recently voted overwhelmingly to issue $23,000,000 to build a canal 246 miles in length, to bring the waters of the Owens River for its use. It will take five years to build this conduit, and assuredly the many thousands of men who will build it will require vegetables, fruits and meats. Suppose you come to Lomita and help raise these supplies!

Do you know how we grow in Southern California? The number of children of school age between five and seventeen in this county is 82,237. The net gain the past year is 6,313. The total number of children under 17 is 108,707. Of this number 105,910 are native born. Manufactures, railway developments, and productions of the ground and mining have been vast in extent, and the per cent of increase of population in Los Angeles has far outstripped Columbus, New Orleans, Kansas City, Omaha, Minneapolis, Louisville and Milwaukee the past 26 years.

In these parts of the United States the raising of crops is not a five months' proposition as in the East, but nearer a twelve months' reality.

There is scarcely a time when something can not be grown for the markets. What is land worth that does business for you ten or twelve months in a year? You cannot expect it to be purchased for the price of land that brings you only one crop in the year.

We expect the "knocker" and the misrepresenter. In fact, he has been here from the forenoon sun already. He is a negative quantity anywhere, so we expect to grow without him. In this world there are three classes: Workers, beggars and thieves. The latter two live on the labors of the workers. Among the workers are the useful workers, the jerkers and the kickers. The first is God's selection. Lomita is seeking useful workers. There is great room for them. Such build good homes, develop the soil, build schoolhouses and honorable churches.

Scarcely two places in Southern California are just alike.

Places only a few miles apart differ. Distance or nearness to the sea, elevation above the ocean, closeness to and contour of mountains, rivers, trees, soil and heat, all have influence on productions.

On account of these differences between places, the descriptions differ. If you know one place you do not know the other place even near by unless you give it study. Hence in describing Lomita we do not describe Covina, and in describing Covina we do not describe Downey, and Downey's description does not fit Lordsburg. For this reason there are strictly citrus fruit conditions, alfalfa places, berry regions, etc. We claim Lomita to be a berry region, good for alfalfa, corn, vegetables, walnuts and peaches and possibly apples. Come and help develop and make yourself a nice home amidst a genial climate free from destructive storms and rigorous winters. There is no winter at Lomita. We have spring and summer only.

Markets are good and are likely to continue good. Each year about 50,000 people make their way into Southern California, thus increasing the demand for food stuffs and each year the area of productive land grows less because of subdivision into town lots.

In no year has there been enough raised in our country to feed the people, hence considerable food stuffs are brought from the East. The stuff will grow here,—what is needed are more industrious farmers and gardeners.

One should have from $1,000 or more to begin at Lomita The more the easier to make rapid progress. Please get the right thoughts about our lovely Lomita, give it a careful look-over, and if you see your way clear to become one of us, we shall be glad to take the next best step—sell you some acres.

A Great Opportunity

FOR THE

HOMESEEKER

180,000 ACRES UNDER THE CAREY ACT

Now Ready to File On

This tract is on the North Side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho

These lands are sold at 50 cents per acre and the water right $30.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms, crops of all kinds are grown to perfection. Fruit growing is a success ,as well as the growing of sugar beets. To see these lands take the Oregon Short Line R. R., to Minnedoka; there change cars for Milner.

Homeseekers' Round Trip Tickets

will be sold to points in Idaho on 1st and 3rd Tuesdays in May and June 1907.

BRETHREN and others returning from the annual conference at Los Angeles, via Portland through Idaho over the Oregon Short Line R. R. should stop and see these lands.

EXCURSION TICKETS will be sold from points east over the O. S. L. R. R. to Seattle and Spokane, Wash., June 20th to July 12th inclusive. Final return limit Sept. 15th, 1907. Stopovers allowed on going and return trip.

For further information write to

THE INGLENOOK

VOL. IX. JULY 16, 1907. No. 29.

The Public and the Saloon

William L. Judy

THE American people believe that their democracy is truly a self-governing nation, deriving its just powers from the consent of the governed, and organized to protect the life, liberty, happiness and prosperity of its rulers, the people. Every institution existing to-day, according to this principle, is promoting the highest public welfare. Ah, ladies and gentlemen, it is so sad to know that such is not the truth. An institution is flourishing in our beloved nation which has no right to exist, because it is gnawing at the vitals of the nation, undermining its happiness and prosperity, corrupting the public morals, and yet we seem to heed it not. This great enemy of the home, the church, and the state is the saloon.

"By their fruits ye shall know them." Poverty, woe, sin, corruption, crime, vice, diseased bodies, poisoned intellects, degenerated manhood—these are its fruits. Has it any right to exist? "By the general concurrence of opinion of every civilized and Christian community, there are few sources of crime and misery equal to the dramshop," is the final and repeated decision of the nation's highest tribunal, which has declared that "there is no inherent right in a citizen to sell intoxicating liquors at retail."

"Who hath woe? who hath sorrow? who hath contentions? who hath wounds without cause? They that tarry long at the wine." There can be no sight more pitiable than that of the drunkard. Can it be that his diseased body was made in the likeness of the Creator? What means that staggering gait of his, if not that his intellect has been poisoned by the vile stuff and no longer has control o'er his body? Listen to the words of that great sage, Wm. Shakespeare, when he said, "Oh, that men should put an enemy in their mouths to steal away their brains!" The drunkard's higher nature is blunted. The appreciation of the sublime, the beautiful, and the cultured, given to him as a gift from his Maker, finds no sympathetic chord in his degenerate soul. His heart, made to beat with that of the Infinite, responds only to baseness, immorality, and degradation. The bestial, the animal, hold sway o'er his higher sensibilities, o'er the divine part of his nature. No hope e'er swells in his breast. Life means only the continual satisfying of his abnormally developed appetites and passions. "No man liveth unto himself." The drunkard's woe, misery, and sorrow affect also his family and society. The innocent and helpless wife and children must bear the greater share. "By their fruits ye shall know them." What is the fruit of the saloon?—the drunkard. He is its finished product. Has it any right to exist?

This institution is the curse of American civilization, the open sore of our nation. It empties our churches and workshops, and fills the jails, almshouses, and the dens of vice and misery. Virtue and purity are trampled under foot. Even the home, the hope and bulwark of our nation, is threatened. The cursed custom of drink is making us a nation of weak-bodied and weak-minded men. The saloon is corrupting the public morals, whose forces determine the stability of our government. Not one good thing can be placed to its credit. There are no bright pages in its shameful history. Has it justified its existence?

What should be the attitude of the government towards the saloon? Our democracy was organized to protect life, liberty, and the pursuit of happiness. This is the fundamental purpose of our government. Public welfare must stand supreme. Every temptation to crime and wrong-doing should be removed. It is the government's duty to make it hard to do wrong and easy to do right. It must assume the attitude of unending hostility to every producer of crime, poverty, and misery. Yet, the saloon, though it is admittedly responsible for seventy-five per cent of the crime, poverty, and woe existing in the nation to-day, is flourishing under our government, and has the full protection of our flag. The same stars and stripes that protect the church, the home, and the state, protect the saloon with equal importance.

Our government has agreed for a sum of money to give existence to an institution which thrives on vices, appetites, and passions of men. A question of revenue can never be considered alongside of morals.

License means the government's permission, protection, and partnership. By sharing in profits of the saloon, the government has become a partner in the business. The liquor dealer has no right to earn his bread and butter by taking away the bread and butter from the drunkard and his innocent family. Though it has a license from the government, it has no license from the Almighty. "No drunkard shall enter into the kingdom of heaven." If it is the unquestioned duty of the government to protect the morals of the people, to secure happiness and peace both to themselves and their posterity, why does it allow to exist, yea, to thrive and threaten, the corrupter of public morals, the institution which everywhere tempts the American youth, the hope and promise of the future to begin the habit that steals his brains, weakens his physical strength and endurance, takes his wages and gives no equal return, breaks his mother's heart, and makes his father's hair untimely gray? Why does the government hesitate to destroy this cursed traffic, this archenemy of civic righteousness and public welfare? Oh, when will our nation awake from her lethargy and open her eyes, so long closed, to the existence and condition of this awful curse, which seeks to undermine her welfare and prosperity? God grant that it may be soon.

The government is responsible for the existence of the saloon; and the people are responsible for the government; therefore, the people are responsible for the saloon. Public sentiment rules in our democracy. The voice of the people is law, for they are the rulers of the government. The only way by which to reach the saloon is through the government; and the only way by which to reach the government is through the people. Therefore, the solution of the liquor problem lies with the people.

The existence of the saloon is due to the distorted attitude of the public towards it—an attitude of indifference caused by a lack of education and information concerning it. They regard it as having existed for a long time and as now being necessary. They do not see its real nature. "Does it not help to pay our taxes?" the public asks. Yes, and does it not help also to fill the jails, disturb the peace, and cause crime? The people do not seem to see that the cost of the saloon is sixteen dollars to every dollar of income. The saloon is a deceiver and tries to keep the public ignorant of its real nature. It tries to appear as a necessary adjunct to the community, and as the poor man's club. Though it claims equal rights and privileges with other trades and continually complains of undue interference, yet, unlike any other trade, it disregards every restraint imposed upon it. The saloon does not stay within its limits as a trade but tries to dominate political parties, control elections, and bribe the press. The office-seeker dare not incur its enmity. Votes are bought by liquor. Think of it; the dearest right of a free citizen bartered for drink.

The crying need of the hour is the education of the public. Let them see this cursed traffic in all its hideousness. Show them how they have been so long deceived and imposed upon. A great change in public sentiment must come about. The public conscience has been seared and must be aroused. The call is for men, strong and courageous for the right; men, high minded, and who "understand the living might inherent in a principle." The educating of the public is the one necessary means. If the public finds that it has been buying spoiled meat or adulterated food, at once it demands an immediate redress. It knows that murder and robbery must be punished because the common good so demands. It sees the need of such action and realizes the evil result if allowed to continue. But apparently the public does not see the saloon with all its hideousness and treachery. It does not think of the saloon as criminal and to be dealt with accordingly. Agitation alone can bring this about. Oh, for men, eager and ready to open the eyes of the public, and lift the veil from the saloon! Then, when the iron is hot, strike, and victory is certain.

The future promises success to the cause of prohibition. The final struggle is yet to come. The forces on both sides are strengthening their lines. Listen to this bugle call on the enemy's side: "The trend of public sentiment in this decade is against the liquor trade, and when the trade realizes this fact and confines its efforts entirely to protecting what they now have, and banishing thoughts of what they would like, the better it will be for all." Immorality, crime, misery, and sin are arrayed on the one side; on the other, virtue, civic righteousness, the church, and the home. But we are assured the victory. Prohibition will succeed because it is a civic necessity. A righteous cause knows no defeat. The evil cannot withstand the good. The Lord of Hosts, our God, is with us; and who dare oppose him? "Forward" be our watchword; "on to victory" our battle-cry.

TENDERNESS.

RICHARD SEIDEL.

Down in the woodland's deep and fragrant gloom,
Where shadows quiver, green boughs interlace,
And soft, cool zephyrs tremble in each space,
The violets grow, arrayed in purple bloom,
All wet with dews, exhale their rare perfume,
We gaze into each bright, uplifted face,
They sweetly smile with soft and tender grace,—
A hint of joy from worlds beyond the tomb.
They seem to wear an angel's aureole,
Such as we see in pearly dewdrops shine.
Their silent speech—an oracle divine,
Breathes forth this message to each listening soul:
"All life is rich that humbly seeks to bless,"—
Oh petaled music of Love's tenderness!

The Song Sparrow

M. E. S. Charles

ALTHOUGH the song sparrow delights in thickets near swamps and in lowlands, it is a very sociable bird and frequents gardens, orchards and door-yards. When nesting near a dwelling it seeks a thicket of mock orange bushes, spireas, etc., or dense, twining vines, as the honeysuckle, clematis and wild grape vines, in which to build its nest. This structure is placed from one to three feet above the ground. The bird can adapt itself to surrounding conditions and when it sees fit to build in the open field, the nest is placed on the ground, often under a bunch of clover, or at the roots of a hill of growing corn.

But whether the song sparrow builds on the ground or in bushes its nest is always well made. The foundation is constructed of stout stems of grasses and rootlets: the nest proper being built upon this of long slender grasses, and not infrequently finished off inside with hair. The eggs, four or five in number, are greenish white, more or less thickly blotched and spotted with dark reddish brown. At first the young birds are fed upon plant lice, small caterpillars and worms. But by the time they are one-third grown they are ready for moths, butterflies, beetles, grasshoppers and caterpillars, which they consume in immense quantities. During the fall and winter both the old and the young birds feed on grass and weed seeds. Two broods and sometimes three are reared in one season, the nesting season lasting from May to August.

By the middle of September the song sparrows will have left the haunts of men and will be found in thickets along roadsides, and on the bushy edges of swamps and creeks, or among the underbrush bordering woods and fields. They are now quiet and retiring in their habits, being rarely seen except by those who look for them. The tide of migration will soon set in, and by the last of November only an occasional straggler will be seen in the places where a month or two before the thickets seemed alive with them.

If in doubt as to the identity of the song sparrow, the wedge-shaped patches of black and brown which often unite to form a large spot in the center of the breast, will settle the matter definitely. Plain and homely in its dress, its sweet notes and its gentle, confiding manners render it a most welcome visitor to our doorsteps where it will soon learn to come for the crumbs that are thrown out: and the same bird will return year after year to the same locality, whenever thus encouraged and in this way it has become inseparably associated with the early childhood of almost every country boy or girl.

The song sparrow is one of our most noted and conspicuous singers. Frank M. Chapman, a reliable ornithologist, says of this bird: "You can not go far afield without meeting this singer," and Miss Blanchan says, "There is scarcely an hour in the day, too, when its delicious, ecstatic song may not be heard." Early in the morning, almost before day dawn, we may hear its resonant notes which are kept up at intervals until nightfall. Being one of our most constant musicians its song is heard from early spring until late fall. It is the opening song of the season, often being heard in central Indiana and Illinois as early as the middle of February, and as late as November. Its song is especially impressive when snow still lingers on the ground and few other birds are heard. When a song sparrow begins a trill it usually repeats it a number of times, and then, as if tired of one tune, turns to another; and yet with all its variations there is always something that distinguishes its singing from that of all other birds. Some of its notes are full and exultant, while others in the same run are low and tender, like the strains of a harp. Henry Van Dyke has paid a beautiful tribute to the song sparrow in his poem beginning:

The Home of Two Sparrows.

"There is a bird I know so well,
It seems as if he must have sung
Beside my crib when I was young;

Before I knew the way to spell
The name of even the smallest bird,
His gentle, joyful song I heard."

Spiceland, Ind.

FILL YOUR PLACE.

ANNA GARBER.

You may travel upon this vast globe of ours, sailing from ocean to ocean, traversing the continents in turn, viewing the wonderful works and inventions wrought by man, admiring the lives of those who have left an immortal influence, beholding the beauties and wonders of Nature, or, in short turn your mind's eye to anything that lives, moves, or has its being on mother earth, and you will everywhere observe the great necessity and importance of this theme—Fill Your Place.

Each one of us has a place to fill; we all have a mission here,—a work to do in this great, busy world. Everything has a place, else there would be no existence, and the most important, and probably the most difficult is that of finding our place. It is essential that there be a fixed purpose; a true aim in life, and a firm decision as to what place we shall occupy in this vast throng of workers. This may be done by environment, inherited tendencies, or in a personal choice, and in making this choice set yourself earnestly to see what you were made to do, and then set yourself earnestly to do it.

We perhaps can not see the need of properly filling our place. Why not drift along with many others who are going at a rapid pace? But they must reach their destination all too soon, so let us be "rowing, not drifting." It is a duty to your Creator, yourself, and others. The world has need of competent workers, and can use you even if your ability is limited, for one talent well used and cultivated is worth much more than five or ten, undeveloped and buried. It is not what we possess, but how we use it.

Then be yourself, and fill your own place, for no one else can fill it for you, neither can you rightly fill the place of any one else, but you may teach them by your own worthy example. In order to fill our place well and be able to cope with the difficulties and trials of life, we must have preparation. The first part of this preparation lies in the development of character.

Make your character, let your reputation be what it will. "You can not dream yourself into character, you must hammer and forge one for yourself." So it is achieved. The person who has enough strength of character to overcome the daily contests successfully, is the one who will be able to fight the great battles.

What are we without character? We are nothing. Where is the place for him who will not render full value for what he receives? The world doesn't need such and is better off without them. This is the greatest part of the preparation that we learn to control ourselves, and frame a strong and beautiful character.

Education is also a requisite, and is obtained by perseverance and diligence; indeed, it is not so much the difference in brain as in the effort put forth that some are better educated than others. Perhaps they have more of that characteristic known as "stick-to-it-ive-ness."

Good manners constitute no small part of our education, and these are an index to good character. Thus character and education go together, and form a happy combination in the same individual. We should fill our place every day by seizing every opportunity to do some little act of kindness, or to speak a helpful, cheering word to those around us, not forgetting the aged one, or the little child.

We must realize our possibilities, and feel that it lies within our power to accomplish great things and to make the world richer by lofty purposes. Greatness does not depend on position but on faithfulness, which is very necessary in accomplishing good results.

"He alone is great
Who by a life heroic conquers fate."

Count a man great who fills his place of service well.

We should have high ideals and great ambitions, but without discontent; it is wise to be looking ahead and striving upward.

Failing to fill our place, or to do our duty, influences others. They may be benefited, or injured by us,—just as we choose to do. If we help them, they will pass it on, but if we hinder them by our own poor life, theirs will also be a failure and just how far the destruction reaches no one can determine. "No man liveth unto himself; no man dieth unto himself."

We should fill our place nobly—however small it may be, for the place does not confer dignity on the man, but the man on the place. All have not equal capacities, hence we cannot all expect to do great things, but it is often the little places that count. So it is important that every one do and be the best they can in the place they should fill. What an ideal place this world would be if every one properly filled his own place! We should do right regardless of what others do.

"They are slaves who dare not be
In the right with two or three."

Filling our place always, brings success and happiness. In order to fill our place successfully, we must sacrifice pleasure for duty,—hence *success means sacrifice*. Successful people find that shade trees and easy chairs are few and far between on the road to success.

And let us remember that it is every day that counts. Success does not come all at once, but it takes both time and work, for there is "no excellence without

great labor." Then I say again, Fill your place in every true sense of the word. Let us live a life of usefulness and great accomplishments, and we will be assured success and happiness both here and hereafter.

Burr Oak, Kans.

"SOMETIMES the hardest struggle about duty is deciding to do it. When the decision has been made, once for all, and the will fixed, the carrying out is not nearly so hard as it looked. Indecision is the unhappiest mortal state to be in. To decide and be done with it is half the battle."

Song of the Roses

Marguerite Bixler

Last evening I restlessly wandered
Into my rose-garden, fair.
For my heart was heavy with sorrow,
And comfort I thought to find there.

But alas! instead of rich blossoms
Scattering their fragrance around
And modestly blushing a message,
Only buds in the garden I found.

All day were they kissed by soft zephyrs,
And golden-winged sunbeams so bright—
Yet, while I longingly lingered,
The buds only whispered, "good-night."

Sadly I turned from my garden,
Pausing a moment to weep,
Then like a burden-worn pilgrim
Sought to bury my sorrow in sleep.

But sometimes in life there are struggles
So vital, so keen and so deep,
Blighting our most cherished heart-hopes,
Such cannot be silenced in sleep.

How long were the hours of night-time,
How mournful the winds in their sighing,
How ghostly the cold, silent moonbeams,
Mocking my heart in its crying.

But morning's dawn chases the shadow,
Each dewdrop, so lately a tear,
Is changed to a smile in the sunshine,
As it whispers, "Heart, be of good cheer.

"This life is not all pain and sadness
'Neath the dark cloud waits the gold and the blue
Myriad are the hearts of compassion,
There's comfort in this, Heart, for you.

"Come, troubled one, cease thy repining,
Blessings rich are awaiting thy way,
Keep busy, be helpful, believing—
Thy strength it shall be as thy day."

Once again I enter my garden,
Oh! the wonderful change that's been wrought,
Crimson-blushing and snowy-white blossoms,
Every nook with rich aroma is fraught.

And thus have the sweet blossoms taught me,
To cheerfully sing on, and wait,
For the One who awakens the rosebuds
Will sometime, for me open a gate.

That leads into a garden celestial,
Where the adored Rose of Sharon doth reign.
In the Homeland of love's purest fragrance
There, our loved ones, redeemed, to regain.

A Summer in the Rockies

Hattie Dell

OUR first stop was at Grand Junction, about six miles from home. Here we laid in a supply of canned goods, and more bread. A mile or so out of town and we were on the desert. We came to a place where there were two ways and thinking they both led to Whitewater, the men thought we would take the shortest. This led us through gates and just about dark we came to the end of the road. Here was a bank from which had been hauled dirt or fine rock. It was a little difficult to find our way back to the right road, but we found it, and soon came to a small irrigating stream, where we camped.

We all seemed more tired than hungry, so we had a lunch, made our beds, and retired. We had neither springs nor feathers; we just spread our covers on mother earth, with the blue sky and bright stars above us. Our sleep was sweet and refreshing, for we breathed no poison air. We were up at four o'clock. While the men looked for wood with which to cook our breakfast, we girls completed our toilet at the little stream. It did not take long to eat breakfast, for it was served in one course.

We were soon on our way up the hill. Walking was fine, the air so sweet and light that it made one feel as if he could almost fly. East of us was the Grand Mesa covered with trees and brush. We could see a house here and there several miles up the mountain side, and streams of water looked like a mere thread. We stopped in Whitewater and the men laid in a good supply of ammunition, for they were going to kill deer, and bear. We crossed the Garrison river and commenced climbing a seven mile hill. John and we girls took it turn about driving. Will and Archie walked the whole seven miles, and shot rabbits. There were a good many flowers along the way; we gathered our hands full, but the hot sun soon wilted them. This was a hard pull for our little team, but we all rested going down the other side. The road on this side was made by blasting the rocks out of the mountain side just wide enough for a road.

At the foot of the hill was a little brook, and as we were very hungry we stopped here for dinner, we had fried rabbit and gravy. The Colorado rabbits are good any time of the year; they are smaller and have a better flavor that the Nebraska rabbits. We had not learned yet to let the fire burn down before trying to cook a meal, so our potatoes tasted a little smoky, and the ashes blew in the gravy. We hinted that we had spilled the pepper into it and the men thought it was good. We decided while eating that each one should take his own dishes to the brook and wash them. What wouldn't come off with water, was rubbed with sand and our dishes were clean, too.

We were now in Uniweek Cañon. There are some fine little farms and log houses scattered along through this cañon. We saw some wheat and oats, but mostly tame grass is raised here. The soil is rich and is farmed wherever it can be had. As we were passing one prosperous little farm, we saw a man at the well. John said that man had killed his neighbor who lived on down the cañon a little way. The wife of the man that was killed told her boys when they grew up they wouldn't be men if they didn't

A Short Level Stretch.

kill the man that murdered their father. It was told that she didn't care anything for her husband when he was alive, but made a big fuss when he was gone. What a wicked heart that woman has. What can we expect of the boys and men as long as there are such mothers in the land. Just let Satan get into the heart of the mother and a ruined home will be the consequence. The fathers are often the cause, too, but if their mothers would have been true Christian women, not many of these men would be as they are. Here is one man's idea of woman: "O woman! lovely woman! Nature made thee to temper man; we had been brutes without you. Angels are painted

fair to look like you; there is in you all that we believe of heaven—amazing brightness, purity and truth, eternal joy and everlasting love." May God help each of us to become the true, pure, faithful woman he would have us be. Don't forget this, sisters, if you let slip all else I say.

The mountains here are not what one would call beautiful, but grand and wonderful. There is but little growth on them, but at every turn one of us would see something new in these mighty rocks. We saw one very pretty waterfall. It was back quite a distance from the road, so we only quenched our thirst from its sweet water where it crossed the road. The sun was too low down to get a snap shot of the fall, and it was the same way when we came back. I was much disappointed for I did want a picture of it. There were two nice farmhouses here, and this man farmed for a mile or more on down the cañon.

Our next stop was at a rock possibly two thousand feet high with a hole through it about five hundred feet from the top. We were all anxious to see what the opening looked like, so the horses were unhitched and left to eat by the fence, and we set out across a hay field. To our surprise, and discomfort, the owner was watering his field, and our feet got a good soaking. We crossed a small stream and picked our way through the thick underbrush until we reached the foot of the mountain; then the climb over and around large rocks commenced. We had a hard, hot climb of it, but by resting several times we all reached the hole. Likely we girls would have been left half way down had not the men given us a lift over the hard places. We were very warm and as we entered the opening, the cool air rushed through making us shiver. There were large rocks piled up all through here and they looked as if they had been blasted out, but people say it is a natural opening. We were not so long going down, but our knees wanted to turn the wrong way before we reached the foot of the rocks. It was getting along toward dark and we hurried on to find a camping place, which we soon found and an ideal one, too, on the bank of a brook with trees, brush and grass. What more could campers ask for?

We were all hungry after such a hard climb, so while the men rolled in logs, and broke up brush for a fire, we girls unpacked the provisions. Supper was soon cooking rapidly and we hastened to spread the table, for the odor from the kettles and frying pan sharpened our appetite still more. How we enjoyed cooking and eating in this way so much more than at home. How much we enjoy a change. We soon called supper. One call was usually enough for the men, for they were never far away at mealtime. And how they did eat! We girls were afraid sometimes we would have to go hungry. I suppose if they could get a word in here they would say the same thing about us. But never mind, boys, we enjoy seeing you eat our cooking as though it were too good to leave any. After supper we sat around the campfire and dried our shoes. The men laid their guns by the bed, so that if a lion or bear came down upon us they would be ready for him.

For several reasons I did not sleep much that night. The wind started up and blew the ashes from our fire right over us, and something in the brush close to me kept stirring the leaves until I was so wide-awake I thought no sleep would come to me that night. But it did come at last to my relief. The morning dawned bright and fresh. The men were up and fed the horses while we slept that "sweet morning nap," and they called to us saying the horses had eaten two loaves of bread that had been overlooked in unloading in the evening. They left just a crust so we would know where our bread had gone. We were scarce of bread anyway, but John said if we ran out, he could make pancakes out of water, and they were good, too. We girls smiled at that remark, but didn't say

Unlweek Cañon.

LOWLY BUT CROWNED; OR, SYBIL THE OUTCAST

A Story by Sadie Brallier Noffsinger

Chapter XIV. In Which Sibyl Exhibits Some Characteristics.

THE days flew rapidly by at Shady Brook, the occupants of which were active, each in his appointed way. Mr. Chester was busy with his college work, Mrs. Chester devoted much of her time to benevolent enterprises and literature, while Sibyl and Lily were engaged mainly in loving each other and every day becoming firmer friends. Unselfish employment is sure to bring its own reward, hence it is needless to add that all were happy.

Meanwhile, some characteristics were developing in Sibyl. Mrs. Chester watched and silently "pondered them within her heart."

One feature which was highly conspicuous in Sibyl, was her love for the weak and suffering. One plaint from Lily, as well as the cry of a kitten in distress put her on the alert and insured her immediate protection. Mrs. Chester observed this and said to her husband: "Surely, dear, that trait alone is a gem well worth the polishing."

While this was true, she was not marked in her deference to superiors, in general, and would, in no wise be imposed upon by any one who was her equal in years and strength. She strenuously thwarted any infringement upon her rights, and her disposition for revenge upon the offender was as noticeable, as was her defense of the weak. In evidence of this she had several times been rude in her replies to some of the village maids who hooted "beggar gal!" at her; much to the mortification of Mrs. Preadle and Mrs. Trot, two pious ladies of Busy Homes.

"I tell you, Sister Trot, it's a shame on't, as well as a neverlastin' disgrace to Sister Chester, to have a gal of that make-up about her. In my estimation, it's a 'peachable wrong to the young folks of this neighborhood round about to have her brung and stationed in their midst. The Lord knows the workin's of the brain, how treacherous it is an' how deceivin! Who'd a' thunk it ob Sister Chester?" concluded Mrs. Treadle with a tragic glance upward, and a groan which was intended, perhaps, to pierce the heavens, but which in all likelihood reached no further than the ceiling.

"'The heart is deceivin' above all things and desperate wicked,'" quoted Mrs. Trot. "That prophecy is fulfilled at Shady Brook, Sister Treadle! from this day forward I wash my hands from humanity!"

Mrs. Chester had once remonstrated with Sibyl, in a quiet manner concerning this propensity, and pointed out the evils which would naturally follow if she persisted in such a course. Sibyl was always deferential to Mrs. Chester, and one word from her benefactor immediately subdued her. And now she burst into tears and sobbed: "I know its wicked an' bad, an' I'm sorry most powerful, but it seems like the strivin's of a sperrit in me, an' when they make fun an' call me beggar gal, I can't keep back the words nohow! I know it's a wicked sperrit makes me say them, Mrs. Chester, an' I will try more as ever not to listen."

Sibyl was in earnest about the matter; and the next day when Priscilla Trot called "beggar gal" at her she did not even move her lips. That night she felt more than conqueror as she knelt beside her snowy bed and prayed: "Forgive me my sins, even as I forgive Persilly Trot."

Mrs. Chester also observed that Sibyl had strong perceptive organs. She was quick to imitate and apt in learning. Since her arrival at Shady Brook she had learned to read and write under the patient teaching of her benefactress. The pleasure she evinced upon mastering the alphabet was something touching. And for a time, in Mrs. Chester's absence, Lily heard nothing but d-o-g *dog*, t-o-p *top*, r-a-n *ran*, and a few other favorites. At length she was able to comprehend simple composition, discriminate between poetry and prose and finally to read the magazines to whose literature Mrs. Chester contributed. There was something in poetry that awed her and she declared that she herself would be a "pome" some day. For many days she coveted this idea, and perhaps no poet ever gave to the world his master piece in greater triumph than that with which she handed to Mrs. Chester her "own first verse."

Upon a crumpled piece of paper, which showed that much scribbling and erasing had taken place, were cramped these words:

"O deep blue sky
Way up so high
Look down on I!"

Mrs. Chester could not repress a smile and Sibyl

accepted that as an evidence that her poem had found great merit in Mrs. Chester's eyes, and looked intensely gratified. For some moments there was an unbroken pause. Perhaps Mrs. Chester was wondering what to say and how to say it. At last Sibyl disturbed the silence by suggesting:

"Do you think as my verse is beautiful?"

"It certainly contains several beautiful thoughts," replied Mrs. Chester.

"Do you think it sounds sort o' like what the great pomes write?"

"I believe most all great poets speak about the wonderful, deep, blue heavens," affirmed Mrs. Chester.

"Thank you, Mrs. Chester. I can't tell you as how happy your words make me! I don't think as I ken ever be as great a pome as you are, but I b'lieve as I have done something what Persilly Trot *can't* do; for it is like enough 'at she has never thought about the deep, blue sky."

Chapter XV. The Building of a Bridge.

"'B'LIEVE me that with the deeds an' struggles o' the present we are 'forded the opertunity o' buildin' fer ourselves a bridge what shell span the waste an' bear us inter that blessed an' redeemin' future where there shell be no past.'

"'With the deeds an' struggles o' the present,'" murmured John Deane, still more emphatically, withdrawing his hand from his throbbing temples; "them wuz her words."

"'The deeds an' struggles o' the present,'" he quoted yet again; then added: "That's a hard sayin' fer the struggles o' the present means suthin' turrible. But Mrs. Chester's words are true, I doubt.

"'A bridge what shall span the waste an' bear us inter that blessed an' redeemin' future where there shell be no past.' I will begin the buildin' o' that bridge this day.

"It will take a deal o' buildin' to make a bridge what is long enough ter carry a fellow inter that mysterius future, an' will 'quire a purty stout un," soliloquized John Deane. "I will make my piers o' repentance, an' the floorin' o' faith in God, what will surely stan' the test, an' the iron spikes what jines the materal shell be b'lief in humanity. I never thought as I could b'lieve in humanity no more; but Mrs. Chester cares fer me, an' she will help me. It'll be hard work, this buildin' will, but I hev the bridge planned out an' I'll begin it, fer I am anxious ter reach that future what has no past!" And John Deane gazed long and earnestly at his mental plan.

It is a hard road that leads from sin to righteousness and must needs be a toilsome and tedious journey. Many faint by the wayside and only here and there a traveler reaches the far-off haven of eternal rest.

Ay, when one has spent his best years in the paths of folly it is hard to retrace his steps. But John Deane started, and that is more than many travelers do.

A SUMMER IN THE ROCKIES.

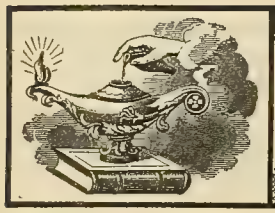
(Continued from Page 679.)

much. No one seemed hungry—strange isn't it?—so we drove several miles, and stopped by a tiny brooklet and shade trees, made a little fire just to make coffee; we had buns, salmon and fruit and didn't take time to cook anything, for we wanted to get as far as we could before the heat of the day. Cora and I walked on, but we did not go far until we saw strange tracks in the road, so we waited for the wagon.

SUMMER HYMN.

The year draws near its golden-hearted prime,
Fulfilled of grandeur rounded into grace;
We seem to hear sweet notes of joyance chime
From elfin bells through many a greenwood place.
The sovereign summer, robed and garlanded,
Looks, steeped in verdure, up the enchanted skies;
A crown, sun-woven, round her royal head,
And love's warm languor in her dreamy eyes.
We quaff our fill of beauty, peace, delight:
But 'mid the entrancing scene a still voice saith,
"If earth, heaven's shadow, shows a face so bright,
What of God's summer past the straits of death?"

—Paul Hamilton Hayne.



WHY WEAR CREPE FOR THE DEAD?

WHY will Christians persist in wearing crepe? It is purely a custom of heathen origin, and is anti-Christian and anti-rational.

Unfortunately the notion prevails that by dressing in black and wearing long crepe veils the bereaved friends manifest the depth of their grief and the ardor of their love, and thus honor their dead; and that to refuse or neglect to "put on mourning" is to fail to pay respect to the departed one. No more absurd notion could prevail.

If death ended all, then the custom would be appropriate; but for Christians who believe in the resurrection of Him who "brought life and immortality to light," and has gone to prepare a place for us and ours, to perpetuate a heathen custom that had its origin in the notion that death and the grave end all, is not only inconsistent, but absurd.

Of course the manufacturers and dealers in crepe and other "mourning" fabrics will perpetuate the custom as long as possible, because it puts money into their pockets; but is it not time that Christians break away from the tyranny and expense of this heathen custom? How ridiculous, how superstitious, how heathenish to see, at a funeral, the bereaved ones draped out in long, costly, trailing veils, and hats and bonnets that indicate all the blackness of despair.—*Religious Telescope.*

THE QUIET HOUR

SERMONETTE.

D. L. FORNEY.

"Thou shalt love thy neighbor as thyself."

SOME scriptures could very easily be fulfilled were there no qualifications.

The first great command as Jesus numbered them, "Thou shalt love the Lord thy God," would, if it stopped right there, be very easily observed. But when it must be "with all thy heart, with all thy soul, with all thy mind and with all thy strength," the limitations are such that those who comply are not so numerous.

So also the command in our text; with the last two words omitted there would indeed be a grand rallying host to the unfurled standard. But with the qualification *as thyself* a Gideon's band can scarce be rallied.

Could men read their own lives into the scriptures it would be an easy matter to have sufficient love to satisfy. But when it is required to love a neighbor *as thyself* it is necessary to dig deep enough into our natures to find a love that is founded on the Divine. The self nature must be pushed aside to make room for a neighbor on the same platform with ourselves. A love that is broad and deep and true as the love of God must possess the heart to love our fellow as we love ourselves.

Cain no doubt loved his brother till he allowed the spirit of envy a place in his heart, then all was changed. But with a heart of love that is true, acts of love spring forth from its virgin soil.

Two brothers lived neighbors. One alone without wife or children, the other had wife and children. Each possessed a field of grain. The first said to himself, "I have no wife or children and do not need so much grain as my brother who has a family." So during the night he carried a number of shocks from his own field to that of his brother. The other meditating on his brother's condition said, "His lot is lonely and he does not have a wife and children to bring joy to his life as I have." So during the night he transfers a number of shocks of grain from his own to his brother's field. In the morning both rise to find they possess as much as they had before giving any away.

Paul places a very high ideal in this one command when he says, "For all the law is fulfilled in one word even in this: Thou shalt love thy neighbor as thyself."

The Savior's answer to the lawyer's question, Who is my neighbor? answers the question as to whom we are to love as ourselves. Not him alone who lives on adjoining lots. Did we open our eyes we might see both the man in need as well as the man whose kindness should receive recognition. Each is neighbor to the other. *Love thy neighbor as thyself.*

Reedley, Calif.

HENRY WARD BEECHER.

J. KURTZ MILLER.

THIS noted preacher has gone to his reward years ago, but he is not forgotten. He cannot be forgotten in Brooklyn. In a beautiful little park at City Hall, he stands life-size in bronze, on a granite pedestal some six feet high. At the base are orphan children and a poor widow (in bronze) looking towards the man who was their friend. "Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction and to keep himself unspotted from the world" James 1: 27.

Thousands of people pass this little park every day going to and fro at business in the heart of our great city. The other day I paused before the image of this man of God, and counted over twelve different varieties of the most beautiful flowers planted in artistic designs. Beecher's little tribute to flowers flashed into my mind. It was this: "The most beautiful thing God ever made, that he forgot to put a soul into, was a flower."

Oh how we do love the beautiful! But listen! Sin is ugly—makes you ugly! Your only remedy is the Word of God. It will beautify your life, and build for you a character which is worth far more than any earthly monument made by man.

Brooklyn, N. Y.

SOMETIME, SOMEWHERE.

Unanswered yet? The prayer your lips have pleaded
In agony of heart these many years?
Doth faith begin to fail; is hope departing,
And think you all in vain those falling tears?
Say not the Father hath not heard your prayer;
You shall have your desire sometime, somewhere.

Unanswered yet? Though when you first presented
This one petition at the Father's throne,
It seemed you could not wait the time of asking,
So urgent was your heart to make it known:
Though years have passed since then, do not despair,
The Lord will answer you sometime, somewhere.

Unanswered yet? Nay, do not say ungranted;
Perhaps your part is not yet wholly done.
The work began when first your prayer was uttered,

And God will finish what he has begun:
If you will keep the incense burning there,
His glory you will see sometime, somewhere.

Unanswered yet? Faith cannot be unanswered,
Her feet were firmly planted on the Rock;
Amid the wildest storms she stands undaunted,
Nor quails before the loudest thunder shock:
She knows Omnipotence has heard her prayer,
And cries, It shall be done sometime, somewhere.

—Browning.

"JESUS, LOVER OF MY SOUL."

THE golden quality of this best-known and loved of Charles Wesley's hymns is attested by two indorsements that cannot be impeached; its perennial life, and the blessings of millions who needed it.

Jesus, Lover of my soul,
Let me to Thy bosom fly,
While the billows near me roll,
While the tempest still is high.
Hide me, O my Savior, hide,
Till the storm of life is past,
Safe into the haven guide
O receive my soul at last!

Wesley is believed to have written it when a young man, and story and legend have been busy with the circumstances of its birth. The most poetical account alleges that a dove chased by a hawk dashed through his window into his bosom, and the inspiration to write the line—

Let me to Thy bosom fly

—was the genesis of the poem.

The popularity of "Jesus, Lover of my Soul" not only procured it, at home, the name of "England's song of the sea," but carried it with "the course of Empire" to the West, where it has reigned with "Rock of Ages" for more than a hundred and fifty years, joint primate of inspired human songs.

Compiled incidents of its heavenly service would fill a chapter. A venerable minister tells of the supernal comfort that lightened his after years of sorrow from the dying bed of his wife who whispered with her last breath, "Hide me, O my Savior, hide."

A childless and widowed father in Washington remembers with a more than earthly peace the wife and mother's last request for Wesley's hymn, and her departure to the sound of its music to join the spirit of her babe.

A summer visitor in Philadelphia, waiting on a hot street-corner for a car to Fairmount Park, overheard a quavering voice singing the same hymn and saw an emaciated hand caressing a little plant in an open window—and carried away the picture of a fading life, and the words—

Other refuge have I none,
Hangs my helpless soul on Thee.

On one of the fields of the Civil War, just after a bloody battle, the Rev. James Rankin of the United Presbyterian church bent over a dying soldier. Asked if he had any special request to make, the brave fellow replied, "Yes, sing 'Jesus, Lover of my Soul.'"

The clergyman belonged to a church that sang only Psalms. But what a tribute to that ubiquitous hymn that such a man knew it by heart! A moment's hesitation and he recalled the words, and, for the first time in his life, sang a sacred song that was not a Psalm. When he reached the lines—

Safe into the haven guide,
O receive my soul at last,

—his hand was in a frozen grip of a dead man, whose face wore "the light that never was on sea or land." The minister went away saying to himself, "If this hymn is good to die by, it is good to live by."—*From "Story of the Hymns and Tunes."*

THE OPINION OF STATESMEN.

IT is frequently charged that the glowing reports of the results of missionary work are given by missionaries and are colored. It is of interest therefore to hear testimonies from those who are not missionaries.

At the Student Volunteer Convention held at Nashville last February a number of statesmen were present and made remarkable speeches.

The British minister came from Washington to tell that Christianity had been the greatest factor in raising the standard of morality in Persia, India and elsewhere. He pronounced the highest eulogy that language could express on the untold value to the British Government, socially and intellectually, of Christian missions in heathen lands.

Mr. Foster, who has been the representative of the United States in the East, testified that the missionaries were the greatest boon to China, that they have had the most to do with the present awakening of that vast empire.

Minister Condit of Peking, and Mr. Denby, formerly dean of the diplomatic circle in Peking, have given similar testimonies. They all repudiate the charge that the rebellion came through the missionaries, but that it came rather from the wicked foreigners who have tried to make a prey of China. The Chinese have little love for the drunken and licentious sailors who infest their ports, or for the dishonest traders who seek to take advantage of them, but for the missionaries they are coming to have the greatest respect and admiration.—*Selected.*

"O GOD, thou knowest what is the battle with each one. Wilt thou help every one of us to gain victories in his own place and over his own nature. May we not be weary in well doing; may none of us feel as though it were too long a strife, or too hard to bear."

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

MAKING WORK.

THOSE who are wide-awake and have a fair understanding of their capabilities and of the numberless opportunities for putting them to the test, and who are true to the laws of their being, are sorely tried in their endeavor to exercise the necessary amount of patience and forbearance toward those who see very little to do and who actually do less. The short span of a lifetime seems to be quite out of proportion to the amount of work we could otherwise accomplish and even to that which seems to be demanded of us.

But it is possible for one to exaggerate these demands, and when this is the case it may result in harm. With the majority of industrious people the prospect of an amount of work to which they feel themselves fully equal, acts as a spur to their diligence. But when the amount appears far out of proportion to the strength, in most cases it has a weakening effect. Of course no one is expected to do more than he can do, and in the light of the assurance, "As thy day, so shall thy strength be," the above condition would indicate that some are making unnecessary additions, —are adopting duties that were never meant to be such.

While it is true that we may not judge truly in all things as to what may fall rightfully upon our neighbor as a duty, by nature we have so many things in common that we cannot go wholly astray in our judgment. To test the reliability of the indication mentioned above, let us take the case of a housewife and mother,—the one whose duties are manifestly many and whose will to do them is generally in the same proportion. When she speaks of tasks demanding double the strength and time at her command, ask her to enumerate them, and see how quickly you can reduce them to reasonable proportions.

The harm that comes from this tendency to make work may come in two ways. First, as already stated, the prospect of a task far beyond one's powers of accomplishment may rob one of her strength; and second, it will in time blunt one's sense of discrimination so that real duties may be placed among those things that are left undone, while the "made" duties receive most attention. By all means let us be industrious, but let us be careful that we do not presume to disprove the declaration that duty is proportioned to strength.

UNDERSTANDING EACH OTHER.

UNDER the title, "The Personal Factor in the Labor Problem," the July *Review of Reviews* discusses an article appearing in the June number of the *Atlantic Monthly* in which the writer endeavors to show how the personal element should figure in the relations existing between the laborer and capitalist. The theme is broad enough to furnish a text for discussions and applications in other fields than that of the business world. We quote a portion of this review in order that we may have the force of the argument to carry the thought further.

"It is frequently asserted nowadays that the personal, or human, element in the relations between employers and wage-earners has been virtually effaced by the advent of corporations. Indeed, this has been generally accepted, and cynics have spread the belief that conscience, good-will, desire for justice, and inclination for mercy are all matters of a past age, having no legitimate place in the labor market of the present, wherein the impersonal machine-like aggregation of capital snaps up the offer of the labor organization for the commodity it has for sale,—the muscle and brain power of its members.

"Assuming an official position in a corporation does not nullify any law of human nature or repeal any of the conditions of human existence. Corporate policies are made by men and carried out by men, and men cannot become economic abstractions. Despite the changes in our business world, personal contact has not been changed between the employee and his employer; it is merely the point of contact that has been altered. This means that the foreman question is to-day one of the most vital points in our whole scheme of industrial relation.

"If this fact were more generally observed by corporations, better results would be attained and fewer strikes take place. The foreman is the key to this situation, but the employer selects the foreman and shapes the general policy. To regard the workman as an 'economic problem,' to be driven with mechanical regularity, is a sad mistake. The personal relation of confidence and responsibility must be present if good results are desired.

"By a system of frank and cordial recognition of the contribution made by the employee to the prosperity of the enterprise, by trusting the men themselves, and letting them feel they have a 'friend at the top,' much trouble may be averted. To treat all

fairly, to do the best that business will reasonably permit, to give free and unprejudiced hearing to reasonable requests and grievances, and to discuss these matters in a respectful and businesslike way, will go far to promote good feeling and loyalty among workingmen."

Almost every social and economic problem, as well as that of the laborer and capitalist, may be largely solved by the course suggested above. In no point are intelligent, self-respecting people so sensitive as in that which concerns their rights as intelligent people, and when we learn to give "honor to whom honor is due," no matter whether he works with brain or brawn, we will go far toward removing the friction that at present causes so much trouble in the various fields of activity. An honest application of the golden rule is pretty sure to give satisfaction all around in any case, and when it is made after a study of the question from its different angles, it is hardly possible that any one could be accused of unfairness.

Most of the trouble and sorrow with which the world is afflicted may be traced to a lack of understanding between individuals. We use our reasoning powers and our tongues for almost every purpose except that of making ourselves understood where an understanding is vital to our welfare and that of others. When the several parties interested in some one subject can leave self in the background and come together and frankly discuss the matter, the outlook for the peaceful adjustment of all differences is most encouraging. But before this happy condition of affairs can prevail it is evident that some of us will need to change our minds as to what constitutes real dignity and manliness. There must be an understanding on this point before any other can be considered.

THE CATALOGS OF OUR SCHOOLS.

We are so constituted that some one thing must hold the preponderance of interest at all times; it is almost impossible to divide it equally among several objects. For nine months our student boys and girls gave first attention to the several text-books, the mastering of which their course of study required. Now something else,—perhaps altogether different,—has taken their place.

The arrival of catalogs from a number of our schools during the past few weeks set us to thinking on this line. Ordinarily, a school catalog, or a catalog of any sort for that matter, is treated in a somewhat indifferent way, but there comes a time in the life of a fair number when a school catalog outrivals the most interesting novel in its power to hold the attention. The years since are not so many but that I can recall the day when a lone school catalog found its way to the back country where I lived. For days its pages held a fascination for me above everything else, and the influence of their power has no doubt had much to do with the years since. To-day, as I leaf through the current catalogs before me,—not very different in make-up from the one that was of most absorbing interest to me,—my mind goes out over our fair land to the boys and girls who, experiencing the same hunger for knowledge, are eagerly devouring these precious books. Amid numberless attractions their favorite school catalog holds first place.

May this door open up to them not only the fountains at which they may satisfy their present longings, but may it reveal to them the highest possibilities of a useful life; and may the number that pass therethrough increase.

CHANGING ADDRESSES.

Daily there come to the House requests to have addresses changed. Some of the writers are very precise, and their requests can be carried out without any delay or uncertainty. But others! One writes and says to change his paper from one place to another, but does not say which of our papers he is taking. That means delay and loss for the House, for there are several lists of names and they cannot be looked through without loss. Sometimes we are asked to change a paper to a given address, but the old address is not given, and this occasions delay and loss.

If our readers will write plainly their name, the name of the periodical which is to be changed, the old address and the new address, they will help us greatly and will be better satisfied themselves.

WORTH REPEATING IN THIS ISSUE.

Their silent speech—an oracle divine,
Breathes forth this message to each listening soul:
"All life is rich that humbly seeks to bless,"—
Oh petaled music of Love's tenderness!

Echoes from Everywhere

Baron Speck von Sternburg, German ambassador to the United States, will likely have to give up his position in the not distant future because of ill health. He has filled the place with credit and his departure will be greatly regretted.

A tornado on the night of July 6 did damage to the extent of a hundred thousand dollars near Long Pine, Nebr. Three persons were hurt. The fire station was blown down and the jail destroyed. It is reported that heavy damage was done the crops.

Following the example of New York City, an attempt is being made in Chicago to establish noiseless zones around hospitals. The movement is a good one and deserves to meet with success. The noise of a city has an injurious effect on many well persons, and on the unwell it is very much worse.

Premier Petkoff, of Bulgaria, was slain March 11. July 4 his murderer was sentenced to death, one accomplice was condemned to life imprisonment, and the other to fifteen years' penal servitude. Petkoff was the leader of the Stambouloff party; Stambouloff was assassinated twelve years ago.

Professor Stetson of Kalamazoo College, Mich., calls the epidemic of unwritten law a menace to the nation. "The evils of the unwritten law are serious. The unwritten law means the destruction of the juidicial system if juries sworn to apply the written law disregard the instructions of the court in one class of cases. If it is possible in these cases, why is it not in others? The jury system is shaken to its foundations. The unswerving fidelity of jurors to their oaths is our greatest safeguard. If the jury plays fast and loose with the law laid down by the legislatures and interpreted by the court, the administration of the law is greatly weakened. This brings a decay of the repect for the courts. People are smiling at the farces acted too often in court. The old reverence for the jury system is being destroyed, while the administration of criminal law falls under suspicion. This condition leads to anarchy. There is no safety for any one if the unwritten law can be substituted for the written law."

The report comes from London that the English claims on China at the time of the Boxer uprising were for actual expenditures incurred, and for that reason Great Britain was not called upon to remit part of the amount agreed upon. This reply was given by Foreign Secretary Grey when asked whether the government would follow the example of the United States.

Japanese railroad laborers in Montana on the morn- of July 4 raised two Japanese flags over the box cars in which they were living. The fact was telegraphed to the sheriff, and he went out and tore down the flags. He gave them to understand that if they wanted to fly their flag it must be done with the American flag above it.

Judging from newspaper reports of the recent celebration of American independence, the people are not making any progress toward a safe and sane celebration. Love and loyalty to country and thanks to the Giver of liberty are not shown by noise and the killing and wounding of a large number of persons. After the day is past and the terrible results of it are clear to all, is a good time to plan to see that in future years there is no such record made.

There is a report that the United States government would like to secure a good harbor in Lower California, and even that the whole peninsula, which is a little larger than Illinois, might be bought. Since a large number of warships are to be kept in the Pacific, a harbor located in Lower California would be a great advantage. But it is not likely that Mexico would sell even a harbor, much less the whole section, unless there was an opportunity to gain something somewhere else.

Great Britain is not willing to surrender the right to capture private property on the sea in time of war; and so the doctrine advocated by America will not be accepted by the present conference at The Hague. But it is good that the matter has been brought up, and in time it is sure to prevail. Great Britain, on account of its immense navy, has little to fear or lose and much to gain by holding to the right of capture. But its policy is selfish, while that of America is unselfish.

THE building of a railroad from Miami to Key West, Fla., is not an easy task. Climatic conditions during the summer are very unfavorable, and the annual expense for medicines and medicinal attention for the laborers is from thirty to forty-five thousand dollars. Many obstacles have been overcome, but there are other great ones to be met, and it cannot be said just when the road will be completed. The cost is estimated at about a hundred thousand dollars a mile.

JAMES R. BREWER, Secretary of the Maryland State Board of Charities, claims that vaccination is primarily responsible for the alarming increase in the number of cases of tuberculosis. He claims also that tuberculosis is conveyed into the human system by means of vaccine virus taken from cattle. The penalty for refusing to be vaccinated he hopes to see replaced by a law prohibiting vaccination. There is a difference of opinion as to the value or harm of vaccination, and it will be well if the question can be settled.

THE Japanese think the Emperor of Corea is intriguing against them. At The Hague there is a deputation of Coreans who claim that Japan has broken faith and its pledge to maintain Corean independence. It would be almost impossible for an outsider to get at the facts; but it is natural that the Japanese should gain as much as possible, and if one may judge by reports of their actions, given by missionaries living in Corea during the war between China and Japan, they are not over-scrupulous as to the means employed to gain their ends.

MAYOR SCHMITZ of San Francisco, though in jail, has sent to Auditor Horton a formal demand for his salary for the month of June and for the three hundred dollars contingent fund allowed the mayor's office for July. The situation is a peculiar one, and Auditor Horton has decided that his only safe course is to refuse to pay mayoralty demands unless they bear the signatures of both Schmitz and Gallagher, the acting mayor. When Schmitz is sentenced a new mayor will be selected. It seems strange that a man who rises to the highest position in a city cannot refrain from using his position in order to gain for himself that to which he has no right.—LATER.—He has been sentenced to five years' imprisonment.

A NEW citizenship law which went into effect July 1 may deprive several thousand people of United States citizenship. The law says: "When any naturalized citizen shall have resided two years in the foreign state from which he came, it shall be presumed that he has ceased to be an American citizen, and his place of general abode shall be deemed his place of residence during the said two years." This law will affect more Germans than men of any other nation, for many of them after gaining fortunes in America return to their native land to spend their last days. As they years ago renounced their allegiance to the emperor they may become men without a country; and this prospect is not pleasing.

GARIBALDI, the Italian patriot, was born a hundred years ago July 4, and the centenary of his birth was celebrated in Rome by a great parade. But some of those celebrating seemed much more bent on disorder than on honoring the memory of Garibaldi. There were many cries of "Death to pope and priests!" and the cry of "Death to the priests!" was raised whenever the procession passed a church. Squads of police escorted the marchers, and many troops had been brought into the city. The Vatican was surrounded by troops and the bridge leading to it was strongly guarded. The day ended peacefully, but this was due to the precautions taken by the government.

GROTON school, Mass., which has been reserved for the sons of the wealthy, has found its standard of scholarship so much lowered that a committee was appointed to devise means for raising the standard, and the committee has suggested that pupils be sought all over the country. The school will not be reserved exclusively for the wealthy, but next year places will be reserved for those who wish to enter by competitive examination. Scholarship is a better standard than wealth, and Groton school should improve under its changed conditions. The exclusiveness of wealth is not good for a school, nor is it good for a country like ours where all the people are supposed to be equal.

JOHN D. ROCKEFELLER, the richest man in America and probably in the world, the owner of more than a third of the capital stock of the Standard Oil Company of New Jersey, in response to a summons appeared in the court of Judge Landis in Chicago July 6 and told some interesting facts concerning the company's business. One of them is that a dividend of forty per cent has been paid for several years in succession. The Standard Oil Company of New Jersey is largely the owner of the Standard Oil Company of Indiana. These facts will be of importance when the fine for violating the law is to be imposed. If the maximum fine were imposed by Judge Landis it would amount to more than twenty-nine million dollars. This would be scarcely six months' earnings of the Standard Oil Company of New Jersey. But the case will be appealed to the United States Supreme Court, and then a decision will be given which will go far toward settling some questions which are now before the courts in several sections of the country. We believe the law will bring to time and punish those who have so often violated it.

The Small Philosophies of a Pair of Chums

Hattie Preston Rider

VIII. The Overheart.

A SAD and terrible thing had happened, turning the Lesser Chum's world upside down. Bert Lester, closest friend of all his little coterie, was drowned. The Lesser Chum had witnessed the entire tragedy: the hurly-burly of attempted rescue, the familiar little figure laid unfamiliarly stiff and still under its white draperies in the Lesters' darkened parlor, and worst of all, the lowering of the small casket into the earthly cell, whose ugliness no kindly garniture of branch and blossom could wholly disguise. Wide-eyed, without comments, he had seen the strange chain of events through to the end; and at bed-time the night after followed his mother silently up to his room. He was a long time undressing; and his relief was very evident indeed when she said, as he snuggled himself into his pillow:

"I'm coming to bed myself, in a few minutes, so I will leave the gas burning."

He did not ask her to remain, so with a lingering hand-pat she went down to the sitting-room. But she had barely settled herself, when the Lesser Chum's quavering voice called from the head of the stairs. She laid down her magazine and went back, seating herself on the side of the bed, where he could curl up against her, with his head in her lap.

"I just couldn't stand it, mother," he exclaimed, pitifully, "All the time I kept thinking and thinking."

She smoothed his hair.

"There's one thing for which we may be glad," she said, in a comforting way. "It was not so hard for Bert, as it was for us."

He opened his heavy eyes wide.

"Not so hard?" he repeated. "To go down in the water like that, and—and—" he caught his breath with a shivering sob.

"Son," his mother said, earnestly, stroking his hot hand, "there is nothing really dreadful about dying, itself, except as we make it so. At the most, Bert only felt badly for a few moments, and then it was just as if he went to sleep."

"But what if he should wake up, and—down in —there?" he faltered.

His mother's fingers tightened.

"Oh! Allan, darling! You did not suppose for a minute that he is in that grave, did you? Why, Bert himself was the part that thought of nice things, that played with you, and understood when you talked to him. No one could put that in the ground."

"But they did!" the Lesser Chum persisted, in dogged misery.

"When fire or a cyclone destroys a house," his mother said, slowly, "the little particles go here and there, some into the air in smoke, some to the ground in ashes, or splinters of wood that in time decay. But God never loses them; He saves them and uses every one, over and over, in the plants and trees that grow up to furnish more material. So it is with Bert's little body. Don't you see it was exactly like a house, with automatic telephones running out from it, that we called seeing, feeling, hearing, and the rest of the senses? But he will never need it any more. The particles will loosen and fall apart, and God will save them to use in some pretty flower or tree."

The Lesser Chum lay very still, looking puzzled and forlorn.

"But where will Bert stay, then, and what will he do for a house to live in?" he asked. "I should say a 'think' would get lost, all loose in the air like that;" —the old stumbling-block of many a wiser student.

"I'm coming to that," said the Greater Chum. "If God, who is the big, beautiful, loving 'think' that manages everything, even the stars that are so far away we cannot see them,—if he cares so much about the tiny particles of matter that neither feel nor love him back again, as to save them all so carefully, we may be sure he cares enough about every little child of his to keep it safe always. Don't you see that we are really like little bits of him, working, loving, growing to be what the Bible says we are, the image and likeness of God? So we couldn't be lost, for God is everywhere. Besides, he has left word for us, in the same Bible, that when the body-house we live in here is no more good, he will have another all ready for us to move into, that nothing can spoil. I suppose Bert has got to feeling quite at home in his, by this time."

The Lesser Chum drew a long, quivering sigh, as if the picture were too good to be relied on.

"Then you're sure that—he—isn't—"

"Quite sure!" the Greater Chum responded, confidently. "He may be playing over home, this minute, in his wonderful new body that, though we could not see it, is so strong that he could go walking with it right up through the air, as Jesus did. He will be glad when you are happy, and not like you to feel bad about him, ever, any more than if he had gone into the country for a visit, or camping, as he did last summer. Anyway," conclusively, "the minute I heard what had happened, I asked God to make it all right with him, and his father and mother, and the rest of us; so I know he will, for he never has failed me, when I asked such things."

Numberless small dilemmas of the past, straightened out in this same divinely practical fashion, rose before the Lesser Chum's mental vision. Unspeakable relief stole into his shadowy eyes.

"I hadn't thought to do that," he said, slowly. "Everything seemed so queer, I kind of forgot."

"When you are older, darling," the Greater Chum went on, "you will learn more about the great, wonderful, mysterious force that holds the stars in place as they revolve around each other, that keeps the little particles together, and draws different ones to each other. You have studied about Sir Isaac Newton and the apple, haven't you?"

The Lesser Chum nodded, following, though not very clearly.

"Well, all that great strong power that draws and draws is just God, keeping everything safe. Our loving him and each other is part of it, and that is why giving up to love makes us happy. When we have learned by earnest studying and trying, to let foolish things go and take hold of the way God likes us to live, I think all the dreadful part of death, like disease and accidents, will go away. Won't that be beautiful, Allan?"

There was no answer. Leaning closer, she saw that the Lesser Chum's eyes were fast shut, and the coverlet rose and fell with his quiet breathing. He had gone to sleep, comforted by the Love he could understand because it was shown him in the love he knew.

"Of a truth," said the Greater Chum, as she shifted his head gently to the pillow, "philosophy is the long road, and a child's innocent trust the short cut to the peace of God."

"DON'T say it was only a word. It takes very little to hurt a soul. To block the wagon going down hill, to prop the wagon going up, needs but a pebble. The art of kind words—words of encouragement, of comfort, of sympathy, of appreciation—is a beautiful art, not half enough cultured."

LESSONS FROM THE FLOWERS.

Down in a field one day in June
The flowers all bloomed together,
Save one who tried to hide herself
And drooped, that pleasant weather.

A robin who had soared too high
And felt a little lazy,
Was resting near the buttercup
Who wished she were a daisy.

For daisies grew so trig and tall!
She always had a passion
For wearing frills around her neck
In just the daisy's fashion.

And buttercups must always be
The same old tiresome color;
While daisies dressed in gold and white
Although their gold is duller.

"Dear Robin," said this sad young flower,
"Perhaps you'd not mind trying
To find a nice white frill for me
Some day when you are flying."

"You silly thing!" the robin said,
"I think you must be crazy;
I'd rather be my honest self
Than any made-up daisy.

"You're nicer in your own bright gown
The little children love you;
Be the best buttercup you can,
And think no flower above you.

"Though swallows leave me out of sight
We'd better keep our places,
Perhaps the world would all go wrong
With one too many daisies.

"Look bravely up into the sky,
And be content with knowing,
That God wished for a buttercup
Just here, where you are growing."

—Sarah Orne Jewett.

THE SOUL OF WOMEN.

"THE brain women," says Oliver Wendell Holmes, "never interest us like the heart women." Men are so often wearied with themselves that they are rather predisposed to admire qualities and tastes in others different from their own. "If I were suddenly asked," says Mr. Helps, "to give proof of the goodness of God to us, I think I should say that it is most manifest in the exquisite difference he has made between the souls of men and women, so as to create the possibility of the most comforting and charming companionship that the mind of man can imagine." But though no man may love a woman for her understanding, it is not the less necessary for her to cultivate it on that account. There may be difference in character, but there must be harmony of mind and sentiment—two intelligent souls as well as two loving minds—

"Two heads in council, two beside the hearth,
Two in the tangled business of the world,
Two in the liberal offices of life."

—*Great Thoughts.*

SPRAINED JOINTS.

An injury resulting from any violent wrenching or twisting of a joint without a fracture of bone is termed a sprain.

Immediate attention is an imperative necessity in sprains, since in no injury do swelling and pain more promptly supervene. The marked and rapid swelling following a sprain is usually occasioned by the exudation of fluids taking place not only around the injured joint, but also within the joint, the latter frequently to so great an extent as to force the two articulated surfaces apart.

Any motion or weight upon the joint when in this condition is intolerable, and in every case effort should be made to check exudation promptly, relieve the swelling and pain, and relax the tension of the muscles adjacent.

Nothing meets the emergency better than hot water, —as hot as can be borne,—and this is usually quickly at hand, even in the most primitive camp. The joint and adjacent limb should be plunged into the water, which may be kept hot by the addition of small quantities from another vessel kept over the fire. This treatment must be continued for hours, if necessary. It should continue at least until the swelling and pain have been reduced. An all-night treatment not infrequently results in the possibility of using the limb the next day, although such a procedure is not to be recommended.

Cold water is nearly as effectual as hot in checking the symptoms. In some cases, it seems equally efficacious and even more comforting. In either case, the treatment must be prolonged, and the temperature of the water faithfully kept at the point of greatest efficiency.

Other remedies are also valuable, if the physician has them at hand, but all are used with the same end in view—of relaxing muscular tension; combating the swelling, and relieving pain.—*Youth's Companion.*

SUBSTITUTES FOR ICE.

Ice is not a necessity. It's a luxury, a comfort, a convenience. We have got used to it. We like to use it in refrigerators. We are fond of ice water and other iced drinks; and in moderation they are not very bad for us. So long as we like to have ice, we are entitled to have it; and to have it at a reasonable price; in time we shall have it, and have it cheaper than ever.

But it is not a necessity, and there is no way of getting it cheap quicker than to lessen the demand for it. Meantime, there are ways for keeping food cool enough for health which cost less than ice at ordinary prices, says a writer in the Hartford *Courant.* These are some of the ways. None of them are experiments. They have all been long tested.

For cool drinking water, wrap around a bottle of water an old woolen sleeve or pantaloon leg or a newspaper, and tie in place. Soak the covering well and set the bottle in a saucer or bowl of water, in a draught or breeze if you can find one. The porous cover of the bottle will suck up water from the saucer, which should be part full, and kept wet. The evaporation from the cover will cool the water in the bottle many degrees cooler than the air—as cool as is really desirable for health, unless in special cases of medical treatment. The water will be nearly as cool as can be drawn from any faucet where pipes run through cool cellars, or deep ground. And where waste water is to be paid for, as when a water meter is used, the cool water in the bottles costs much less than from the faucet. This is nothing but the old way of the armies of many nations of putting a felt wrapper on the soldier's canteens. It is like "the Fayal monkey" which was a clay pig with a handle and a spout made of porous baked clay, which was filled with water and hung in the shade where the air could pass across its surface. The water which percolated or "sweated through" the clay evaporated and cooled the water which was left in the monkey. This was for a long time the ordinary, and almost the only, way in many ships and many tropic countries for getting cool water to drink.

For a cheap refrigerator (forty cents to a dollar) —half fill a milk pan with water. Set a florist's saucer or a soup plate bottom side up, a flat stone or anything heavy enough not to float, in the middle of your pan for the floor of your refrigerator, above the water level. Set your milk jar, butter, meat, whatever is to be kept cool on the floor or shelf you have built. Wet a large flower pot and turn it upside down over your provisions. They will keep all right for a day or two.

A section of unglazed tile covered with a large saucer may be more convenient than a flower pot; or a large refrigerator may be built of bricks on the cellar bottom, covered with a board and a felt or woolen blanket laid on it—the whole to be kept wet on the outside.

Butter or anything which easily takes the flavor of its surroundings, should be wrapped in paraffin paper before it is set into such a refrigerator.

A refrigerator with porous walls will, of course, soon become impregnated with odors of anything set in it, and should often be renewed or cleansed. This can be very easily and cheaply done by burning out the clay with excelsior, shavings or paper. The flower pot should be dry before it is burned or it will crack.

Such a refrigerator is no experiment. For more than a year a well-known Jersey dairyman, whose butter regularly commanded a fancy price, kept his

cream for churning and his butter waiting for market under a big, wet flower pot in the cellar bottom (in a covered glass bowl, of course), and as well as if ice had been used.—*Vick's Magazine.*

SELECTED RECIPES.

Creamed Young Beets.—Cook with two inches of the stem on, to prevent bleeding and do not clip the top root. Have ready a cupful of cream, heated, with a pinch of soda. Rub the skins off, top and tail the beets, and slice them then into the cream, setting the saucepan containing it in boiling water. When all are in, stir in a tablespoonful of butter rubbed into one of flour, pepper, salt and a teaspoonful each of sugar and onion juice. Simmer two minutes to cook the flour, and dish.

Cucumber Salad.—Cut medium sized cucumbers thin and one nice sized onion sliced thin, and salt well; let stand two or three hours and squeeze the water off of them and then make a dressing of good cream, sweet or sour, and vinegar and pour over them and sprinkle with pepper.

Mock Angel Food.—Two cups flour, two cups sugar, two teaspoons baking powder, one saltspoon salt; sift altogether several times; add one and one-quarter cup boiling water. Fold in the stiffly beaten whites of five eggs, bake slowly.

Duchess Cream.—Four tablespoons tapioca soaked over night; drain off water; put in double boiler with a little hot water and boil until clear. Small cup of sugar, juice of one lemon, a little salt, and pineapple (canned sliced pineapple is best) chopped, and juice. Stir into tapioca. Let cool; then add the stiffly beaten whites of three eggs.

For the Children

THE WOOD PROCESSION.

"Now, children, you'll have to clear out of this," said the head carpenter briskly. "It's too bad to rob you of your playground, but we're going to set fire to this pile of trash, and it would be too dangerous to have you near it."

The little folks reluctantly gathered up their shovels and pails. For a whole month they had a lovely playground in the big sand pile, and now they were to lose it. Every day during that time an older boy or girl sat on an old stool in the shade keeping an eye on the happy children, and all the mothers rejoiced to think they were safe and having a good time. A row of old buildings had been torn down, and a large brick house was to be built as soon as the trash and old boards could be disposed of.

"Are you going to burn all those boards, Mr. Gray?" asked Margaret Kirby, who was looking after the little folks that morning. "It seems too bad."

"You see, Miss Margaret, no one would buy that stuff, and it costs too much to get it cut up into kindlings. I'd willingly give it away, but no one wants the stuff."

"Children," said Margaret suddenly, "how many of you have little wagons?"

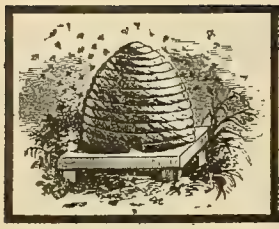
"I! I! I!" cried a chorus of voices.

"Now, Mr. Gray, if I get some big boys to help, and the little children haul this wood to old Mrs. McGuire's house, may we do that?"

"Yes, if you can get it done to-day," said Mr. Gray. "The children will soon be tired of the task, but I'll give you till evening to dispose of the old wood."

In less than two minutes Mr. Gray was alone in the big yard. The children were scampering for their wagons and Margaret was getting together all the big boys in the neighborhood. The first thing old Mrs. McGuire knew of the plan was when a procession of little wagons turned into her yard all loaded with pieces of old boards and shingles.

"The saints be praised!" cried the old lady, hurrying out with two pairs of glasses on. "Whatever is the meanin' of this?"



"We are bringing you a little wood," explained Margaret. "They were going to make a bon-fire of it to get rid of it, but the children will bring it to you."

"I thought the children would soon give up" said Mr. Gray, coming out to see the little wagons still making trips to the yard and back again. "These boys and girls deserve a whole lot of praise."

The big boys broke up the long boards and loaded the wagons, while the girls helped the children all morning. It was a very busy time, but a very happy one, and by noon every trace of the pile of wood was gone. Mrs. McGuire was crying over the woodhouse full of dry wood and telling the children they had made her very happy.

"I have another old house to tear down on Summit street next week and"—began Mr. Gray, and all the children shouted, "May we have another wood procession? We can give the wood to Mrs. Kelton."

And what do you think Mr. Gray did? He made a large box out of old boards and filled it with sand for the little people to play in whenever they want to, for he says they save him a great deal of trouble, and the wood keeps some poor person warm a long time. Don't you think it paid them to give up one morning's pleasure to carry wood to poor people?—*United Presbyterian.*

THE RURAL LIFE

DREAMING AND WAKING.

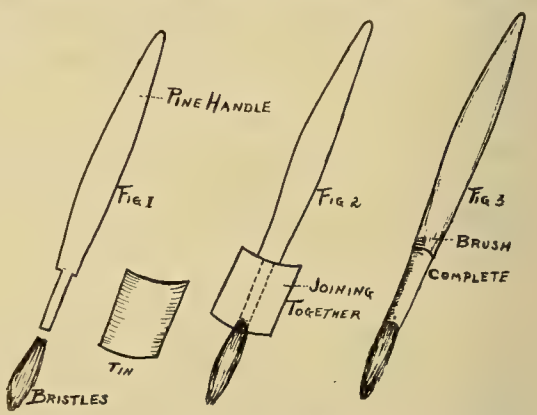
I remember, I remember,
When I was just eighteen;
I think I was the wisest youth
This world had ever seen.
It was a childish fairy tale;
But now 'tis little joy
To know I don't know lots of things
I did know when a boy.

I remember, I remember,
This old world seemed so slow;
I'd teach it how to put things through
When once I got a show!
It was a boyish "guess again";
But now 'tis sorry play
To find how hard I have to play
To get three meals a day.

I remember, I remember,
The things I planned to do,
I meant to take this poor old earth
And make it over new.
It was a very pretty dream;
But now 'tis little cheer
To know the world, when I am gone,
Won't know that I was here.

—Nixon Waterman.

MAKING PAINT BRUSHES.



D. Z. ANGLE.

SUITABLE paint and good brushes are necessary in painting farm machinery, buildings, and vehicles, and we wouldn't advise the use of anything inferior in either, tending to produce unsatisfactory work. So we say, Buy good paint and good brushes.

But probably the average farmer does painting only occasionally, at intervals of months, so he needs few brushes, and those he does get are laid away after using slightly, to get stiff as a board, by the bristles being immersed in or covered with oil and lead and dried on. In that condition the brush is worthless, or *is* until cleaned or softened, which is a job that, rather than undertake, many prefer buying a new brush. Thus many a good brush is thrown away as useless, only for the want of a little care and attention to preserve or render it serviceable. When through using brushes for a time, they should be thoroughly washed with lye soap and hot water and cleaned of all very sticky paint and oil. Then when ready to use again they will answer as well as new ones.

But if a brush is neglected it may be cleaned or softened by thoroughly saturating with spirits of turpentine, and working the bristles with the hands until well loosened and separated from each other.

In painting vehicles and machinery especially, one needs several brushes if several colors are used on the same article; sometimes four or five brushes can be used to advantage in painting a wagon, which is usually painted two or more colors. Large brushes go faster and are suitable for flat surfaces, while small

ones are convenient to use in the niches and corners, for striping and at angles where two colors are liable to get mixed.

But if one doesn't care to purchase so many new brushes, the small ones may be easily made from an old large brush which still has a number of good bristle bunches. To make one take a bunch of bristles as large as your needs require, probably a bunch from an eighth to a half inch thick would do. Make a wooden handle of pine about the size of a lead pencil and cut a piece of tin like that shown in illustration, Fig. 1. Place the three parts together as shown in Fig. 2 and wrap, clamp and secure tin tightly around handle and bristles. By a little careful practice, a result is obtained as shown in Fig. 3, thus saving a little time and money and helping develop latent talent.

"THE farm is not simply a place for raising hay and grain and rosy-cheeked apples; it is the one spot in all the world where we may live nearest to the heart of Him who fills to overflowing every heart and hand that are reached up to Him."

BERRIES.

It may seem rather late to talk of work in the berry garden. Also, to some it may seem work for nothing, but in this there could be no greater mistake, the returns are certain from all work of the right sort done among the fruit vines and bushes, but, of course, no returns can be expected before a year, perhaps not always then, for an unusual scourge of insects or late frost may ruin the crop.

After the fruit is harvested, all decayed, misshapen and superfluous canes should be removed with a pruning-knife. Remove the oldest wood each year, and thin out so that the sun and air may have a chance to get in their work all through the bushes. If this pruning is well done each year, the old roots will continue to send up new shoots, and all will remain vigorous and healthy as a newly set row.

All the canes thus removed should be burned entirely, not left around for insect eggs therein to hatch and attack growing canes. A small ash-heap looks tidier than a brush-heap, also. All weeds and grass should be hoed from around and between the bushes, using a hand-hoe, wheel-hoe or horse-hoe, depending on the size of the patch.

There are always some weeds among the roots that must needs be hand pulled. If very weedy, it is best to rake them away, but if only scattering, they may be left in the patch. Now a liberal dressing of barnyard manure should be applied. This will serve to prevent other weeds growing, and also enrich the soil and prevent the roots drying out if a dry summer follows.

Raspberry and blackberry canes should be cut back, but we have not found it best to cut gooseberry or currant canes. This may not be good according to some fruit growers' methods, but it has furnished magnificent results among our bushes for several years, with a spring removal of the weeds, and a routing of the insects early in spring.—*Ohio Farmer.*

"MIDDLING GOOD" NOT GOOD ENOUGH.

"He is a middling good farmer." That is what we hear said about some men.

I believe I'd about as soon have a man hit me a whack over the head as to call me *middling good* at anything, for then I could conclude that I was just as near to being a first-class failure as a man could be and miss it.

Middling good is neither good nor bad. When you hear a man ask another how his health is, and he says, "Middling good," you know that he is just grunting around, not able to do a full day's work, nor sick enough to have the doctor. The crop of corn that is middling good is nothing that is worth taking pride in or showing to folks that come visiting.

It beats all how many "middling" farmers there are in the world. You meet them everywhere. Shut your eyes and you can think just how their farms look. Just on the edge of being tip-top, and still narrowly escaping the condition that makes them good for nothing. Only a little more work and a little more care would make those farms splendid. A few more touches with the hoe would give these men fine crops of corn. A trifle more of good planning and care would enable them to get ahead and be counted among the successful men of their times.

And yet, they are satisfied to be reckoned among the "middling" farmers. Why is it?

A middling good apple is not one that you and I care much about. Not much taste to it one way or another. You had just about as soon gnaw a toadstool as to try to get any good out of a middling good apple.

Now, it is not necessary for any of us to be "middling" farmers. When we get up to that point it is really easy to reach higher and better things. All you need to do is to dig your toe nails a little harder and you will fetch it.

The nipper is what counts. When you are almost up it is time to grit your teeth and hang on like death. If you slip back then, you are done for. *But you need not slip.* The man who is bound to win *will* win every time.

How is that? Is it a fact that every man can be something more than a "middling" farmer? It certainly is a fact. Do you think that when God passes opportunities around he intentionally slights you or me?

"But some men have the start of others because they have money and other good things left them. Some are born smarter than others, too. Those things count."

I expected you would say that; and I say back to you that in my humble opinion those things do not count a cent's worth. In fact it often seems as if the boy who has everything done for him by his father,—farm all paid for, money left for him in the bank, a good name and all that,—is the very one who comes out the "middling" farmer. He is more selfish, more stuckup, more apt to live on what his father before him did, than the boy who has to begin right at the bottom and dig for all he has.

The only thing that counts is the will to do.

The man who wants to keep his farm up nicely can do it. If he wants to grow better crops, he can do it. If he wants to be happy, a good husband and father, a respected citizen, he can do it.

Now, this is encouraging. It shows that we do not need to stop when we get to the "fair to middling" point. Just a little more of nipping in; just a little more thought, planning and doing, and we shall be at the very head of the heap. Let's do it!—*Farm Journal.*

THINGS GETTING TOO COSTLY.

THE existing conflict between labor and capital at San Francisco will very likely mark the beginning of the wave of liquidation and readjustment which is certain to oversweep this country within the next year or so. Here is a city which was almost wiped out of existence by the hand of an inexorable—shall we say avenging?—Providence. In no place in the world could there be a louder call for industry, forbearance and mutual confidence—and yet instead of that we have the spectacle of everybody boosting prices and pulling in different directions. Material men and labor unions have vied with each other in squeezing the public until at last the public, like the worm has turned. The point seems to have been reached where capital refuses to invest at hold-up prices—and by "capital" we do not mean millionaires or big, soulless corporations but the general run of everyday people—all those that ever have a dollar to spend for any purpose.

The crisis was bound to come. No tide is so high that it does not in due time reach its climax and begin to ebb. The bulk of everything we eat, drink, wear or use represents labor, and with wages constantly on the rise a point is inevitably reached where retrenchment must take place. If everyone would but be content to be moderate in their demands there would not need to be any crises or hard times; no strikes or lockouts or labor riots would take place and the world would maintain an even tenor of prosperity, with all hands employed, all reasonably well paid and in the end all much better off. But now each element and each individual aims to load on "all the traffic will bear," and we have increased cost of living and rising prices generally; every raise reacts and in turn stimulates new raises all around the circle, and thus the very conditions which indicate prosperity eventually cause a panic.

"Catching" diseases like "prosperity" however breed their own anti-toxins; these periods of hard times are not calamities for they are verily needed, in the present state of things, to counteract in the blood of society what would otherwise become fatal. Lucky are those who by foresight and self-restraint can keep themselves immune from the ravages of these financial epidemics which bring so much misery to the heedless.—*The Pathfinder.*

PERPETUAL PEACE IN PROSPECT.

ALMOST the last official work of the late Secretary Hay was the framing of several arbitration treaties, in consultation with the diplomatic representatives of the respective powers, following closely the lines of arbitration compacts which had already been signed between a number of prominent nations. One of these treaties was sent to the Senate, to test its temper. It was immediately and rather vigorously turned down. It was an imperfect arbitration treaty. No such treaty must be the model presented now for universal signature, if peace is the result to be attained. But it was not the short-comings of the treaty which the Senate discussed. The rebellion arose over a clause concerning the authority to make consignment of certain cases to the Hague Tribunal, in language which curtailed the treaty-making prerogatives of the Senate and increased the power of the Executive. The Senate of the United States is very jealous of its constitutional rights—and very wisely so.

The perfect arbitration treaty must avoid that clause, for it must not discriminate between cases. It must bind the signers to consign *all* unadjustable differences, of whatever nature, to the High Court, and to abide by the verdict. It must make the appeal of either party to the Court sufficient to transfer the question to its jurisdiction. And that is substantially all that the treaty-constitution of the world need be.

At all hazards, it must omit one other clause common to all of the foregone arbitration treaties. It must omit the reservation from submission to the court of questions touching a nation's honor and integrity. There will doubtless be the rub with the mighty nations which must take the lead; for when a nation feels confident of its power, "honor and integrity" at once becomes a term to conjure with, a term to agitate, a term to thrill with absurd and silly pride, a shield for any possible affront or ambition, a senseless, meaningless term until some sinister sense is instilled for the purpose of accomplishing an ulterior desire. With puffed cheeks and swelling chests we strut about and talk of our nation's honor and integrity which must not be assaulted, Hague or no Hague, unless we wash away the smirch with blood!

O tempora, O mores! As nations we are back in the clutches of barbarism and appealing to the lost code of penalized dueling. Men who were spoiling for a fight with those they felt sure they could vanquish used to carry about on their shoulders a chip which they call their honor and integrity. If there ever was a smirch put on one man's honor by another, did that man ever really wash it out by shedding blood? The nation longing for conquest can easily force or find an assault upon its honor for its patriotic citizens to rave and fight about. But if a nation's honor was ever effectively impeached or assaulted, did that nation ever restore its integrity by firing cannon at the subjects of its wrath? Our nation's honor is not so fragile that an indignity from another nation can possibly justify the hell of war. The idea is barbaric in any case. The thought is preposterous if there exists an international law and an international tribunal. If a nation claims sufficient cause against another and would rather go to war, with all its hor-

rors, than carry its contention into publicity, for the serious consideration of a neutral court, it is no uncertain indication that that nation should be forced to arbitrate.

The nations cannot well avoid finally seeing it in this light if they are called upon to give the matter sober thought. If the Hague Congress presents to the world a complete arbitration treaty—if it dares to —drawn for all nations alike, making war as criminal as the murder which it is, making it obligatory upon every signer, on the appeal of any nation with which there is a difference, to refer the question without reservation to the Hague Tribunal, I believe the treaty will be signed—after the first shock of opposition has passed—and every nation will at once become both sheriff and police, to keep the peace and enforce the law. The only possible result will be that wars will cease unto the end of the earth, that the bow will be broken, the spear cut in sunder, and the chariot burned in the fire.—*Willard French, in July Lippincott's.*

DOES THIS APPLY TO YOU?

Some one's selfish, some one's lazy;
Is it you?
Some one's sense of right is hazy;
Is it you?
Some folks live a life of ease,
Doing largely as they please—
Drifting idly with the breeze;
Is it you?
Some one hopes success will find him;
Is it you?
Some one looks with pride behind him;
Is it you?
Some one's full of good advice,
Seems to think it rather nice
In a "has been's" paradise—
Is it you?
Some one trusts to luck for winning;
Is it you?
Some one craves a new beginning;
Is it you?
Some one says: "I never had
Such a chance as Jones' lad."
Some one's likewise quite a cad—
Is it you?
Some one yet may "make a killing,"
And it's you.
Some one needs but to be willing,
And it's you.
Some one'd better set his jaw,
Cease to be a man of straw.
Get some sand into his craw—
And it's you.

—Baltimore American.

"No man receives the true culture of a man, in whom the sensibility to the beautiful is not cherished; and I know of no condition in life from which it should be excluded."

FUNNYGRAPHS

"You told him to diet himself," said the young doctor's wife.

"Yes," replied the young doctor, "I told him to eat only the very plainest food and very little of that."

"Do you think that will help him?"

"It will help him to pay my bill."—Philadelphia Public Ledger.

"Do you suppose Jinx's Hair Restorer does anybody any good?"

"I know it does; I am personally acquainted with one man whom it has helped amazingly."

"Give him a big head of hair?"

"No, gave him a big bank account; I am speaking of Jinx."—Houston Post.

SAUCE FOR THE GOOSE.

The old saying that "Chickens come home to roost," has many a good application. It is also true that the good we would do is often outdone by our own mistakes. The following needs no further comment:

"She was dressed smartly, and when she met a little urchin carrying a bird's nest with eggs in it, she said: 'You are a wicked boy; how could you rob that nest! No doubt the poor mother is now grieving for the loss of her eggs.' 'Oh, she don't care,' answered the boy, edging away, 'she's on your hat.'"

Examiner (to medical student)—"Now let us take appendicitis. On what grounds should you decide that an immediate operation was necessary?"

Medical student—"On the financial condition of the patient."—Bon Vivant.

He Has Felt Them.

Boy—"My mother bought some slippers last week."

Man—"Felt?"

Boy—"Yep. Three times already."—Denver Post.

His Ancestors' Way.

Before a great fire of logs in Helicon hall, the seat of his recent Utopian colony, Upton Sinclair one snowy night talked of the injustice of the private ownership of land:

"A tramp was one day strolling through a wood that belonged to the Duke of Norfolk. The duke happened to meet him and said:

"'Do you know you're walking on my land?'

"'Your land?' said the tramp. 'Well, I've got no land of my own, so I'm obliged to walk on somebody's. Where, though, did you get this land?'

"'I got it from my ancestors,' said the duke.

"'And where did they get it from?' went on the tramp.

"'From their ancestors,' said the duke.

"'And where did their ancestors get it from?'

"'They fought for it.'

"'Come on, then,' said the tramp fiercely, as he pulled off his coat, 'and I'll fight you for it.'

"But the duke, retreating hastily, declined to accept this fair offer."—The Pathfinder.

NEFF'S CORNER

Of course everything doesn't turn out to just suit everybody every time—if it did, well where would be the occasion for the exercise of patience and courage? Now I have no very serious troubles to complain of; if I had I wouldn't burden you with them. As it is, I know a number of you will be interested in the explanation that follows:

You know a number of persons have made investments with me on the association plan, each to share pro rata in the profits. I wrote some and perhaps announced once in this corner that I could invest small sums sent me on this plan where they would at once begin earning 24 per cent. Now the July dividend has been declared and it turns out to be only 15 per cent, and some will wonder why. Well, the first several remittances that I received were invested in a property that was rented and bringing a monthly income of 2 per cent on the amount paid for the property, as stated. There were two lots with a small house and a tent on one of them. It was the house and tent that were bringing the income. During the windy days of spring the tent became wrecked and the tenant moved into a larger house. The wreckage of the tent and one lot have been sold, and the proceeds, together with money that has come in later, have been loaned at 12 per cent and so, on the whole, we are able, without using one cent of the original investments, to declare from profits alone a dividend of 15 per cent and still leave a small surplus of undivided profits on hand.

And after all, 15 per cent income is not bad, I am not complaining and no one else is. Perhaps some of you whose outstanding funds are earning less than 15 per cent would like to write me about it. If so, address

JAMES M. NEFF,
Lake Arthur, New Mexico.

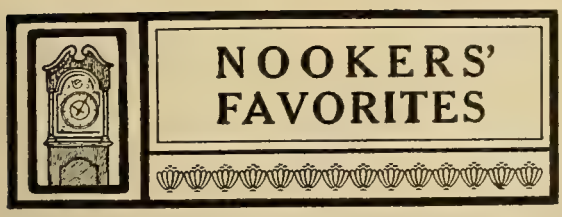
The Other Half of the Globe

BY



D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

Inglenook readers may not only call for any favorite poem they would like to have, but they are asked to send in copies of favorite poems which they possess. The chief aim of this department is to pass along the good things. In asking for a poem, be sure to give the title correctly, or if that cannot be done, give the first line. In sending in copied poems, be sure that the copy is an exact one and whenever possible give the name of the author.

COMETH A BLESSING DOWN.

Not to the man of dollars,
Not to the man of deeds,
Not to the man of cunning,
Not to the man of creeds,
Not to one whose passion,
Is for a world's renown,
Not in a form of fashion
Cometh a blessing down.

Not unto land's expansion,
Not to the miser's chest,
Not to the princely mansion,
Not to the blazoned crest,
Not to the sordid worldling,
Not to the knavish crown,
Not to the haughty tyrant
Cometh a blessing down.

Not to the folly blinded,
Not to the steeped in shame,
Not to the carnal-minded,
Not to unholy fame,
Not in neglect of duty,
Not in the monarch's crown,
Not in the smile of beauty,
Cometh a blessing down.

But to the one whose spirit
Yearns for the great and good,
Unto the one whose store-house
Yields to the hungry food,
Unto the one who labors,
Fearless of foe or frown,
Unto the kindly-hearted
Cometh a blessing down.

—Author Unknown.

THE LITTLE MARTYR OF SMYRNA.

It was in the fateful ages when the Christian martyrs died,
And the gods of high Olympus in their glory were defied,—
When, throughout the Roman Empire there were festivals and feasts,
Where great Jupiter was lauded by his pontiff and his priests.
It was in these tragic ages, that with bacchanalian songs,
Through the streets of fair Smyrna surged one day the maddened throngs.
"Find us Polycarp, the Christian;" rose the wild discordant cries,
"To the lions with the Christian! By the gods of Rome, he dies!
"Drag him forth to the arena! Let the beasts devour their prey,
'Less he swear, by Rome's great Cæsar, to forsake the Christ this day!"

So the mob, in growing fury, surged the streets with swelling roar,
But the Bishop of Smyrna found they not at any door.
It was then a soldier pointed to a sunny-headed child,
On whose boyish face the beauty of his dozen summers smiled.
"Ask of him," the ruffian shouted; "ask the lad; he knows him well;
In his home the man sought refuge, ask the lad and he shall tell."
So they turned like wolves upon him, fierce for prey, and hungry-mad
And he stood a lamb among them, though a lion-hearted lad.
"Knowest thou of any Christian, or where Polycarp be found?"
Cried a Roman soldier fiercely as upon the child he frowned.
And the boy, his pale face lifted, with his fearless, fair blue eyes,
In whose depths life's hopes were dawning like the morn in cloudless skies,
And there seemed a sudden halo round the brave but youthful head,
"If thou seekest but for Christians, I am one," he fearless said.
"What! Oh, ho! thou bold-tongued nursling!" cried the first with fiercer frown,
"Make no boasts, or by Olympus, thou shalt burn ere sun go down!
Lead us hence. We seek thy bishop, Polycarp, that evil knave.
Dare refuse and to the lions thou shalt go and naught can save!"
Then the boy's face flushed indignant: "Call him not a knave!" he cried,
"He is bishop of Smyrna, servant of the Christ that died."

Then a cruel arm uplifted, smote him sudden to the ground
And the soldiers mad with fury gathered eagerly around.
"Fool! thy hasty blow hath slain him," cried a guard, "it was too soon!"
"Nay," another sneering answered, "drag him forth; he doth but swoon.
Doth he think to move our pity by his tears and weakling cries?
Drag him forth! His lips shall answer, or from worse than this he dies."
"See, he moves, he was but feigning. He shall tell us all he knows.
What, defeated by this youngling, we who brave the fiercest foes?
Now, then, speak, thou stubborn traitor, where shall Polycarp be found?
Say the truth, lad, or thou diest as thou liest on the ground."

Then a gleam of saintly beauty lit the simple childish face,
And a look of pain and anguish to a heavenly calm gave place.
"Him ye seek to slay is noble and he serves the Christ that died,
Kill me if ye will, but never will I tell where he doth hide!"
Turn away, oh ye that witnessed, ye who saw the deadly blow,
Was it man who struck or demon? Answer not—God's angels know.
So the awful lot was chosen, so the cruel fate was told,
And that even, when the sunset crowned Smyrna's hills with gold,
On his weeping mother's bosom with the smile that death had given,
Lay the bruised and martyred body, but the spirit was in heaven.

—Ernest W. Shurtleff.

OUR HIRED GIRL.

Our hired girl, she's 'Lizabuth Ann;
An' she can cook the best things to eat!
She ist puts dough in our pie-pan,
An' pours in somepin' 'at's good and sweet;
An' nen she salts it all on top
With cinnamon; an' nen she'll stop
An' stoop an' slide it, ist as slow
In th' old cook-stove, so's 't won't slop
An' git all spilled; nen bakes it, so
It's custard-pie, first thing you know!
An' nen she'll say,
"Clear out o' my way!
They's time fer work, an' time fer play!
Take yer dough, an' run, child, run!
Er I can't git no cooking done!"

When our hired girl 'tends like she's mad,
An' says folks got to walk the chalk
When she's around, er wisht they had!
I play out on our porch an' talk
To th' Raggedy Man 't mows our lawn;
An' he says, "Whew!" an' nen leans on
His old crook-scythe, and blinks his eyes,
An' sniffs all 'round an' says, "I swan!
Ef my old nose don't tell me lies,
It 'pears like I smell custard-pies!"
An' nen he'll say,
"Clear out o' my way!
They's time fer work, an' time fer play!
Take yer dough an' run, child, run!
Er she ain't git no cookin' done!"

Wunst our hired girl, when she
Got the supper, an' we all et,
An' it wuz night, an' Ma an' me
An' Pa went wher' the "Social" met,—
An' nen when we come home, an' see
A light in the kitchen-door an' we
Heerd a maccordeum, Pa says, "Lan'—
O'—Gracious! who can her beau be?"
An' I marched in, an' 'Lizabuth Ann
Wuz parchin' corn fer the Raggedy Man!
Better say,
"Clear out o' th' way!
They's time fer work, an time fer play!
Take the hint, an' run, child, run!
Er we can't git no courtin' done!"

—James Whitcomb Riley.

Fifty acres of the best corn land in Iowa or Illinois.

An absolutely certain yield from it every year of 60 bushels per acre (supposing some yet undiscovered fertilizer were applied which would make this yield certain.)

A price guaranteed by government of 40c a bushel, paid right on the farm.

This would make an income of $24.00 per acre, or $1200 on the 50 acres.

Suppose the price to be $100 per acre, which would be cheap enough for such land, or $5000 for 50 acres. Any corn man would jump at such a chance.

This income of $1200 is the very highest that could possibly be expected. It is several shades above the average, especially when considering occasional poor crops, freight charges, etc. And yet, even considering these things, this corn land is among the best land in the world and millions of dollars are made on it every year. If a man has a good corn farm in Iowa or Illinois he thinks he is pretty well fixed.

OR

20 acres of Hazelwood irrigated land.

An absolutely certain yield (with irrigation) of from 6 to 8 tons of alfalfa per acre in 3 cuttings. (One cutting of 2 1-2 tons has already been raised without irrigation.)

A price of from $10 to $12 per ton in the stack, owing to its being only a two hours' wagon haul to Spokane. (It has never been less and often more. Alfalfa is retailing now in Spokane for $15 to $17 per ton.)

Taking 6 tons per acre (the lowest yield) at $10 per ton (the lowest price), the income on 20 acres would be $1200.

Price $250 per acre, or 20 acres for $5000.

This income of $1200 on alfalfa is bedrock, the very lowest that can be expected, if the land is properly handled. That makes it an absolutely safe investment. It is as certain as 2 per cent on government bonds.

By raising fruit or vegetables several times as much can be made. From $300 to $500, and even as high as $700 per acre, has been made on land no better than this, and, considering the market, not so good.

The leading nurseryman of the northwest has bought 20 acres at Hazelwood for a nursery, as he considers it the best fruit land in the state.

Only 4 1-2 miles from Spokane, one of the best markets in the world. A sure market and no freight to pay.

Which is Better?

The **lowest** income on Hazelwood land equals the **highest** income on the corn land. If farmers get rich on the corn land, what can they do at Hazelwood? Write us and we will mail you a fine lithographed map, showing where this land is and all about it. EASY TERMS.

You Can Easily Operate This Typewriter Yourself

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos— or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on **any** kind, size or thickness of paper, and **space** any way you want on

The OLIVER Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the **simplified** typewriter. And you can see every word you write. About 80 per cent **more durable** than any other typewriter, because it has about 80 per cent **less wearing points** than most other typewriters.

80 per cent **easier** to write with than these other **complicated, intricate machines** that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-size documents except you buy expensive **special** attachments requiring experts to operate.

You can adjust the OLIVER to any **reasonable space**—you can write on **any** reasonable size and thickness of paper, right out to the very edge, without the aid of **any expensive attachment** or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the **simplified** features of the OLIVER.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,

CHAS. B. WESTOVER, Pres.

BRETHREN PUBLISHING HOUSE, = = Elgin, Illinois

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

For particulars and cheap rates apply to

THE R. R. STONER LAND CO., LTD.,

A Dollar Paper Free

To each person who sends us just one new subscription to the

INGLENOOK

for the remainder of the year at

Only 45c

we will send an excellent weekly Farm Journal, worth $1 00 to any farmer, free of charge. The **Prairie Farmer** is the paper and all who know its true worth will not be long in getting a new subscription to the **Nook.**

Time Limit July 25

The only qualifications we make are:

1. Subscription must reach us on or before July 25 in order to get the Farm Paper FREE.

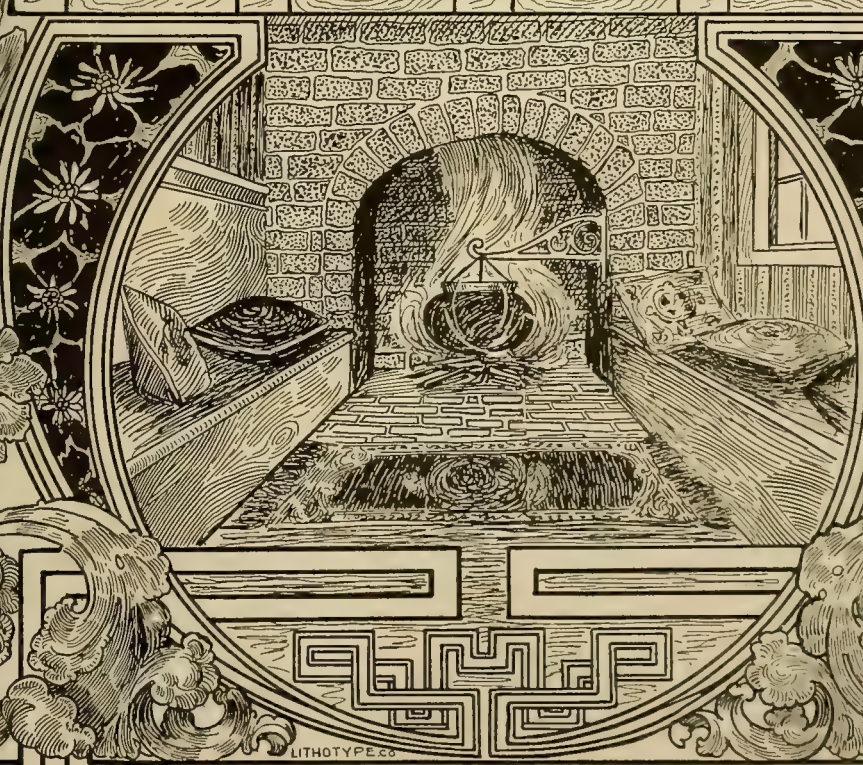
2. They must be new subscribers. The INGLENOOK must be sent into homes where it is not now being received.

The Inglenook as you no doubt know, takes second place to none along its line. Each week it is filled with most excellent, elevating, inspiring and helpful reading matter. Always something fresh and interesting for both old and young.

For each new Nook subscription you are entitled to one subscription to the "Prairie Farmer" if sent before July 25. We will send the paper to any name that you may suggest.

Something for nothing. Through this offer you can secure something valuable for as near nothing as you will ever have offered to you.

Don't ask us send you the paper free after July 25. Get your subscriptions in at once and do not delay. Send to the



BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

The Inglenook

A Weekly Magazine

DO not keep the alabaster boxes of your love and tenderness sealed up until your friends are dead. Fill their lives with sweetness. Speak approving, cheering words while their ears can hear them, and while their hearts can be thrilled and made happier by them: the kind things you mean to say when they are gone, say before they go. The flowers you mean to send for their coffins, send to brighten and sweeten their homes before they leave them.

—Selected.

Usual direct ticketing routes, except that tickets to California points will not be sold via Portland, and tickets to points in Oregon, etc., will not be sold via Sacramento. Rates to intermediate points will not be higher than to points beyond.

Corresponding rates to other points in related territory.

Favorable stop-over privileges at and west of Pocatello, Idaho.

Stop-over of five days at all points in California **except San Francisco and Los Angeles** on tickets to California destinations.

STOPOVER PRIVILEGES

GOING TRIP—Going trip must begin on date of purchase of ticket and stopovers may be had at any point enroute prior to midnight of "Going Transit Limit" as shown above.

RETURN LIMIT—The Joint Agent at destination of ticket (or at any intermediate Pacific Coast point where joint agency may be maintained) will make good ticket for return passage by attaching validation certificate, for which service a fee of 50 cents will be collected. After ticket is validated, stopover may be had at any point enroute within the "Final Return Limit," as shown above. Passengers desiring to stop off, should notify conductors when presenting ticket.

BAGGAGE—The usual free allowance of baggage (150 pounds on full tickets and 75 pounds on half tickets) may be checked going or returning to any point at which stopover is permitted.

FREE SIDE TRIPS

To holders of tickets via Union Pacific R. R. to Ogden or Granger, sold at rates named herein, following free side trips will be given:

From Denver to Colorado Springs or Pueblo and return. (Apply to Union Depot Ticket Agent or to General Agent, 941 17th St., Denver, Col.)

Ogden to Salt Lake City and return. (Apply to conductor into Ogden or to Union Depot Ticket Agent, Ogden.) In connection with this side trip, free Pullman seat checks will be furnished passengers holding Standard Pullman car tickets.

YELLOWSTONE PARK SIDE TRIP

Side trip tickets from Ogden or Pocatello to and through Yellowstone Park including five and one-half days' hotel accomodations as well as railroad and stage transportation, will be sold for $55.00. Side trip tickets covering rail and stage transportation only will be sold for $28.00. Park season will be from June 10 to September 19. Apply to Ticket Agent either at Ogden or Pocatello. Passengers holding through sleeping car tickets will be furnished sleeping car stopover checks on application to the Pullman conductor.

OPTIONAL ROUTES

All tickets reading via the Union Pacific Railroad to Ogden or Granger will be honored via Julesburg Line and Denver or via the direct line through Cheyenne, at option of holders.

Proportionate rates from all points East. Be sure to buy your ticket over **THE UNION PACIFIC RAILROAD** known as the **Overland Route**, and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

Farming Lands in California can be bought from $25 to $40 per acre. Printed matter free. Write to

GEO. L. McDONAUGH, Colonization Agent,
UNION PACIFIC RAILROAD,
OMAHA, NEBRASKA.

To the Settlers of Butte Valley

Watsonville, California, June 18, 1907.

During my recent visit to your beautiful valley I have been particularly impressed with the splendid opportunities offered there to the settler and the favorable condition under which to make a start.

No insect pests, obnoxious weeds or fungus diseases to attack or destroy the growing crop. Pests that elsewhere cost the farmer and fruit-grower tens of thousands of dollars each year.

Here is an opportunity to commence, as it were, with a "clean slate."

Will you let this opportunity pass unheeded? Eternal vigilance is the price of liberty, here as well as elsewhere.

From personal experience and observation I know how very expensive, yes, disastrous, in some cases, the lack of a little foresight and some preventative measures have been. The great damage caused the farmers of a locality by the introduction of foul seed is only too well known.

However, the unique situation of the Butte Valley gives you a chance to prevent the introduction of such pests and disease as Johnston Grass, morning glory, Canadian thistle, pear blight, walnut blight, grain smut, rust and weevil. All varities of scale insects, codlin moth, wooly aphis, bitter rot and dozens of other enemies of our cultivated plants and trees.

To do effective work the Butte Valley farmers must organize and obtain the co-operation of the county officers. A committee should be appointed through which all purchases of seeds, plants or trees should be made, thus allowing careful inspection by the County Horticultural Commissioner, besides saving in cost.

Not an ounce of seed, not a box of fruit, not a single tree should be allowed to enter the valley without passing a rigid inspection.

No old boxes or sacks should be allowed at all.

Doubtless the Agricultural Department of the State University will do all in its power to help you, if its assistance is requested.

Co-operative buying, selling and shipping is another subject meriting the serious attention of your organization.

Good schools, buildings as well as teachers, good roads, farmers' telephones, all these and many other problems will engage your best efforts as the population increases.

You will be well prepared to meet them if you organize now on the broad principle of Democracy, "The greatest good to the greatest number."

Wishing you all success, health and happiness, I am

Yours sincerely,

F. L. Willehed MacDonald

Eternal Revenue Stamps

A carefully-selected collection of 120 Scripture verses, beautifully printed in three colors on gummed paper and perforated to tear out like postage stamps.

They are neatly bound in book form, with a stiff cardboard back and with waxed tissue paper between the pages to prevent sticking. Every page is printed in a different combination of colors, giving a variety in color, as well as in verse.

The stamps are classified under twelve different headings, making ten different texts on each of the following subjects:

Invitation, Salvation, Prayer, Purity, Faith, Love, Courage, Comfort, Integrity, Prohibition, Deportment, Miscellaneous.

A traveling man writes from Centralia, Ill., saying: "Enclosed find one dollar. Send me Eternal Revenue Stamp Books for it. I got three of them yesterday from a man in Paris, and Christian workers who saw them to-day persuaded me to part with them and send for more."

Price, each, ...10 cents
Per dozen, ...$1.00

Elgin, Illinois.

Lomita California

At this writing, July 5, the great steam thresher is pounding out the barley on twelve hundred acres of this ranch. This business is done on a large scale. It requires about thirty-five men and twenty teams to run the machine. There are eleven wagons hauling the grain to the machine, and two men feed the cylinder with forks. The well drillers are hauling their machinery up on the hill preparatory to drilling a fifteen-inch hole for water. Fifteen-inch steel casing will be used. The surveyors are running the town lines and fixing the boundaries of the acreage. M. M. Eshelman has his barn up and is living in it, and lumber is on the ground for his house. Harvey Frantz has his big tent on the ground and is hard at work carpentering. Things are doing at Lomita. Those who purchase acreage and want more land to farm to corn and barley should make application at once for land to rent. All rents begin November 1.

Six years ago Mr. McNally bought ten acres and put six into vegetables. At the start he was in debt $500. Now he owns 37 acres, built a seven-room house, and has money in bank. He is out of debt. Vegetables and poultry were his specialties, and he found a good market all the time.

Perhaps few places offer better opportunities for industrious Brethren. With great and growing markets that can be reached early in the morning, what can industrious producers receive for their toilings? Only good, sound money and plenty of it. In this land of the afternoon sun, you have more than toil and revenue. You have climatic conditions where you can, in a few months, beautify your home, and make fragrance and beauty run hand in hand. Is this worth something in this life? It certainly is.

Fruit growers are getting fancy prices for their produce this year. Each year there are more eaters all over these United States,—hence more produce is required. Where can you have better chances than in this country where something can be grown all the time? Always something for the market, and, of course, always something for the pocketbook.

Another excellent thing is, that no difference how much you may labor during the day, you need not swelter with night heat. Here you can lie down and take sweet sleep with several covers on you in the night, and surely you are rested in the morning. It is the cool nights which bring to you such delightful feelings the next day. Is this a good asset? Surely it is.

And if you will come to Lomita you will show you how to keep your drinking water nice and cool all day long without ice. Soft water in plenty is worth while.

There are lots of people who will try to tell you what they do not know, but if you will come and see Lomita and use your good eyes and sound mind, you can possess knowledge to tell those unknowing ones what they ought to know. Facts and truth are good enough for Lomita. We want to withhold no good thing in our statements nor tell anything with gloss and varnish on it. Just the truth, no more, no less. Come and let us show you our offerings

A Great Opportunity

FOR THE

HOMESEEKER

180,000 ACRES UNDER THE CAREY ACT

Now Ready to File On

This tract is on the North Side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho

These lands are sold at 50 cents per acre and the water right $30.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms, crops of all kinds are grown to perfection. Fruit growing is a success ,as well as the growing of sugar beets. To see these lands take the Oregon Short Line R. R., to Minnedoka; there change cars for Milner.

Homeseekers' Round Trip Tickets

will be sold to points in Idaho on 1st and 3rd Tuesdays in May and June 1907.

BRETHREN and others returning from the annual conference at Los Angeles, via Portland through Idaho over the Oregon Short Line R. R. should stop and see these lands.

EXCURSION TICKETS will be sold from points east over the O. S. L. R. R. to Seattle and Spokane, Wash., June 20th to July 12th inclusive. Final return limit Sept. 15th, 1907. Stopovers allowed on going and return trip.

THE INGLENOOK

VOL. IX. JULY 23, 1907. NO. 30.

DREAMS.

LOIS L. THOMAS.

The chirp of the birds in the orchard,
The croak of the frogs in the spring,
The sigh of the breeze through the maples;
And the faces that haunted my dreams,
When a child I leaned by the gateway
That led from the pasture lot,
Impressed, with I know not what
Meaning, my opening, vibrant soul.

But the song of the bluebird was sweeter,
E'en the croak of the frog had its place,
While the sigh of the breeze through the maples
Seemed the breath from a far-off world.
Yet, I felt them as only a setting
For the faces that haunted my dreams.
Those faces! From fairyland, elfdom,
And even from lower worlds brought;

They smiled and they leered through my slumber
And filled me with joy, and with fright.
But the face that has lingered the longest,
When all of the rest have grown dim,
Which soothed me when others affrighted,
Which kissed me when others had leered,
Is the one which had kissed me at evening,
The one which would wake me at morn.

Herring, Ohio.

ELEMENTS OF CHARACTER.

RICHARD BRAUNSTEIN.

ENERGY of character is a vital force. It lies at the very foundation of a successful life. It animates and rouses to action the dormant faculties of the soul, and leads to the successful accomplishment of noble deeds and daring achievements. Accompanied by perseverance, it has discovered continents, tunneled mountains, conquered armies, captured cities, and brought into instant communication nations separated by intervening oceans. Good fortune, without effort, has never made the man or enabled him to attain greatness.

"Each man makes his own statue, builds himself," and energy is the motive power which secures his development, and enables him to achieve renown. Life has many rugged paths; obstacles intervene; lions are in the way. Who shall overcome? Who shall scale the towering cliff and gain the far fields beyond? The bold, the daring, the energetic alone may hope to pluck the flowers that bloom on the banks of life's gentle stream as it nears the ocean of eternity. But the energy must be under the control and guidance of integrity, to attain its object. Some one has said, "The moral grandeur of independent integrity is the sublimest thing in nature." It is indeed an essential element in every true character.

In their struggle to reach distinction, how often do men ignore honor and justice! With earnestness they toil for the glittering prize, regardless of the means by which it is to be attained; but when it is reached, they find they have sacrificed their manliness, their dignity of self-respect, to grasp a shadow. Their very success is a total failure. We have many manifest illustrations of this truth among the distinguished men of our own times and country. With becoming energy and boldness, they have sought for wealth and renown, but have bartered away their integrity, and thus lost all.

"'Tis moral grandeur that makes the mighty man." And integrity to attain its end, must be accompanied by moral courage. The knights of olden time who gained renown by their gallantry and daring, had courage as the guarantee of their success. But there is more heroism in *daring to do right* than in facing the cannon's mouth. Many a man has stood fearlessly the storm of death on a hundred battle-fields, who would quail under the finger of scorn and surrender without a shot to the scoffs and jeers of the vulgar crowd. *Moral courage* gives power to do right, when it is popular to do wrong; when fortune frowns, temptations assail and discouragement and gloom hang over the timid soul like a pall. *Faith,* too, is an element of success which must not be overlooked; faith in man that observes the lineaments of integrity amid the ruins of sin and believes in the progress and elevation of the race; that faith in God which is the "substance of things not seen;" which pervades the soul and has its temple there; which is not weakened when the hand of God afflicts, but becomes purified and strengthened by the trial; that faith which finds a striking illustration in the loving child nestling in the bosom of its fond parents. But faith implies *hope,* and hope cheers the desponding soul even in the darkest day. It is a pleasing thought that "no star goes down but climbs in other skies." Faith, hope and charity, but the greatest of these is *charity.* Not that charity which seeks the praises of men, but that which seeks the relief of human woe; which by loving acts and sympathizing words gladdens the life of the disconsolate, and leaves sunshine in the sorrowing heart and especially

that highest exercise of this quality, *charity towards the uncharitable.*

These are the leading characteristics of a whole mind, and the elements of any true successful life. Other qualities of seeming less importance are always blended, like the higher shades of a perfect picture, and all essential to the end in view. The goal is distant and can be reached only by the most careful training and earnest effort. The prize and the crown are elevated and can be gained by no false climbers. These elements must be harmoniously combined, and each faculty of mind and soul imbued by the love of truth, and energized with the spirit of enthusiasm and prayer.

Seeing the West Through the Eyes of a Missourian

Ada Kircher

NO doubt many of you saw the same things I am about to mention, yet you did not see them through my eyes, so if I do not tell it as you saw it, please just remember that we are two entirely different persons with a pair of eyes apiece that see differently.

One bright, warm May day, I found myself comfortably seated in a chair car with an acquaintance, a fellow ex-pedagogue, by my side telling me all sorts of trials and tribulations that beset the paths of a schoolma'am that she had encountered since she had taken up her position in the school of two.

While I listened I handed my ticket to the conductor, one of those tickets you all remember so well, and will you think I never saw a wolf in my life, if I say it was fully three-quarters of a yard long. The conductor deliberately stretched it out its full length and looking over his glasses asked with the look of a mischievous school-boy, "Where are you going? To the Philippines?" I answered, "If I were judging by the length of the ticket I should say around the world." To which he replied, "It's long enough, I'm sure."

At Kansas City I met my traveling companion. I am very much in doubt whether I should give her name or not. You would all know her if I should tell who she was, if indeed you were not all related to her. For it soon became quite a joke among us that every one was related to Mrs. C—. There, I very near told, but I'll be more careful.

After some anxiety and a great deal of patience, a berth was secured and the train was boarded, the anxiety being caused by the loss of a telegram which wasn't lost at all, only stored away carefully in one of the pockets I had provided for myself for this special occasion. Not being accustomed to wearing pockets at home, I forgot about this receptacle, and so the telegram could not be found until the next day when I had no need of it, as is the case with all lost articles.

We partook of dinner at the dinner hour and found our baskets contained more, or so at least it seemed, than before we had eaten. The lids actually refused to go down and we anxiously awaited the supper hour expecting when our excitement had cooled a bit, to lighten our lunch baskets considerably, only to find the lid further from closing than ever; and indeed, we were several days' journey from home before we could get the basket and lid to condescend to meet on any terms.

Eastern Kansas looked very much like Missouri, although I am sure they do not like for me to say so and I like no better to say it, for I have always considered this little spot, bounded on the west by Harrisonville, as we used to say in our geography classes, on the north by East Lynne, on the east by Garden City, on the south by the creek (out west they would call it a river, for I saw rivers there with less water in than this creek, Eight-Mile, has when it's gone dry), the garden spot of the world. I'll tell you what I think about it still after I get through with my narrative.

In central Kansas we traveled all afternoon in sight of round hills covered with rocks, which I might have imagined to be mountains had I not known better, for the simple reason that I spent one winter teaching in the heart of Amarugia, climbing just such hills every morning and descending them every night, only the Amarugia hills were closer together and more so.

Towards evening we came to more level land where the grass, alfalfa and wheat looked as if it was no joke about planting the little yellow kind. The grass was so short that it was no trouble to see the long ears of the jack-rabbit protruding from the grass, and in fact his whole body could be plainly discerned. That, however, was not much of a sight to me as our jack-rabbits at home have just as long ears as these western Kansas jack-rabbits and a much more graceful hop. But the lack of grace on the part of the Kansas jack-rabbits might be due to the wind, for who ever saw any one carry himself gracefully when the wind was blowing a gale?

My companion decided to look through her lunch basket after supper to see if anything was spoiling. The lid was raising amazingly and she knew something inside was the cause of it. Her search resulted in nothing but three spectacle cases that had somehow

gotten themselves into her lunch basket. She immediately rid herself of these, only to find that the lid was further away than ever. At the same time I found my cookies upon the floor, but no room in the basket for them anywhere. I couldn't, for my life, see how we got all those things in the basket at home, and the lids closed, too. It must have been because the atmosphere is lighter here; we do not have the extra pressure to assist us.

It grew dark and we then had time to look around us inside the car. Our car was not half filled; the occupants were all middle-aged or over, except myself.

Our neighbors were already old acquaintances of ours, although we never met before that day. We had taken a walk through the train of ten cars, which is no small walk, looked into two hundred and ninety-six faces, met many people I had never seen before, but we were acquainted just the same. Right here let me say that they were most all relatives of Mrs. C., or else they were related to some of her relatives, or knew some one she knew, or else, perhaps, were old neighbors of hers. I would just like to add that when I see people collected in groups trying to straighten out their relationship and find out really how they are related to one another, I am sometimes glad that I do not have that trouble. Any one who bears the family name on either side is my kin and their number is not very great, though there is one thing I miss when I go to Annual Meeting and that is the reunion part.

Just before retiring we gathered in one end of the car and there erected a family altar, for were we not a big happy family? We sang, and then kneeling together we thanked our heavenly Father for his kindness and protecting care over us, asked his further guidance and protection and asked his watch-care over those left behind.

Thus ended the first day of that long contemplated trip to the Western Coast. Not quite ended, for this retiring was new to some of us and to people burdened with a superabundance of modesty, it was quite disagreeable to have such close neighbors and then, too, sleeping in a berth has to be learned just like riding horseback or skating on skates and, indeed, my companion, who said she never could sleep behind, found some difficulty sleeping in front, and once found it difficult to retain her equilibrium so much so that she reached the floor before she could again regain it. She also said the motion of the train would not let her sleep. As for me, after a few nights I was so thoroughly spoiled I could not sleep unless the train was in motion. I was just like a child in a cradle, when the train stopped I awoke, and I began to be alarmed lest when I reached Los Angeles I should have to be rocked to sleep.

Harrisonville, Mo.

BEWARE OF AVARICE.

RICHARD SEIDEL.

I REMEMBER once looking at an old German print, containing a terrible sarcasm against the sin of avarice. It was a picture of Satan carrying a miser on his back to purgatory. The miser, true to his intentions, was trying to strike a bargain with his Satanic majesty, and was saying, "Say, old fellow, what is the price of coal down in your region? Would there not be a chance for a fellow to make a few thousands down there? Hey?" It was wonderful to see the leer with which the "old fellow"—his Satanic majesty—regarded him. It was as much as to say, "What, would you cheat the very devils themselves, and that, too, when you are yourself on the high road to hell?"

It has been said, "The devil cheats all souls but one, the miser cheats the devil." His soul becomes corroded, so covered with rust that the true metal is nowhere to be seen. He has lost fellowship with all humanity, and stands a blank in God's creation. His business is to ruin and defraud others. Prayers, tears, widows' prayers and orphans' tears, avail nothing with him. Money he must have; money, though souls are ruined and betrayed; money, though the earth is made a vale of tears; money, though dug from the lowest depths of hell.

The miser often perishes through his own devices. Some years since, in making improvements in the city of Paris, they tore down a large stone building that had once been the residence of Frozzard, the miser, who had suddenly disappeared from the world a century before. In digging among the foundations, the workmen discovered a trap door, rusty with age, and fastened with a spring lock, itself nearly consumed by rust. They forced open the door. There were steps leading to a vault beneath, silent and dark as a tomb. They procured lights and descended the steps. There, among chests of gold and silver, hung a human skeleton. The clothing was hanging in tatters from the fleshless limbs, and from one hand had dropped a lamp on to the ground beneath. The skeleton was that of Frozzard, the miser. He had been solicited for a large loan of money to enrich the royal treasury. Unwilling to incur the displeasure of Louis the Sixteenth, and fearful that the money would not be refunded in those dark and troublesome days of the French nation, in order to make it appear that he had not the sum demanded, he had caused these vaults, secretly, to be built, and the money conveyed into them. The sequel is easily told. A spring lock had fastened him in there and he had died there, gloating over his treasures, and feasting his eyes, even in death, with gazing on the god of his idolatry—gold.

A Summer in the Rockies

Hattie Dell

WE were now on West Creek. This is quite a good-sized stream and such a beauty as it is, winding around the foot of the mountains, through the brush, rocks and trees. The surroundings are rather wild looking, no signs of civilization except the road, and some places it was hard to see where

West Creek.

that was. We wondered how our little horses, Queen and Nellie, would get over some of the large rocks in the road, but they seemed to know just how, and when and where to step, and with our careful driver, the roughest places were crossed and not even a fruit can broken.

We all walked over the worst places except John. There were two reasons for our walking; one was, to save the horses, and the other was, we didn't care to ride. We carried a tin cup, and drank of this sweet crystal water to our heart's content. This is much better than ditch water. I just wish to say to the inhabitants of Grand Valley, ditch water is good when you can't get any better. This is certainly a wild, beautiful place, just such a place as I have often longed to spend a week or two in,—an ideal spot for any one who loves natural scenery. How restful it is to get away from the world's noise and fashions, to get away from sham, into the real thing. Nature is always what she pretends to be; nature is just as God made her; man is not; nature smiles on all; some people smile when on the street, but frown in the home. I do not thank any one for a smile when it is just to hide an unkind heart; anything but a deceitful, untrue human being. May God help us to be what we profess.

We could not remain on this enchanting ground, but must pass again out into the sunshine. We looked back to the shady retreat with somewhat of a longing to spend a few days strolling among the rocks and trees, and playing in the water as it rushes onward to the river. John said early in the spring they caught fish with a pitchfork in this creek, but we did not see one fish. It must have been just such a place where the Virginian took his bride to spend their honeymoon. We camped for dinner on the sand under a few trees. After dinner some of us stretched ourselves out on the sand to rest awhile. About four o'clock we came to a cabin where we stopped to get hay, milk and bread. The woman told us the river was up and we could not ford it, but would have to cross in a boat and swim the horses. We crossed West Creek for the last time just a little above where it runs into the dirty Delories River and is lost.

When we came to the river and saw the muddy boiling water, and the little boat we were to cross in and thought of the horses crossing, and perhaps being washed away, we realized that all was not joy in the journey. The wagon had to be taken apart, and a few pieces taken over at a time. The horses were left till last, and how we dreaded to see them start. They were surrounded by men and dogs; some Mormons lived close and they helped. At last the poor frightened things plunged into the water, and we held our breath, but they came out all safe and sound. In a half hour or so we were on our way again.

We followed along the river several miles. Some places there was just room for a road between the mountain and river. We might compare the river to an impure life, and West Creek to a pure one. We don't want to forget that as a man thinketh so is he.

Professor, don't forget you cannot be a Christian without this purity of heart. You may profess, but you cannot deceive God. He knows our thoughts. I know some people who are trying to hide unclean hearts under plain clothes. What a disgrace and hindrance such people are to the cause of Christ! "Be sure your sin will find you out."

John said we would camp on Cottonwood Creek, so we would have water, but when we reached it we found one small hole of water. However, we took a bucket and went up stream a little way and there found the water running a little so we carried what we used to cook with. We were surrounded by sage brush here, and had to make our beds in it. We decided that the first one of us that complained of not feeling well would get a good, big dose of "Rocky Mountain Tea," and the smell of it was enough to keep any one from getting sick. We were only a short distance from the river and could hear it rushing madly over the large boulders that had fallen from the mountains. We were walled in by immense walls, all around us. All we could see was the moon and stars. It was full moon and a bright, still night. I could tell by their heavy breathing that the others slept, but how could I? I felt alone, as though I were miles away from every human being, but very near the Creator of all these wonderful things we were permitted to behold. I never felt so impressed with the glory of the heavenly bodies before. The heavens do certainly declare the glory of God. Readers, look into them often, it will do you good. We miss so much of life's sweetness by being thoughtless of the things we have all about. We ought to get the best out of everything.

The next morning the water was running quite lively to our glad surprise. While the girls started breakfast I played truant, and followed the brook to the river. When I returned I found John with pan and spoon in hand. I said, "Water pancakes for breakfast." He went to the brook, it was just a few steps from our table, filled the pan half full of water, then for the flour, baking powder, and salt. I laugh now as I see John stirring his pancake batter, and hear him say, "You can laugh now, but we'll see how you eat them when we get to the table." He must have used some kind of sleight-of-hand performance to turn those cakes, for they were turned without knife, or pancake turner; just a quick jerk of the frying pan and over they went. Reader, I know you are anxious to know if those cakes were good. I should guess so from the way they disappeared. I took one bite and choked on that,—it was like chewing gum. Now really, John, they didn't taste so bad, but I couldn't eat for laughing.

A few miles up the cañon we came to Salt Wash, or Poison Creek. There is but little water here, but the rocks are covered with a frostylike substance, making them very pretty. Thirty head of cattle had drunk of the water and died that spring. It is claimed a little of this will not kill, but when animals get a taste they want more and drink till they die. Isn't it just so with the dreadful liquor habit? Taste it and you are crazy for more. "Touch not, taste not, handle not" is wise advice, and they are very unwise who do not listen to it. You drink until all that is manly in you dies. If our men would say, No, it is beneath our dignity, and we women, It is beneath our purity to think, say, or do anything that will lower our characters in God's pure eyes, we would not see sorrow and shame in so many faces.

Salt Wash.

The road was so very rocky through "Salt Wash" we walked almost all forenoon, and were a tired, hungry, thirsty set of travelers when we pulled into camp a little after noon.

(To be continued.)

At top or at bottom all true men and women are laborers. It is unmanly and unwomanly to shirk. A lounger is a lounger, a loafer is a loafer, a tramp is a tramp, a pauper is a pauper, a thief is a thief, regardless of dress, education, or social position. He who lives by the sweat of another man's brow is a parasite, whether he lives in a palace or a hovel. If education brings us to shame of honest effort, if it causes us to shrink from calico or blue jean, if with it we refuse to lay hold of shovel, pick, plow handles, or dinner getting, if this is the appointed task, if it alienates us in any way from this great teeming world of honest, earnest work, it is a base counterfeit, and we are the worse for having it.—*The Universalist Leader*

LOWLY BUT CROWNED; OR, SYBIL THE OUTCAST

A Story by Sadie Brallier Noffsinger

Chapter XVI. A Page from Another Life.

RAISE my pillar a bit higher, Liz. Now turn up that lamp somewot. Ken yer read printed matter?"

"Yes, Granny, a little on't, ef the words is not too long an' hard."

"Well, git them papers, then, inside the kiver o' that book. I allus meant to read 'em sometime, an' now my eyes is too old an' dim."

Liz obeys and takes from their place of concealment two creased printed sheets. They are those which Mrs. Chester had left there almost three years ago.

"Now read out, an' mind 'at yes speak loud. There is a rumblin' in my ears to-night."

The title of the sheet is "Saving Words." Liz stops many times to spell ere she can read the sentence: "Him that cometh to me, I will in nowise cast out."

"That sounds ruther kind," says the old woman, "I spose it means the Lord."

Liz reads on: "Though—thy—sins—be—as—scarlet—they—shall—be—made—whiter—than—snow."

"I em glad o' that," remarks Granny; "but the way yes stops so often on't sort o' jars my mind. Tell yer pap to come an' read it fur me. He is better in eddication than ye be."

Liz again obeys, and soon her father enters.

"'This is a faithful saying and worthy of all acceptation that Christ Jesus came into the world to save sinners, of whom I am chief,'" falters John Deane in a subdued and trembling voice.

"Do yes think as that means everybody?" stammers Granny.

"I think as it does," he answers, "in fact I feel sure on't."

"How do yer know?" queries the croaking voice, now almost in a whisper.

"I kin tell froum example. I know as only a few months ago I wuz the very chiefest of sinners; but I em sure the grace o' God is savin' me, I think as the piers o' the bridge is well nigh completed," he added in a whisper to himself.

"Ef I han only listened to them words afore my feet had got so fur in sin," she muttered, "I could have a better hope. Do yer think as yer ken hold out to the end o' the journey, John?"

"With God's help, I b'live as I ken," he answers.

And now the old woman's mind begins to wander again and she is begging at the Foaming Goblet.

"I hev pawned the last article," she pleads, "an' I am well-nigh burning up with thirst. Only jest one glass! It's not much to ask fur!"

John moistens his handkerchief and lays it upon the fevered brow.

She sleeps until the grey light of dawn is stealing through the little pane of glass, and then says: "Git some water an' cool my lips, John."

He puts the cup to her trembling lips, then assists her head back upon its pillows. "I—feel—sort—o'—chilly-like," she gasps. One withered hand is quickly thrown above her head, and the angel of death draws the mysterious curtain down over the poor, red eyes.

Chapter XVII. A New Acquaintance.

We now ask the reader to turn for a moment from old acquaintances and behold the beauty of a new sweet face. It is Stella's.

She is the child of Mrs. Chester's beloved sister. Her deep eyes and alabaster temples seem to belie her ancestry and almost move one to touch the lily hand in order to be convinced that she is of the earth, earthly. In her beauty, she is fragile as a flower before the blast, and in her purity like a December snowflake suddenly discovered in April's slush and mire. She has come from the thronged heart of the great rushing city to enjoy for a season the rest and quiet of Shady Brook; but in gazing upon the marvelous face, one might almost fancy that she came thither from heaven instead.

In time past she had been the devoted friend, and almost inseparable companion of little Clifford, and his death had made a wound within her heart which time was slow to heal. For long months afterwards she was a rare visitor at Shady Brook, the loneliness of whose rooms made her heart ache, she told her mother. And though she seldom spoke Clifford's name to Mrs. Chester, the manner in which she wandered from room to room with vague unrest, and stood by the gurgling stream with folded arms and dreamy eyes, was plainer language to the bereaved woman than any words had been. After Lily's advent, her visits became more frequent but the fact was plain

that one attraction of that home for Stella had departed to return no more.

Very dear to Mrs. Chester's heart is this lovely child,—dear because of her own sweet self, and none the less dear because of her association with him whom she had loved and lost.

So Mrs. Chester folds her within her arms and says: "My own sweet Stella! Welcome to Shady Brook!" and is repaid by the soft reply:

"My dearest Aunt Katherine!"

Chapter XVIII. Confiding Childhood.

After Stella's arrival at Shady Brook "the hours flew on golden wings." The girls were soon fast friends who exchanged all sorts of girlish confidences and shared each other's joys and sorrows. Sibyl confided to Stella the important fact that she was now a "pome,"—"a real-for-sure one," she added with an air of greatness. "Becourse, Stella," she continued, "I don't spect to be as grand a pome as Mrs. Chester for a long time yet. It might be," she admitted in a serious tone, "that I will never reach her ekul, but I hev writ one beautiful verse. Mrs. Chester says as it's beautiful an' she knows. She calls it my first lit'r-ary effort. I don't exactly know what that is, but I think it means suthin' sort o' high like. Read the verse and tell me what you think on't."

Stella read it over and pronounced it very good. "Only Sybil, you should begin every line of poetry with a capital letter."

Just at this moment the "sperrit" began to strive within her, and taking the poor crumpled piece of paper from Stella's hand, she buried her verse away down in the uttermost depths of her pocket.

"I don't think as you ought to boss me when I am so much older as you are."

"How old are you, Sibyl?" asked Stella, good-naturedly.

"I'm fourteen years old, and that's mighty near bein' a woman, mind you," said Sibyl with a faint tinge of a threat in her voice.

"Well, forgive me, Sibyl, I did not mean to offend but only wanted to be a help to you. You see I have gone to school a great deal more than you have, and while I can be a help to you in books, you can help me in many other things. You can teach me where to find the freshest moss and brightest flowers, and help carry my basketful of nuts when my arms get tired. Now let us be good friends again, Sibyl."

And thus the days move on and Sibyl was a better girl for Stella's companionship. One touch of Stella's hand would often cause the "sperrit" to cease its angry strivings within her breast. And after a time Stella told her all about her great sorrow and loss in Clifford's death; and Sibyl repaid this expression of confidence by unburdening to Stella her own great grief inflicted by Priscilla Trot and the other girls of Busy Homes. Poor Stella! Poor Sibyl! Each knew the depth of her own bitterness, and each sympathized with the other's woe.

THE SCHOOL OF LIFE.

FRANK G. REPLOGLE.

As we ponder weak and weary,
In the glowing heat of day,
We are often prone to wander
From our heavy tasks astray.

Oftentimes we feel disheartened,
When we see so much to do.
And 'tis then we need the courage
Of the resurrected Jew.

Ah, 'tis then that we look heavenward,
And, as we breathe a gentle prayer,
All our troubles quickly vanish
On the unseen wings of air.

We should ever then press onward,
Being shod with gospel peace,
Having Christ as our Great Teacher,
That our knowledge may increase;

That when life's great school is over,
And the testing day has come,
We may there receive our credits
For the heavenly school to join.

Then we'll join our former schoolmates
In one larger class above,
And we'll graduate in heaven,
Crowned with laurels of his love.

NOTES BY THE WAY.

J. S. FLORY.

Quite recently I was permitted to take an extended trip by team over a part of the great Maxwell Grant in Northern New Mexico. Think of one holding of land containing one million and a quarter acres of land. It is a good thing these great land grants are being divided into smaller bodies. Some of our persevering brethren have gotten hold of some fifteen or twenty thousand acres of the said grant and are pushing ahead with vim to colonize the same with enterprising farmers.

In our run around over the valley, taken possession of by our Brethren, we visited the old home place of the famous scout, Kit Carson, so well known to the early settlers of New Mexico. Some of the walls of his old adobe fort are still partially standing. In company with Brother Isaac Frantz, of Ohio, we gathered some mementos from the old fort walls and drank from the beautiful crystal stream near by. The old scout claimed there was a fascination for him in the spot he had chosen as his home he could find nowhere else in the broad west; one was the climate, another the water with its beautiful fish, and another the game of the mountains.

A long lifetime he spent here, an enemy to the

savage who contested his rights, and a friend to the government of the white man. Often he led military expeditions back and forth from the waters of the Missouri to the Pacific coast. Gen. Clark for a time had his headquarters at this same old noted fort. There is now a famous Spanish lady living on the premises which are surrounded with a fine orchard of trees fifty to seventy-five years of age and in the seeming vigor of young trees. She says that in the forty-six years since she has lived there, this year is the first that there was a failure of a crop of fruit. She has fine commodious buildings so built as to form the pleasure court so common to Spanish residences.

She insisted we should come and see her rooms, expensive paintings and pictures of many noted persons. Her home was furnished in luxuriant and costly style. A more courteous and agreeable woman in her home I never visited. She is a queen, indeed, of the broad plains where she reigns in seeming satisfaction. She is a devoted Catholic, but is a warm friend to all about her or who come to visit her. She has a special friendship for Sister M. H. Mikesell, who frequently visits her. She bids God speed to the efforts of our Brethren to make a settlement near her own lands.

The short visit to this locality was full of much interest and it seems to me that with an eye of faith I could see our Brethren taking possession of these beautiful valleys and broad acres of New Mexico, as they have done of Colorado and the regions of the Pacific slope.

Westward the empire of civilization is spreading its wings. "Go west" has not lost its old-time music to the ears of the restless emigrant. Thus history repeats itself, empires and kingdoms rise and flash as meteors in the sky, then disappear for a time; because with man, all is mortal.

PLANTS THAT GO TO SLEEP.

It was Chaucer who first discovered that some flowers nod, go to sleep, and awake again, apparently refreshed. Indeed, as he watched the English daisy (*Bellis perennis*), one smaller and more pink tipped than that which thrives abundantly in American fields, and observed how at sunset it moved its rays in an erect position, held them closed during the night, and then opened them wide at sunrise, he concluded that it had wisely indulged in a long, refreshing sleep.

At present, it is acknowledged that the majority of plants are inclined to sleep by the hour. With some it is only the bloom which closes, to unfold again after refreshment, while with many others it is the leaves which exhibit the most pronounced sleep movements. So complex, moreover, are some of these movements of leaves when preparing for a night's rest, so do they rise or fall to cover the flowers or ripening fruit and thus protect them from cold dews, that the immortal Swedish botanist, Linnæus, speaks of their performances as being analogous to the action of birds, when spreading their wings to shelter the young snugly. Indeed, although both Chaucer and Shakespeare had noticed the sleepiness of plants, it remained for Linnæus to collect the first accurate information on the subject.

The story is told that his attention was drawn to the protecting sleep movements of leaves through the gift of a rare exotic, a species of lotus which had come to him during the absence of his gardener. He at once planted it, then bearing an exceedingly beautiful red flower. It was after nightfall when his gardener returned, and Linnæus, eager to show his treasure, guided him to the greenhouse. No bloom whatever was to be seen; merely many large, languidly drooping leaves.

Thinking that some one had rudely picked the flower, his disappointment was deep; but in the morning, to his surprise and joy, the brilliant bloom again appeared, fresh and vigorous. That night he and the gardener again visited the exotic. Every sign of its former glory had vanished. Its aspect was entirely changed. Through fingering the whole plant well over, however, they at length discovered the daytime beauty, sound asleep under over-leaves.

It was after this observation that Linnæus's interest was quickened in this particular trait of plants, and he collected the number which formed his celebrated floral clock; for with some of the flowers their periodical opening and closing is so regular as not to vary fifteen minutes throughout the season. Indeed, he observed forty-six flowers with a determined hour for sleeping.

This adherence to a certain time for closing is now attributed to the punctuality of their insect friends, visiting them through the offered bait of nectar, which perform faithfully the service of carrying their pollen. As soon then as these conscientious insects have made their rounds for the day, the flowers close to protect their remaining sweets and golden dust from worthless pilferers.

It is not altogether because of exhaustion that the leaves of some plants sleep, but because light which acts as a stimulant to them, is withdrawn. Even it is possible sometimes to cajole them into waking by holding near them a lighted candle; as also some flowers are fooled into making sleep preparations whenever there is an eclipse of the sun. Neither can it be only the absence of light which causes them to sleep, since the common goat's beard, from its habit of closing irrevocably at twelve o'clock, is popularly called by the English people, "Go-to-bed-at-noon." The pimpernel of Tennyson (*Anagallis arvensis*) is another early sleeper, seldom being found awake after midday.

The evening primrose (*Onagra biennis*) is scheduled to open at six in the evening and to close at dawn, being nocturnal in its habits. The spring beauty (*Claytonia Virginica*), known to every child that treads the woodlands, is not only a rare sleeper, but so in dread of rainy or cloudy weather that it invariably dozes through such times. The field convolvulus (*Convolvulus arvensis*) is another flower especially sensitive to the approach of rain; while on the contrary the quaintly pretty chicory (*Cichorium Intybus*) opens its white, pink, or blue florets only in the early morning hours throughout midsummer, or else when the atmosphere is hazed.

Flowers that sleep when the sun goes down and awaken in the morning are observed to regulate their acts with the length of the day, as it increases or declines. Apparently they cannot sleep while it is yet too light, nor awake before darkness has sufficiently vanished. The wayside tansy (*Tanacetum vulgare*) indeed has leaves so sensitive that not only do they close in darkness, but whenever exposed to too powerful a light. Again the leaves of some plants, if brightly illuminated, will at once endeavor to direct their edges toward the light. The common day flower (*Commelina Virginica*) has a most curious habit of sleeping itself away. Early in the morning its bright blue flowers may be seen lively and awake. About noon, however, after its special insects have made their rounds, it closes its petals tightly, which melt away before sundown into a mucilaginous substance resembling jelly.

Hardly one more interesting to watch, or more accessible to all could be named than the pretty little wood sorrel (*Oxalis Acetosella*), abundantly grown in pots as a house plant through the winter. At nightfall its peculiarly sensitive leaves sleep by drooping their three leaflets until touching back to back, in which position they are far from likely to be chilled during the night. At sunrise, however, these leaflets again regain their horizontal position. During the day as well the seedling leaves of this plant exhibit restless, interesting movements. In fact, it has been observed that the flowers and leaves of young plants close much more thoroughly than those older ones. As children, perhaps, they need abundant rest. Generally it is said of the wild lupine (*Lupinus perennis*) or sun dial, that its leaves from morning till night turn to face the sun. At night these leaves sleep. All clover leaves sleep. Often in the morning some one lazy about awaking will be found with its inner surfaces appearing as though gummed together.

This element of sleepiness is indeed most difficult to eradicate from the flowers and leaves of wild stock. Gardeners and propagators have fondly thought to have it conquered, when unexpectedly it returned, often at most inopportune times. A wondrously fine collection of carnations which were sent west, with high hope for the prizes they might secure, fell soundly asleep en route, and neither coaxing nor coercing would tempt them to open their petals until the exhibition where they were displayed was well over.

The large sensitive plant (*Cassia Chamaecrista*) and the wild senna (*Cassia Marilandica*) have the most curious ways of hanging down their stalks, rotating on their axes, and folding their leaflets together whenever they are touched or rudely knocked against. This is owing to their extreme sensitiveness. They then appear much as they do when asleep. Although it is not generally appreciated, the sensitive brier (*Morongia uncinata*) can be grown with facility in many more Northern States than those to which it is a native, and the delight of watching it grow is keen indeed. The many pairs of small leaflets which it bears are even more sensitive than those of the cassias. To tread over much of the dry soil it inhabits in the South, and then to look backward, is enough to foster the notion that witches had been at work in the plant world; since the path of the traveler is then as distinct as the wake of a ship. Flaccid and drooped, the innumerable little leaflets appear to have lost all interest in living.

In parts of Arabia where the rose of Jericho is native, the people carefully regard its movements as being divinely regulated for their special information concerning future events. There these shrubs produce blossoms flaming red in the bud, and turning gradually to white as they expand. The stems, moreover, are not upright, but spread over the ground in large circumferences. They are intensely sensitive in rainy weather. At such times they draw up the stems closely together and assume a globelike form, while with the sun's return they again spread open. The simple minded native, thinking of marriage or of taking any other important step in life, goes first to inspect these shrubs. If on his first sight of them, their stems should be drawn together, the omen is against him, and more likely than not he will cast off the undertaking. On the contrary, should the stems be spread open, all his happiness is before him, and cheerfully he pursues his way.—*Alice Lounsberry.*

* * *

"I'LL WAIT A WHILE LONGER."

I'll wait a while longer before I despair
Before I sink under my burden of care.
Night cannot last always—there must be a morn;
So I'll wait for the daylight; and watch for the dawn.

I'll wait a while longer; to-morrow may be
The brightest and fairest of morrows to me.
The birds may be singing, the blossoms may start
In bloom and in beauty. Be patient, O heart!

I'll wait a while longer, before I give up;
I'll drink, if it may be, the dregs from the cup.
Still watching, still hoping, still longing for day,
I'll wait a while longer, and waiting, I'll pray

—Selected.

THE QUIET HOUR

SERMONETTE.—Idols.

EZRA FLORY.

"Little children, guard yourselves from idols."

NOTICE that this is expressly uttered to believers. Glance back over the epistle to get the force of the charge.

"I am Jehovah, thy God, who brought thee out of the land of Egypt, out of the house of bondage." "Thou shalt have no other gods before me." Ex. 20: 2, 3.

Jehovah means, "He that is to come, he that is, he that was," Rev. 1: 18, hence eternal and for this he rightly is the supreme object of worship.

Every man needs a god. Every man has a shrine of worship. There is no man who has not somewhere in the essentials of his being, a deity that he worships. It may be a false god, but the very actualities of life, the devotion of our powers are all worship. Voltaire said, "If there were no god, it would be necessary to invent one."

The word *idol* means *appearance*. It is something you trust in more than in the invisible God. 2 Cor. 4: 18.

Israel was in peculiar danger here. It is said India had 300,000,000 gods, while Persia made sacred everything connected with fire. Egypt worshipped insects, animals, birds, the Nile, while Greece and Rome had multitudes of gods. But the sad fact is that all these ancient gods are still worshipped.

The demands of cruelty that compels child labor in many cities tells us that Moloch is still worshipped, while the base cravings of heartless men are thus satisfied. Who ruined over thirty-four thousand young girls last year in the state of Indiana, causing premature death? Why are there forty thousand prostitutes in New York City to-day? The answer is, because Baal is still worshipped. Jesus said, "Ye cannot serve God and *Mammon*," yet thousands in America are bowing to "the almighty golden calf."

Suppose an old Roman were to come to life, do you think he would guess the worship of Bacchus dead when he should be told that there are two million drunkards in the United States? If the Greeks could behold our styles and fashions, should they think the worship of Venus dead? Some years ago a minister read an announcement by the Salvation Army that at a stated time they would exhibit some idols. He went expecting to see idols from Africa, India, or China. To his surprise they showed on one card, pipes and tobacco; on another, feathers and ribbon and such like.

Some make pleasure their god. On a single Sunday afternoon recently twenty thousand people entered the gates to a race course. Too hot to go to church (?).

Some worship their children, some fine homes, some worship themselves. Some worship their appetites, "Whose god is their belly." Philpp. 3: 19. Others worship their occupation. Heb. 1: 15, 16.

"He taketh up all of them with the angle; he catcheth them with his net, and gathereth them in his drag: therefore he rejoiceth and is glad. Therefore he sacrificeth unto his net, and burneth incense unto his drag; because by them his portion is fat, and his food plenteous."

Read the lessons to us through Judges 3: 5-8 and Solomon's downfall. Turn to Matt. 4: 10 and Matt. 22: 37, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy might."

Let there be no compromise on fundamentals. Many professed Christians are stumbling-stones. They go to church on Sunday but think little about worship of God all week.

The preventive philosophy of the Bible is unique. It does not stem devotion but seeks to divert it into other channels,—"worship God."

"Every hour
I read you kills a sin
Or lets a virtue in
To fight against it."

LOOK AHEAD.

THERE are some people who ride all through the journey of life with their backs to the horses' heads. They are always looking into the past. All the worth of things is there. They are forever talking about the good old times, and how different things were when they were young. There is no romance in the world now, and no heroism. The very winters and summers are nothing to what they used to be; in fact, life is altogether on a small, commonplace scale. Now, that is a miserable sort of thing, it brings a kind of paralyzing chill over the life, and petrifies the natural spring of joy that should be forever leaping up to meet the fresh new mercies that the day keeps bringing. —*Brooke Herford.*

CALLED BACK.

IDA M. HELM.

He was not an old man, yet twenty years had passed since he, a barefoot boy with pockets bulging with balls, marbles, corks for fishing lines, nails, jackstones, handkerchiefs, in which he sometimes tied his fish bait, and many other things that are dear to a boy's heart, went over this road each morning on his way to school, his heart glad in its carefree youth. Close by the roadside there were ripened blackberries, and he stopped and filled his mouth with the juicy fruit just as he did so long ago.

He went and just beyond the little strip of woods, the school-house came into view,—the same house in which he studied his lessons so many, many times. He always loved to study his geography lesson and he liked history, but he dreaded arithmetic ; he hated the grammar and he looked with contempt on his physiology, and in the spelling class words that were spelled with four letters he was sure to spell with seven, and when they were spelled with seven he would spell them with four; he *never* could remember where the silent letter should be used.

Now years have passed and he had come a long distance to visit his early home, and memories of many happy little incidents that had occurred in the playground in those by-gone days flitted pleasantly through his mind, and his school-day troubles he remembered with a smile.

He continued on his way down the road till he came to the little white church now unused and neglected, where he used to go with his parents on Sundays. He walked up the grass-grown path and as he pushed open the door it creaked on its rusty hinges ; dust and spider webs covered the walls and benches and hung in long festoons from the ceiling. It looked strange and lonely in there. As he walked up the aisle he uncovered his head, for a feeling of reverence came into his soul and he felt that God was present in the house that was dedicated to his name. This was the place where he had made sacred vows to his Maker years ago, vows that he had slighted and broken. Now they returned and appealed to his conscience as though God himself were speaking to his soul. Feelings of sorrow and shame for his carelessness and wrong-doings swept across his breast and he knelt and renewed the vows that he had once reverently made and then so lightly broken. Then he started on his way with an earnest purpose to be faithful to his covenant and vows to his Redeemer in the future.

Long, long ago, a man yet young in years, fleeing from his home, stopped in a lonely, mountainous country to spend the night and while sleeping with his head on a stone for a pillow and with no earthly protection near him, he heard the voice of God speaking to him and declaring that he would be his protector. A feeling of safety came over him and with reverential fear he made sacred vows to God. He said, "Since God has promised to protect and bless me and bring me again to my father's home in peace, I will serve him," and he continued, "Of all that thou shalt give me I will surely give the tenth unto thee."

God is ever faithful to his promises, but man is so forgetful. Jacob went on his way and God watched over him and abundantly blessed him, but when surrounded by his wives, children and servants and when prosperity showered blessings in abundance upon him, Jacob neglected to keep his promise that he had made to God. But God continued his watchful care over Jacob, just as he had promised to do, and brought him again in peace to the home from which he had been an exile so long, and when he had brought him again in peace to his own country God again spoke to Jacob and said, "Jacob, arise and go to Bethel and make an altar unto God that appeared to thee when thou fleddest from thy angry brother, Esau; pay the vows that you promised but did not keep." So Jacob returned to the place where God had given him such rich promises and where he had accepted the Lord to be his God and he erected an altar and paid the vows that he should have paid long before.

God has called each one of us to come and follow him and he has promised us far richer blessings than he promised Jacob that night when he slept under the canopy of Syrian stars. Have we accepted Christ and entered into covenant relation with him ? If we have, are we true to our promises ? If we are not true to our vows, God is calling to us through his Word and through his Spirit; he is saying, "Return to the place from which you started and build again the broken altar and renew your broken promises ; pay the vows that you promised, but have not paid. I am ever true to you." Any place where God is we may erect our Bethel, it is a door to heaven which we may open with prayer and commune with our Maker. "Remember thy Creator in the days of thy youth," are the words of the Bible.

It is our duty as well as privilege to remember and obey our Maker, but how humbly grateful we should be that God remembers us. If we would, at all times, feel conscious of our own weakness and of the power and love of God and of our dependence on him, he could give us many rich blessings from which we bar ourselves by not trusting fully in the Giver of every good gift.

"Let every act of worship be
Like our espousals, Lord, to thee:
Like the blest hour, when from above
We first received the pledge of love."

Ashland, Ohio.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE UNEXPECTED MESSAGE.

EVERY day there flash over the wires messages of few words, which say that mother or father, husband or wife, brother or sister, son or daughter has left the shores of time; and though some of us may not receive such a message for a long time, our turn will come, and with tear-blinded eyes we shall be trying to re-read a message which has suddenly filled our heart with sadness. Like a bolt from a cloudless sky the crushing word comes, and for a time all seems dark. We know that life is very uncertain and nothing in the world more certain than death; and yet we are never quite prepared for the grim visitor when he comes. And if we are far distant from loved ones, thinking that all is well with them, the wound made in the heart is the deeper.

Some of these wounds leave scars that time does not remove. We go our way through life with the burden of a great sorrow resting upon us. During our active moments we are hardly conscious of it; but sometimes, often, involuntarily, the heart cries out for the loved one and the name is spoken. How many times do we catch ourselves calling "Mother!" She has passed into the great beyond and we can no more counsel with her, no more go for help to one on whose love and unselfishness we can depend with entire confidence. If we could have looked ahead ten or twenty or thirty years, and could have known how we should miss her and long, too late, for opportunities to do something for her, her cares and trials with us would not have been so great and we should not now look back with so many regrets. And the fact that she believed in us and said we were more of a comfort than a care for her, but adds to our feeling of unworthiness. But our sighs and tears cannot change the past, cannot ease the burdens of much-tried and very patient love, borne through weary years.

It is the uncertainty of life, the not knowing which words will be our last to those we love, that makes it so important that no mistake be made, no grief caused, nothing done that will leave place for future regret. How different life would have been if we could have looked ahead, how much more kindness would have been shown. But when the message has come it is too late to blot out words that should never have been spoken or written.

We cannot live and escape the sorrows which are a part of our common heritage. The first man and woman who ever lived one day received the sad and unexpected message that their son was dead. That was the first one of the kind; but how many, many millions have followed it. And so it will be while time continues, until the last enemy, death, is overcome. We do not seriously consider this matter in youth, and for that reason thoughtlessly make wounds which never entirely heal. But as the years pass and much of our life is in the past we begin to be more concerned for the feelings of others, more anxious that there be no cause of bitterness, no hasty words to recall. And thus it should be, for if we do not gain wisdom as the years come and go we are living in vain.

He who has not received his message announcing loss, has it coming; and he and all of us, if we are wise, will leave undone the things which cause pain to another now, and later will fill our hearts with sorrow. It is a question of doing the right thing and the best thing.

* * *

OUR RECORD.

ONLY a short time ago there was given in a daily paper an account of a young man who had been arrested because he was thought guilty of crime. He said that he was innocent, but on account of his guilt in other instances he was believed to be guilty in the case in question. It was his record, not proof that he had committed crime, that was putting him in prison for trial. He blamed his record, but did not seem to realize that he had made it himself. His record was bad, to be sure; but he was bad before it was.

Men and women are generally judged as this young man was. What has been in the life in the past is most likely to be in it in the future. So men reason, and they are nearly always right in doing so. If a man has stolen, what is more natural than to think that he will repeat the offense? It is because men are judged by their deeds that we want to know a person some time before saying what we think of him. Experience has taught us that things are not in all cases what they seem, and in order to be on the safe side we reserve judgment. And no one can be censured for having a reasonable amount of caution.

Men make and unmake their own reputations. And it seems to come natural to believe that a man who has always been upright cannot be guilty of a gross crime or sin, while it is impossible for most people to believe that a man who has been wicked can do a good act and show that he has a conscience. Perhaps this is

due to the fact that the one who passes judgment knows that under the same circumstances he could not keep himself innocent. But it is not safe to pass judgment in that way, for the one who is condemned probably is not half as bad as our evil imaginations have painted him. The reputation of many a pure man has been injured by those from whom we should expect better things; so that a man's reputation will not in every instance protect him from evil.

A good reputation is of great value, but a good character is much more valuable. One of the main sources of trouble in the world is that men strive so hard to gain a reputation for being or having something which they cannot be and cannot have, and which would be no real value to them if it were theirs. A good record, or reputation, is almost indispensable if one wishes to accomplish anything in any field. Suppose a man has failed along some line and wants to begin again in the same line. How hard it is for him to inspire confidence in those whose coöperation he must have if he is to have another trial; but if he has been successful he finds plenty of men who are anxious to go in with him.

In the main, we make our own records, though sometimes they are made to appear what they are not. We are responsible for our characters; no man but ourselves can injure them. Some of the best people who ever lived have suffered mentally and physically through evil and false reports. Christ made himself of no reputation; he took his position as a poor man in the world; he sought no such power or influence as would have been his if he had come and occupied the throne of David. But because he was what he was during his life among men, his influence has been increasing through the centuries, and will increase till the end of time.

The reputation is the shell, the character is the kernel; and they generally go together: that is the rule. It is useless to blame our record for shutting us off from some things which we should enjoy having. We made it; or, rather, we are it in nearly all cases; for the maker cannot be separated from the thing made. It is the part of wisdom to look ahead and take this fact into consideration, and direct our course accordingly, for by so doing we shall escape disappointment.

SCHOOL OR SOMETHING ELSE.

At this time of the year the boys and girls from one end of our country to the other are considering the school question, which is whether they shall continue their studies or quit and join the bread-winners. With many, of course, this is not a question at all. Some of them look upon the preparatory school and the college and university as a part of their destiny, while others know that at the earliest possible moment they must quit the school for the shop. But still it remains true that the school question is one of great concern in homes of nearly all classes.

It is one of the most important questions that parents and children have to decide, for on their decision in large measure rests the destiny of the child. In most cases it does not take much to influence those considering the question and have the decision given for or against school. But some boys and girls have in them such a thirst for knowledge that they will accomplish what to their friends seems to be the impossible. Objections may be raised, obstacles placed in their way with a view of discouraging them; but they will overcome all and have their education if life is given them. We like to see young folks with this disposition, for they are the ones who do things, who develop the best there is in them.

But shall they go to school or to work? It all depends on the boy or girl and the school attended. We don't like to see education sought purely for the sake of financial gain; for it is worth more than money. We should like to see all well educated, for the right kind of an education broadens and brings out the best. And so, though we know that many are worth less to the world after going to school than they were before, we advise our young friends to get a good education and use it for the right.

WORTH REPEATING IN THIS ISSUE.

But the face that has lingered the longest,
When all of the rest have grown dim,
Which soothed me when others affrighted,
Which kissed me when others had leered,
Is the one which had kissed me at evening,
The one which would wake me at morn.
—Lois E. Thomas.

There is more heroism in *daring to do right* than in facing the cannon's mouth. Many a man has stood fearlessly the storm of death on a hundred battle-fields, who would quail under the finger of scorn and surrender without a shot to the scoffs and jeers of the vulgar crowd.—*Richard Braunstein.*

We miss so much of life's sweetness by being thoughtless of the things we have all about. We ought to get the best out of everything.—*Hattie Dell.*

We should ever then press onward,
Being shod with gospel peace,
Having Christ as our Great Teacher,
That our knowledge may increase.
—Frank G. Replogle.

It is our duty as well as privilege to remember and obey our Maker, but how humbly grateful we should be that God remembers us.—*Ida M. Helm.*

The preventive philosophy of the Bible is unique. It does not stem devotion, but seeks to divert it into other channels.—"worship God."—*Ezra Flory.*

The miser often perishes through his own devices. —*Richard Seidel.*

Echoes from Everywhere

It has been agreed between the governments of Canada and of the United States that the owners of all buildings on the boundary-line must decide in which country they shall live, and must move the whole building accordingly. The purpose of this agreement is to reduce the smuggling evil and otherwise to put an end to lawlessness on the border.

July 14, while the national celebration of the achievement of French liberty was in progress at Paris and President Fallières was returning from a review of the troops, he was fired upon by a man from the crowded street. Two shots were fired, but neither took effect. While it is said that the man may be a tool of the anarchists, it is believed that he is simply an alcoholic with a disordered mind.

According to government reports for the last fiscal year, 1,463 vessels aggregating 510,865 gross tonnage, were built in the United States, this being a greater number of vessels and far greater tonnage than during any other year for half a century. The record shows a steady decline in the building of schooners and a corresponding increase in steamers, but there is now appearing a considerable number of schooners equipped with auxiliary motor power.

The Department of Agriculture is conducting experiments in Fresno county, California, with a view of reclaiming alkali lands by drainage. Operations are now confined to a large vineyard near Fresno, where alkali has come to the surface. There are many thousands of acres of these alkali plains in the county, which are now useless, but it is believed that their drainage could be easily accomplished through the use of electric power for pumping purposes.

The Roman biblical commission has attained the first positive result of its labors in the pope's decision that a revision of the whole Vulgate shall be undertaken. When the council of Trent declared that the Vulgate should be held as the authentic text, this historic Latin version was given officially the position that it had acquired by custom ever since the barbarian invasion of western Europe. The first authorized edition was issued by Sixtus V in 1590. Pius X proposes to hand the work of revision over to the Benedictine order.

The Japanese Association of America has issued a statement declaring that Japanese children in San Francisco are no longer denied the right of education. It says that there are as many Japanese pupils in the public schools as there were before the earthquake and fire of April 18, 1906, and they are receiving the same treatment and the same advantages that are given to the pupils of other nationalities, and are admitted to the same schools. The statement is made to correct assertions in the recent addresses of the chambers of commerce of Japan.

The *Scientific American* notes an interesting innovation in railway passenger transportation in this country in which, during this month, the Union Pacific railroad will place in service twelve gasoline railway motor cars. The cars are intended for branch-line traffic where the fast and frequent service required cannot be maintained by ordinary trains except at a loss. The latest type of these cars makes sixty miles an hour with a two-hundred-horse power engine, reaches high speed within six car lengths, and can be stopped within one hundred and twenty feet.

The United States Steel corporation has decided to erect new machinery in its Pittsburg steel plants, and relegate nearly one hundred engines to the scrap heap, as the result of recent experiments with a new device for utilizing as fuel the gas that is blown from the blast furnaces, thus saving a few cents a ton in the cost of producing steel. At the new steel city of Gary, Ind., more than twenty of the new engines will be installed, at a cost of $155,000 each, and vast additions are to be made to the plants of the Pittsburg Steel Co., at Monessen, Pa.

Residents of the district around Vesuvius have put to practical use the lava which has flowed from the volcano in past and recent eruptions. Naples and its vicinity appear to be a world of lava. The streets are paved with it. There are lava staircases and statues, drinking troughs, bric-a-brac and even jewelry. The guides make profit out of it by pressing coins or other objects on partially cooled fragments and selling these to visitors. On the ashy sides of the mountain there is enough lava to build a large city. In appearance it resembles a shoreless frozen sea of dull black that shimmers strangely purple in some lights.

An agreement has been reached between the secretary of war and representatives of the Catholic church in the Philippine Islands regarding a number of important matters of controversy which will remove the necessity of prolonging threatening litigations. The church is given possession in absolute title of three hospitals and a college valued at $2,066 000, while it relinquishes to the government all claims to the estate of Santa Potenciana and the hospital of Santa Lazaro. The Spanish Filipino bank dispute was also settled.

The National Education Association recently in convention at Los Angeles, Cal., in their closing session adopted a very interesting resolution. In it the association indicts the children of the United States, the charge including four faults: First, a tendency towards a disregard for constituted authority; second, a lack of respect for age and superior wisdom; third, a weak appreciation of the demands of duty; fourth, a disposition to follow pleasure and interest rather than obligation and order. The resolution approves the efforts of the simplified spelling board and other bodies to promote the simplification of English spelling. Other resolutions declare that the "forces of this world should be organized and operated in the interests of peace and not of war."

The price of industrial progress is shown more forcibly than ever in a set of figures lately compiled in Pittsburg. That city has long been the capital of the world's workshops, and it is fitting that it should furnish such authentic information as to the cost in blood of the coal and iron and steel that modern society demands of its workers. For every fifty thousand tons of coal shipped in the Pittsburg district, a life is snuffed out somewhere in the process of production. For every 3,800 cars that carry freight, a life is sacrificed to help pay the freightage. A human life enters into every seven thousand six hundred tons of the annual seven million tons production of iron and steel. For every eight hundred and seventy tons of steel rails put upon the market, one of the men whose sweat and strain made it marketable has laid down his life.

One of the coal experts of the U. S. geological survey said recently that at the present rate of consumption the anthracite deposits of the United States in 75 years would be practically exhausted. He urges manufacturers to use bituminous coal. "We have found it entirely feasible to abate smoke in power plants, great and small," said another expert, "but it is next to impossible to prevent smoke issuing from the chimneys of residences burning soft coal. Therefore it would seem that the logical thing to do would be to utilize the rapidly waning supply of hard coal for the homes and use the soft coal in the factories and power plants. The real problem before the East is the abatement of smoke from soft coal. New York is now showing that this can be done in the experiments that are being conducted by the New York Edison Co."

New immigration laws, with numerous restrictions upon the reception of undesirable foreigners have now gone into effect, with no appreciable effect on the stream of immigrants passing through Ellis Island at New York into this country. Immigration officers generally say that they believe no great reduction in the number of migrating Europeans will follow from the new rules. These acts, which congress passed last February, were designed chiefly to prevent the embarkation of undesirable foreigners and so save them the expense of the voyage to America. It was not so much the intention to cut down the immigration as to regulate it. The new law requires the steamship companies to examine the immigrant thoroughly before accepting him for passage, and makes the companies subject to a fine of $100 for transporting any physically or mentally defective person or any afflicted with a loathsome or contagious disease. The government physicians put the newcomers through just as rigid an inspection as ever, but through the workings of the new law a far smaller percentage was obtained as likely to be deported. Immigration Commissioner Watchorn believes that the number of persons sent back to Europe will be nearly cut in half. The new law increases the head tax from $2 to $4 for each person.

The pasteurizing of milk as a preventive of typhoid fever finds an advocate in Capt. Thomas Franklin, treasurer of the U. S. military academy at West Point, who in a letter to Secretary Straus says: "For four years I have pasteurized every gallon of milk used in the cadet mess. We average one hundred and eighty gallons a day, almost all of which is drunk by the cadets. Previous to the time when we began to pasteurize the milk we had cases of typhoid every year, and just before I put in the cadet mess the necessary plant we had quite a number of cases. Since the milk has been sterilized there has not been a case of typhoid fever in the corps. It may be a coincidence, as opponents of pasteurizing will assert, but I think not."

IF MOTHER WOULD LISTEN.

If mother would listen to me, dears,
She would freshen that faded gown;
She would sometimes take an hour's rest
And sometimes a trip to town.
And it shouldn't be all for the children,
The fun and the cheer and the play;
With the patient droop of the tired mouth,
And the "mother has had her day."

True, mother has had her day, dears,
When you were her babies, three,
And she stepped about the farm and house,
As busy as ever a bee.
When she rocked you all to sleep, dears,
And sent you all to school,
And wore herself out, and did without,
And lived by the Golden Rule.

And so your turn has come, dears.
Her hair is growing white,
And her eyes are gaining that far-away look
That peers beyond the night.
One of these days in the morning,
Mother will not be here:
She will fade away into silence,
The mother so true and dear.

Then what will you do in the daylight,
And what in the gloaming dim?
And father tired and lonesome then,
Pray, what will you do for him?
If you want to keep your mother,
You must let her rest to-day,
Must give her a share in the frolic,
And draw her into the play.
She should let you do the trotting,
While she sat still in her chair;
That mother should have it hard all through,
It strikes me isn't fair.

—Margaret E. Sangster.

CUSTOMS AND FASHIONS.

WEALTHY A. BURKHOLDER.

An old saying familiar to many is, "It is better to be out of the world than out of fashion." What slaves men, and especially girls and women, who ought to know better, do make of themselves, in order that they can be considered in the style. Often the peace of the home is sacrificed, and the hard-earned money of the husband and father used to procure articles of dress and furnishings for the house that are really not needed. In order that they may appear in the latest, debts are often made that greatly embarrass and hinder.

Everybody should have good, warm, comfortable clothing, and every house should be comfortably furnished, but people do not stop at that. Too many are not satisfied with what is comfortable and respectable, but every nerve is strained, and often to the detriment of health, to procure that which will place them as leaders of fashion in their set.

All admit that some of the fashions are hideous, and yet many women have not the moral courage to ignore them and act out their better taste and judgment.

What a work some women of high position could start in the nation had they the moral courage. Often we see people who are professed Christians aping fashions that are not modest. Low-necked dresses and bare arms do not become girls and women professing godliness. The wearing of black is all right at funerals or elsewhere, but in order to be up to style, I have known poor people to spend money for a black suit to attend the funeral of a friend when they had to go in debt for it.

There are some other things that belong to foolish fashion, that we are glad to say are, little by little, passing away. One is, for the men to keep their hats on in the church at worship at funerals. If ever there is a serious time it is at a funeral, and the apostle Paul, writing to the Corinthian brethren on the subject of how men and women should appear in Divine worship, says, "For a man indeed ought not to cover his head, forasmuch as he is the image and glory of God." Which shall we follow, the Scripture or fashion and custom?

Newburg, Pa.

THE GIRL WHO GOES TO COLLEGE.

Let your little domain be sweet and bright, but withal, dear girl, see to it that its ornamentation is refined. Flee the tawdry gewgaws of bad taste as you would a pestilence. Cheap and perishable nothings are positively detrimental to character. I recall with painful vividness the appearance of a room in the dormitory of a boarding-school.

Two pretty, well-dressed girls occupied that room—rather, they stayed there. In point of fact, the empty nothingness of cheap ornaments really occupied it. The neat and substantial table, provided for the purpose of study, was draped with a cheap white cover, gaudy with embroidered pansies of impossible hue and size. Upon this table was heaped an indescribable mass of curios, plush manicure sets, Christmas cards, easeled

photographs—in fact, as to contents, that table rivaled the "what-nots" of our great-grandmothers' day. Every part of the room was occupied by ill-assorted rubbish, collected by way of ornamentation, much of it brought from homes whose standard of beauty was thus proclaimed.

At their evening study-hour they sat uncomfortable, for there was no place for the accommodation of books or paper, since the study table supported its collection of little gods. It is hardly surprising that their school life was a failure, since no amount of suggestion seemed fruitful in remodeling their chosen standard. Some luckless day they will clutter some unhappy man's home in like manner.—*Jessie Rogers, in the Pilgrim.*

SCORED "COMIC" SUPPLEMENTS.

In a speech in Washington, J. T. Kelly, national director of the Ancient Order of Hibernians, vigorously attacked the comic supplements to the newspapers. He issued a warning as to the effect which may be produced upon infantile minds by reviewing the weekly efforts of the "Katzenjammer Kids" and "Happy Hooligan," which he stated have become a burden to the average intelligent reader.

"The perusal of such stuff as is to be found in the alleged comic supplements is bound to have a most harmful effect upon the minds of children, and should be eliminated from the columns of the home newspapers," said Mr. Kelly. "I will not allow the comic supplements to enter my house, and I intend to use such influence as I possess in a warfare against their publication."—*Selected.*

HOW THEY MAKE BREAD IN PERSIA.

Persian bread is not baked in a loaf as we bake it, but in a thin sheet which looks like an immensely large griddle-cake; and the people of that country speak of "bread" instead of saying "a loaf of bread" as we do.

They do not have stoves, and for an oven they dig a hole in the ground. They make it about six feet deep, smaller at the top than at the bottom, and plaster the inside with a mortar made of clay.

When baking-day comes, they build a fire in this pit or oven, and keep it burning until the sides are hot, and a good bed of clear coals is left on the bottom.

While the oven is being heated, the dough is being made, and when everything is ready, a piece of dough about as large as a fist is spread on a piece of sheepskin. With a careful swing, the dough is slapped against the hot wall of the oven, and in a moment is as quickly taken off baked to a nice brown.

Fuel is very scarce in Persia, and it takes a good deal of it to heat one of these ovens. For this reason, two or more women will do their baking at the same time, and, instead of baking every week or oftener, as we do, they bake but once a month.

After the bread is baked, it is tied in a cotton cloth and hung up, or thrown into a corner, just as happens to be the most convenient. If baked for a shop where bread is sold, it is at once hung on a line stretched in front of the shop, and is left there, exposed to the dust and flies, until it is sold.

The way the bread is used and eaten seems to us even stranger than the way in which it is made. If a Persian entertains his friends at a banquet, they find at each place on the table one of these breads, folded like a napkin. There is nothing else,—no knife, fork, or spoon, as we should find; and the bread must take the place of them, and serve as a plate at the same time.

If anything like a stew is served, each guest tears a piece from his bread and uses it to sop up the liquid with. If he is served with something more solid, and not quite solid enough to be picked up in his fingers, he tears off another piece and makes it serve as a spoon, after which he eats it; and all this time the bread has been serving as a plate. After everything else has been eaten each guest eats his plate, and no one has a lot of dishes to wash.

Such bread as we have would not make a very good plate even if baked in thin sheets, but the Persian bread is very tough. When chewed it becomes sticky. It is very nourishing and is "the staff of life" in a far greater degree than bread like ours could ever become.—*Eva R. Gaillard, in Junior C. E. World.*

CONCERNING CIRCULATION.

It is proverbial that the average individual knows practically nothing about the house in which he lives—his own body. He is not to be blamed for this, however, for it is only within recent years that physiology has been taught in our schools and even now it is only a smattering that is imparted—a few leading facts committed to memory, that is all. The little that man knows of his body is therefore mainly confined to what he can see of it, but that which is hidden is infinitely more wonderful and mysterious than that which is continually in evidence. One of the most marvellous things in relation to the body is the blood, but the knowledge most people have of it is gained by experiencing an injury, which causes it to flow. They know vaguely that the blood is contained in arteries and veins, but of the miles of tubing contained in the body to convey the blood to all parts, the wonderful and complex mechanism by which it is constantly kept in motion, they know absolutely nothing. Life depends upon the incessant circulation of the fluids of the body, especially the blood. If the motion slackens, sickness is present; if it ceases, death ensues. Motion is life. There are some profoundly interesting facts

in connection with the circulation of the blood, some of which are unknown even to those tolerably familiar with physiology. For instance, the rate at which it travels. How many people are aware that the blood courses through the body at the rate of seven miles an hour? Think of it! One hundred and sixty-eight miles per day; six thousand, three hundred and twenty miles in a year! And how is this wonderful speed of the blood current maintained? There are three important factors in the process; the heart, the valves in the veins, and the respiratory act. The heart is a muscular force pump of extraordinary power, that works incessantly and independently of the will, being under the control of what is known as the involuntary nervous system. Each contraction of the heart forces the blood through the aorta, into the arteries, which divide and sub-divide in all parts of the body, terminating in what are known as the capillaries, minute, thread-like vessels that fill up every part of the tissues of the body. Here the blood parts with its nutriment and collects the refuse matter. The capillaries combine to form small veins, which gradually unite into larger and still larger veins, until the impure blood reaches the heart, and is pumped into the lungs for purification. The veins are furnished with valves that open toward the heart only so that the blood cannot return, but must proceed around. Then the heart pumps the blood into the system, the valves in the veins prevent its return to the parts from whence it was collected, while respiration by emptying the chest cavity creates a vacuum, which exerts an enormous power of suction, thereby hastening the return of the blood. Truly, the human body is a temple of mysteries, not the least of which is the circulation of the blood.—*Health.*

WAYS OF UTILIZING OLD BREAD.

In our modern American household it seems to be very difficult, in fact almost impossible, to dispose of bread after it has become at all hard, although it might insure stronger teeth and healthier bodies if we ate more of it. But, as the facts stand, the great question in many homes is how to utilize bread which, though sweet, is too hard for acceptable table use. So I will give a few tested ways.

Crummets.—Break the bread in small pieces, pack in a basin, cover with sweet milk and let soak until softened. Then mash thoroughly, season with salt, pepper, sage and summer savory, add one egg to every pint of bread and flour enough to make a rather stiff batter. Fry in salted hot lard, or butter, and serve hot.

Egg Toast.—To four slightlybeaten eggs add one-half cup of milk (sweet), and one-half teaspoonful of salt. Dip the slices of bread in this and fry in hot salted lard, or butter, and serve hot.

Milk Toast.—Put a quart of milk into a double boiler, heat scalding hot and thicken with a batter made of two tablespoonfuls of flour, one teaspoonful salt, and cup of milk. When thickened pour the milk over nicely toasted bread. Very nice to eat with fresh apple sauce.

Do not be wasteful of bread. Save all pieces in a paper or cloth bag. When thoroughly dry roll fine and and place in a glass can. Do not cover too closely. These crumbs will be found invaluable for puddings, scallops, and in moulding croquettes. They are always ready and if kept in a dry place will be nice and fresh.—*Selected.*

SMOTHERED CHICKEN, VIRGINIA STYLE.

Singe a broiling chicken and split it down the back. Clean and wipe with a damp towel, but do not place it in water. Break the breast bone with a potato masher and place in a baking pan with the skin side up. Spread the breast generously with butter, using at least one-quarter of a pound. Sprinkle lightly with salt and pepper and put a small cupful of water in the pan. Cover tightly and cook in a moderate oven for half an hour, basting frequently, then remove the cover, turn the chicken, recover and cook for thirty minutes longer. Place the chicken on a hot platter, remove the pan to the top of the fire and stir one tablespoonful of flour into the liquor, stirring until smooth and brown, when add a cupful of milk, and again stir until the boiling point is reached. Season to taste. Strain and pour over the chicken. Serve smoking hot, garnish with fresh green parsley.—*Selected.*

COMPARISONS IN MEASURES.

Juliet Hite Gallagher contributes the following useful information to the *Housekeeper:*

Three even teaspoonfuls of dry material equal one even tablespoonful. Four teaspoonfuls of liquid equal one even tablespoonful. Four tablespoonfuls equal one-half gill. Four gills equal one pint. Eight gills equal one quart. Four quarts equal one gallon. Eight quarts equal one peck. Eight gallons equal one bushel. Sixteen tablespoonfuls of liquid equal one cupful. Twelve tablespoonfuls of dry material equal one cupful. Two cupfuls equal one pint. Four cupfuls of flour equal one quart. Two cupfuls of solid butter equal one pound. Two cupfuls of granulated sugar equal one pound. Two and one-half cupfuls of powdered sugar equal one pound. One pint of milk equals one pound. One pint of water equals one pound. One large coffee-cupful of dry brown sugar equals one-half pound. Three and a half cupfuls of corn meal equal one pound. One cupful of raisins equals one-half pound. Ten eggs equal one

pound. One white of an egg equals one ounce. One yolk of an egg equals one ounce.

KISSING THE ROD.

O heart of mine, we shouldn't
Worry so!
What we've missed of calm we couldn't
Have, you know!
What we've met of stormy pain,
And of sorrow's driving rain,
We can better meet again,
If it blow!

We have erred in that dark hour
We have known,
When our tears fell with the shower,
All alone!
Were not shine and shadow blent
As the gracious Master meant?
Let us temper our content
With his own.

For we know not every morrow
Can be sad;
So, forgetting all the sorrow
We have had,
Let us fold away our fears,
And put off our foolish tears.
And through all the coming years
Just be glad.

—James Whitcomb Riley.

For the Children

MACARONI.

"WHERE are the cloves, and the nutmegs, and the mace? And you've forgotten the rice too!"

"Why, mother," answered Elizabeth, "I must have lost the list; I couldn't find it when I reached the grocery. I hunted everywhere, and I thought I'd remembered every one; but all I could think of was cinnamon. It's so hard to remember all the different things you send me for."

"Well," said mother, "I'll have to write another list, and send you right down again."

"Oh, dear!" said Elizabeth crossly.

"Wait a minute, auntie," said Cousin Kate, who was helping with the work that morning, "and I'll tell Elizabeth how to remember those things without your writing them down. They grow just like 'Oats, peas, beans, and barley grow.' Listen while I sing it, Elizabeth:

"How cloves, mace, rice, and nutmegs grow,
You, nor I, nor nobody knows;
How cloves, mace, rice, and nutmegs grow,
You, nor I, nor nobody knows."

"Oh, lovely!" cried Elizabeth, all smiles now, and off she ran down the street singing this new song over and over again lest she might forget:

"How cloves, mace, rice, and nutmegs grow."

That was the beginning of much fun for Elizabeth. Every day or two mother sent her to the store to order things, and each time Cousin Kate made them into a song for her. Once it was:

Sing a song of cocoa,
A pocketful of rye,
A pound and a half of round steak
Baked in a pie.

Another time it was:

Jack and Jill went up the hill
To get a dozen lemons;
Jack fell down and broke his crown,
And Jill brought home the lemons.

After Cousin Kate went away, Elizabeth managed to make the songs all herself sometimes. The day mother wanted gooseberries, she sang all the way to market:

Here we go round the gooseberry bush
So early in the morning.

One day mother needed four things. "I'll not write them down, dear," she said; "but you can make them into a song as you go."

Elizabeth worked hard until she had fitted them into a tune. Then she had to laugh at her own song, as she sang it under her breath.

"I just know Cousin Kate would like it," she thought.

Yankee Doodle came to town
With oatmeal, eggs, and honey;
Stuck a codfish in his cap,
And called it very funny.

As soon as she had told Mr. Smith the things, she hurried back and sang it to mother, and they both agreed that it was one of the best songs ever made.

"I wonder," said mother, some time later, "how Mr. Smith happened to send up macaroni. The eggs and honey and oatmeal and fish have come, and macaroni besides."

Elizabeth was cutting out cookies with a little cutter.

"You told me to order it, mother, and I did," she said.

"Why, surely not, dear; for we have a very large package of macaroni now that has not been opened."

"But, mother, excuse me; I think you did, because it's in my song:

"Stuck a codfish in his cap,
And called it macaroni."

"Why, no! that's not right, either! He called it very funny, didn't he? Why, mother, isn't that queer?"

"Yes," laughed mother; "he called it 'funny,' to sound like 'honey.' It was the feather that Yankee Doodle called macaroni."

"I must have got the song all mixed up when I was talking to Mr. Smith!" exclaimed Elizabeth. "I didn't suppose I'd ever make a mistake so long as I had the things all made into a song."—*Ellen Lake, in the Morning Star.*

THE RURAL LIFE

EGGS.

JOHN H. NOWLAN.

To many persons an egg is an egg, and is simply either good or bad. If good it may be used or marketed and if bad it is worthless except to forcibly present to the object of the possessor's disfavor.

The farmer takes his wheat to market and expects pay according to the plumpness of the grain and its state of preservation, but the egg producer expects to market his produce without considering those factors.

However that may be, the professional egg dealer who wishes to realize the most from his eggs grades them carefully. The commonest method of grading is "candling." The eggs are held between the operator and a light and he classifies them by the manner in which they transmit light and by the outward appearance.

A perfectly fresh egg fills the shell, but begins at once to shrink. A first class egg should be of good size, clean, fresh, and of the particular color demanded by the market to which sent. When they fill all these conditions *perfectly* they are known as "fancy hennery" and sell at from three to five cents above the general market price. As an extreme case last winter one of the wholesale dealers of this country received forty cents for fancy hennery and twenty-four cents for seconds, which are really a good grade, just as number two corn is about as good as is usually found on the market.

Eggs are named from their condition. "Firsts" are clean, fair size and fresh. Of these the best are "extra first." "Seconds" are not quite up to the standard in freshness or appearance. "Dirties" and "smalls" are defined by their names. "Checks" or "cracks" are those that have the shell broken, but the lining membrane intact. "Leakers" are—leakers. "Spots" have been kept unturned till the yolk has settled and become attached to the shell, causing a visible spot when candled. When the contents are removed the yolk is broken. "Blood-rings" have undergone twenty-four hours or more of incubation and have developed a trace of blood around the shell. "Watery" eggs are found in very hot weather or when chilled. The white is so thin that when shaken it appears addled, causing it to be cast aside as worthless.

The *dirties* and *checks* are used by the poor people, cheap boarding houses, and baker, while those not positively malodorous are dessicated. When too for decomposed they are sold to the tanners, who use them in leather dressing. Those that are yet usable are used to clarify wine, glaze roasted coffee, in manufacturing dyes and photographers' dry plates.

During the spring months many are put into cold storage where a temperature of about thirty-two degrees is maintained.

Formerly the summer eggs were sold for little and in some cases merchants refused to buy at any price; but with increased facility for preserving and transporting, the prices are better.

Strange as it may seem, the color of the shell determines the value to the extent of a cent or more per dozen. Providence and Boston—in fact all New England demand a brown shell, New York accepts either with a preference for white, while California stands for white.

It is generally conceded that perfectly fresh eggs have the finest flavor, those having been kept for a long time being inferior even though they have kept perfectly. Experiments prove that the flavor is affected by the food of the fowls, those from hens fed on food mixed with wild onions being unfit to eat.

There are various methods of preserving, but for strangeness a Chinese method heads the list. Duck eggs are buried in the ground for ten or twelve months. The hydrogen sulphide formed breaks the shell and escapes while the remaining part becomes hard.

Experiments have proven that the yolks are yellower when the fowls are fed on green food, the difference being due to iron. Dried clover makes a good substitute for green food.

The advice of a prominent dealer who is considering the purchase of eggs on the merits is—"Get a breed that lays good large eggs, even though not so many, have clean nesting places, gather every day, and send to market as soon as possible—not holding longer than one week."

Don't wash your eggs. Washed eggs will not keep in cold storage.

THERE is no virtue in the one-day sprint that requires the six-day snooze.—*Technical World.*

A LETTER FROM THE SOUTH.

Dear Nook:

After keeping silent for some time I will come again. Thought in my last article I would get around about once a month, but failed. In my last I had to complain about the dry weather. The latter part of April conditions changed very sudden, rain after rain and flood after flood. Hundreds of acres in the rice fields were lakes from a few inches to from two to three feet deep. Seeding in May was much retarded and some that was planted had to be re-sown. May 10 we had the highest water there is any record of in these parts. Now we are suffering for rain.

The rice looks well as a rule and pumping plants are running day and night. The melon and corn crops were ruined, first by excessive rain, then too dry. Roasting ears, cucumbers, snap beans, etc., have graced our tables for a month or more. Should we get rain, I will take the fodder off of my first and second corn planting and plant corn again. Have seen only a few melons, except what were shipped in from Texas.

Grapes have fruited well,— fine, large bunches and nicely ripened. Took off about ten pounds to-day. Our fig trees are a sight, they look as though there was not room for any more and are just commencing to ripen. Much more might be said, but my article is growing so I will stop.

Would like to say, however, to all the Nook family, every letter I send to the Nook brings letters and cards of inquiry on various subjects. Now, dear Nookers, I love you all, but when letters and cards come in abundance we can not answer them unless a few stamps are sent. A self-addressed stamped envelope is best. True, one stamp costs only two cents. Envelopes and paper costs a little and time is worth something. We do not mind depriving ourselves of a few hours' sleep to answer or give information to the best of our ability, when stamp is sent. Love and best wishes to all. J. I. Miller.

Roanoke, La., July 1, 1907.

CONCERNING THE FARMER'S FRIEND.

When a horse buries his nose in the water it is because he likes it and because it is good for him. It refreshes and invigorates him on a hot day. When horses are being worked in hot weather, an occasional application of a wet sponge to their mouths and nostrils will save them from much discomfort and misery. A good deal of fun has been poked at the straw hats with which many persons protect the heads of their horses from the blazing sun, and yet they are a most useful and humane invention. Something, if nothing more than a tree branch, should be fastened to the horse's bridle for a protection, whenever the animal is exposed for hours at a time to the rays of the sun.

"You never see a broken-winded horse in Norway," said a horse doctor. "That is because the horses are allowed to drink while they eat, the same as mankind. Our horses, let them be as thirsty as can be, must still eat their dry fodder, their dry hay and oats and corn, with nothing to wash them down. But in Norway every horse has a bucket of water beside his manger and as he eats he also drinks."

The check rein besides causing horses more torture than any other device of man, also impairs their usefulness. The horse with his nose thrust in the air can not see his way, and is much more likely to stumble than when driven with a loose rein. The strain upon the neck makes the animal less efficient, besides causing discomfort, a fact that is made clear by the constant efforts to relieve the strain by tossing the head from side to side.—*Selected.*

AMERICAN FARMERS' GOOD FORTUNE.

Good fortune appears to attend the American farmer, despite the belated season. The prospect for making up from foreign plenty the shortage caused by delayed sunshine and abnormal temperature at home, is small. Europe, as has been shown, has its own crop deterioration to consider; Australia, India, and the Philippines will give no marvelous returns in food production ; South America is optimistic, but the extent of its harvest is yet uncertain. Lessened bushels of grain and lacking bales of cotton mean continued high prices,—not to be beaten down, because nowhere in the world is an opulence of yield visible.

The American farmer is much better off than he expected to be when ice and snow in May caused alarm. On the whole, his delayed harvest, though lessened in quantity, may give him a return almost as satisfactory in dollars and cents as some of greater volume gone before. With a wheat surplus from last year in his granaries, he is in a position to contemplate with equanimity the coming twelvemonth.

The consumer may have to face a problem of increased living expense, but the farmer, even if his corn gives only a moderately satisfactory yield, will forget last spring's gloomy perspective and consider himself well treated. From this source, at least, we need anticipate no material lessening of our national prosperity.—*From "A Year of Delayed Harvests," in the American Monthly Review of Reviews for July.*

We should insist upon the better cultivation of the land. For on that one item depends your future growth and prosperity, and there is no other item to which you can look, no other source of wealth than that which comes out of the cultivation of the soil.—*James J. Hill.*

HOW TO FORM A LOCAL IMPROVEMENT SOCIETY.

"Would you like your town to be a model one?" This qustion was put to the wealthiest citizen, the most prominent politician, and to the first physician of a promising manufacturing town. Answers in the affirmative were given without hesitation. "What method would you pursue to accomplish this result?" was then asked. The answer came more slowly ; in fact, it would scarce be called an answer, for no method was suggested.

But it was not among the wealthy and influential that the work was in reality commenced. Instead, the wise organizer of the local improvement society took into her confidence a bright-faced boy some fourteen years of age To him she imparted the plan, and ere long he had a little band of followers, each pledged to "plant a flower, destroy a weed and clean up a yard in M——."

It was not an easy task to explain to the little band who gathered in her parlor one afternoon, or to make them understand her interest in cleaning up the town, but she persevered and before they left she had the idea of "America made beautiful for Americans" thoroughly instilled in their minds.

Reform work is always uphill work and local improvement is no exception to the rule. Although there are few but would feel a pride in their town if it were cleaned and beautified, there are few who really care to take the trouble to clean it up. Among the wealthier parts of the town there are well-kept lawns and paved streets kept clean anl pure, but in other parts of the city unsightly bill boards, ragged lawns and paved streets kept clean and pure, but in combine to make it untidy and unsanitary.

Down into those parts of the town went the band of children under the supervision of the organizer, and the work of improving the quarters began in earnest. One point impressed upon every member was the obtaining of recruits, and it was not long before the children from those parts of town began to join the little force that was slowly but surely working a great change in the appearance of the place.

Five regulations were enforced and five rules given to guide the work. The first were necessary to check the zeal of the over-enthusiastic workers and were, viz. :

1—No property shall be trespassed upon and all grounds must be entered only after the full permission of the owner has been obtained.

2—Perfect politeness towards all persons must be maintained, else the work cannot succeed.

3—Full reports of any work done in furtherance of the cause must be given to the organizer.

4—No opportunity shall be neglected because of the smallness and apparent insignificance of the task.

5—All meetings of the organization shall be attended promptly and reports given cheerfully.

Other localities or different workers may find these regulations unsuited to the existing conditions, but in the case cited they worked admirably. There were no complaints of trespassing against any members, all work received the guidance and kindly criticism of the president, and bits of paper, occasional weeds and small placards were not left untouched to spoil the effect of the larger work.

Many of the children were ignorant of the work to be done when they joined, and one child said, "I b'long to the society to pick up paper." Others had little more knowledge other than that expressed in the pledge before quoted. For them the following rules were adopted :

1—Each member should make an effort to keep his yard and the street in front and alley behind his home free from paper, rubbish, weeds and other matter injurious to appearance.

2—Each member should endeavor to pick up bits of paper and to remove placards from all poles on his way to school or work. Such placards and advertisements are entirely against law, and are a great eyesore to the town.

3—Each member should persuade a neighbor to join the movement for a cleaner town and should try both by words and by example to induce other residents of his section to keep yards, alleys and streets clean.

4—Each member should willingly join all other members in concerted movement upon any very bad location where single efforts are unavailing. Such places when found should be reported at once and a time set for a general cleaning.

5—Flower planting should be done by all members as extensively as possible. Try to have a flower in the place of each weed. Report flowerless gardens and if owners are willing seeds will be furnished and members will plant and care for same.

The above were found adequate for the use of the band of workers, and the results accomplished more than justified their adoption. There were many scoffers who predicted the falling through of the scheme, when the children began their work. There are always scoffers where reform work is attempted but the President was not easily discouraged.

The first concerted attempt made was the cleaning of a small vacant lot owned by a rich citizen and jammed in between two tenement houses. It became a dumping place for tin cans, old bottles and an astonishing variety of rubbish. Permission was granted by the owner, who remarked that "If the youngsters had a mind to clean up that hole, he was willing enough."

Some thirty members joined in the work, which was begun at nine o'clock one Saturday morning. Some

of the children had previously visited the neighborhood, and when the time for commencing had arrived three or four children from the tenements on either side had joined the group. Tin cans and bottles were gathered up, bones and old shoes placed in a pile, and when the work was done a rag man removed an accumulation of years. When noon came the little workers had the lot in very fair order. The owner had also consented to allow them to plant whatsoever they desired upon it and the afternoon was devoted to preparing the ground and planting seeds.

The ground was divided into portions and one assigned to each child, who dug it and fertilized it with leaf mold brought from the woods outside the town. Vegetables and flowers were planted carefully, the hardy, common kinds only being chosen, and when the work was finished a woman from one of the adjacent tenements came to the fence, and nodded approval at the change. "Sure, 'twas a handy bit," she said, "but as for meself, I'm powerful fond av flowers and it's a foine bit av work ye've done."

The watering pots were left with the children in the adjoining houses to tend it faithfully. Thus not only new recruits but active members had been gained. The garden throve and with the weekly overseeing of the President, the children of the neighborhood took entire care of it. Many of the products were purchased by the proud mothers of the little workers while others turned in to the President were sold to provide funds. In the fall, many vegetables were entered in the annual sale which has become a settled feature of the work.

This is but an instance of the work accomplished during the summer. Waste lots were planted and neglected back yards brought forth fruit. In the neighborhood of each lot planted, new children were enlisted and when they had proved themselves efficient, the work was left in their hands.

The original band, besides caring for their individual gardens, cultivated an acre of ground in the suburbs of the town. Many garden owners who had never availed themselves of the space under their care were perfectly willing for the boys to plant it should they wish. If a member lived near, the work was put into his care after the planting was finished; if not, recruits were sought and nearly always found and the garden became their share of the labor.

A prize was offered to the child bringing in the largest number of placards, bill circulars and other advertising nuisances, and though the work was slow, poles, fences, trees and barns were freed from rubbish and paper. Many prominent citizens began to notice the improvement and one day the mayor visited the determined woman who had cleaned up M—— to thank her for the change she had wrought. "It is not I," she answered, "but the children you must thank;" and she told him how, little by little, they had carried on the campaign. A meeting of the town officials gave a vote of thanks to the little ones for their work and to their efficient leader.

If the methods used in the town of M—— be copied, I think there will be no difficulty in accomplishing the desired results. Unlimited patience is of course a requisite for all work with children, but when thoroughly imbued with the idea, the children are enthusiastic and efficient aids. Then, too, what interests the children generally interests the parents also, and through them the co-operation of the grown-ups is often obtained.

In my opinion, the success of civic reform lies with the coming generation and my advice to those desirous of attempting the work would be, "select a band of bright, intelligent children as your assistants, adopt thorough, business-like methods and rules, and make no restriction upon the number of members."—*Mary H. Northend, in Floral Life.*

FUNNYGRAPHS

Where the Difference Lay.

"I don't see why that idiotic swell set should turn down Nuritch."

"Well, he's a self-made man, you know."

"Yes, but so is Snodgrass, and they admitted him."

"Ah! yes, but he was made in England, don't you know."—Philadelphia Press.

Mother Goose to Date.

Little Bo Peep lost her sheep,
But she was both wise and sweet;
She knew full well what fate befell—
And followed them to Wall Street.

Tom, Tom, the piper's son,
Stole a pig and away he run.
The pig got loose and killed a goose
And Tom got put in the calaboose,
Had Tom but thought of high finance
He'd not have met with that mischance.

There was a crooked man who made a crooked deal;
He sold a crooked railroad a lot of crooked steel.
He made some crooked dollars and wore a crooked air,
And lived a life of crookedness a Pittsburg millionaire.
—The Commoner.

The Mean Thing.

"You don't say a word about the pie, dear," said Mrs. Nuwedde.

"What could I say, love?" replied her husband.

"You might at least say they reminded you of mother's pie."

"They do. I saw the good old soul making them."

Song Praises

Popular Edition

10,000

We have just published an edition of **"Song Praises,"** in heavy paper binding. There has been a demand for a cheap song book for missions and weak churches, and we now are able to supply all such at a price that cannot be duplicated.

Will Go Fast.

We do not expect our large edition of 10,000 to last long when it is once known that we are selling them at **Only 10c.**

Sunday Schools

Who are not using this book and do not feel able to supply themselves with the cloth-bound book will do well to get their order in quick before this edition is all gone.

The book is printed on an excellent grade of paper, substantially bound in heavy paper and we are sure will give good service.

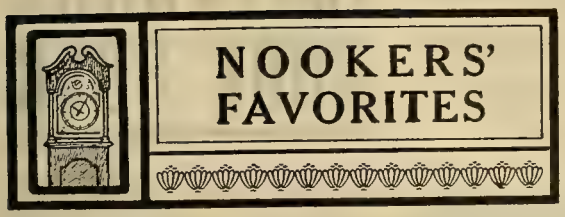
All to new Subscribers for only..... .95

We want to add 5,000 new subscribers to our list. We can do it if you will help us. If you are not a subscriber, send your subscription to-day. If you are, then tell your friend who is not a subscriber of this offer. The Book alone is worth much more than we ask for the combination. If you have a copy of the Book, you can tell them of its value.

The Other Half of the Globe

BY



D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

ELGIN, ILLINOIS

THE LITTLE ARM-CHAIR.

Nobody sits in the little arm-chair;
It stands in the corner dim;
But the white-haired mother, gazing there
And yearningly thinking of him,
Sees through the dust of long ago
The bloom of her boy's sweet face,
As he rocks so merrily to and fro,
With a laugh that cheers the place.

Sometimes he holds a book in his hand,
Sometimes a pencil and slate;
And the lesson is hard to understand,
And the figures hard to make;
But she sees the nod of the father's head,
So proud of his little son,
And she hears the word so often said:
"No fear for our little one."

They were wonderful days, the dear sweet days
When a child with sunny hair
Was hers to scold, to kiss and to praise,
At her knee in the little chair.
She lost him back in her busy years,
When the great world caught the man,
And he strode away past hopes and fears
To his place in the battle's van.

But now and then in a wistful dream,
Like a picture out of date,
She sees a head with a golden gleam
Bent over a pencil and slate.
And she lives again the happy day,
The days of her young life's spring,
When the small arm-chair stood just in the way
The center of everything.

—Harper's Bazar.

THE PATHWAY OF GOLD.

In the light of the moon, by the side of the water,
As I sit on the sand, and she on my knees,
We watch the bright billows, do I and my daughter,
My sweet little daughter Louise,
We wonder what city the pathway of glory,
That broadens away to the limitless west,
Leads up to;—she reminds me of some pretty story
And says; "To the city that mortals love best."
Then I say: "It must lead to the far away city,
The beautiful city of Rest."

In the light of the moon, by the side of the water,
Stand two in the shadow of whispering trees,
And one loves my daughter, my beautiful daughter,
My womanly daughter Louise,
She steps to the boat with the touch of his fingers,
And out on the diamond pathway they move;
The shallop is lost in the distance, it lingers,
It waits, but I know that its coming will prove,
That it went to the walls of the wonderful city,
The Magical City of Love.

In the light of the moon, by the side of the water,
I wait for her coming from over the seas;
I wait but to welcome the dust of my daughter,
To weep for my daughter Louise.
The path, as of old, reaching out in its splendor,
Gleams bright, like the way that an angel has trod;
I kiss the cold burden its billows surrender,
Sweet clay to lie under the pitiful sod:
But she rests at the end of the path, in the city
Whose "Builder and Maker is God."

—Queen Victoria's favorite poem, written by Homer Green.

BETSEY AND I ARE OUT.

Draw up the papers, lawyer, and make 'em good and stout
For things at home are crossways and Betsy and I are out,
We who have worked together so long as man and wife
Must pull in single harness the rest of our natural life.

"What is the matter," say you? I swan it's hard to tell!
Most of the years behind us, we've passed by very well,
I have no other woman—she has no other man,
Only we've lived together as long as ever we can.

So I've talked to Betsy, and Betsy has talked with me,
And we've agreed together that we can never agree;
Not that we've catched each other in any terrible crime,
We've been a-gathering this for years, a little at a time.

There was a stock of temper, we both had for a start,
Although we ne'er suspected 'twould take us two apart.
I had my various failings, bred in the flesh and bone,
And Betsy, like all good women, had a temper of her own.

The first thing I remember, whereon we disagreed,
Was something concerning heaven, a difference in our creed.
We arg'ed the thing at breakfast, we arg'ed the thing at tea,
And the more we arg'ed the question, the more we couldn't agree.

And the next that I remember, was when we lost a cow.
She had kicked the bucket for certain, the question was only "How."
I held my opinion, and Betsy another had,
And when we were done talking, we both of us was mad.

The next that I remember, it started in a joke,
But for a full week it lasted, and neither of us spoke.
The next was when I fretted because she broke a bowl;
She said I was mean and stingy, and hadn't any soul.

And so the thing kept working, and all the selfsame way;
Always something to arg'er and something sharp to say.
And down on us came the neighbors, a couple o'dozen strong,
And lent their kindest sarvice to help the thing along.

And there have been days together—and many a weary week,
When both of us were cross and spunky, and both too proud to speak;
And I have been thinking and thinking, the whole of the summer and fall,
If I can't live kind with a woman, why then I won't live at all.

And so I've talked with Betsy, and Betsy has talked with me;
And we've agreed together, that we can never agree.
And what is hers shall be hers, and what is mine shall be mine,
And I'll put it in the agreement, and take it to her to sign.

Write on the paper, lawyer,—the very first paragraph—
Of all the farm and live stock, she shall have her half;
For she has helped to earn it through many a weary day.
And it's nothin' more than justice that Betsy has her pay.

Give her the house and homestead; a man can thrive and roam,
But women are wretched critters, unless they have a home.
And I have always determined and never failed to say,
That Betsy never should want a home if I was taken away.

There's a little hard-earned money besides that's drawin' tolerable pay,
A couple of hundred dollars laid by for a rainy day,
Safe in the hands of good men, and easy to get at—,
Put in another clause there and give her all of that.

I see you are smiling, sir, at me giving her so much,
Yes, divorce is cheap, sir, but I take no stock in such.
True and fair I married her, when she was blythe and young,
And Betsy was always good to me exceptin' with her tongue.

When I was young as you, sir, and not so smart, perhaps,
For me she mittened a lawyer, and several other chaps.
And all of them was flustered, and fairly taken down,
And for a time I was counted the lucklest man in town.

Once when I had a fever,—I won't forget it soon—
I was hot as a basted turkey and crazy as a loon—
Never an hour went by me, when she was out of sight,
She nursed me true and tender, and stuck to me day and night.

And if ever a house was tidy, and ever a kitchen clean,
Her house and kitchen was tidy as any you've ever seen;
And I don't complain of Betsy or any of her acts,
Exceptin' when we've quarreled, and told each other facts.

So draw up the paper, lawyer, and I'll go home to-night,
And read the agreement to her, and see if it's all right.
And then in the morning I'll sell to a tradin' man I know,
And kiss the child that was left to us and out in the world I'll go.

And one thing put in the paper that first to me did occur,
That when I'm dead at last she will bring me back to her,
And lay me under the maple we planted years ago,
When she and I was happy before we quarreled so.

And when she dies, I wish that she would be laid by me,
And lying there in silence, perhaps we'll then agree;
And if ever we meet in heaven, I wouldn't think it queer
If we loved each other the better because we quarreled here.

—Will Carleton.

An Encyclopedia Within Your Reach at Last!

COMPLETE IN EIGHT VOLUMES. SIZE 8x5¾ INCHES.

Over 4,100 double-column pages. Hundreds of illustrations.
Extra Cloth Binding. Beautiful Full Gilt Backs.
Weight 16 Pounds. Packed in Wooden Case.

THE NEW AND COMPLETE

Universal Encyclopedia

(SELF-PRONOUNCING)

Edited by Chas. Annandale, LL. D., Isaac Thorne Johnson, M. A., Walter Hart Blumenthal, B. S. E., and a corps of eminent specialists.

(Complete in eight volumes.)

This Cyclopedia stands alone in freshness and variety of matter presented in concrete form. It is the only Cyclopedia making a petext of being published in recent years.

IT CONTAINS NEARLY DOUBLE THE NUMBER OF ARTICLES FOUND IN THE ENCYCLOPEDIA BRITANNICA

IT TELLS ABOUT every subject in Science, Art, History, Philosophy, Biography, Geography, Mathematics, Law, Chemistry, Medicine, and scores of other subjects, all of which are treated simply, thoroughly and concisely.

FOR HOME, SCHOOL, OFFICE AND LIBRARY

The Universal Encyclopedia fills the need for an up-to-date, well digested, exhaustive, condensed work.

The correct pronunciation of all obscure words; the variety of subjects explained and the simplicity of the explanations; the convenient size of the volumes, the clear print, and beautiful bindings, the **"within the reach of all" price**, all tend to make it **THE GREATEST PUBLICATION OF THE CENTURY.**

The Universal Encyclopedia comprises eight volumes, 8x5¾ inches in size, over four thousand double-column pages, **FULLY ILLUSTRATED**, and is printed on extra quality of book paper.

Bound in Cloth, With Full Gold Stamping on Back.

Webster's Unabridged Dictionary

This is the original Webster's Unabridged Dictionary, with supplement and revises by Chauncey A. Goodrich, of Yale College. An American dictionary of the English language, containing the whole vocabulary of the first editions and the corrections and improvements of later editions. To this is added a table of synonyms, peculiar use of words and terms of the Bible. If you do not care to spend $9.00 or $10.00 for Webster's International Dictionary, which is the latest and best made, then get this book, which, for nearly all practical purposes, will serve you quite as well. It is printed from good, clear type and contains 1,600 pages. Cloth, $1.25.

Brethren Publishing House, :: Elgin, Illinois

500 Scriptural Anecdotes

A Hand-book for Preachers, Teachers and Christian Workers.

COMPILED BY

HAROLD F. SALES

An entirely new collection of short, sharp Scriptural Anecdotes, invaluable to those who are being called on to conduct meetings and are compelled to prepare on short notice.

A large variety of subjects are treated, and it will be found more helpful than some collections costing four times its price.

The entire collection is carefully classified under fifty different subjects and arranged alphabetically.

SAMPLE ANECDOTES.

(As they appear in the book.)

The Obscured Light.

There was a great lighthouse out at sea. One night the men lighted the lamps, as usual. Some time afterward they saw that there appeared no light upon the water where ordinarily there was a bright lane of beams. They examined their lamps —they were burning brightly. But they looked outside, and there were millions of little insects on the glass, so thickly piled there that the light could not get through. In the morning they learned that a ship had been wrecked close by because the light had been obscured by the insects.

Glorified God in Our Homes.

A saintly bishop once said: "I never move about my home, I never step out of my house, I never pass along any street or path, I am never anywhere without being likely to be seen by some one who knows me. A knowledge of this fact always makes me watchful of myself and cautious. I want it to be so that whoever sees me, at any time, or anywhere, will be able to see nothing in me that is inconsistent with the character of a loyal and faithful servant of Christ." Such a spirit cannot help glorifying God wherever it is lived.

Price in limp cloth binding, 25 cents.

BRETHREN PUB. HOUSE,

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,
CHAS. B. WESTOVER, Pres.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

BAGGAGE—The usual free allowance of baggage (150 pounds on full tickets and 75 pounds on half tickets) may be checked going or returning to any point at which stopover is permitted.

FREE SIDE TRIPS

To holders of tickets via Union Pacific R. R. to Ogden or Granger, sold at rates named herein, following free side trips will be given:

From Denver to Colorado Springs or Pueblo and return. (Apply to Union Depot Ticket Agent or to General Agent, 941 17th St., Denver, Col.)

Ogden to Salt Lake City and return. (Apply to conductor into Ogden or to Union Depot Ticket Agent, Ogden.) In connection with this side trip, free Pullman seat checks will be furnished passengers holding Standard Pullman car tickets.

YELLOWSTONE PARK SIDE TRIP

Side trip tickets from Ogden or Pocatello to and through Yellowstone Park including five and one-half days' hotel accomodations as well as railroad and stage transportation, will be sold for $55.00. Side trip tickets covering rail and stage transportation only will be sold for $28.00. Park season will be from June 10 to September 19. Apply to Ticket Agent either at Ogden or Pocatello. Passengers holding through sleeping car tickets will be furnished sleeping car stopover checks on application to the Pullman conductor.

OPTIONAL ROUTES

All tickets reading via the Union Pacific Railroad to Ogden or Granger will be honored via Julesburg Line and Denver or via the direct line through Cheyenne, at option of holders.

Proportionate rates from all points East. Be sure to buy your ticket over **THE UNION PACIFIC RAILROAD** known as the **Overland Route,** and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

Farming Lands in California can be bought from $25 to $40 per acre. Printed matter free. Write to

GEO. L. McDONAUGH, Colonization Agent,
UNION PACIFIC RAILROAD,
OMAHA, NEBRASKA.

How Do You Like This Way of Building a Church?

In a new country where a colony is being planted there is always more or less difficulty in inuagurating free institutions such as churches and schools. The people are usually busy building their own houses, clearing up farms, building fences, etc., which requires both time and money. Then as a rule, people come to a new country to make money and have made about as large a sacrifice as is possible for them to make at one time, and are not prepared to help much in the way of donations.

It is always more or less embarrassing to be continually begging through the church papers for donations from the old churches, for though they are as a rule willing and ready to help in all such cases, yet they are not always in a position to grasp the situation and see the actual necessities as they exist. This is why it takes a long time to build churches in new localities oftentimes and why the people become discouraged with the missionary work by colonization.

In colonizing Butte Valley, the California Butte Valley Land Co., partly realized these facts and tried to avoid some of the difficulties incident to frontier life and the following statements properly signed will speak as to what they have done.

To Whom This May Concern:

WE, THE BUILDING COMMITTEE OF THE BUTTE VALLEY CHURCH TAKE GREAT PLEASURE IN TESTIFYING TO THE LIBERALITY AND CONSIDERATION OF THE CALIFORNIA BUTTE LAND COMPANY IN PROVIDING A HALF BLOCK OF GROUND AND THREE THOUSAND DOLLARS TO ERECT THEREON A HOUSE OF WORSHIP.

EVERY REPRESENTATION OF THE COMPANY HAS BEEN MET IN FULL AND IN BEHALF OF THE BUTTE VALLEY CHURCH WE EXTEND OUR SINCERE GRATITUDE FOR THEIR GENEROUS TREATMENT.

(SIGNED)

J. C. FUNDERBURGH.

The Span of Life

is three score years and ten. That is the record of a well-lived life. We cannot all live to that advanced age, but we can live longer, healthier and happier lives if we keep a wise and careful watch over our health. In order to do our full duty in life's battle, it is necessary to have good health.

If we're sick, broken down, weak and poorly, we cannot enjoy life, neither are we able to do the part required of us; we are a burden to ourselves and our fellow-beings.

But nobody needs to be sick, that is, for any length of time. You may feel that something unusual is the matter with you. You may lose strength, your appetite, your ambition.

You may feel tired, worn out, dizzy and nervous. You may have a headache, pains all over, you may feel sore in the muscles, the back and kidneys. You know that you are sick, but still you don't know what ails you. These are nature's danger signals. It is your blood. Impure blood is the cause of most diseases of the body. It produces rheumatism, gout, la grippe, neuralgia, kidney complaint, jaundice, backache, fevers, skin diseases and other ailments. It causes trouble for both sexes, men and women; for all ages, young and old.

In order to enjoy good health, your blood must be in a normal condition, as blood is the life. It is the element of life.

It is, therefore, important that we should know something about this life element and how to keep it pure and in a healthy state. Every movement of our body wears out some flesh or tissue and these "wearouts" must be repaired. The material for these bodily repairs comes from the blood. The blood builds up the vital organs, strengthens and regulates them and enables them to perform their functions regularly, according to the laws of nature. It carries the waste matter from the different parts of the body and removes it through the pores of the skin and other channels. If the blood is thick and sluggish it will fail to perform this work; the channels become clogged up and disease follows.

What is needed is an agent that will help nature remove the cause and build up the system. Nature has wisely provided for these emergencies. You must look to the vegetable kingdom for relief. In its herbs, roots, barks, flowers, seeds, etc., lies your salvation. These act without hurting your system.

Among known remedies there is probably none which has met with such marked success in accomplishing this as **Dr. Peter's Blood Vitalizer,** a purely vegetable preparation. It does not remove the cause temporarily, but attacks the evil at the root, destroying the evil, roots, trunk, branches and all. It does this because it not only purifies but makes new rich, red blood. It builds up, strengthens and invigorates. Thousands have testified to its merits.

A BUSINESS MAN WRITES.

Wagner, S. D., April 14, 1905.

Dr. P. Fahrney, Chicago, Ill.:

Dear Sir.—I must write and tell you what your **Blood Vitalizer** has done for me. I had rheumatism for a number of years, and finally got so that I was unable to walk. Last summer I went to New York to be treated for it, but I returned home without being any better. I then thought I would try the **Blood Vitalizer,** and must admit that it is the best medicine there is. My own case proves it. I am well known through South Dakota, having been in business for over eight years. I can not describe the wonderful change the **Blood Vitalizer** brought about in my condition. People wonder what cured me. If it had not been for the **Blood Vitalizer,** I would have become an invalid.

Yours respectfully,
M. Kennedy.

NO MEDICINE LIKE IT.

Lone Grove, Texas, Feb. 18, 1906.

Dr. Peter Fahrney & Sons Co., Chicago, Ill.:

Dear Sirs.—The **Blood Vitalizer** which I ordered of you arrived in good time and order. It gives me pleasure to state that it is all that you recommend it to be and a great deal more. It has been a great blessing to me. I am sixty-four years old and all broken down in health. Through God's blessing I am a new man since using the **Blood Vitalizer.** There has never been any medicine like it. I could not walk when I sent for your medicine, but now I am well and in better health than I have been for twenty years. I shall ever feel grateful to you. May God bless you in your work. I gained nine pounds in twenty days and my case is the wonder of this country.

Yours very truly,
W. H. Bates.

Do you wish to gain strength, to gather flesh, to acquire an appetite, to enjoy a regular habit of body, to obtain refreshing sleep, to feel and know that every fiber and tissue of your system is being braced and renovated? If so commence a treatment with **Dr. Peter's Blood Vitalizer** at once. The very first bottle will convince you of its merits. **Dr. Peter's Blood Vitalizer** is not an article of commercial traffic. It is not put up in a humdrum way for the purpose of sale but is prepared with the most scrupulous care and exactness as a medicine for sick people. Every bottle, as it leaves the laboratory, is supplied with a registered number duly recorded. For good reasons, the proprietors do not supply the **Blood Vitalizer** to druggists or others interested in "traffic" goods, but to the people direct through special agents appointed in every comunity. Eternal Revenue Stamps

A carefully-selected collection of 120 Scripture verses, beautifully printed in three colors on gummed paper and perforated to tear out like postage stamps.

They are neatly bound in book form, with a stiff cardboard back and with waxed tissue paper between the pages to prevent sticking. Every page is printed in a different combination of colors, giving a variety in color, as well as in verse.

The stamps are classified under twelve different headings, making ten different texts on each of the following subjects:

Invitation, Salvation, Prayer, Purity, Faith, Love, Courage, Comfort, Integrity, Prohibition, Deportment, Miscellaneous.

A traveling man writes from Centralia, Ill., saying: "Enclosed find one dollar. Send me Eternal Revenue Stamp Books for it. I got three of them yesterday from a man in Paris, and Christian workers who saw them to-day persuaded me to part with them and send for more."

Price, each, ...10 cents
Per dozen, ...$1.00

Brethren Publishing House, Elgin, Illinois.

Lomita California

Lomita, California—Los Angeles County—has 82,237 children of school age, between 5 and 17 years, an increase of 6,363 over last year. This is our "best crop." And ample provision is made to educate all of them. Teachers are paid from $70 to $90 per month in the country schools. The school buildings are modern with every convenience for the health and progress of the pupils. Morals are good. Prohibition or Anti-saloonism is growing surely Pasadena, Riverside, Pomona, Long Beach, Redlands, Ontario, Glendale, Tropico, Lordsburg, Inglewood, and many smaller towns and country precincts are free from saloonism. So will Lomita be. It will grow beautiful flowers, hence one can have delightful surroundings. When the nut trees, the apple, peach, plums, pear, prune, apricots, nectarine, quince, loquat, orange, lemon, and other useful fruits with berries and scores of kinds of vegetables dot the acres of Lomita, and the Sunday school, and church services and the day school and the library, all are running in the interests of mental, moral and spiritual training, won't it be a delightful and joyous peace for old, young and middle aged? One should not set all his mind upon money and material, but balance himself by giving time and thought to the realm of higher good. Come and be of use in this field. Aim for the best in all lines. Here are opportunites to "grow up" in every good thing.

Los Angeles in a few years will have water for a million of people. From that city to San Pedro is all down-hill. On this down-hill plain the city is fast growing. It will reach the sea at San Pedro. Already a strip a half mile wide from Los Angeles to San Pedro is a part of Los Angeles. Lomita is only a few hundred feet from this City strip. Should a 100-foot street be built in this strip from the busy city to the sea and the wealthy people build palatial homes along this boulevard, what would land at Lomita be worth? Mr. Allen Manvel when president of the Santa Fe Railway, said in 1892: "Some day there will be a city from Redlands to the ocean, and then happy will that man be who owns five acres." Very right was his fore-vision. Get your five or ten acres now in Lomita, for that city is fast on its way down here. Mr. Manvel was a great financier and was long on foresight.

Brethren and others are selecting five and ten acres. Active steps are being taken to pipe ample water for each home. No water tax collector every month. All it costs you is maintainance and operation and you can have a voice in that. It costs you something to keep up and run a plow or wagon. So it does this water plant. That is all. Your plow produces your revenue. So does this water.

A Great Opportunity

FOR THE

HOMESEEKER

180,000 ACRES UNDER THE CAREY ACT

Now Ready to File On

This tract is on the North Side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho

These lands are sold at 50 cents per acre and the water right $30.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms, crops of all kinds are grown to perfection. Fruit growing is a success ,as well as the growing of sugar beets. To see these lands take the Oregon Short Line R. R., to Minnedoka; there change cars for Milner.

Homeseekers' Round Trip Tickets

will be sold to points in Idaho on 1st and 3rd Tuesdays in May and June 1907.

BRETHREN and others returning from the annual conference at Los Angeles, via Portland through Idaho over the Oregon Short Line R. R. should stop and see these lands.

EXCURSION TICKETS will be sold from points east over the O. S. L. R. R. to Seattle and Spokane, Wash., June 20th to July 12th inclusive. Final return limit Sept. 15th, 1907. Stopovers allowed on going and return trip.

THE INGLENOOK

VOL. IX. JULY 30, 1907. No. 31.

The Peace Palace at The Hague

William L. Judy

MAN has lived amid strife and bloodshed ever since the time when he emerged from the cavern of darkest savagery, when he dwelt in caves, fed on fruits and flesh, and fought with the rudest weapons. Though he approached the stage of civilization, yet he knew not peace. A tribe was ever on the lookout lest a neighboring tribe should swoop down upon their village, destroy their homes, murder the men, and take the women and children captive.

Man took on civilization; he learned the principles of right and wrong; he knew the value of friendship and peace; but notwithstanding all this he did not give up his love of strife. Brute force was the final arbiter in every difference small or great. Monarchs knew that their doom was sealed when their armies were routed on the field of battle. Mercy dwelt not on the throne. Nation hated nation; crown feared crown. Such was the state of affairs existing until very recent times. One nation seemed to have no thought of evil against another: the two were friends on the surface; but beneath dwelt treachery and hatred whose embers would burst into a blaze at the slightest provocation and become a mighty fire of destruction.

War is the concentration of all human crime, the essence of cruelty, the direct relic of barbarism. Butchery, devastation, death—all unite to make it the horror of horrors. No mercy, no love, no manly instinct can be found amid the roar of cannon and the rattle of musketry. The description of what is called a battle is but that of murder and hell. Facing each other, drawn up ready for the fight, stand lines of soldiers, inspired with a spirit of revenge, of hate, of desire for destruction. The command is given, the fire opens, they charge to meet each other. From the mouths of a thousand cannon pour forth shot and shell in one continuous blaze. Clouds of smoke fill the field. The noise becomes almost unbearable. Friend or foe cannot be distinguished in the confusion. Here they flee; but there others open a fresh attack. The general rides up and down the lines, bravely urging on his men. But look! away rushes the fleeting steed without his master, who has fallen pierced through the heart. Still mightier and bloodier grows the conflict. Bullets whiz through the air, shells burst above the soldiers,—but who heeds them? The men fall in heaps. On the line moves, over the bodies of the fallen, some of whom are lifeless, while others groan with pain.

The firing gradually ceases, the smoke clears away, the din of battle is heard no more, and the troops leave the field stained with the blood of thousands who have fallen. Where only an hour before was deafening noise, now all is quiet. But soon the stillness is broken by shrieks of anguish, cries for help, and the last desperate effort of the dying soldier, whose lifeblood is ebbing away, when in his last moments, as Death stares him in the face, his thoughts go back once more to the home of childhood, to his wife and little ones, whom he had bid farewell not long since—and then, cursing with his last breath the awful carnage, he closes his eyes forever to the light of the calm, clear sky above him.

Let us turn away from such a horrible sight. Surely the destruction must end on the battle-field? Oh that it would! It has changed the hopeful wife to a desolate widow, who must care for babes yet too young to feel deeply the loss of a father. It has broken the mother's heart—she who prayed day after day that her son might soon return in safety. It has bereft the father of the only hope and support of his declining years. Does it end here? Oh that such were the truth! Industry is paralyzed; trade ceases; property and life alike are unsafe; dire distress follows. War—better call it wholesale murder—dulls the finer instincts of a race. It requires years for a country to free itself from the scourge of war. Think of it! A "Christian" nation sending forth the flower of its youth and manhood to engage in the murder of fellow-men! Can it have the least justification? Who dares to say that it is not the curse of humanity? Is it not murder? Then why not drive it from the earth?

Into a world stained with the blood of war, into a world rent with strife and confusion, came Jesus Christ, the lowly Galilean, heralding the dawn of a new day, and bringing as his first message to a troubled world: "Peace on earth, good will to man." E'er since that first Christmas night the message which the angels sang was taken up by men until to-day the whole world listens with gladness to the heavenly strains; and even now the dream of poets and philosophers for ages past is being realized.

"For lo! the days are hastening on,
By prophet bards foretold,
When with the ever-circling years,
Comes round the age of gold.
When peace shall o'er the earth
Her ancient splendors fling,
And the whole earth gives back the song
Which now the angels sing."

Just five days ago the second Congress of the World, including representatives from every one of the forty-five nations of the globe, assembled at The Hague, where there is being erected through the generosity of Andrew Carnegie what will be known as the "Peace Palace at The Hague." Never has the hope for universal peace been brighter. Nations are beginning to feel that they are members one of another; that their interests are common; that they cannot do without each other; that they must help one another. Our own nation (thanks be to God, far removed from the jealousies of the Old World!) ought to be proud that it can be called the greatest peace society in existence. The great stepping-stone to Universal Peace is arbitration,—an idea founded on the simple principles of the gospel of Christ, a masterpiece of Christian statesmanship, a movement towards a more enlightened civilization.

The South American republics, Chile and Argentine, ever contending with each other, agreed to arbitrate every difference that would arise between them. In memory of this notable action ('tis a beautiful story) they erected high up on the Andes, on the border-line between the two countries, a statue of Christ and the Cross, bearing the inscription: "These mountains shall crumble into dust ere the people of Chile and Argentine break the peace, which at the foot of Christ, they have sworn to keep."

That never-dying name, in whose memory the hearts of the American people will ever go out in gratitude and remembrance, the noble Washington, though he attained his greatness through war, though a master of that art, though the most of his years were spent on the battle-field, and though his praises as a general were sounded o'er all the earth, yet, after he had devoted his life to his country's cause, when he was about to bid his beloved nation farewell, gave as his parting word: "My first wish is to see this plague of mankind (war) banished from the earth."

What a grand and glorious picture the Future shows to us! Behold the Parliament of Man, the Federation of the World! What a sublime idea! At last the world has come to realize that

"Peace hath her victories
No less renowned than war."

Ah, there, hovering o'er all, rests the Cloud of Peace, sheltering humanity from the woes of war and guiding to this earth of ours rays of sunlight that have their origin in the Sun of Righteousness, the Prince of Peace. "He shall judge between the nations, and shall reprove many peoples; and they shall beat their swords into plowshares, and their spears into pruning-hooks; nation shall not lift up hand against nation; neither shall they learn war any more." Oh then what joy 'twill be to live! when wars shall be heard of no more, when peace shall reign, when all shall be harmony and love, when in the early dawn the sun in the heavens shall burst forth with all its splendor in the eastern horizon to greet a world beneath it living in peace and fellowship; and when as it shall sink into the clouds of the western sky, coloring them with its myriads of brilliant hues, it shall light up the western heavens into a scene of happiness and quiet; and when just so the Son of Righteousness, the Prince of Peace, shall reign supreme o'er all the earth, illuminating it with the heavenly brightness of his eternal glory, and shall transform it into his kingdom above, the everlasting life to come.

Midsummer

Richard Braunstein

When wan midsummer holds the land,
Close-clasped within her magic hand,
A mellow haze enwraps the ways,
Where placid-browed, the far hills stand.

Blithe brooks that laughed and leaped with spring,
By pebbly banks no longer sing,
No more rejoice, but sink their voice
To dull and drowsy murmuring.

From hedge to hedge the eye can trace,
Sheer, silken filaments of lace,
By spiders spun ere yet the sun,
Had glimmered o'er the morning ways.

Oppressive silences enfold
The songless wood and sleeping world,
When noontide spills, along the hills,
Her lavish largesses of gold.

And yet, though stilled the song of streams,
Most gracious is my lot, I seem;
All joyous still by copse or hill
To wander, comraded with dreams.

Our Village Schools

J. M. Blough

THE people of India live in villages; the whole population is counted by cities, towns and villages and there is no country population as you have it in America. There may be but a few houses, yet it is called a village or forms a part of a village if there are other houses near. So when it comes to schools they are all town schools and you do not find schoolhouses out in a field somewhere a half mile from any home but right in the town or village.

The Government aims to supply schools throughout the kingdom and has done very much to this end, but for some reason or other there are still many villages without schools. Many of the castes do not desire schools and do not send if they have a chance. Thousands more could go to school if they would but there is positively no desire. The parents say they must have the children to work at home, and so keep them for the smallest reason. At some places it is necessary to offer special inducements in order to get a school started at all. But as time goes on and people see the advantages of an education they demand more school privileges.

Throughout India mission societies have taken advantage of the school as a way of doing mission work, for this reaches the children and is a good way of gaining the friendship of the people. Our own mission is supporting a number of village schools with the hope of thus reaching the hearts of the people and turning them to the Lord. At present in Bulsar taluka we have three schools in three villages where there are no other schools of any kind. Several schools had been opened in other places for a while, but for some reason or other were closed.

In these three schools we have Christian teachers and we aim to have them teach the Christian religion as much as opportunity affords. They live right in the villages and so have plenty of chance of talking with the people, and the people do not think it much of an intrusion for he is the school-teacher. The children when not hindered by their parents learn rapidly about Christ and Christian truths, but sometimes the older people of the village object. They say if Christianity is taught they will not send their children, but in these three villages it is not so.

In these villages there are Sunday schools, too, and in them they study from our quarterly the same lessons you study in America and this is a splendid chance to teach them the true religion. In these they learn to pray and learn Christian songs. First as they begin to sing there is no harmony and scarcely a tune but it is far from desecration for they do the best they know and will God not be pleased? In this way we hope to fill the minds of the children with Christian truth and lead not only them but through them many others to Christ.

These schools give also this advantage: When we go to the village we have a place to go to and to stay and at once an opportunity to begin work for the Lord. For if the people are friendly enough to want a Christian school they will give the Christian preacher a hearing when he comes, but it takes long, hard work to bring them to where they are courageous enough to confess.

There are often difficulties in the way and sometimes schools must close or be suspended. A few weeks ago one of our schoolhouses was burned down. It was only a grass hut but answered the purpose, for most of the people live in just that kind of a house. We tried to rent a house but could not; we tried to have the people to build one and they would not; monsoon was near so if we did not wish the school to close there was but one way and that was to build a new house. So we set to work at once and the teacher took it in hand. It is now about done and cost about $10 and this is large enough for the school and a room for the teacher to live in. The land is free.

You may be interested to know what wages these teachers get. They get from $2 to $3 per month. One school is large—over fifty on the roll—so in it there are two teachers one of whom is a Hindu but we hope he may be a Christian soon. He has learned much Christianity and says there is nothing in his way, yet he has not come out boldly yet and accepted Christianity. The principal gets but $3 per month. The Christian teacher is one of our boys and was married just two weeks ago and now he and his wife live there in the midst of the village, the only Christians for miles around. Here it takes courage to be a Christian. Pray for the Christians of India.

I wish you could have a glimpse into one of these schools. All the boys (for scarcely does a girl come) are seated on the ground floor and hold their slates and books in their hands over their crossed legs. The only furniture is a chair and table for the teacher and he is awkward in the use of them. The boys are very poorly dressed and sometimes you can scarcely call it dressed but they know no better and there is no one to point his finger at them nor despise them, so they are happy. They sit in school with their caps on and frequently their bunch of long hair trails out behind. You would think it funny but here no one

does. But they learn to read and write and so on and some become prominent men in their community, for their parents have no education at all. The parents become proud of their children when they can read, and why should they not? Would they just be so proud to see them become Christians? We hope for that day.

Bulsar, India.

"The Convict"

Harry B. Bradford

STANDING behind two sets of bars; those of the cage and those on his body, is this "Horse-tiger," as some ancient zoölogists were pleased to call the beautiful animal we know as the zebra.

You will notice that, like the tiger, the stripes run nearly at right angles on the parts of the body where they occur, so that those on the legs are horizontal, while those on the body are vertical.

This is a portrait of the zebra which was presented to President Roosevelt by King Menelik, of Abyssinia, and was said to be the most beautiful one he ever saw. He has been given the name of "Dan," since his arrival at the Washington Zoölogical Gardens, and all that you ever heard about the stubbornness of that uncertain animal, the mule, is found most wonderfully developed in Dan.

Some considerate prisoners put on their good behavior when behind the bars, in hopes of an early emancipation, but Dan is not that far-seeing in this particular direction. He behaves as stubbornly as his natural gifts in that line allow him, and nature has been most generous in providing him with unlimited tendencies of that character. He can kick, and bite, and back up against the door when his care-taker wishes to bring him a pail of water. The name "care-taker" is especially appropriate here, as any one must certainly take care or be sorry, while around Dan.

Notwithstanding the fact that he came from the mountainous districts of East Central Africa, he is able to keep himself quite comfortable here at the zoo. His quick, twitching tail keeps his rear, semi-anatomy clear of the housekeeper's burden, while his large, muscular head-fans waft a soothing breeze along both slopes of the *striped, backbone mountains* to the rear.

This, so strikingly marked animal is indeed very beautiful. The strong contrast between his rich, black stripes and the creamy white color between them is very effective. His forehead reminds one of a Chinese puzzle, but as we follow the lines down his finely-shaped nose, we are attracted by the soft, chocolate-brown color in which they are merged. The nostrils are of brownish, mouse-color while the spot between them is nearly pure white, His hoofs are much like those of the mule, very small and clean.

Zebras in the wilds are confined to the mountainous districts, where they roam in bands, like the wild mustangs of our western plains. They are very keen-eyed and are very difficult to approach. The old ones are very rarely ever captured, as they place sentinels upon some prominent crag, overlooking the surrounding country, to warn them of any approaching danger.

Zebras, when taken quite young, may be trained in harness, but there is always that mule-like tendency at the other end of the reins, which puts a decided limitation on any extended travel with them.

Kensington, Md.

SEEING THE WEST.

FURMAN R. CLINE.

THAT "one-half of the world does not know how the other half lives" is a statement that cannot be fully realized until one launches out and sees for himself. With this desire to see a little beyond the state line, three of us boys bid adieu to McPherson College soon after commencement and started for the west. Our first stop was at Rockyford, Colo., a place flowing with sugar beets and melons, and located in the richest valley of Colorado.

Amidst all the charms and beauty of nature we sped onward and in a short time found ourselves looking with awe and astonishment at the handiwork of God in the Rockies; the magnificent peaks towering heavenward as if eager to reach the sunlight above, while the little streams at their base busied themselves with carrying nourishment to the fertile plains and valleys below. The great chasms, waterfalls and snow-capped peaks all added much interest to the trip until the curtains of day warned our weary eyes that the same Power which created these scenes of beauty, must also be obeyed, so we closed our eyes for a few short hours, and awoke the next morning and beheld the barren plains and mountains of Utah stretching in all directions until suddenly there sprang into sight the great city of Salt Lake, made famous by the Mormons having their temple located at this place, and whose beauty and grandeur cannot be expressed to one who does not know the meaning and realize the significance of a $4,000,000 structure. The Great Salt Lake also adds to the notoriety of the place and can be reached by a fifteen mile ride on the cars.

Eastern Nevada along the railroad, being mostly barren with the exception of a few narrow fertile valleys, did not attract much attention until we reached our temporary destination at Reno, which is located in the western part, close to the California line.

It is a beautiful little city with all classes and nationalities represented. Being on the main railroad line and close to the mining districts, it is the headquarters for the whole of Nevada; gambling and saloon-keeping are the principal occupations. Stretching out in all directions from this place are to be seen beautiful valleys where dairying and farming prosper.

The mineral resources of the state are enormous; it has some of the best-paying gold mines in the union. Fishing and hunting add to the state much attraction and many tourists take up their abode in the mountains and spend their leisure hours in and about the hot springs which are very numerous.

Still looking westward, we soon expect to see the orange groves and large trees of California and to enjoy the gentle sea breeze for a few weeks before returning.

Reno, Nevada.

HE WAS AN EDITOR.

RICHARD SEIDEL.

A haggard, pale and wretched man
Once I met,
Who from that day to this I can
Ne'er forget;—
Clothed in garb of sundry dyes
Cut in every shape and size—
Low and plaintive were his cries—
Shunning everybody.

"Friend," said I, "pray tell me
All thy woes!"
"Oh," said he, "the die is cast—
All my cheerful hopes are past;
Now I must give up at last
Pleasing everybody.

"When I first began my labors,"
Said the man,
"Then to try and please my neighbors
I began;
But I've led a sorry race—
Owning now no resting place,
Save the short six feet of space
Due to everybody.

"If you try to please mankind
As you go,
Plenty of labor you will find
Here below;
First a hit and then a miss,
Sometimes No and sometimes Yes—
Pleasing everybody.

"Should the world declare you wrong,
Never heed,
If your cause is true and strong,
Sow your seed;
On life's stage act well your part,
Serve your God with honest heart;
But give over from the start,
Pleasing everybody."

Fort Hancock, N. J.

WHY do we not always smile when we meet a fellow being? This is the true recognition which ought to pass from soul to soul. Little children do this involuntarily. The honest-hearted German peasant does it. It is the magical sunlight all through that simple land, the perpetual greeting on the right hand or the left between strangers as they pass each other, never without a smile. This, then, is the "fine art of smiling," like all fine art, true art, perfection of art, the simplest following of Nature.—*Helen Hunt.*

A Summer in the Rockies

Hattie Dell

WHILE we were quenching our thirst at the spring the cook looked out of the door and said, "Hello Van! Bring your folks in to dinner." What a welcome invitation that was to us, and we accepted it at once. The men had eaten dinner and gone to work, but there was plenty left. Oh! how good everything was! We had beef, potatoes, rice, fruit, two kinds of pie, bread, butter and coffee. It seemed to take more to satisfy me than the rest and I accounted for it this way,—I didn't eat pancakes for breakfast. We were the first women folks to visit Sinbad Valley and we had consented to spend the evening at the cabin before we left to look up a camping place. We crossed a ravine and camped several rods up the hillside opposite the cabin. There was a large rock under a tree that served for a table. For our beds we took cedar boughs. There wasn't much spring to them, but the odor from the broken boughs mixed with the sweet mountain air, and the moon peeping through the tree tops, invited us to a refreshing slumber.

The Copper Mine Hill in the Distance.

The first afternoon was spent climbing the mountains to see the copper mines. Two of them have been worked to some extent, but they were doing more prospecting and road making than mining when we were there. I think the mining is done mostly by blasting to loosen up the ore. By this time they have their leaching mill up and are getting copper ready for market. If the mines turn out to be good they will likely get a railroad built up in there, but it will take an immense lot of hard work, it seems to me. This is a new place and not much going on yet.

In the evening we went down to the cabin where we met several of the miners. They insisted on spending the evening in singing; they had song books and John had his hymnal. I think there were nine of us joined in the singing and we made the little log cabin ring for an hour or more with religious songs. I think most of the men were Christian professors. One of them had been a Sunday-school superintendent and one a minister, and some didn't make any profession, but they all seemed to think Van, as they called him, and his religion could be trusted at all times. Does it pay to be true to your profession?

The next day Will and Archie went down the valley to a ranch for hay, beef, butter, sugar and milk. We girls baked bread in the cabin stove. The cook kindly offered his oven when he wasn't using it, and tended our bread if we weren't in when it needed attention. We boiled our beef, and made potpie in the broth for supper. Oh! but it was good!

The men wanted us to spend the evening at the cabin again, but we asked them up to visit us. We pulled in the dead trees and brush and had a big campfire. They brought their song books along again and we sang until we were tired out. Singing sounds fine in the open air among the hills, and I am sure we all enjoyed it immensely.

After our company left the men made plans for a hunting expedition the next day. They had quite a time making out what they would do if they should run up against a bear. We were up bright and early. After breakfast we prepared lunch for the men and they were off with our warnings ringing in their ears to be careful and not let a bear get them down. We had to bake again that day. Where did that bread all go we had just baked? We set the bread, took it to the cabin, and then commenced climbing the hill where we were camped. We followed the trail and found it very difficult some places, but by resting several times we at last reached the top. We hoped to see some deer down in the cañon, but all we saw was a few birds, though we saw fresh deer tracks. After wandering around awhile we struck a new trail and followed it back to camp. We rested and read in the afternoon. The men came home in the evening with a bob-cat head. They saw a deer, and bear; the bear was close, but they waited for a better chance to shoot, and he was gone.

The cabin men spent the evening with us again. They tried to make plans to have us stay longer, and we surely should have enjoyed it, but we wanted to get home Tuesday evening, so we would have to leave in the morning. It was ten o'clock the next day when we said good-bye to the miners and Sinbad Valley, and turned our faces homeward. John staid and one of the miners went back to Grand Junction with us.

(To be Continued.)

At the Mines. (The woman and children arrived after our party.)

TYING THE SPINAL CORD.

MODERN surgery confesses to no impossibilities. All the old standards of performances have been swept away by intrepid experimenters, and to-day no case is pronounced hopeless until death has actually ensued. In the realm of organic disease such marvels of cure and removal have been accomplished that the word "operation" no longer suggests the extremity of the case. It signifies the ordinary course of procedure. A few ailments still baffle the physicians and surgeons, such as cancer, for an example, but they are being continually attacked, and the belief is expressed that eventually they will yield to treatment and operation.

One of the most remarkable achievements ever scored is just announced in New York as a demonstrated fact, being no less than the tying together of the severed ends of the spinal cord. Broken vertebræ have been heretofore mended or removed to relieve pressure, and "back-bones" have been tinkered up after severe jolts and smashes. No longer the man with the "broken back" or the "broken neck" is regarded as beyond salvation.

But when the cord itself has been sundered, science has yielded, until four years ago a patient was brought into the Brooklyn Hospital suffering from a bullet wound in the spine. Examination by the late Dr. George Ryerson Fowler demonstrated that the ball had severed the cord and was embedded in the bones. He concluded that the man would die without help and that the only help possible was the reunion of the body's main conductor of nerve force. This operation was performed and the patient survived.

The years passed, with signs of slow progress toward recovery, but while the sufferer was getting better Dr. Fowler died. That was a year ago, and his chief regret for passing was that he could not live to determine the success or failure of his experiment. It has just been announced that the man with the sewed-together spinal cord is cured and will henceforth be able to move about practically as well as a normal person.

In view of such accomplishments there is assuredly encouragement for the men and women of great wealth to contribute richly to the maintenance of the hospitals of the country. They are served to-day by an army of faithful, zealous, skillful men and women, who have devoted their lives to the pursuit that is often unremunerative because of their attention to the field of experimental surgery and medicine.—*Washington Star.*

* * *

"THE babe's helplessness is its strength. Moses, the infant in the ark by the river-side, was safer than a knight in armor or the king surrounded by his embattled hosts. The homage of the world to childhood is a certain proof that man is not totally depraved and is a sure hope that the world may be redeemed from sin. Every problem of social, governmental and religious life centers in the child."

* * *

THE records of great men's lives that have come down to us all bear testimony to the tremendous uplifting force of womanly influence in the background. A still, small woman, of whom the world never hears, is sometimes the lever grinding and making possible the effort of those whom the world delights to hear. *London Free Churchman.*

MANY a noble desire sleeps in the grave of weak resolves.—*Hoss.*

LOWLY BUT CROWNED; OR, SYBIL THE OUTCAST

A Story by Sadie Brallier Noffsinger

Chapter XIX. Mrs. Treadle Moralizes.

"Do say!" cried Mrs. Treadle, holding up both hands. "Do say, Sister Trot! Is it an actu'l truth that things have come to sich a pass as that? *To sich a pass,*" she gasped again, meekly lowering her hands and folding them, as though in mortal pain, upon her breast.

"If I hadn't saw it with my own eyes, Sister Treadle, we might doubt the truthfulness on't. I had hearn tell how Sister Chester 'lowed that gal to gether moss an' flowers on Sabbath days, so not wishen to misjudge the gal nor Sister Chester nuther, I went up to them woods myself an' watched there till she come."

"An' you actu'ly saw her, then?" gasped Mrs. Treadle.

"I did. I sent Persilly there to watch last Lord's Day gone, but forgettin' her mother's words, she went with Janie Sharp to the Commons and got a lovely mess o' young mushrooms, what we had for lunch on Lord's Day evenin'. Well, 'you can't put old heads on young shoulders,' as Sister Sharp said, when I spoke severe like to Persilly for not heedin' my commands. So, yesterday, thinks I, I'll go myself and see what I shell see. I waited there an hour or so, an' was afeared I'd be too late to tend the Sabbath school; but then I thought how wrong it is to murmer an' meekly said: 'The Lord's will be done.' Immediately after sayin' this I commenced to sing 'God moves in a mysterious way,' an' after that, 'He leadeth me.' Says I to myself, 'If the Lord, in his mysterious way has led me here, I ought to be content to wait.' Then I straightened up a few items, sich as my grocery bill an' milk account, as I happened to take the little book along, thinkin' as perhaps I'd have to wait awhile. Well, after while I sees a figger comin' through the trees, stoppin' every now and then to gether up some blade o' grass, or posey; then watch the birds an' listen to their songs, feedin' them with crumbs an' seeds what she had in her pocket. She didn't see me till she was nigh unto my presence. 'My gal,' says I, 'is this the way that ye are breakin' o' the blessed Sabbath day?'

"A rushin fire burst from out her eyes an' she was about to speak; but all of a suddent then she dropped her eyes an' stood in front o' me in deathlike silence.

"'Come here, you ignorant gal,' says I, 'an' I will learn you the Savior's prayer.'"

"That was very Christianlike in you," interrupted Mrs. Treadle.

"I felt it to be my Christian duty," meekly acknowledged Mrs. Trot, "but the gal answered me that Sister Chester learnt her that a long time ago.

"'Well, then,' says I, 'all the worse for you if you don't practice on't. How ken you pray "Thy will be done," an' then come up here breakin' o' his holy Sabbaths by huntin' flowers an' sich?'"

"An' what did she say to that?" asked Mrs. Treadle.

"You could never guess, an' will be shocked when I tell you. She said she was not doin' as much devilment by getherin' flowers as I was by pryin' around an' watchin' her."

"That settles it in my mind, Sister Trot. I hev been thinkin' o' pointin' to that gal the evil o' her ways for long days past, an' now I hesitate no more. It is written: 'In the presence o' one or two witnesses every word shell be established.' That voice is from the highest heavens, an' him that has ears to hear, let him hear. Git on your bonnet, Sister Trot, an' don't despise the Lord's commands."

In less than half an hour afterwards a sharp ring was heard at the door of Shady Brook and was answered by Sybil herself.

She did not appear strictly amiable in her attitude toward the visitors, but asked them to walk in. "Mrs. Chester's gone out, an' will not be back for an hour, p'r'aps," she exclaimed, drawing forth a chair for each.

"It's not Sister Chester as we wish to see just now. We hev come to point out the dooty which belongs to you as a gal what has intruded on a Christian community."

Sibyl's eyes flashed fire but instantly drooped again.

"I hev hearn tell on't how you rail agin the Lord's pure Sabbaths an' despise his laws by getherin' plants an' sich, when you had better be upon your knees repentin' o' the sins o' your forefathers, to say nothin' o' your own blasphemies. I hev waited in times past for Sister Chester to admonish you, but the time is come when I ken wait no more. Speak out the truth, an' don't add sin to sin by utterin' falsehood in the

very face o' one who saw you in the act o' desecratin.' That face is Sister Trot."

No response.

"I rebuke you, not so much in my own behalf as fur the sake o' the sons an' daughters 'round about, though as Sister Trot can testify, my groanin's o' spirit has been severe enough."

Still Sibyl answered not a word.

"I trust the Lord'll be gracious to Sister Chester an' forgive her fur bringin' the calamity o' your presence upon the camunity o' Busy Homes"! continued Sister Treadle.

But that lady made a stroke in the wrong direction this time.

"One thing Mrs. Chester has learnt me, an' that is as it is wrong to parley with folks as is only fit for victims o' the lunytic asylum," answered Sibyl without a twinge of conscience in her voice.

"The Lord knows the workin's o' the brain!" shrieked Mrs. Treadle. "Sister Trot! what a vizable vindication o' that truth this is!"

Mrs. Trot was standing with arms thrown wildly up and looked as though she had suddenly been transformed into the statue of fury.

As for Sibyl, she calmly walked into another room and closed the door behind her. But soon the amazed ladies were brought partly to their senses by some loud and wonderful words. It was a new "pome" of Sibyl's:

"High ditty, ditty
Now what a pity
That women like this
Disgrace the city!"

Mrs. Treadle's hand was soon upon the doorknob. Mrs. Trot immediately followed suit, and the last words she was heard to say were these: "Sister Treadle! I wash my hands from humanity!"

Chapter XX. Within The Nursery.

"HERE I come, girls," exclaimed Mrs. Chester, bounding into the nursery and depositing a fresh bouquet in a vase upon the mantle. "Peep, Lily!" she laughed, bending over the cradle and pressing a kiss upon the little face. The wee hands instantly grabbed for mamma's sparkling eyes, whereupon mamma clasped them within her own, and lifting the little maiden upon her knee, called her "My spotless dove."

Mrs. Chester made it a rule to spend a part of each day visiting and frolicking with the girls. They were fond of contriving little surprises for her and just that morning she had received a note asking her to take dinner in the nursery at ten o'clock. The note was in Stella's handwriting and contained a postscript imploring Aunt Katharine not to disappoint them. Mrs. Chester dispatched a note in reply, saying that she would not disappoint them for the world.

So, when she entered the nursery at ten o'clock sharp, she found the feast ready, and Sibyl's best doll, Lily Katharine seated upon a high stool at the table, awaiting the arrival of the guest. This doll was the patient work of Sibyl's own creation, and while its features were not artistically designed, it received every attention due a respectable child, even down to the wash-rag, to which its ragged cheeks bore especial testimony.

The feast consisted, mainly of flowers and fern and spotted leaves, with here and there an apple for variety.

Mrs. Chester was stationed at one end of the table with little Lily on a high chair at one side and the solemn-looking Lily Katharine at the other. Stella sat next to Lily Katharine and Sibyl occupied the head of the table, as it was agreed that she should act the role of hostess that day.

Mrs. Chester remarked how good everything tasted and then asked the girls how they intended to employ themselves during the afternoon.

"I," replied Stella, "have promised Sibyl to take full charge of Lily, as she has something important to attend to."

Mrs. Chester smiled and looked interested in the direction of Sibyl, who met that look with an air of thorough greatness and answered it by saying:

"I'm busy writin' a childern's story. I've been workin' at it for a week or more. It's about a little boy what had a faithful dog. The boy fell in a pond and would a drowned only the dog pulled him out again. I'd like to make it 'pear how as the dog carried his master home," concluded Sibyl, passing a cup of water to her guest, "only I'm afeared as it 'ud tear the little feller's pants."

This was followed by a wholesome peal of laughter, which neither Stella nor Mrs. Chester could repress. Sibyl looked highly gratified and asked: "Do you like that as good as you did my pome, Mrs. Chester?"

"I believe I do. It may be that you will be a great writer sometime. Only, Sibyl, you must not work too hard and tire that busy brain of yours. You have much time yet."

Saying this she withdrew to her duties downstairs and the girls to their work of clearing away the table.

"There never was as good an aunt as Aunt Katharine," affirmed Stella, removing the cloth from the table.

"Nor never will be!" prophesied Sibyl, lifting the solemn Lily Katharine from her place of prominence.

(To be Continued.)

"A MERE dreamer never succeeds. It is your interpreter of dreams, your man who can translate visions into actualities, who has power with God and man. He who can put his dream into a poem, a song, a psalm of life, an invention, an interpretation of unfolding events, becomes the real ruler among men."

THE QUIET HOUR

SERMONETTE.—The Cloud of Glory.

CHAS. O. BEERY.

"Then a cloud covered the tent of the congregation, and the glory of the Lord filled the tabernacle."

WHEN did the cloud of the Lord cover the congregation of the people; and when did the glory of the Lord fill the tabernacle?

Read this entire chapter and you will find that the Lord gave to Moses most specific instructions in reference to the erecting and the furnishing of the tabernacle. After Moses had carried out these minute details of direction, the cloud of the Lord covered the tent and the glory of the Lord filled the tabernacle.

This chapter records more than sixty definite instructions given by the Lord to Moses; and Moses rendered strict obedience. "So Moses finished the work." "Thus did Moses: according to all that the Lord commanded him, so did he."

As we picture the congregation of Israel covered by heaven's glory cloud and their tabernacle filled with the glory of the Lord, let us bear in mind that God manifested his glory and his protective presence as a reward for faithfulness in obedience.

As a congregation of God's people, let us continue to yield loving obedience to his New Testament will that the cloud of the Lord may cover us from all harm, and that the glory of the Lord may fill these tabernacles of clay.

Because God so loves us and Jesus died for us, let us finish the work. According to all that the Lord Jesus commands us in his Word, let us do.

Tyrone, Pa.

JOINING THE CHURCH.

To join the church is the natural thing for a Christian to do. It is the public profession of faith in Christ. It is an effective way of letting one's light shine, and so of glorifying God and leading others to glorify him. It brings one into line with the forces of righteousness, and so encourages and strengthens those who labor to elevate humanity. It increases interest in the kingdom of God and in the means used to extend it.

Church membership is a strength to those who are in doubt, a relief to those in trouble, a comfort to those whose friends have been taken away. It is a reminder of our relation to Christ, and of heaven, our future home.—*American Messenger.*

THE SECRET.

Men wondered why, in August heat,
The little brook with music sweet
Could glide along the dusty way,
When all else parched and silent lay.

Few stopped to think how, every morn,
The sparkling stream anew was born
In some moss-circled mountain pool,
Forever sweet and clear and cool.

A life that, ever calm and glad,
One melody and message had—
"How keeps it so," men asked, "when I
Must change with every changing sky?"

Ah! if men knew the secret power
That gladdens every day and hour,
Would they not change to song life's care,
By drinking at the fount of prayer?

—James Buckham, in Wayside Altar.

THE BEAUTY OF THE CHRIST-FILLED LIFE.

CLARENCE SCHROCK.

THE true Christian's life is a very beautiful one. But the lives of all professed Christians are not beautiful, and this is because they are not Christ-filled as they should be. It is a sad fact, but true nevertheless, that many professing Christians do not have the real Christian spirit at all. This ought not to be. What a dark picture of Christianity such lives are before the world. They are anything but beautiful.

But the Christ-filled life is truly beautiful. It possesses a beauty that is enduring, a beauty that even the most worldly-minded creature cannot help but see.

Christ's life was a life of love. Who can measure the great love of Christ for humanity?—a love so great that he spent his whole life in service for the good of others, and at last died a most cruel death, all for the same purpose. Oh! the depths of such love, the beauty of such a life! Was it not a model life? Surely it was.

Even those who profess infidelity speak of Christ's life as a model one. Can they say the same of your life and mine? If we are Christ-filled, as all Christians should be, our life like his, will be one of service, a life of self-denial for the good of others. What else can Christ mean when he says, "If any man will come after me, let him deny himself, and take up his cross, and follow me"? The individual who lives for self, has not yet learned the alphabet of Christianity.

Our lives in order to be useful and beautiful, must,

like our Savior, be spent for the bettering and uplifting of our fellow-beings.

The Christ-filled life is one that is filled with good deeds and kind acts. It, like Christ's, must be filled with love, kindness, meekness, and a forgiving spirit. It is a life that can sympathize with others.

Oh, how many souls are dying for want of human sympathy. In this fast age, when the great bulk of humanity is rushing blindly on, thinking only of self, what a blessing it is to meet, amid the vast throng, someone, who takes the time to extend a helping hand to some downtrodden, sorrowing individual! Such was the life of our Savior, and such are the lives needed to-day.

Our lives should be Christ-filled to overflowing. They should be filled with such great love for others, that we would willingly deny ourselves of anything for the good of another. O, dear reader, if you would possess the beauty of the Christ-filled life, let your life be filled with love, let it be filled with kindness, and ever be ready to extend a helping hand to the fallen, and shed a sympathizing tear with those in sorrow, and your life will be the means of helping others heavenward.

Such was the life of Christ. Is it not a beautiful one worthy of imitation ?

Beattie, Kansas.

THE WORLD'S WISDOM.

For the wisdom of this world is foolishness with God. —1 Cor. 3: 19.

To be wise in the ways of the world—this is the great ambition of millions of men and women. They imagine foolishly that the acquirement of worldly wisdom is a passport to the things they most desire. Laboring under this delusion, they attempt anything that will advance them in the surface estimation of others. And the end of such persons is always the same.

They fail, and are disappointed.

They take the wrong path to happiness or contentment. The road that leads to these desirable places is marked by a signpost that reads : "The Wisdom of God."

But is it possible for any human being to be a partaker of the wisdom of the Almighty, the Creator of the universe and all that therein is ? Are we not so far below his omnipotence as to be utterly incapable of in any measure sharing his power—for wisdom is power ?

Are we too far below him to enjoy the things he has given for our comfort and well being ? Are we too far below him to be his children ? And may not the children be partakers of that which is the Father's ?

It is here we make the mistake. Too often do we belittle ourselves. Too often do we account ourselves as nothing in his sight. We are made in his image, according to his word. We are entitled to dwell with him in some world to come. Why, then, should we not be eligible to some share of his wisdom here and now ?

There is no good reason, for the simple fact that we are thus eligible.

The wisdom of God is righteousness, and what man or woman is not capable of being righteous, and what one, being so, is not making use of the wisdom of God ?

It is because we cannot, or do not, see beyond the narrow confines of this life that we think of ourselves as capable of thus enjoying the attributes of Divinity. We count those things of greatest value which have to do with our temporal and physical welfare, when, in reality, they are but means to an end, and that end always righteousness. We see the fleshpots and think our knowledge of them will be of vast use, overlooking all the while the greater things of the spirit, which is immortal, and neglecting the very virtues and efforts that will lead us to a place far above anything that is to be gained by this ceaseless quest of the material and tangible.

The best of all our possessions are intangible. Love, friendship and brotherhood are beyond the touch of hands or the sight, but they exist in such strength as to regulate us in the most important of our affairs. The really strong things of life after all, are those which are without the physical grasp. As a rule, those within the reach of the human hand fade and dwindle away the nearer we approach to their possession, while those of the spirit grow more beautiful and to be desired as we approach them.

And so the first thought of each day should be to add to it some measure, however small, of the wisdom of God—the righteousness that lies back of all he has done and all he is doing for this world. Life is replete with opportunities for the obtaining of this —they spring up around us like wild flowers in the country on a summer day—and, if we neglect these opportunities, we fall short of our possibilities in the line of spiritual and eternal development.

To know the things of the world is right and necessary, so long as we make use of this knowledge in the bettering of our own lives and those of others, but to think that the sum of such knowledge will entitle us to the full benefits of this earthly experience is to dream a dream that is as false as it may at times seem fair.—*North American.*

The common problem, yours, mine, every one's
Is not to fancy what were fair in life,
Provided it could be; but, finding first
What may be, then find how to make it fair
Up to our means. —Robert Browning.

THE INGLENOOK

A Weekly Magazine

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

ON THE WRONG TRACK.

Last week on another page we noted the action of the National Education Association when in the closing session of their meeting in Los Angeles, Cal., they passed a resolution declaring that the American youth is growing up wrong. The charge is a most serious one and concerns us not only as individuals, but as a nation. The grounds for the charge should be closely studied and if they are found to be upheld by actual conditions, it is high time to be doing some pruning and training.

Four points are mentioned in the charge, all more or less related and any one of which, if true, is of sufficient importance to justify the action taken. By way of an introduction for a more thorough individual study let us notice these points briefly. First it is declared that among our children there is a tendency toward a disregard for constituted authority. That is, the children of the United States do not have the proper regard for that power which would direct and control them in many of their relations with each other, and for those who exercise that power. We will have to depend largely on personal observation to test this statement, but we can take a look at present conditions and see whether they in any way may give rise to, or encourage, such a tendency.

The first thing to meet us in this study is the stubborn fact that many people who enjoy almost unnumbered blessings and privileges in our land have no use whatever for "constituted authority," and on all occasions preach the doctrine of unrestrained license. Their influence is bound to leave an impression on the plastic minds of the children who so closely study and copy the grown-ups around them. But we cannot leave all the blame here, for not all our children come under the influence of the out-and-out anarchist. The subtle works of the citizen who preaches loyalty to constituted authority and at the same time puts into practice the most dishonest schemes for circumventing the government, is, I believe, a greater influence in molding the mind of the American youth. And in this connection we dare not go outside the family where God-fearing fathers and mothers, in their dealings with the government, observe a very different, and questionable, standard of honesty from that which they use as between man and man; and where those in authority are mercilessly criticised, in season and out, even in the insignificant details of their duties.

Considering these three agents and the power of their influence compared with that of the genuinely loyal citizen, without waiting for the result of our observations, we must conclude that the National Education Association has either expressed the true condition in a very mild way, or that our children are all of the "backward" kind,—exceedingly slow in taking up the pernicious teaching that is being drilled into them in so many ways.

The second accusation is that there is a lack of respect for age and superior wisdom. The third, a weak appreciation of the demands of duty. The fourth, a disposition to follow pleasure and interest rather than obligation and order. All these are either natural and inevitable outgrowths of the first or together produce it. At any rate they are inseparable. The spirit back of all may be easily expressed in the one word, disobedience,—that which has wrought havoc in families and nations ever since the world began.

The condition is one that demands a remedy if we are to preserve our homes and our nation. We should seek the wisest way of applying it and be careful that we do not go far afield in our endeavors to hunt out the guilty parties. It is a manifestation of the eternal principle of a thing producing after its kind,—of reaping as we sow.

LEARNING TO REST.

We pride ourselves on our many accomplishments, but it is an evident fact that few of us have mastered a very important one, and that is, how to take a rest so that we shall not do violence to the real meaning of the word when telling some one of the feat. At this season of the year, when workers are returning daily from their rest, so-called, with about fifty per cent less energy and zeal for their work than when they went away, the fact of our failure is bound to force itself upon us.

The cause and the remedy are things that ought to be sought out, and it is with the hope that some thinking may be done to this end that the reader's attention is called to the matter.

In the first place, everyone, speaking for himself, is in need of a rest. Whether this condition is due to the actual strength-consuming nature of our work, or to the way in which we have gone about it, or the numberless detractions of this complex life, we shall not presume to decide or even stop to discuss.

The facts are that we are all tired out, we want to get rested, and we, seemingly, do not know how.

The first step is plain enough and most of us make no failure in getting that far,—we must let go of our work, or of the thing that tires us. The second step is not so easy and few are able to take it with any degree of success. That is, to lay hold of nothing having the nature of the former work in its power to weaken. This is where the mistake is generally made. The one who would recuperate seeks a diversion which proves to be work instead, robbing him of the little strength he had. The question demands that we be so well acquainted with ourselves that we can judge beforehand of the effect of any course sought for recreation.

But perhaps we are not so ignorant or lacking in judgment as conditions would seem to indicate. It is my honest opinion that we miss the supposed mark wilfully, in most cases. That we seek to have a "good time," however the reaction may affect our work, instead of seeking that which will put us into better condition to pursue it. It seems a rather uncharitable conclusion, but it is about the only one left us when we see intelligent men and women returning from their vacation with no ambition to take up their work again. Where the conclusion is the right one the remedy, of course, is a new heart, giving rise to better and higher motives.

FROM MY OFFICE WINDOW.

Owing to the fact that the passenger traffic between Elgin and Chicago is of considerable importance, with several lines bidding for the trade, the railroads go to extra trouble to accommodate their patrons. Trains are made up here which make the trip regularly at the time of day when there is the most travel. Many people prefer the through trains, but when these are delayed for any cause the locals are taken advantage of. At certain times of the day when through trains are scheduled to run there are no regular locals. In this case if the through train should be much behind time an emergency train is made up to carry waiting passengers.

The event of this train taking the place of another that has failed to meet its obligations reminds one of similar instances in other lines of activity. The resistless, on-rushing sweep of affairs these days shows little sympathy for the one who is behind time. Some have found out to their keen disappointment that other things besides time and tide have the faculty of leaving the straggler in the lurch. A certain work is planned and then carried to completion in this way or that, according as skilled workmen can be secured. At all events it is finished, and he who is not on the ground at the proper time and thoroughly prepared to do the part expected of him is soon made aware of the fact that his load is "being taken in on another train."

We hear a great deal of talk about filling *our* niche, as if we had a patent right to a certain amount of work with the credit and all else belonging thereto, no matter how much we might dillydally in the performance. There is a place for all of us, it is true, but it is ours only on condition that we are ready to fill it at the opportune moment. It is ours not by inheritance but on condition of our worthiness.

This is the only safe method by which the world's work may move forward unhindered, and the only fair method by which its perquisites may be distributed. It gives zest and attraction to the most dull tasks and is the unfailing source of inspiration to the true worker.

Our work is to do what is before us to be done, and it is none the less ours because some one else has failed to do it.

WORTH REPEATING IN THIS ISSUE.

War is the concentration of all human crime, the essence of cruelty, the direct relic of barbarism. The description of what is called a battle is but that of murder and hell.—*William L. Judy.*

Should the world declare you wrong,
Never heed.
If your cause is true and strong,
Sow your seed;
On life's stage act well your part,
Serve your God with honest heart;
But give over, from the start,
Pleasing everybody.
—Richard Seidel.

Our lives in order to be useful and beautiful, must, like our Savior's, be spent for the bettering and uplifting of our fellow-beings.—*Clarence Schrock.*

Oppressive silences enfold
The songless wood and sleeping world,
When noontide spills, along the hills,
Her lavish largesses of gold.
—Richard Braunstein.

As a congregation of God's people, let us continue to yield loving obedience to his New Testament Will that the cloud of the Lord may cover us from all harm, and that the glory of the Lord may fill these tabernacles of clay.—*Chas. O. Beery.*

I wouldn't stop to think of any smirch on myself, if I could give a happy answer when God asked if it was well with the child.—*Hattie Preston Rider.*

If we learn rightly to understand and use industrial education, it will be really the foundation for our book education.—*Ida M. Helm.*

Echoes from Everywhere

A FRENCHMAN has patented the idea of using an egg-shell for an incandescent mantle with the acetylene flame. He literally uses the egg-shell. It does not shatter or break and gives forth a soft, pleasant light. The only preparation needful is to make a hole at each end of the shell and place the shell in position with the burner inside. The burner head throws out lateral flames which impinge on the interior of the egg-shell.

UNDER the recent law passed in Norway women have been granted the parliamentary franchise on the same condition that it was previously granted to them in municipal elections; that is, to every woman twenty-five years old who is taxed on an income of $113 in cities or of $84 in rural districts. This practically assures the attainment of universal suffrage by adult representatives of the female sex in the course of a few years. The new law will give full suffrage to about 300,000 women.

THERE has recently been invented a machine for boring into rock and making tunnels in an extraordinarily rapid way. In addition to the rapid opening of ground for the more economical development of metalliferous veins, it will remove the necessity for the present expensive work necessary in many instances to provide outlets for the water. This machine, it is claimed, will cut a hole eight feet in diameter and make five feet per hour. It is claimed that it will cut from twenty-five to eighty lineal feet per day of twenty-four hours.

PARIS is experimenting with what is called steel pavement. It is really a concrete pavement reinforced with a steel framework. The metal part of the pavement is a plate of perforated steel with strong bolts of steel running through it between the perforations. Each section has some resemblance to a steel harrow, only the prongs project equally on each side and they are square and blunt. It will be superior to asphalt in ultimate economy and to wood both in the better footing that it affords to horses and in the fact that it will not admit of dangerous ruts developing. The sample laid cost $5.40 a square meter (a little more than a square yard), but when the work is done on a large scale it is believed the price can be cut to about $4.50.

THE Bowery savings bank in New York made an unprecedented showing for a savings bank when the deposits reached a total of $100,000,000. The president of the bank stated that the enormous increase in deposits in savings banks indicated in the most gratifying manner the continuance of the great national prosperity and the subsidence of the suburban real estate speculative fever and return to normal conditions for security of their earnings on the part of the masses, to whom savings bank security and the six per cent interest made the most attractive proposition for the thrifty and conservative element.

WE shall have to cease laughing at the man who makes extravagant assertions as to what may be accomplished by the inventive world in the future. Jules Verne's story, "Around the World in Eighty Days," aside from making interesting reading, was considered an absurd improbability. Less than two months ago a man named Lieut.-Col. Burnley Campbell landed at Dover at the completion of a trip around the world which occupied forty days and nineteen and one-half hours. Good connections throughout the trip favored the traveler or several more days would have been required.

THE Boston school committee has approved the recommendation of the superintendents to establish with the next school year a girls' high school of practical arts with a four-year course, conditions for admission to which will be equivalent to those of the regular high schools. The theory of this school is to give opportunity to those pupils whose talents lie in the direction of doing and expressing rather than in acquisition. On the academic side courses will be created in English, history, art, modern languages, mathematics and science, but those will be treated in their relation to some practical line of work. On the industrial side the school will be divided into two classes, one for those seeking to become homemakers, and the other for those who aim, at least for a time, to be self-supporting. For the first class emphasis will be given to all phases of domestic science and arts, and for the second a foundation will be laid in some distinct taste, so that the pupil may be able to enter upon the higher form of the various women's industries.

William Crittenden, of California, who was the first student under the Rhodes scholarship to reach Oxford, Eng., and also the first to finish the full course, has returned home, having finished the three years' course in two years. He speaks in the highest terms of his treatment by the Oxford students and the English people generally.

July 22, the steamer *Columbia* on its way from San Francisco to Portland, with two hundred and forty-nine people on board, was run into by the lumber-laden schooner *San Pedro* and was so disabled that it sank in a few minutes after being struck. The collision occurred about midnight when many of the passengers were asleep. A number, mostly men, made their escape from the sinking vessel, but the captain and perhaps fifty passengers were lost. The accident occurred within the fog belt.

The *Scientific American,* of July 20, describes a new process for photography in colors which has been brought out at Paris by Messrs. Auguste and Louis Lumière. They are able to take a photograph in colors upon a single plate and in an ordinary camera, with exposures of one second or less. The work is done by the use of a specially prepared plate. The new process marks quite a step in advance, and color photography will no doubt come into extensive use. Besides the great interest for amateurs, it will render service in the different sciences.

July 21, in an address before the Chautauqua assembled at Chautauqua, N. Y., C. F. Aked, the "imported" pastor of the Fifth Avenue Baptist church of New York, questioned the right of any one to live in luxury while others starve. He said, "Our lives are wrong, if we are living for ourselves, thinking, planning, toiling, accumulating, enjoying, for ourselves." Such utterances, coming from one so influential, ought to put to thinking not only the oil king, who is a member of the Fifth Avenue church, but others who spend their lives in ease while others toil and yet never get beyond the reach of want.

The enforced abdication of Corea's emperor, by which Japan assumes control of that country is thought to be a fortunate affair for the hermit kingdom. It is said that the system of government was so antiquated and the methods so obsolete that it was impossible for the nation to prosper. In taking over the control of the country Japan has acted with great moderation. Owing to the fact that she has few soldiers in Corea at present, there are likely to be disturbances for some time until she can get matters well in hand. China is the only country that will be uneasy over the change, but she will be afraid to say anything.

The American Shipbuilding Co. recently has completed at Lorain the largest dry dock on the Great Lakes, which also is among the largest in the world. The Lorain dry dock is seven hundred fifty feet long and one hundred twenty-five feet wide. It will accommodate two boats at once, and with few exceptions could dock the largest ocean boats. The ocean dry dock at Newport News is one of the largest in the world, and is only one-seventh larger than the Lorain dry dock. The ocean dry dock is eight hundred sixty feet long and one hundred sixty-two feet wide. The Lorain dock will take the largest boat upon the Lakes. Recently the dock held two large boats and a tug at one time.

Some of the new laws that went into effect in Texas a few days ago are as follows: Permitting medical colleges to deal in human bodies. Prohibiting cock-fighting. Making it a misdemeanor to drink intoxicating liquor on trains. Prohibiting free passes or franks of any sort. Creating an eight-hour day for telegraphers and full train crews. Abolishing negro school trustees. Requiring insurance companies to invest seventy-five per cent of their Texas earnings in the state. Taxing those who sell pistols fifty per cent of the gross earnings on all their business. Closing brokerage houses, exchanges and bucket-shops, as the law does not permit wire service to them. Requiring five days' notice of liquor license applications, thereby making saloons sell at their own risk for the next few days.

The cry of the pessimist that we are on the eve of a period of hard times would seem to be without any foundation whatever. In regard to money necessary for the movement of the season's crops, it is gradually dawning upon the financiers of the east that the interior is able to take care of itself in this regard. Western banks and trust companies have for a long time been loaning money in the east. People have come to understand that stringency in Wall street does not indicate a scarcity of cash for legitimate operations. The approach of the presidential campaign will doubtless have a dulling effect upon trade, but hardly more than usual.

Mrs. Barnett's "Wandering Boy"

Hattie Preston Rider

In Four Parts. Part One.

AT the doorway of the handsome reception-room Aunt Hetty shrank momentarily back, screening herself behind her niece's tall, stylish figure. But the timidity passed. With quiet dignity she followed Alicia under the carved arch, and presently found herself seated in the angle of a cosy corner. Half a hundred curious eyes had observed her; but she missed the fact, for, as she leaned back in the gilded chair, a lady rose to read a report of the temperance work in some foreign field of unpronounceable name. Aunt Hetty folded her work-worn hands, and let her beauty-loving eyes rove over the rich furnishings about her. Twice a month, back in Riverdale, a dozen mothers met to discuss household ways and remedies for childish ills, from croup to playing hooky. All who had tots too tiny for the school-room, brought them. Aunt Hetty glanced half-yearningly, half-humorously, over this gathering, which Alicia had designated a Mothers' Club. What a menagerie a lively baby would have constituted, in their elegant midst!

The temperance report drew to its close. Several others followed. Then Aunt Hetty saw the president, a bright-faced young woman, rustle down from her chair of state and approach the piano. Some one struck a few chords, and a rarely sweet soprano voice began the familiar air:

> "Where is my wandering boy to-night,
> The boy of my tenderest care,
> The boy that was once my joy and light,
> The child of my love and prayer?"

As the second stanza began, Aunt Hetty's lips set themselves in a hard line of self-control, oddly contradicted by two big tears that welled up in her keen, blue eyes. The only boy her warm heart had ever mothered was safe from all that the song set forth. His curly head had lain under the daisies these thirty years. But as the liquid notes of the singer floated through the rooms, queer, rebellious thoughts sprang up in Aunt Hetty's soul. Conscientiously she tried to hush them, however, as discourteous to those whose guest she was.

A social hour followed the program. Directly Mrs. Barnett, the president, walked over and clasped Aunt Hetty's hand warmly.

"I saw you come in," she said, brightly, "I wanted to know you right away. Do you believe me, it seemed as if I had been waiting for you. Was it not odd?"

The president's laugh was unconventional and sweet as her face. But she looked at Aunt Hetty with a curious eagerness that brought a faint color into the elder woman's cheek.

"It's dear of you to say that, my child; and I've been wanting to thank you for your beautiful singing."

The president slipped into the chair Alicia vacated.

"How did you like the program?" she asked. "We get so accustomed to the round, it is often helpful to know how they strike one just coming in."

Aunt Hetty, suddenly remembering her late reflections, felt a guilty twinge.

"The readings were very interesting;"—she hesitated. "But in our little Mothers' Circle at home we always bring the children. Maybe 'twas that made it seem different. And—"

"And you missed them," the president suggested, sympathetically. "But these mothers are more free to give their minds fully to any subject, than if children were about. Besides, I think all who need them have competent nurses."

Aunt Hetty's eyes grew dark.

"There's no one able to take care of the child like its own true mother!" she declared, warmly. "Some mothers I know, though, are only half acquainted with their children. Why, when you were a-singing, I couldn't help but think—"

"Well?" prompted the president.

"I couldn't help but think why didn't that mother whose heartache was giving us all we could do to keep from crying, just begin when her boy was little and pure to make home so pleasant he wouldn't want to go to those other places, and bring him nice boys to have a good time with. I thought I'd have gone after him myself instead of sending somebody else, and made him so interested with me he couldn't have stayed away."

Two red spots came into the president's cheeks.

"I know. One feels as if there was absolutely nothing one would not do, in such a case. But that is emotion. When it comes to actual doing, it is quite different—I'm honest, you see,"—with a little laugh. "If your boy went to a place such as the song suggests, you could not really go and fetch him away. One must keep one's own garments unspotted."

Aunt Hetty shook her head.

"I wouldn't stop to think of any smirch on myself, if I could give a happy answer when God asked if it was well with the child."

A swish of silken garments and a gay voice interrupted them. But the look that flashed for an instant across the president's face cut Aunt Hetty's tender heart like a stab. Had she been too frank in her impersonal criticism? The fear sent her off on a remorseful quest, from which she returned to earth only as Alicia and she were walking with a dozen others to the street corner for the car. There were gossips even in the Woodlawn Avenue Mothers' Club, it seemed.

"Mrs. Barnett always seats herself for the best light on her complexion!" half-laughed, half-complained a sallow member. "She looks ten years younger, in that new suit!"

"Well, anyway!" retorted the speaker's bosom friend, casting a glance of challenge round the group, "if I had a boy like hers, I'd choose something different for a solo, even if I could not sing it with such melting pathos!"

There was an embarrassed silence. One or two giggled. A few frowned. Then the car rumbled up; Alicia, catching a glimpse of Aunt Hetty's face as they climbed aboard, wondered at its expression of blank dismay.

Next morning as Alicia handed her husband his coffee across the breakfast table, he laid down his paper with a shocked exclamation.

"That young Barnett was shot last night in a club-room row!" he announced. "Here's an account of it, with big headlines!"

Alicia turned pale. Aunt Hetty, unfolding her napkin carefully over her lap, sat upright with eyes of incredulous horror.

"Not killed?" Alicia asked, in a shaken voice. "And in such a place! Ralph is the brightest boy I know."

"'Received Bullet Intended for Companion,'" read her husband, taking up the sheet again. "'Shooting Result of Quarrel Over Cards. Victim Carried Home Unconscious.'"

Alicia drew a breath of relief.

"It may be a warning to him, if he recovers."

A quick frown creased her husband's forehead. "It might be a warning to parents to keep their boys out of such places," he replied.

Alicia looked hurt, for the instant.

"How are you going to manage that, Will? I don't know what I should do if we had boys; but surely one couldn't lock them up."

"It would be better," he insisted, grimly. Then glancing across at Aunt Hetty, who was still regarding the big headlines very much as if they were to blame for the calamity they chronicled,—"Wouldn't you try that, aunty?" he asked, with sudden quizzical, affectionate lightness.

"There's one way of locking them up," she answered, with a tremulous laugh.

He nodded understandingly.

"Aunty shall have supervision of the lads, if they ever need it," he declared; adding soberly: "You'll call at the Barnetts' to-day, Alicia?"

His wife shook her head.

"There are the Children's Home bills to audit; and I've an appointment at Madame Hoye's, I'll run over as soon as I can manage. They have so many friends."

All that miserable forenoon, Aunt Hetty roamed restlessly about the house, the president's sweet, hungry eyes haunting her like a ghost's. After luncheon, she declined Alicia's invitation to the modiste's. Late in the afternoon she slipped on her wraps and walked half-guiltily down the avenue toward the number given under those black headlines in the morning paper.

418 Algona Ave., Elgin, Ill.

* * *

MOTHER LOVE.

Take the glory of the conquest and the grandeur of the morn,
The splendor of the triumphs out of toil and patience born,
The beauty of the cities and the armies of the just
Moving down the golden valleys to the victories of the dust—
But the mother love that wraps around a wayward child its wings
Is sweeter than all triumph and is stronger than all kings!

The mother love is patience bearing all the years of care,
With faith to take the burden up and strength to lift and bear;
The mother love is warder of the rosy gates of life,
With kiss good-bye to little ones who go to face the strife,
And arms of old endurance waiting there to clasp and greet
The loved who wander back again, the lost with weary feet!

The mother love is gentleness that mellows through the years,
With lips to kiss the brow that aches and song to stay the tears;
The mother love is tireless in the vigil that it keeps
To guard the couch from danger where the bloom of love-hood sleeps!
Oh, wayward, weak, and weary, and ye who walk in sin,
Be sure the heart of mother love will ope and let you in!

—Baltimore Sun.

A BOY'S SISTER.

An elderly lady and two young girls walking together on the street one day, met a boy known to one of the girls. Stopping to speak to him for a moment, she introduced him to her friends. When they had bidden him good-afternoon and passed on, the lady remarked:

"I think that boy must have a very nice mother and sister."

"He has. Mrs. Lee and Nellie are both lovely; but how did you know?" replied the girl in surprise. The lady smiled. "I did not know it, but I guessed it from his manner. A boy who is snubbed at home does not act like that one when he is out. Only home kindness and courtesy and a training that love gives can make a boy such a frank, easy, well-bred gentleman," said she.

The girls looked at each other for a moment, and then one voiced the thought of both.

"I'm going to be careful how I treat Ned after this. If people are going to judge me by him, I'll have to be on guard; and I know you are right about it. There is Will T——. When you speak to him he always shuffles his feet and puts his hands in his pockets and hangs his head and stammers. His sister is always chasing him out of her way and scolding him, and her mother acts as if she were ashamed of him, and sends him off out of sight when there are callers. I earnestly believe he would be as nice as Rob, too, if he only had the same chance."

"Quite likely," said the other girls. "I know he is good-natured and bright, when he forgets to be awkward and embarrassed. I think I shall have to look out, too, and make sure that my little brother is a living demonstration of my amiable disposition," and, though she laughed as she spoke, under the laugh was a tone of real earnestness.—*The Classmate.*

SELECTED HOUSEHOLD HINTS.

To Keep Shoes New.—Wipe off all dust, then wash the shoes in milk. When the milk dries, polish with a dry flannel cloth. This will keep them new and soft and they will not crack.

To keep overshoes looking like new, and make them wear longer, wash thoroughly, and when dry, apply a little vaseline and rub briskly with a soft cloth.

A good home-made fire extinguisher is easily made. Three pounds of salt and a pound and a half of sal-ammoniac, thoroughly dissolved in a gallon of water, and kept in well-corked bottles, will speedily put out any sudden blaze.

To rid the kitchen of flies, take a small stove shovel; just heat it red hot and pour over it a few drops of carbolic acid, having closed the doors and windows. In a few minutes open the room and the flies will be found to have disappeared entirely. Only a faint odor of the fumes of the carbolic acid will remain, which will serve to prevent the flies from again congregating.

When a sink becomes greasy, especially one of those made of glazed ware, instead of spending hours of labor in endeavoring to clean it, put a little paraffin oil on a piece of flannel, and rub the sink with it. It will remove all grease, thus saving much time and labor. The smell of paraffin can be removed by washing with hot water and soap, and then flushing with cold water. At the same time this will also clean the pipes.

Breakfast Food.—Soak over night a heaping cupful of oatmeal in two cupfuls of cold water, salted to taste, and in the morning a few minutes' cooking in a double boiler will produce a thoroughly cooked, nicely flavored breakfast food.

Ice Cream Substitute.—Take two or three eggs, beat them well up in a basin; then pour boiling hot tea over them. Pour gradually to prevent curdling. It is difficult for the taste to distinguish it from rich ice cream.

TO DRIVE AWAY MOSQUITOES.

When retiring for the night take with you a leaf of the castor oil plant *(ricinus communis)*. After bruising it to bring out the odor, wave it a minute or two about the room to get the air filled with the odor, which is disagreeable to mosquitoes. They soon will disappear; not to return that night.

This plant is grown by many families for the beans, and the new variety, zinzibarensis, is one of the most decorative plants for the lawn, besides being equally effective for mosquitoes.—*Chicago Tribune.*

The father and mother of an unnoticed family who in their seclusion awaken the mind of one child to the idea of love of perfect goodness, who awaken in him a strength of will to repel all temptation, and who send him out prepared to profit by the conflicts of life, surpass in influence a Napoleon breaking a world to his sway.—*Wm. Ellery Channing.*

For the Children

WHICH WAS THE COWARD?

This story has been told to a good many children and there is a great deal of difference in the answer to the question. It remains to be seen what the *Northwestern* children think.

Bessie and Bertrand were twins. They came into the jolly old world on the same birthday. They had known their father and mother for exactly the same number of years. They had learned to read out of one book, and learned to write sitting sole to sole on the floor with one big slate laid down on their flattened knees, and two lines of "copy" carefully written facing two ways from the middle of the slate. Bessie was such a loyal sister that she always wanted to copy Bertrand's line, and it took a good deal of careful explanation on mother's part to convince her that if she copied Bertrand's line instead of her own, hers would be "down side whoppermost" as funny Uncle Godfrey called upside down.

One time the twins fell into a deep part of the creek together and poor Bessie came near being drowned. That forever—or the biggest end of forever—spoiled Bessie's liking for the water, but Bertrand was just as bold to wade in and take impromptu baths as he had been before the accident.

One day mother sent the two on a very important errand. They were to take a letter to Aunt Maggie's, and in return Aunt Maggie would give them a very important letter to bring back. It was to be pinned in Bertrand's pocket but he and Bessie were to be equally responsible for it.

"You can cross the creek down by the old log, children. I was there yesterday and the water is very low. Some of the stepping stones are quite dry. Take hold of Bessie's hand, if she wants you too, Bertrand; and Bessie, if brother says it is all safe try to be a brave little girl and not cry. Mother would not send you if it were dangerous, and children who live in the country must get used to creeks and cows and snakes and wasps and thunderstorms. City children have other things to be afraid of and to get brave about. But these are our battles."

So the twins set out while the dew was still on the grass. They had doughnuts and apples in a little pail, for the walk was long and they were to start home as soon as Aunt Maggie's early supper was finished. Then they would be on familiar ground long before it began to grow dusk.

Hardly had they got safely to Aunt Maggie's when a great thunderstorm came up and it rained hard most of the day. But before the middle of the long afternoon the sun came out hot and the wind was strong, so that the road was pretty dry, and the children could set out safely on their return home.

All went well until they came to the creek when, lo and behold! the stepping stones were all under water and one end of the old log which had been high and dry in all their memory of it was floating. Bessie stopped with a little cry of dismay, and her face turned quite pale. "I can *never* cross," she said. Bertrand coaxed and scolded by turn but the child stood resolutely on the bank, her knees shaking under her. "I tell you, Bertie, I *can't!* I should fall right in," she said piteously.

"Let me show you something," said Bertrand who was a regular water nixie. Off came his coat, his shoes, his stocking, up above his knees he rolled his pants and in he waded, carefully it is true, but without any fear and waded clear across to the other side. Then he came back. "Will you go now? And hold my hand?"

They debated the matter for a long time and at last one argument won—mother would be frightened if they did not get home on time. Bessie would suffer anything rather than make her mother suffer, so off came her shoes, and stockings, and skirts tucked up, holding tight to brother's hand, tears rolling down her cheeks and in danger of falling through sheer fright, the little girl made the trip safely. Then they stopped to dress again.

Suddenly Bertrand dropped his coat with a shriek. "There's a snake in it! A snake in it! A snake in it!"

Sure enough, while the coat lay on the bank a little snake that had had his home under one of the stepping stones near the edge of the creek, spying the dark pocket, slipped in it to be high and dry from intruders. Startled by the motion of the jacket being carried across the creek he had coiled himself up more tightly in the snug little pocket and it was his first endeavor to poke his head out that revealed him to the boy.

The children stood respectfully away from the jacket and waited for Mr. Snake to come out. They poked with a stick, starting back with little shrieks, but Mr. Snake thought too much of head and tail to have them severed. So he stayed in the dark and sniffed doughnut crumbs.

All of a sudden Bessie looked at the sky. "It's most milking time," she cried. We've *got* to get home and that snake's *got* to get out of there!"

"Let's leave the old thing and send father after it," suggested Bertrand.

"But that letter is in your pocket, and it has money in it and someone might steal it."

Resolutely Bessie started to pick up the coat whereupon Bertrand set up a regular howl. "You'll get poisoned! You'll die!"

But Bessie set her face like a flint. She picked up the coat by the tail and shook it vigorously, at the same time giving it a fling away from her. Mr. Snake fled in dismay and hid himself in the long grass. Bertrand positively refused even then to touch the coat and Bessie carried it all the way home. She felt shivery, and two or three times thought she felt snaky touches on her hands and arm, but they arrived safely, boy and jacket and money and all.

Now *you* tell—which was the brave one of the twins? That settled, we need say nothing about the coward.—*Northwestern Christian Advocate.*

THE RURAL LIFE

THE MAN AND HIS WORK.

I haven't much faith in the man who complains
Of the work he has chosen to do,
He's lazy, or else he's deficient in brains,
And—may be—a hypocrite, too.
He's likely to cheat and he's likely to rob;
Away with the man who finds fault with his job.

But give me the man with the sun in his face,
And the shadows all dancing behind;
Who can meet his reverses with calmness and grace,
And never forgets to be kind;
For whether he's wielding a sceptre or swab,
I have faith in the man who's in love with his job.

—John L. Shroy in Lippincott's.

THE "OLD NATIONAL ROAD."

JOHN H. NOWLAN.

In these days of hard road agitation, we are apt to look upon the subject as of recent origin. Such is far from being correct.

When Washington marched with Gen. Braddock to that fatal field he realized that settlers were necessary to hold the Northwest Territory, and to get settlers to emigrate, better roads were needed.

Throughout his life he adhered to the dreams of a highway reaching and penetrating the great Northwest, but nothing practical was done till seven years after his death.

When we gained possession of Louisiana Territory, the government realized that something must be done to bring the parts of the country nearer each other if the West was to be held for the nation, for a dissimilarity of interests and non-intercourse lead to separation.

Threats of a Southwestern confederation was one of the causes which led to the acquisition of Louisiana, the settlers south of the Ohio demanding a free outlet to the ocean by way of the Mississippi.

Soldiers of the Revolution and other wars were given lands in the Northwest Territory as remuneration for services, and something had to be done to encourage them and other loyal persons to settle there.

Congress made appropriations for a road, known officially as the Cumberland Road, to extend from Cumberland, Md., to the Mississippi at E. St. Louis, a distance of about seven hundred miles.

The road was to reach a point on the Ohio somewhere between Grave Creek, near Wheeling, and the northern limit of Steubenville, the state of Pennsylvania stipulating that it pass through Washington, Washington Co., and Uniontown, Fayette Co.

In 1806 work was begun under the supervision of engineers of the regular army. It was built in as nearly a direct line from one to another of the four points mentioned as the contour of the country would admit.

West of the Ohio the country was more nearly level and the course was straighter, the only points fixed by Congress being the state capitals of Columbus, Indianapolis and Vandalia. The road was, however, only fully constructed to Vandalia, Ill.

Congress fixed the width at four rods and the grades to not exceed five per cent.

In many places the fence and plow have encroached upon it till it is much narrower, and much directness has been lost by making it conform to section lines and town streets.

The government expended $6,824,919.33 on the road, much of it coming from the sale of land along the route.

The coming of the railroad called a halt in road-building, in fact Congress considered the wisdom of substituting a railway from Columbus west to the Mississippi.

The last appropriation was made in 1838, and the last work was done the next year.

The road was completed to the Ohio in 1818 and settlers came to the river, then floated down the river on flatboats to their destination.

Down this stream and along the road across the states rolled one continuous westward tide of humanity seeking for homes, with an intermittent counter-current discouraged with the hardships of pioneer life.

A federal commission had charge of repairs, though it was the intention of Congress to donate it to the states as was afterwards done.

Toll gates were established, the tolls being used for repairs.

Much of the original foundation remains, and if the dreams of an Atlantic-Pacific highway ever become a reality, its route will doubtless in the main coincide with the existing road as the steam and electric roads, and telegraph and telephone lines do now.

Mulberry Grove, Ill.

PROGRESS IN POULTRY.

When Columbus reached the shores of America there was not a chicken to be seen anywhere. The Indians of the Isles, those of the continent stretching north along the Atlantic, as well as the Aztecs of Mexico, and the Incas of Peru, were wholly unacquainted with the luxury of hen eggs, and had never heard a rooster crow. The wild duck of course was known everywhere that water flowed, and the wild turkey was familiar to the residents from northern Mexico to Hudson Bay, but nowhere in the Americas was there a duplicate of the now so common occupants of the coops and barnyards. It was not until well into the sixteenth century that chickens were imported into the colony of Virginia, and nothing but the common dunghill fowl was known in what is now the United States until the new republic was well under way. So the poultry industry, as we now know it, one of the marvels of the modern world, was practically the growth of the nineteenth century, and principally of the last sixty or seventy years. It was not until the fanciers took up the business and began scientific breeding that the varieties were increased and improved until at present they number more than a hundred.

As explained heretofore in these columns, the original of all our poultry was the jungle fowl which was found wild in India, subsequently domesticated and spread over China, Japan and other countries of Asia. It does not appear, however, that any effort was made in these countries to evolve improved breeds, and in Egypt they still have the exact duplicate of the chickens that pecked in the straw around the pyramids during the reign of the early Pharaohs. The original supply was brought from Asia to Europe, but it is England and America that have been foremost in developing new breeds. The results accomplished by the fanciers in these two countries in recent years have been nothing short of marvelous. By careful selection and mating, persistent experimentation, a system of culling and excluding along the lines taught by the Darwinian philosophy, fowls of all sizes have been produced, from the diminutive bantam to the mammoth Rocks, one a tiny bit of feathered vanity weighing only a few ounces, and the other weighing many pounds.

Results equally as wonderful have been accomplished in color effects. There are varieties in red, black, brown and white, with nearly all possible combinations, besides buff and Andalusian blue. Not content with this, the fanciers have shown that they can lace, stripe, spangle or bar the feathers of their birds in any way to satisfy their individual fancy. In fact, it seems that about all there is left for them to do along this line is to put their initials on the feathers of their birds, which, in the light of what they have already done, is not as impossible as it may sound. While this is interesting, however, it is the commercial feature of the business that commands attention. The magnitude of the business, reviewed from the standpoint of national finances, is truly amazing. Poultry and eggs, as is well known, constitute an important part of the food supply of the country. Indirectly, the business represents an invested capital of hundreds of millions of dollars. One poultry farm alone in the anthracite region of Pennsylvania, covers eighty-two acres, thirty-five of which are taken up with the buildings and yard, there being 12,000 square feet of floor space under roof. The owners have a contract for furnishing a large hotel in New York with 600 dozen eggs every week, and another to supply a New York firm with 3,000 dozen weekly. The plant is lighted throughout by electricity, heated by steam and watered by a system of pipes fed by an immense living well. From this one example an idea may be formed of the gigantic proportions reached by the poultry industry in the United States, as there are many other establishments almost as large scattered throughout various States of the Union. The business is growing all the time and what it will eventually develop into under modern inventive genius and American enterprise, stimulated by certainty of great dividends, is beyond the reach of the most far-seeing prophet.—*American Farmer.*

THE WEST AND WALL STREET.

The West has learned to discriminate.

Time was when the West, embittered by hardship, spoke unkindly of the East as an oppressor. That day has passed. For the East, as a section of the nation, are only friendship and sentiments of mutuality. The Westerner no more holds the Eastern business man, manufacturer, or banker, responsible for Wall Street's limelight performers than the East connects the Western farmer with Jesse James.

The West is keenly hopeful and is somewhat proud of the unusual financial power that has come to its hands. This power is the direct gift of fields and herds and flocks. The indications are that it is going to continue; for with the better understanding of how to suit production to climate and how to utilize the discoveries of advanced agriculture, a general and overwhelming crop failure is unlikely. Only a succession of bad years can have permanent effect.

On the other hand, many thinking Westerners, realizing the Western sentiment toward the operators of Wall street, without passing judgment on its correctness, fear the indirect effect of Eastern business stagnation, which would affect the West through alarm in financial circles, as well as in lessening the market for the West's products.

To this extent, they say, the West is an interested party,—but the average Westerner does not study the situation so analytically, and for the present watches the ups and downs of "the street" as he would a lurid drama, himself being merely a spectator.—*From "The Middle West and Wall Street," by Charles Moreau Harger, in the American Monthly Review of Reviews for July.*

GOING TO SCHOOL.

IDA M. HELM.

It was May the fifteenth, the last day of school. Charlie and Annette walked slowly homeward; they finished their work in the district school but they had had longed to go on with their education and fit themselves for the best service possible; they wanted to go to college and to learn and not to loaf; they knew that the object of education is to make men and women, and visions of true and noble men and women rendering the best service to themselves, to the community, to the government and to their God ever hovered before their mind's eye.

But there was one great obstacle in their way; they had no money with which to pay their way to college and they knew that their parents could not afford to give them the needed money. So they walked along and talked of different ways by which it might be possible for them to earn the necessary money.

"Teacher said we ought to be educated in industry as well as in books," said Charlie, "and if we can earn *our own* money with which to pay our way to college, and if we learn rightly to understand and use industrial education it will be a great advantage to us; it will be really the foundation for our book education. Just think of it, Annette, what would education amount to to us without industry?"

"What would it?" replied Annette, "I can answer the question better by referring you to Stephen McShane. You know as well as I do how his education affects him; there is no diligence about him whatever; people say his parents coaxed so for him to go to college that he went, but he went only to have a good time and the year he should have been graduated he came home the week before the examinations began, and of course he never received his diploma. Now he walks around dressed up like a dude and he thinks it's smart not to speak to people that have never been to college. When I was in the store the other day Stephen came in looking grand (?) and I heard Mr. McShane say to him, 'You don't amount to anything; wish I would have put you to work instead of sending you to school and put my money to a better use."

A look of contempt passed over each face as they spoke of the mistaken young dude and they said, "He is a silly fellow," and Annette added, "I guess there are not very many that act like Stephen."

The next day when Charlie came in to dinner Annette said, "Oh Charlie, mamma and I have a fine plan by which I can earn enough money to go to college next winter. Mrs. Love was here this forenoon and she offered me two dollars and a half a week if I will go and help her with her work and take care of the baby. You know she is such a nice woman and is always so kind to her hired girls. I intend to do my best while working for her so I think we will get along all right. There will be fifteen weeks till school begins and if I stay all the time I will have thirty-five dollars. Now if you can earn that much we can both go to college next winter. Of course we won't have any money to spend uselessly, but the object in going to school should be to get an education and not to spend money. We can rent empty rooms and mamma will spare enough furniture from home to furnish them and we will board ourselves so that will not cost us much. Mamma is going to fix my old clothes over so I will not need to buy but very few new ones. Mrs. Lowe has been to college and she says some of the students sell their school books when they have finished them and she is sure I can get them at reduced prices. After I have earned a few dollars Mrs. Lowe will pay me; then I am going to speak to the professor and have him help me to get secondhand books; they will do just as well as new books. What do you think of that, Charlie?"

"Well, that is a fine plan," echoed Charlie. "And your plan brings to my mind an idea that I shall not tell you of till supper time."

All the afternoon Annette wondered what Charlie's plan might be, and when he came in at supper-time her imaginations were swept away by the real being made known to her. He had known for quite a while that Mr. Slocum could not get as many men as he would like to hire to work by the day on his large farm, so in the afternoon he had walked across the woods to the field where he was at work and offered to work for him through the summer. Mr. Slocum said he would give him a dollar for every day he would work for him till harvest begun then he would give him a dollar and a half a day through harvest, and Charlie agreed to begin work on the Monday morning following.

The diligence with which Charlie and Annette worked during the summer and the care and thoughtfulness that they showed for their employers' interests spoke very plainly in favor of their being diligent in their school work and making a success of their education and of their life-work.

The kind of education that people need is the kind that they can make use of, but to spend years in the schoolroom lavishly spending money and giving one's

time to studying books that he will close on commencement day and never open again and perhaps never give them more than a passing thought, is simply a waste of time and money. With a foundation of industry and a good common practical education, one can live a life of usefulness and happiness. For men that the world needs are

"Men of strength, men of faith,
Men of worth and honest toil,
Men, who knowing, dare maintain
The sacred birthright of the soil.

"Men who love their fellow-men,
Men who know their sacred trust,
And in knowing how and when,
Stand for God and all that's just."

R. D. 2, Ashland, Ohio.

SENSE OF SIGHT IN ANTS.

THE old theory that ants could not see and were guided entirely by sense of smell has been demolished by a series of experiments reported in the *Revue Scientifique*. A little platform of cardboard was set up near one of their nests with inclined plane leading conveniently down to the entrance. Then a number of the insects and a quantity of their eggs were placed upon the platform.

For a few minutes the ants seemed greatly perturbed, but they very soon found the inclined plane and at once started carrying the eggs down it to the nest.

A second inclined plane was located on the opposite side of the platform, but they took no notice of it. The experimenters then twisted the platform around so that the second plane pointed to the nest entrance.

Without hesitation the ants ceased using the old plane and took to the new one, showing conclusively, it is argued, that they were not following a trail by scent but were getting their bearings by some other sense.

The next step was to mark some of the ants with a view to seeing whether each individual always used the same path and the same entrance to his nest. It was found that no such thing was the case.

They all seemed to know the entrances and to have a sense of their direction. They struck out new paths for themselves and always reached their destination without fail. This was regarded as establishing some form of vision.

Finally, an electric light bulb was set up near one entrance to the nest. It seemed to have an immediate attraction for the ants, as they unanimously used the entrance on that side coming to and going from the nest. Then it was changed over to the other side, causing great excitement apparently among the insects, which ended in their changing over to the newly illuminated way.

Changes in the brilliancy of the light seemed to have no perceptible effect on the ants, but they never failed to detect the change of direction. All possible precautions were taken to prevent the heat from the lamp from reaching them, so that it is regarded as certain that they perceived the light.—*Sun.*

FUNNYGRAPHS

Watch 'Em.

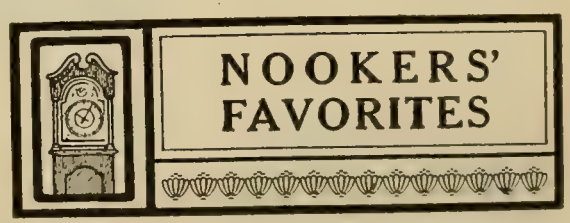
"The American souvenir hunter will steal anything but a cellar full of water," says Admiral Robley D. Evans.

Yes, and if ever our cellar fills up we are going to watch the high financiers in our neighborhood.

Queerly mixed metaphors are sometimes used in extempore speech even by very good orators. Witness this from Hon. W. E. Gladstone: "We must not take our stand on the shifting sands of schemes which are hatched from day to day." Also this from another member of parliament: "The pale face of the British soldier is the backbone of the British army."

She—I saw you in a street car the other evening, Mr. Saxby.

He—Did you? Well, I didn't see you!



She—I suppose not! I was standing!

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

Wanted—Matron. Man and wife to cook. Fireman. Fine position. Address: McPherson College, McPherson, Kans.

AN ORDER FOR A PICTURE.

O good painter, tell me true,
Has your hand the cunning to draw
Shapes of things that you never saw?
Ay? Well, here is an order for you.

Woods and cornfields, a little brown,—
The picture must not be over-bright,
Yet all in the golden and gracious light
Of a cloud, when the summer sun is down.
Alway and alway, night and morn,
Woods upon woods, with fields of corn
Lying between them, not quite sere,
And not in the full, thick, leafy bloom,
When the wind can hardly find breathing room
Under their tassels,—cattle near,

Song Praises

Popular Edition

10,000

We have just published an edition of **"Song Praises,"** in heavy paper binding. There has been a demand for a cheap song book for missions and weak churches, and we now are able to supply all such at a price that cannot be duplicated.

Will Go Fast.

We do not expect our large edition of 10,000 to last long when it is once known that we are selling them at **Only 10c.**

Sunday Schools

Who are not using this book and do not feel able to supply themselves with the cloth-bound book will do well to get their order in quick before this edition is all gone.

The book is printed on an excellent grade of paper, substantially bound in heavy paper and we are sure will give good service.

Price each, ...10c
Postage extra, ... 4c
Per hundered f. o. b. Elgin, ...$ 9.50

Cloth Bound.

Brethren Family Almanac, ... .10
The three are worth, ...$2.35
All to new Subscribers for only..... .95

We want to add 5,000 new subscribers to our list. We can do it if you will help us. If you are not a subscriber, send your subscription to-day. If you are, then tell your friend who is not a subscriber of this offer. The Book alone is worth much more than we ask for the combination. If you have a copy of the Book, you can tell them of its value.

The Other Half of the Globe

BY

D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

Biting shorter the short, green grass,
And a hedge of sumach and sassafras,
With bluebirds twittering all around,—
(Ah, good painter, you can't paint sound!)
These, and the house where I was born,
Low and little, and black and old,
With children, many as it can hold,
All at the windows, open wide,—
Heads and shoulders clear outside,
And fair young faces all ablush:
Perhaps you may have seen, some day,
Roses crowding the selfsame way,
Out of a wilding, wayside bush.

Listen closer. When you have done
With woods and cornfields and grazing herds,
A lady, the loveliest ever the sun
Looked down upon, you must paint for me;
Oh, if I only could make you see
The clear blue eyes, the tender smile,
The sovereign sweetness, the gentle grace,
The woman's soul, and the angel's face
That are beaming on me all the while,
I need not speak these foolish words:
Yet one word tells you all I would say,—
She is my mother: you will agree
That all the rest may be thrown away.

Two little urchins at her knee
You must paint, sir; one like me,
The other with a clear brow,
And the light of his adventurous eyes
Flashing with boldest enterprise:
At ten years old he went to sea,—
God knoweth if he be living now;
He sailed in the good ship "Commodore,"—
Nobody ever crossed her track
To bring us news, and she never came back.
Ah, 'tis twenty long years and more
Since that old ship went out of the bay
With my great-hearted brother on her deck:
I watched him till he shrank to a speck,
And his face was toward me all the way.
Bright his hair was, a golden brown,
The time we stood at our mother's knee:
That beauteous head, if it did go down,
Carried sunshine into the sea!

Out in the fields one summer night
We were together, half afraid
Of the corn-leaves' rustling, and of the shade
Of the high hills, stretching so still and far,—
Loitering till after the low little light
Of the candle shone through the open door,
And over the haystack's pointed top,
All of a tremble, and ready to drop,
The first half-hour, the great yellow star,
That we, with staring, ignorant eyes,
Had often and often watched to see,
Propped and held in its place in the skies
By the fork of a tall red mulberry tree,
Which close in the edge of our flax-field grew,—
Dead at the top,—just one branch full
Of leaves, notched round, and lined with wool,
From which it tenderly shook the dew
Over our heads, when we came to play
In its handbreadth of shadow, day after day.
Afraid to go home, sir; for one of us bore
A nest full of speckled and thin-shelled eggs;
The other, a bird, held fast by the legs,
Not so big as a straw of wheat:
The berries we gave her she wouldn't eat,
But cried and cried, till we held her bill,
So slim and shining, to keep her still.

At last we stood at our mother's knee.
Do you think, sir, if you try,
You can paint the look of a lie?
If you can, pray have the grace
To put it solely in the face
Of the urchin that is likest me:

I think 'twas solely mine, indeed:
But that's no matter—paint it so;
The eyes of our mother—(take good heed)—
Looking not on the nestful of eggs,
Nor the fluttering bird, held so fast by the legs,
But straight through our faces down to our lies,
And oh, with such injured, reproachful surprise!
I felt my heart bleed where that glance went, as though
A sharp blade struck through it.
You, sir, know

That you on the canvas are to repeat
Things that are fairest, things most sweet,—
Woods and cornfields and mulberry tree,—
The mother,—the lads, with their bird, at her knee:
But, oh, that look of reproachful woe!
High as the heavens your name I'll shout,
If you paint me the picture, and leave that out.

—Alice Cary.

THE LIPS THAT TOUCH LIQUOR SHALL NEVER TOUCH MINE.

Alice Lee stood awaiting her lover one night,
Her cheeks flushed and glowing, her eyes full of light.
She had placed a sweet rose 'mid her wild flowing hair;
No flower of the forest e'er looked half so fair
As she did that night, as she stood by the door
Of the cot where she dwelt by the side of the moor.

Her lover had promised to take her a walk,
And she built all her hopes on a long, pleasant talk;
But the daylight was falling, and also, I ween,
Her temper was fading, 'twas plain to be seen;
For now she'd stand still, then a tune she would hum,
And impatiently mutter, "I wish he would come!"

"You may say what you like, 'tis not pleasant to wait
And William has oft kept me waiting of late;
I know where he stays, 'tis easy to tell,
He spends many an hour at the sign of the Bell;
I wish he would keep from such places away,
His rakish companions do lead him astray."

She heard a quick step, and her young heart beat fast
As she said, "I am glad he is coming at last;"
But it was only a neighbor who hastened to speak,
And he marked the quick flush on the young maiden's cheek
As his aged eye twinkled with pleasure and glee,
As he merrily said, "So you're waiting, I see."

"Now don't at all think I'm intending to blame,
For love ought ne'er be a subject of shame;
But I tell you to warn you. I fancy, my lass,
Young William is getting too fond of the glass!
And, oh! if you wish for the love that endures,
Say that the lips that touch liquor shall never touch yours."

He went on his way, but the truth he'd impressed
Took root and sank deep in the young maiden's breast,
And strange things she scarce could account for before
Now appeared quite plain, as she pondered them o'er.
She then said, with a look of deep sorrow and fright,
"I really believe that the old man is right.

"When William next comes I will soon let him know
He must give up the liquor, or else he must go;
'Twill be a good chance, no doubt, to prove
If he is really sincere in his vows of deep love;
He must give up at once and forever the wine,
For the lips that touch liquor shall never touch mine."

She heard a quick step coming over the moor,
And a merry voice which she had oft heard before,
And ere she could speak a strong arm held her fast,
And a manly voice whispered, "I've come, love, at last.
I'm sorry that I've kept you waiting like this,
But I know you'll forgive me, then give me a kiss."

But she shook her bright curls on her beautiful head,
And she drew herself up while quite proudly she said,
"Now, William, I'll prove if you really are true,
For you say that you love me—I don't think you do;
If really you love me you must give up the wine,
For the lips that touch liquor shall never touch mine."

He looked quite amazed. "Why, Alice, 'tis clear
You really are getting quite jealous, my dear."
"In that you are right," she replied; "for, you see,
You'll soon love the liquor far better than me.
I'm jealous, I own, of the poisonous wine,
For the lips that touch liquor shall never touch mine."

He turned, then, quite angry, "Confound it!" he said,
"What nonsense you've got in your dear little head;
But I'll see if I cannot remove it from hence."
She said, "'Tis not nonsense, 'tis plain common sense:
And I mean what I say, and this you will find,
I don't often change when I've made up my mind."

He stood all irresolute, angry, perplexed:
She never before saw him look half so vexed;
But she said, "If he talks all his life I won't flinch;"
And he talked, but he never could move her an inch.
He then bitterly cried, with a look and a groan,
"Alice, your heart is as hard as a stone."

But though her heart beat in his favor quite loud,
She still firmly kept to the vow she had vowed;
And at last, without even a tear or a sigh,
She said, "I am going, so, William, good-bye."
"Nay, stay," he then said, "I'll choose one of the two—
I'll give up the liquor in favor of you."

Now, William had often great cause to rejoice
For the hour he had made sweet Alice his choice;
And he blessed through the whole of a long, useful life,
The fate that had given him his dear little wife.
And she, by her firmness, won to us that night
One who in our cause is an ornament bright.

Oh! that each fair girl in our abstinence band
Would say: "I'll ne'er give my heart or my hand
Unto one who I ever had reason to think
Would taste one small drop of the vile, cursed drink;"
But say, when you are wooed, "I'm a foe to the wine,
And the lips that touch liquor shall never touch mine."

—Harriet A. Glazebrook.

An Encyclopedia Within Your Reach at Last!

COMPLETE IN EIGHT VOLUMES. SIZE 8x5¾ INCHES.

Over 4,100 double-column pages. Hundreds of illustrations. Extra Cloth Binding. Beautiful Full Gilt Backs. Weight 16 Pounds. Packed in Wooden Case.

THE NEW AND COMPLETE

Universal Encyclopedia

(SELF-PRONOUNCING)

Edited by Chas. Annandale, LL. D., Isaac Thorne Johnson, M. A., Walter Hart Blumenthal, B. S. E., and a corps of eminent specialists.

(Complete in eight volumes.)

This Cyclopedia stands alone in freshness and variety of matter presented in concrete form. It is the only Cyclopedia making a petext of being published in recent years.

IT CONTAINS NEARLY DOUBLE THE NUMBER OF ARTICLES FOUND IN THE ENCYCLOPEDIA BRITANNICA

IT TELLS ABOUT every subject in Science, Art, History, Philosophy, Biography, Geography, Mathematics, Law, Chemistry, Medicine, and scores of other subjects, all of which are treated simply, thoroughly and concisely.

FOR HOME, SCHOOL, OFFICE AND LIBRARY

The Universal Encyclopedia fills the need for an up-to-date, well digested, exhaustive, condensed work.

The correct pronunciation of all obscure words; the variety of subects explained and the simplicity of the explanations; the convenient size of the volumes, the clear print, and beautiful bindings, the **"within the reach of all" price,** all tend to make it **THE GREATEST PUBLICATION OF THE CENTURY.**

The Universal Encyclopedia comprises eight volumes, 8x5¾ inches in size, over four thousand double-column pages, **FULLY ILLUSTRATED,** and is printed on extra quality of book paper.

Bound in Cloth, With Full Gold Stamping on Back.

SECOND EDITION

Annual Meeting Report

On account of the great demand for the report of our late Conference held at Los Angeles, California, we are compelled to run a second edition. The report is of more than ordinary interest this year for several reasons:

1. On account of the unique location.

2. The important questions discussed.

3. The valuable information along educational and Sunday-school lines.

4. On account of its value as a reference book.

If you have not sent your order, do so at once, for this edition will not last long and there will be no more published.

The Age of Innocence

By Walter Russell.

8vo. Published 1904.

Beautifully illustrated, contains portraits of some of President Roosevelt's children and of many other children, and also the pictures of the prize winners in the Ladies Home Journal competition.

If you want to feel young again; if you want to live your childhood days over, read this book.

It will please the boys and girls as well.

A beautiful book indeed it is, worthy of a place in the best-kept library.

The best of paper is used and large, clear type, which makes it easy to read.

Webster's Unabridged Dictionary

This is the original Webster's Unabridged Dictionary, with supplement and revises by Chauncey A. Goodrich, of Yale College. An American dictionary of the English language, containing the whole vocabulary of the first editions and the corrections and improvements of later editions. To this is added a table of synonyms, peculiar use of words and terms of the Bible. If you do not care to spend $9.00 or $10.00 for Webster's International Dictionary, which is the latest and best made, then get this book, which, for nearly all practical purposes, will serve you quite as well. It is printed from good, clear type and contains 1,600 pages. Cloth, $1.25.

Brethren Publishing House, :: Elgin, Illinois

500 Scriptural Anecdotes

A Hand-book for Preachers, Teachers and Christian Workers.

COMPILED BY

HAROLD F. SALES

An entirely new collection of short, sharp Scriptural Anecdotes, invaluable to those who are being called on to conduct meetings and are compelled to prepare on short notice.

A large variety of subjects are treated, and it will be found more helpful than some collections costing four times its price.

The entire collection is carefully classified under fifty different subjects and arranged alphabetically.

SAMPLE ANECDOTES.

(As they appear in the book.)

The Obscured Light.

There was a great lighthouse out at sea. One night the men lighted the lamps, as usual. Some time afterward they saw that there appeared no light upon the water where ordinarily there was a bright lane of beams. They examined their lamps—they were burning brightly. But they looked outside, and there were millions of little insects on the glass, so thickly piled there that the light could not get through. In the morning they learned that a ship had been wrecked close by because the light had been obscured by the insects.

Glorified God in Our Homes.

A saintly bishop once said: "I never move about my home, I never step out of my house, I never pass along any street or path, I am never anywhere without being likely to be seen by some one who knows me. A knowledge of this fact always makes me watchful of myself and cautious. I want it to be so that whoever sees me, at any time, or anywhere, will be able to see nothing in me that is inconsistent with the character of a loyal and faithful servant of Christ." Such a spirit cannot help glorifying God wherever it is lived.

Price in limp cloth binding, 25 cents.

BRETHREN PUB. HOUSE,
Elgin, Ill.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features.

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,
CHAS. B. WESTOVER, Pres.

Corresponding rates to other points in related territory.

Favorable stop-over privileges at and west of Pocatello, Idaho.

Stop-over of five days at all points in California **except San Francisco and Los Angeles** on tickets to California destinations.

STOPOVER PRIVILEGES

GOING TRIP—Going trip must begin on date of purchase of ticket and stopovers may be had at any point enroute prior to midnight of "Going Transit Limit" as shown above.

RETURN LIMIT—The Joint Agent at destination of ticket (or at any intermediate Pacific Coast point where joint agency may be maintained) will make good ticket for return passage by attaching validation certificate, for which service a fee of 50 cents will be collected. After ticket is validated, stopover may be had at any point enroute within the "Final Return Limit," as shown above. Passengers desiring to stop off, should notify conductors when presenting ticket.

BAGGAGE—The usual free allowance of baggage (150 pounds on full tickets and 75 pounds on half tickets) may be checked going or returning to any point at which stopover is permitted.

FREE SIDE TRIPS

To holders of tickets via Union Pacific R. R. to Ogden or Granger, sold at rates named herein, following free side trips will be given:

From Denver to Colorado Springs or Pueblo and return. (Apply to Union Depot Ticket Agent or to General Agent, 941 17th St., Denver, Col.)

Ogden to Salt Lake City and return. (Apply to conductor into Ogden or to Union Depot Ticket Agent, Ogden.) In connection with this side trip, free Pullman seat checks will be furnished passengers holding Standard Pullman car tickets.

YELLOWSTONE PARK SIDE TRIP

Side trip tickets from Ogden or Pocatello to and through Yellowstone Park including five and one-half days' hotel accomodations as well as railroad and stage transportation, will be sold for $55.00. Side trip tickets covering rail and stage transportation only will be sold for $28.00. Park season will be from June 10 to September 19. Apply to Ticket Agent either at Ogden or Pocatello. Passengers holding through sleeping car tickets will be furnished sleeping car stopover checks on application to the Pullman conductor.

OPTIONAL ROUTES

All tickets reading via the Union Pacific Railroad to Ogden or Granger will be honored via Juiesburg Line and Denver or via the direct line through Cheyenne, at option of holders.

Proportionate rates from all points East. Be sure to buy your ticket over **THE UNION PACIFIC RAILROAD** known as the **Overland Route,** and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

Farming Lands in California can be bought from $25 to $40 per acre. Printed matter free. Write to

GEO. L. McDONAUGH, Colonization Agent,
UNION PACIFIC RAILROAD,
OMAHA, NEBRASKA.

How Do You Like This Way of Building a Church?

In a new country where a colony is being planted there is always more or less difficulty in inuagurating free institutions such as churches and schools. The people are usually busy building their own houses, clearing up farms, building fences, etc., which requires both time and money. Then as a rule, people come to a new country to make money and have made about as large a sacrifice as is possible for them to make at one time, and are not prepared to help much in the way of donations.

It is always more or less embarrassing to be continually begging through the church papers for donations from the old churches, for though they are as a rule willing and ready to help in all such cases, yet they are not always in a position to grasp the situation and see the actual necessities as they exist. This is why it takes a long time to build churches in new localities oftentimes and why the people become discouraged with the missionary work by colonization.

In colonizing Butte Valley, the California Butte Valley Land Co., partly realized these facts and tried to avoid some of the difficulties incident to frontier life and the following statements properly signed will speak as to what they have done.

To Whom This May Concern:

WE, THE BUILDING COMMITTEE OF THE BUTTE VALLEY CHURCH TAKE GREAT PLEASURE IN TESTIFYING TO THE LIBERALITY AND CONSIDERATION OF THE CALIFORNIA BUTTE LAND COMPANY IN PROVIDING A HALF BLOCK OF GROUND AND THREE THOUSAND DOLLARS TO ERECT THEREON A HOUSE OF WORSHIP.

EVERY REPRESENTATION OF THE COMPANY HAS BEEN MET IN FULL AND IN BEHALF OF THE BUTTE VALLEY CHURCH WE EXTEND OUR SINCERE GRATITUDE FOR THEIR GENEROUS TREATMENT.

THE NEW AND COMPLETE

Universal Encyclopedia

(SELF-PRONOUNCING)

Edited by Chas. Annandale, LL. D., Isaac Thorne Johnson, M. A., Walter Hart Blumenthal, B. S. E., and a corps of eminent specialists.

(Complete in eight volumes.)

This Cyclopedia stands alone in freshness and variety of matter presented in concrete form. It is the only Cyclopedia making a petext of being published in recent years.

IT CONTAINS NEARLY DOUBLE THE NUMBER OF ARTICLES FOUND IN THE ENCYCLOPEDIA BRITANNICA

IT TELLS ABOUT every subject in Science, Art, History, Philosophy, Biography, Geography, Mathematics, Law, Chemistry, Medicine, and scores of other subjects, all of which are treated simply, thoroughly and concisely.

FOR HOME, SCHOOL, OFFICE AND LIBRARY

The Universal Encyclopedia fills the need for an up-to-date, well digested, exhaustive, condensed work.

The correct pronunciation of all obscure words; the variety of subjects explained and the simplicity of the explanations; the convenient size of the volumes, the clear print, and beautiful bindings, the **"within the reach of all" price,** all tend to make it **THE GREATEST PUBLICATION OF THE CENTURY.**

The Universal Encyclopedia comprises eight volumes, 8x5¾ inches in size, over four thousand double-column pages, **FULLY ILLUSTRATED,** and is printed on extra quality of book paper.

Sunday School Teachers

Here is a chance to supply your class with neat Bibles at a small cost. Don't miss this opportunity. This is a neat little Bible and will give you good service for a cheap Bible.

Send all orders to,

BRETHREN PUBLISHING HOUSE,
ELGIN, ILL.

Is this your picture Mother, Sister? Is your Nervous System broken down and you can hardly drag along? Brawntawns, The Victor Tonic, was made for you as it builds broken down systems, restores appetites, strengthens the digestive organs. If you have tried other tonics don't despair until you try Brawntawns, The Victor Tonic, for it will build you. Thirty days' treatment delivered to your home for 50c.

Lomita, California

By permission of Messrs. W. I. Hollingsworth and company I shall talk to you this week about church or godly matters. As heretofore announced the Company has set apart six lots on Brethren Avenue, worth about $800, for church purposes. These lots were dedicated to the Lord by prayer, by Elder S. R. Zug, of Elizabethtown, Pa., at the close of the last Annual Meeting, and it is our desire to labor to have a neat churchhouse on those lots early next year or sooner if possible. There is no churchhouse nearer than four or five miles. This community, made up largely of steady Germans, is favorable to our purposes.

It certainly is a good wish that a goodly number of industrious and holy members should be moved by the Spirit to come hither to help build up the cause. Quite a number have so promised, and it is further desired that among the number coming there may be plenty of young, earnest, self-denying members who can do work for Christ in the surrounding towns.

God did not put all the temporal blessings at one place but wisely distributed them, leaving quite a number at Lomita. Come and help develop them. I am trying by the help of our dear Father to keep the spiritual life above the temporal things, and in this I know our Lord will be my partner. I am not looking for human "bosses," lovers of manhonor, but I do pray for makers of the life that now is and that to come." Feeders of the flock of God are heartily welcome but no place for those who scatter the sheep with mere opinions. **"What does God say in His WORD,"** this counts in Lomita just as it counts elsewhere. The Diatrophes can do us no good, but the Johns and Marys can be powers for good. All of John 13: 35 practiced all the time means great increase both in holiness and in numbers. We can have a model people if we all will.

Once organized into a working band, then with a good house to worship in, the grounds set to God's beautiful flowers and shrubbery, and a clean people prompt to study the truth and just as prompt to obey it, Lomita certainly can be a praise to our beloved Father. But we dare not expect all honey, for where there are honey gatherers, there hornets may come and create great commotion. I have seen very good hives of bees badly damaged by a few determined and vicious hornets. Whole congregations have been wrecked by human yellow-jackets. They do nothing but use their stingers.

The land company very kindly gave the opportunity to those members who first come to purchase at a figure somewhat below the regular price because the first ones usually have the most hardships and their earnest efforts are sure to enhance the value of the other's lands. I hope those who contemplate a change will take advantage of this offer before outsiders pick up all the tracts adjoining the town site. The Company platted only ten acres for town purposes leaving the future to those who purchase next to town to increase the village. Usually no such chances are given to settlers. It certainly is worth something to have your acreage right by the town.

Each settler ought to have some means for a house and to purchase such things as are necessary to begin. The more money the better to make things come quickly. Of course, in the spring a crop of potatoes, and other vegetables will go far towards helping out in the necessities. One should grow first, the things that take a short time to mature for market. With sufficient water and plenty of brain and muscle, one ought to get on where things grow for market nearly every month in the year. If a lving can be made where the productions grow only a few months and storage must be resorted to that the other months may bring the living, what may be done where the food stuffs grow every month? Could you make a living under such conditions? I can. It is up to you as to what you can do. The WILL has much to do with it.

I want you, however to come and investigate for yourself, and not be influenced wholly by me nor at all by any one who does not know just what is at Lomita. Consult people who have made a success here, and you can then form a more correct judgment. There are altogether too many people trying to tell something about countries of which they know nothing but heresay or from unjust prejudices. Let us be above this worldly kind of business. I shall take pleasure in time to come as I have in time past, in being of service to my Brothers and Sisters and to any other for their good.

I remain yours in Love of Jesus.

M. M. ESHELMAN,
314 Wilcox Building,
Los Angeles, Cal.

An Important Date

OCTOBER 1, 1907

FOR ALL

HOMESEEKERS

150,000 Acres of Land Under the Carey Act Will Be Thrown Open For Entry on October 1, 1907

This will be a great opportunity to the settler to secure a Homestead in a mild, equable climate, where crops grow to perfection by irrigation. No failure of crops on account of drought. This tract is on the North side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho.

THE BRETHREN

should now be arranging to go to the opening for entry of 150,000 acres of land on the Twin Falls, North Side Canal in Idaho on **Oct. 1, 1907.**

These lands are sold at 50 cents per acre and the water right $35.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms, crops of all kinds are grown to perfection. Fruit growing is a success, as well as the growing of sugar beets. To see these lands take the Oregon Short Line, R. R., to Minnedoka; there change cars for Milner.

Homeseekers' Round Trip Tickets

will be sold to points in Idaho on 1st and 3rd Tuesdays of each month in 1907.

Seeing the West Through the Eyes of a Missourian

Ada Kircher

In Five Parts. Part Two.

NEXT morning Grandma looked very bad and said she felt like she wanted some coffee, so our near neighbor and I started to find that gas range we had been told about. We went the entire length of the ten cars only to be told by the conductor that the range was at the other end of the train, so we retraced our steps. There we were told that they had the range aboard all right but unfortunately had no gas. Soon the conductor returned from the other end of the car and told us that it was a mistake, they had the gas all right, which I had never doubted, but had no range.

We were in southeastern Colorado, in the claim section. We saw sod houses here and there. The first irrigating ditches came into view, also the prairie dogs were sometimes visible. Then we saw a pack of wolves and we began to realize we were in the "Wild West."

We saw some stock grazing upon the plains but not nearly as many as I expected. At home we put twelve to fifteen head upon a twenty-acre pasture with the assurance that if it is at all a seasonable grass year there will be an abundance of grass for all.

Out here they told me it would take fifteen acres to pasture one head the entire season and I do not doubt it at all, and furthermore believe that oftentimes fifteen acres, and more, too, are not enough and the cattle and other stock die of starvation, judging by the number of dead carcasses we saw. I am sure I saw by far more dead stock than live stock. I am not speaking of southeastern Colorado alone, I am speaking of the southwest generally.

We met a sister from northeastern Colorado and Mrs. C. asked her how they manage to make a living in Colorado. I felt very sorry for the sister, so I asked Mrs. C. if she would like to have Missouri judged by the Ozarks.

We stopped at a little station called Bloom. There was some trouble with the engine, so we got out to look for the Bloom. There was no bloom to be seen on anything and not much of anything that could ever hope to put forth a bloom. I pulled up a stalk of buffalo grass and found it reached into the ground three inches and it's no telling how much farther down its roots ran. I also took a twig of sagebrush with me from this city of Bloom that arose so stately and serenely out of the desert. It was a very peculiar city,—a city of one house—and the occupants were visible at doors and windows. I perceived a boy with jaws swollen and handkerchief tied thereabout, and I became alarmed lest the mumps were abroad in the land, and I went inside where I confided my fears to a good sister from Kansas, telling her also that I always had been taking everything contagious obtainable even if I had had it before. To which she replied, "Oh! I don't think its the mumps. Why, there is nobody to catch them from way out here." At this place I saw the first alkaline pools I had ever seen and shouldn't have known what they were had not a kind sister told me. I just thought somebody had spilled a barrel of salt.

Presently a bird flew by,—the first I had seen that day, and further along there were four burros too lazy to lift their heads as we passed.

We next saw the Spanish Peaks. They are very beautiful. They are a beautiful misty blue at the foot, shaded to a white at the top, a bright and shining white. They seem to be playing hide and seek with us, sometimes in sight and sometimes out of sight.

There seems to be no thing in this country for miles and miles but sagebrush and sand with an occasional cactus or a few cypress trees.

Just before we reached Trinidad we saw some very beautiful mountain scenery. We also entered another irrigating section where they raise alfalfa and sagebrush and buy everything they eat, judging from the amount of tin cans we saw scattered round and indeed we soon became so proficient that we could tell just what sized town we were approaching by the

amount of tin cans and rubbish we saw scattered round.

Through this section of country we saw many sod houses and adobe houses, which are very beautiful when finished nicely. Somewhere I remember seeing one containing six rooms and several verandas. It was truly a modern western castle.

We entered another typical western town containing but one house other than the sod houses. That one was the ever-present Indian addition that we find in every southwestern town.

Alkali seems to be plentiful and does not make a secret of itself like hard-pan does at home. That's one advantage for the land-buyer in this section.

South of us there was a big blue wall and I could not help wondering how people tell out here when it is going to storm. I would be looking continually if I lived out here. At a distance the mountains look so like a big, heavy cloud.

At Trinidad every one detrained for a rest and to look at the beautiful station house and hotel. It is called Cardenas. It is made of a rough concrete in old mission style, having a tile roof. It is of rectangular shape, open on the south and encloses all except the south side of a plot of grass with a fountain in the center.

At almost every place we stopped for lunch we found one of those splendid eating houses and stations and they were invariably built in old mission architectural style.

As we traveled through the mountains we saw several dugouts. The mountains are covered with pines, cedars, hemlocks and spruce trees, possibly others I did not learn to know.

We saw several mining towns. They were built of tents and box houses. I wondered why people build all other kinds of houses when stone is so plentiful.

Springer is a town in an irrigating section among the foothills. Water seemed to be plentiful. Everything looked well, but why have spring wagons covers on them and the fence posts rocks piled around them?

In many places in this country one can go for miles and never see a house or a person, and one is made to feel as if we can truly say to the immigrants, "Room for all, my brother, come."

The sky was so blue, the air so balmy and we knew we were again nearing an oasis. Then we saw a river and later a little town called Shoemaker and back of the Shoemaker's was a cement factory. In this town the houses were made with the lath and cement on the outside and then painted.

We saw nothing but cliffs with trees growing on the edge for a long distance. What an opening for the cement industry! Occasionally we saw a green spot where someone had built a nest and made use of the river.

At Las Vegas there is another of those splendid Mission Lunching Pavilions.

Now I know what a corral is. When the Westerners come to our country they call the pig pens the corral. The cow lot is the same, and the horse lot receives the same cognomen. The chicken run fares no better than the rest and so I wondered how these vastly different places could all be a corral. Now I see they have a round lot and only one. We would call it a lot made either of stone or logs and that is the only fence far or near.

We wound around among the mountains for hours with an occasional snow-capped peak in view. Mrs. C. said she was very tired of them, and to be strictly honest I was wanting to see some prairie for a change, but I would not acknowledge for the world that I was tired of the mountains because I lost too much sleep over my anxiety to get my first view of them the night before.

We were now passing through red country. The soil was very red and I saw so many saloons. I am wondering if the towns weren't sufficient to be painted red and if some of the painting had reached over into the country.

My companion was very tired, so we decided to retire early and not get out at Albuquerque because we would not reach there until late at night. However, we had no more than comfortably disposed of ourselves until the call came that we would be in Albuquerque in fifteen minutes and would stop to see the Indian Museum. "What shall we do?" asked Mrs. C. "Make ourselves presentable some way or another as quick as we can and go," said I, which we did. We were all ready by the time we reached there, that is, as nearly ready as most people were that went, for it seems as if nearly everyone had retired.

The museum contained everything made by Indians, showed their way of living, even the camp-fire was imitated by an electric light. It also contained a fine collection of Mexican drawn work and tennerife lace.

Thus ended our second day's journey towards the Jerusalem of the West, Los Angeles.

TENNYSON'S "IDYLS OF THE KING."

LEON F. BEERY.

All through this poem there is one main theme,—the war between Sense and Soul; and this is exemplified most strongly in the criminal love of Lancelot and Guinevere. That is the hinge on which the whole story swings. Were it not for that, the tale would doubtless be quite different. Of course others of the Round Table were spoiled in character by Sense get-

ting the better of Soul, but the former deceitfulness is the principal action of the plot.

In following up the war between Sense and Soul in the different characters, let us first look at the king himself. Arthur was a good king, the best of his time. He was pure and right, and just in all his dealings with the people of his kingdom. Never was any guile or wickedness in his heart, and he maintained this standard of goodness and purity and justice to the end. Soul probably had many a hard fight with Sense in his life, but Soul nearly always came out victor. There is scarce a single instance where Arthur yields to Sense. His speech beginning with line 419 of "Guinevere," in which he gently rebukes her for her fault, and the calm submission with which he realizes the fate of his order, and his words in lines 408 to 410 of the "Passing of Arthur," clearly show the predominance of Soul in the heart, and that he is resigned to the circumstances and knows that the time has come when the old order must change and yield place to the new.

With Lancelot the greatest sensual sin is his criminal love for Guinevere, the Queen. Arthur, in creating his knights, made them vow to live faithful to their own wives, if they had any, and to show no partiality to the wife of any other particular man. Lancelot broke this vow in the aforesaid way. This crime was the thing which started the downfall of the court. And yet in spite of this Lancelot was one of the best knights of Arthur.

Gareth is another example of one in whom Soul nearly always had the victory. Perhaps the first outburst of any predominance of Sense is when he asks for his boon in line 632 of "Gareth and Lynette." In all probability he was somewhat elated over his mother's taking away the condition she imposed upon him at first, and was anxious to show what he could do. However, in the whole journey to Castle Perilous with the maiden, he shows a good spirit, and never once gets angry at her slurs. Again, when he fights with the supposed "Death," when, as he splits the helm, a blooming boy is revealed, he shows mercy, and does not kill, but has a feast and makes merry over him.

As an example of the so-called "bad knights," who let Sense get the better of them, let us take Tristram. The sin of Tristram consists in deserting his wife, Isolt of the White Hand, and paying attention to Isolt the wife of Mark, king of Britain. His murder by Mark is the just reward of his wickedness.

Now on the woman's side of the court we will first look at Guinevere, the Queen. As before stated, her great sin was her love for Lancelot. A realization of the consequences of this sin is more or less apparent to her all the time, but it comes to her most strongly when the end is drawing nigh, and especially when Modred espies the two together. It is shown in line 53 and following in "Guinevere." And again she realizes the result when Modred again catches them unawares, their final meeting-place having been betrayed by the sly Vivien. The Queen knew from the first that she was doing wrong, but she kept letting Sense get the better of Soul, and thus came to the end she did.

Lynette is a very good example of the alternating dominance of Sense and Soul. When Gareth was chosen for the quest she asked for, she showed a spirit of indignation, which was perhaps justifiable, considering that Gareth was then but a kitchen knave. All along on the journey to the castle where her sister was imprisoned she showed the same spirit, even till after the second warrior had been conquered, and Gareth is having a hard fight with the third, when she exclaims, "Strike, strike, the wind will never change again." From then on Soul is on top, and she recognizes the worthiness of Gareth, and as this recognition ripens into friendship and love, she at last, as told by Tennyson, weds Gareth.

Enid generally had Soul uppermost in her heart. When Geraint commanded her that morning to ride on before and speak not a word she calmly obeyed as far as her conscience would let her. Even in the trying situation with Earl Doorm she dares to cross his will, and remains constant to Geraint. The Earl supposing him dead, insults Enid in such a manner that Geraint, who was not dead, suddenly springs upon him and kills him with a single blow. After that Geraint is changed and he and Enid live together in joy and peace.

GLENSONSIE.

JOHN H. NOWLAN.

Glensonsie, I love thee, I love thy green hills,
Thy tangles of copsewood, thy bright, sparkling rills.
How often the mem'ry of happy days steals
O'er me as I wander among thy green fields.
The quail in the clover, the dove in the trees,
The loud-screaming jaybird, the hum of the bees,
The bark of the squirrel so blithesome and free,
That call back my boyhood, are music to me.

Glensonsie, I love thee, I wish not to roam
To countries far distant, for here is my home.
'Tis true here I've labored till down o'er my brow
The moisture was streaming, but what care I now?
By the sweat of our faces we all eat our bread
And he who will toil not had better be dead.
My wife and my children have lightened each care,
In each joy and sorrow have had a full share.

Glensonsie, I love thee, 'twas here in my prime
That gray in my temples was scattered by time.
Yet love I to linger beside the small rill
That flows by the cot on the uppermost hill.
If brilliant with verdure, or glittering with snow;
When fanned by the zephyrs, or when piercing winds blow,
Thou ever art lovely. Till life's sun shall set,
Glensonsie, I love thee, and ne'er can forget.

Mulberry Grove, Illinois.

The Catbird -- Mrs. M. E. S. Charles

THE outskirts of the woodland border, the thickets in the meadows and the honeysuckles in the garden harbor one of our sweetest and loveliest songsters, the catbird. While it is called "saucy" by some persons, it is so confiding along with its familiarity that one can but love it the more for its impertinence.

The catbird is very neat and trim, both male and female being alike. It winters from southern Illinois southward to Cuba, Mexico and Central America. It is a cousin to the house wren, but the sub-family to which the catbird belongs is composed of the thrashers and mocking birds. It is the best mimic among the birds that come north, and deserves the name of northern mocking bird. This would be much more appropriate, for its present name has added much to the disrepute of the bird. The upper parts are of a dark slate color; its crown and tail dull black. It comes to us about the middle of April, and leaves for the South in November. Most of our familiar birds are very wild and unapproachable in their winter homes. The robin and catbird rarely enter gardens in the South, the latter preferring the seclusion of the dense underwood in the forest, the former being more abundant in larger woods.

Carefully open the canopy of dense green of an upright honeysuckle or mock orange in the garden and discover the glossy, emerald green eggs, three to five in number, in a nest well made of sticks, leaves, weeds and strips of bark, and lined with fine rootlets. The breeding season begins in May and they frequently rear two broods of young.

The catbird picks up from the ground every worm, grasshopper, bug, beetle and caterpillar it can find. Chinch bugs, weevils and cutworms make up a considerable portion of its insect food. There is no mistaking the fact that this bird sometimes causes serious annoyance to fruit growers. This trouble is met with chiefly in the prairie countries of the West. F. E. L. Beal in *Farmer's Bulletin* No. 54, of the United States Dept. of Agriculture, says that with the settlement of the western prairies comes the extensive planting of orchards, vineyards and small fruit gardens, which furnish shelter and nesting sites for the catbird as well as other species, but without providing the native fruits upon which they have been accustomed to feed. Cultivated fruits can be protected by the planting of such wild fruits as are preferred by the birds. Some experiments have been made with caged catbirds and it was found that the fruit of the Russian mulberry was preferred to any cultivated fruit that could be offered. In the eastern and wellwooded parts of the country a large part of the vegetable food is obtained from wild vines, wild cherries, sour gum, dogwood, elder berries, greenbrier, spice berries, black alder, sumach and poison ivy.

As a singer the catbird ranks high. Even the note which gives it its name, is not disagreeable. It is a soft "mi-eu," very much like the cry of a small kitten, and is uttered softly or loudly, according to the state of emotion. This summer a pair of catbirds made their home near the house, and we soon became quite intimate friends. They come to the door for the crumbs which are thrown out to them, and, as if fearing their breakfast may not be ready early enough, I am frequently awakened about four o'clock in the morning by their fluttering about the open window of my bedroom. Their singing has been a delight ever since they came, and I am hoping they will return next year. One day I heard, as I at first supposed, an oriole singing. But after listening for a short time I thought I detected a soft "mi-ew" at the close of each strain. To make sure I started in search of the singer and soon had the pleasure of focusing my glasses on the bird, and found it to be what I had suspected—a catbird. If it had left off the last note the imitation would have been perfect. For weeks that bird sang the oriole's song every day from morning till night.

The Catbird.
Courtesy of American Homes and Gardens.

Passing along the street the other day I heard excited cries from a pair of catbirds nearby. I began looking for the cause and found a young bird on the ground thoroughly soaked by a recent shower. It was evidently just beginning to fly, and the added weight of the water-soaked feathers made it impossible for it to fly from the ground. I placed it on the fence where the old birds immediately joined it.

Spiceland, Ind.

The Personality of Jesus Christ

Henry W. Mack

THE life of Jesus Christ was pre-eminently the life of the spirit. He blessed those whom he met by radiating to them a part of his own beautiful inner life. When men came near him they experienced a congenial warmth of feeling as exhilarating as the springtime sun and rain on beds of flowers. Back of what he said and did was a reassuring Personality. There was something in the man more convincing than even his message; something which made men say, "I don't know why, but I can't help but believe this thing—I feel it to be so."

Jesus Christ dealt in great soul worths and measured everything in terms of its ultimate value. Those ultimate values were always the great things of spirit and soul. He always knew, but it is just dawning upon us, that spirit is the only reality. He kept his finger on the pulse-beat of the times and interpreted the everyday experiences of mankind in the light of its spiritual significance.

Jesus must have been an aspiring soul,—he never drifted. He always had definite things on hands to do and held his life tenaciously to great purposes. He grew into the consciousness of his work as surely as the great painter feels his to be with color and canvas, or as Milton came into the consciousness that he was to help the race up by his immortal epics. Like all men who live primarily the life of the spirit he had a tremendous consciousness of God. This is apparent at twelve years of age when he is found in the temple "about his Father's business" and is emphasized throughout his teachings. He felt the best in him to be like unto God himself; and coming so early into this great consciousness of the closeness of God, his spiritual growth began early, yet his was only a perfectly natural, normal development under the same spiritual laws by which we grow and expand. This one thing he was careful of, however: *He made everything in him and about him incidental to his spiritual development.* The evolution of soul in him was rapid indeed but not more so than is possible with any of us if we can keep the conditions for its growth so auspicious as he did. But there's where we fall down. If we could live in the limpid, pure atmosphere of the spiritual heights where Jesus Christ was always found we could approach somewhat of his psychic or soul development. His largeness of soul then was the key to his matchless personality. Now let us try to discover a few things fundamental to this largeness of soul.

First of all, it is *keeping our attention concentrated at all times upon the great things of spirit and soul.* It is being open and responsive at all times to all impressions of him which we may get through our mind, our senses and our hearts. Browning says it is seeing God

"In the star, in the stone, in the flesh, in the soul and the clod.
* * * The submission of man's nothing—perfect to God's all-complete,
As by each new obeisance in spirit I climb to his feet."

It is reflecting in our own lives the best in the lives of our friends and being tolerant of their opinions. Hardly anything contributes more to personality. It is searching for the truth at all times and thinking incessantly about the great questions of life and immortality. "What am I here for? Where did I come from? Where am I going? What to me is God?" are the important things to think about. In short it is progressing in things of soul and getting closer to God every day of life. "If happily we can find out God," wrote Paul to his congregation.

A second condition for largeness of soul is *absolute self-control.* Dr. King says. "The problem of character is ultimately the problem of self-control." Self-control comes through the will. That is why God endowed us with wills. Possibly I cannot will not to think about a thing, but I can will to think about some other thing. In this way I can always think about worthy things.

There are many things to be controlled, but perhaps nothing more so than our own emotions. We should school ourselves in avoiding periods of great emotional excitement, whether of joy or fear or what not. Nothing is more detrimental to psychical development than emotional excesses. There's no real soul development in the emotions attending shouting or hallelujah preaching and praying. God doesn't do things under such high tension. It's too dangerous The reaction is inevitable. After all, we always settle down to the "c-major of life." Nothing is more exhaustive of nervous energy, therefore nothing can be more contrary to permanent healthy development. "Moderation in all things" was found to be essential way back in the twilight of history and it hasn't lost any ground. Student on the football field, don't go mad over your victory; young man in a quandary, keep cool, Christ always kept so; and ye who are studying for his kingdom be calm always.

There are other things in which self-control should be exercised. Our ambitions, our passions need lots of it. We need a great deal of it to hold our ambitions rigidly to a strictly spiritual development. It takes self-control to refrain from thinking envious thoughts about our associates who are getting along faster than we are; and self-control when we keep silent in-

(Continued on Page 755.)

LOWLY BUT CROWNED; OR, SYBIL THE OUTCAST

A Story by Sadie Brallier Noffsinger

Chapter XXI.—Significant Names.

"YOU must not speak so loud, Sibyl," rebuked Stella, almost in a whisper. Then added: "Yes, I know that Clifford's books and clothes and little toys are very dear to Aunt Katharine."

"She's upstairs cryin' over them now," whispered Sibyl back. "I saw her when I brung the dickshunary. I don't know the day since I'm at Shady Brook as she has not looked over all his things. An' then to think as Mrs. Treadle cum an' told her that it was 'stravagant an' sinful like to keep them things locked up, when she might be wearin' them on Lily. She told Mrs. Chester as how by doin' so she was not follerin the example o' the Lord and his basketful o' fragments. I settled the varmint, though, the other day when you and Mrs. Chester went down the Holly to see that poor sick gal, by tellin' her as she was only a victim fit for the lunytic asylum."

"Oh, Sibyl!" cried Stella in amazement, "you surely did not speak like that?"

"Yes, I did, though, I took it as long as she throwed her 'flections straight at me, but when she said as she hoped the Lord would be merciful an' forgive Mrs. Chester, I couldn't stand it nohow."

"I don't know what Uncle Benjamin and Aunt Katharine would say if they knew you spoke like that," remonstrated Stella. "Mama told me once that it is impolite to contradict persons older than one's self."

"Mrs. Chester told me so more as once, but I'm a sinner like everything, an' when the sperrit strives I do things," and something choked her.

"Well, brighten up now, Sibyl," entreated Stella, "and let us find the meaning of those names. See! here is Benjamin; that means 'comfort' and 'blessing,' and is a true definition, for I know Uncle Benjamin is a great comfort and blessing to Aunt Katharine. Mama says he is."

"An' to everybody else what knows him," adds Sibyl.

"Then here is Katharine," continues Stella, scanning the pages of the dictionary. That means 'purity' and is a true definition also."

"There never was a corrector meanin'," comments Sibyl." "Now what does Clifford mean? We'll, take 'em in turns, you know."

"I can't find that name," replies Stella, running her fingers down the margin.

"Well, it don't make no difference. I know as it means 'angel' anyhow; for Mrs. Chester allus glances up'ard when she says that name."

"I believe, too, that it does," answers Stella. "And that makes me think of something which I must tell you: Once when Aunt Katharine took Clifford and I walking, a lady paused to admire Clifford with his golden curls and large blue eyes. Everyone thought him beautiful and this lady said that he looked just like an angel."

"An' now he is one," whispered Sibyl.

"Yes. That lady said that all that was wanting then was wings."

"An' now I spose he's got them, too," suggests Sibyl.

"I think so," answers Stella. "He used to often dream about shadows floating over him; he called them white shadows. Mama says she thinks they were the wings of angels."

"Oh," exclaims Sibyl, "don't stop,—tell me some more!"

"Well," confides Stella, "I remember how Aunt Katharine's eyes immediately filled with tears when the lady said that; and how she always looked so far away when Clifford spoke about his dreams. I did not understand it then, but Mama told me afterwards that Aunt Katharine always thought he would not live long."

"I wonder why?" almost breathlessly questions Sibyl.

"I do not know," replies Stella with trembling lips "unless it was that his hair was so very yellow and his face so very, very white."

"Well, don't speak about it any more—just now," says Sibyl, noting how that memory moves her. "Now what does Lily mean?"

"Sweetness."

"Well, I tell you there never was a sweeter lily than that one layin' in the cradle yonder," declares Sibyl.

"Now here is Stella; that means a 'star.' Uncle Benjamin always calls me his star. He says I often

cause him to look heavenward. Isn't that a beautiful thought, Sibyl?"

"Yes; now find Sibyl!"

"I can't find that name either," declares Stella after much searching.

"Do you think it might mean strivin' sperrit?" queries Sibyl.

"Indeed, I cannot tell," Stella acknowledges with a rather suspicious air.

"Or ugliness, p'r'aps," continues Sibyl.

There is a painful pause, then she persists: "Do you think I am so very ugly, Stella?"

The honest Stella looks completely puzzled. "It is wrong to tell a falsehood, Sibyl; and—and I do not like to tell you the truth," she adds in her childish frankness.

Sibyl is not offended, but meekly asks: "Can't you see nothin' purty about me?"

"Yes," answers Stella, with a glad smile, "when you speak to Lily and talk about poetry I often see something in your eyes that is almost beautiful."

"Thank you. Now find Mrs. Trot an' Mrs. Treadle."

"Oh Sibyl, those are surnames and are not found in this list."

"Well, it don't make no difference," quoth Sibyl. "I know as Trot means gadabout, an' Treadle means to be on top yourself an' tramp the heart and feelin's out o' other people."

Chapter XXII.—Glimpses from beneath the Foaming Goblet.

AGAIN it is darkness. The hour is midnight; and by the dull light of a few lamps here and there, one can determine the place of the scene to be that of the Foaming Goblet.

"Don't be in a hurry about leaving," urges the proprietor. "It is not every day that a man has the money to spend; when he does have, let him spend it upon himself. Who has a better right to enjoy it?"

"Perhaps so," assents the young man, holding out his glass to be refilled. "Mary grieved terribly about me keeping late hours at first, but she is becoming reconciled; at least she scarcely speaks about it now."

"You are to be congratulated upon your wisdom," declares the host as he refills the glass. "There is nothing like steeling one's self against his wife's tears at the beginning. Right here is where too many young men make the mistake and enjoy none of life's good things in consequence." This piece of warning he gave in a loud voice, for the benefit of his guests in general, and several newly-wedded husbands in particular.

"Yes, sir," he continued, perceiving that he held the attention of all present, "right here is where too many men make the mistake; give in to a woman once and you are tied to her apron strings for ever."

"My belief, Mr. Macdonald," ventured one man, arising and reaching for his hat, "is that woman should not be spoken of in such disrespectful terms."

"Oh, I beg your pardon," immediately answered the proprietor with his blandest grin. "I meant no disrespect to the ladies, I do assure you. Woman is an important factor of man's life; indeed we could not do without her. But that she is subordinate to man is proven by all laws, human and divine. The point I wished to make was this: that the sooner man makes this authority practicable, or in other words, the sooner he accepts and ennobles this God-given power, the greater and more universal is the respect which the wife will render him." This successful dealer in souls nad been in the business long enough to know just how high to bid for stock and when.

So he grinned once more as the newly-wedded husband resumed his seat, and proffered a treat to all the company.

And while they tipped the sparkling glasses a haggard face peered through the door; a face upon which the pangs of struggle and failure and despair were written; a face which wore the expression of a man who had been hunted by some evil foe or passion, and from whom God's good angel had turned away. It was the face of poor John Deane.

His foot was already upon the threshold. For one moment the haggard face was seen, then turned into the darkness and was gone.

"That Deane?" cried several of the guests. "How strange that he did not come in!"

"Very strange indeed!" replied the man who dealt in souls.

* * *

FRANCIS MURPHY.

AT his home in southern California, on the thirtieth of June, there passed from earth the soul of a man who led many men to abandon drink. Francis Murphy was the leader of a great pledge-signing crusade beginning about thirty years ago, and this eloquent and earnest pleader with men led many thousands to sign the pledge to abstain from intoxicants.

In an old Bible of mine is a dingy little card to which I signed my name when perhaps fourteen years old. It was my pledge to never drink intoxicants and I am glad to say that I have kept that pledge. It was signed in a "blue ribbon" or "Murphy meeting" in one of the churches of our town, about fifty miles from Pittsburg. Mr. Murphy was stirring that city with his appeals, and speakers went out to the near-by places. I walked three miles to town that night to hear the temperance lecture, and was thrilled by his address. I never had any intention of drinking intoxicants and perhaps would not have done so even had

I not signed the pledge, but I am satisfied that I recorded myself as I did.

Mr. Murphy was born in Ireland about seventy years ago. He was for a long time a drunkard, and his story starts with the work of a sympathetic Christian man in a Portland, Maine, jail where Francis Murphy was serving a sentence for illegal liquor selling. Captain Cyrus Sturdivant, a man of faith, asked the sheriff for permission to talk with the prisoners. Mr. Murphy tells of this meeting in "The Lincoln Legion":

"To Captain Sturdivant, if I have been of any use in the world, under God, I owe all of it. He commenced his work on the Sabbath day. The great, dark entrance door was opened to the Christian people. Quite a number had collected together, and they came in singing, 'All hail the power of Jesus' name.' I was sitting on the little iron bedstead in my cell, when the keeper came to the door, and looking at me said:

"'Mr. Murphy, we would like to have you come out and attend religious services.'

"'Please excuse me; I will remain here, and not disturb your people,' was my prompt reply.

"'Come out; these people are your friends; they will not injure you,' persisted the keeper.

"There was something so kind and agreeable in the face of the man, that it produced a disposition of assent within me, and touched my heart. Yet my answer was:

"'I would sooner stay here.'

"'Come on, Mr. Murphy,' he continued.

"At this I concluded I would go. Oh, how my heart had ached for a kind word! For someone to say, 'Can I do anything for you?' I then responded:

"'I will go out with you, I believe.'

"I rose from my seat, stepped out of the little open door, walked about ten paces, and sat down with the rest of the prisoners. There was Captain Cyrus Sturdivant. His back was turned toward me as I walked along the corridor. When he turned about, he was weeping as a mother sometimes weeps for her child. As I looked at his face, I asked myself, 'Who is he weeping for; has he lost a son?' No, it was evident that he had a heart for others. He was telling of God's goodness. His words were very sweet to me. He spoke to us of hungry wives and children. And, at that moment, it seemed I could see my poor wife and children before me. As he continued to talk, it seemed to me that my imagination never realized so powerfully as it did at that time, the presence of the objects of my affections. My children seemed to be about me; and my dear wife was standing in my presence, as calm and patient as ever, saying not one word. I queried, 'Does any one care for me? I wonder if there is a friendly hand here to be extended to me?' And I said to myself, 'Oh, what would I not give to sit down with that man and tell him the sorrow of my heart!'"

Captain Sturdivant followed the matter up until Murphy was happily converted to Christ, and with it, of course, came his determination to cease to have anything to do with intoxicating drinks. He remained a prisoner for some time afterwards, and his work as a reformer began during his prison days.

One day he conceived a project of carrying the work begun in his own soul, among the unconverted men around him. He sent a petition to the sheriff, asking his permission to hold a prayer meeting. The meeting was held, and was one of powerful influence for good. In the course of a little time, he saw the seventy-five men in the jail brought securely from the evil of their lives. God gave him every man in the jail. Murphy took this as a sign from God that henceforth he was to give himself to the work of rescuing and reforming his fellow-men. The result was so wonderful in the conduct of the men that the sheriff discontinued the practice of locking them up. They were put upon their honor. Contrary to the previous custom of the place, they were permitted to go out into the yard, and not one of them ever violated his word to the keeper.

Francis Murphy delivered his first lecture in the City Hall, Portland, Maine, April 3, 1873. The success was remarkable. A great crowd was present, and the humor and pathos of the discourse captivated the audience. That very evening he received over sixty applications for lectures in other cities. He was already launched upon his career. From Maine he went to New Hampshire, and then to Iowa and Illinois, and then to all the world.

Francis Murphy was very remarkable for the number of drinking men of great prominence and influence whom he won to sobriety through personal and individual work, in addition to the multitudes who were persuaded to take the pledge at his public meetings.

The Murphy movement was distinguished on the part of its followers by the wearing of a bit of blue ribbon in the button-hole of the coat, and so rapidly did the movement spread that the blue ribbon became a well-known badge from one ocean to the other. The work in some cities was phenomenal. Eighty thousand signed the Murphy pledge in Pittsburg. One hundred and twenty thousand signed the pledge in Philadelphia within two months, and in the State of Pennsylvania alone four hundred thousand wore the blue ribbon.—*The Watchword.*

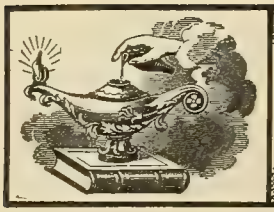
THE workshop of character is everyday life.—*Babcock.*

MINING DIAMONDS IN SOUTH AFRICA.

Some two generations ago little was known of gold and diamond mines down about the Rand and Kimberley in South Africa. They were discovered partly by chance. British rule in Cape Colony became too oppressive to suit certain of the Boers and two bands left that state, one of them settling on a patch of territory now known as the Rand, 40 miles in extent and now yielding perhaps a hundred million dollars annually in gold. In the other band was a man known as Burgher Jacobs, who settled on a tract of 100 acres, not knowing the immense wealth that was concealed on his claim. Diamonds were so thick around Jacob's place that the children used to gather them and use them for playthings. A neighbor one day took one of the toys; it was sent to Europe and at the Paris exposition was exhibited, a beautiful diamond of 22 carats. Everyone has heard the story of how, lying in the dark room of a friend's hut, a Boer, named Van Neikirk, saw something gleaming in the mud wall, picked it out and found it was a diamond. The gem was what is now called the Star of Africa and brought $56,000. Then the fame of the country began to go abroad and to-day what was a wilderness is one of the richest fields on earth; some 15,000 Kaffirs and 4,000 Europeans are employed there in the famous Kimberley mines.

The earth containing the diamonds is in strata which are tube or funnel-shaped, cover many acres of ground, and seem to have been forced up in some bygone age by volcanic action. The earth is blue and yellow in color, and the blue already has been followed to a depth of 3,000 feet and still the limit is not reached. These two colored earths are sown thick with the precious gems. Far back in the ramifications of these mines thousands of men are at work at $1.25 a day, drilling holes into the blue earth so it can be blasted. The yellow earth lies near the surface. Tons of the blasted earth are hauled along the underground corridors to the shaft of the mine where the loads are hoisted to the surface. It is dumped out on an area prepared to receive it, being spread about a foot thick. The weather does the rest, disintegrating the clay and setting free the diamonds which are in no way affected. This method is as sure as, and much cheaper than, machinery. The clay is exposed for several months and then begins to crumble. Steam harrows from time time pass over it to help the disintegration along. If any resists this milder treatment it is taken up and turned into machinery made for the purpose. These dumping grounds in some cases extend for miles.

The next process is the washing. Dirt and gravel are washed down an inclined plane which has a gummy coating in which the diamonds are caught. When one washing is completed the coating is scraped off and melted and the diamonds are set free. They are then sorted out according to size and value. It is said that as much as $200,000 worth of dimonds have been washed out in one day. The waste earth that has passed on from the washing machine is collected and submitted to another treatment, a process well worth while as last year $1,400,000 worth of gems was taken from the refuse. Not only diamonds are found in this earth, but garnets, olivines and other stones. The gems are then ready to be shipped. An English syndicate contracts for the whole output of the mines and it sends the gems to various places to be cut. The rough stones bring from $1.50 to $200 a carat.



Naturally, where so small a stone attains to such great value, the owners of the mines have trouble in keeping the workers from stealing some of them. Sorters have been known to swallow as much as $5,000 worth of diamonds. All sorts of ways are devised to get the diamonds out of the mines so that the hair, mouths and clothing of the workers are searched when they come out. Perhaps the x-ray will be turned on their stomach to see if any have been swallowed. Sometimes they are smuggled in pipes, under the tobacco, the smuggler puffing away vigorously as he goes along. Some have even constructed little pockets in their flesh so as to conceal a gem or two.—*The Pathfinder.*

TONIC IN CAT-NAPS.

The benefit a man gets from sleep does not seem to be in proportion to its length. Five minutes of sleep in the middle of the day will often give a most surprising braceup to the system. Something happens then—no one can say just what—but there is some readjustment, some new coöperation, which may bring an entirely fresh vim and push to a man, enabling him to make the attack on his work with redoubled vigor. This, while difficult to explain, is a matter of common experience.

Dr. Morse, the great geographer, had an original way of taking advantage of the benefit of a moment's sleep, and of doing it in such a manner that he did not lose time from his work. When the sleepy feeling came over him as he worked late at his desk, he would place his wife's darner in one of his hands and hold it between his knees, resting his elbow on his knee. Then he would yield to the impulse and shut his eyes. But as soon as he really fell asleep, his hand would relax, and the sound of the wooden egg falling to the floor would awaken him. Strangely enough, the second of sleep that he had thus secured would be enough to let him work on for another period with new energy. Then he would go through the same process again.—*Luther Halsey Gulick, M. D., in Good Housekeeping.*

"For every man who can do things, there is a man willing to pay for having things done."

THE QUIET HOUR

"SERMONETTE."

G. A. SNIDER.

"Wine is a mocker, strong drink is raging; and whosoever is deceived thereby is not wise."

SATAN is great at deception; many and varied are the means used to accomplish his end. In his deadly mission, probably, he has no weapon so powerful as strong drink.

I. *Wine is a mocker.* Wine is here used under a figure representing an evil spirit who deceives and excites to boisterousness and wantonness.

How true it is,—wine is a mocker; it seems to possess the power to entice so many of the noble young men. It holds out glowing promises, which lead but to the snare. It promises pleasure, but brings misery to its victim, his family and society. It promises joy, but brings sadness and grief. It promises health, but leaves its victim with a diseased and broken-down system. It promises to the youth freedom, but how sad is his condition when he finds himself locked in prison,—bound by such chains as appetite, habit, lost will-power and evil companions.

It promises you eloquence, but mocks you by causing your tongue to stammer.

It promises friends,—and leaves you deserted, friendless, in alley, ditch or roadside. It promises prosperity, wealth, but mocks by landing its victim in the poorhouse or some inebriate asylum. At last it promises to make you a man, and instead it steals away your manhood, and all your finer faculties, so it is impossible for you to become a man.

II. *Strong drink is raging.* Strong drink in the hands of Satan to accomplish his purpose is not unlike the devils in the swine. Men lose their self-control and their self-respect, scoff at religion, reject advice and reproof, and ridicule much that is good and uplifting. When strong drink enters, wisdom and judgment vacate and the victim becomes little less than a raging maniac. Truly, strong drink is raging both in itself and its effects on others.

III. *Whosoever is deceived thereby is not wise.* Wisdom is the right and proper use of knowledge. Knowing that wine is a mocker and that it deceives and debauches, how unwise a person must be to allow himself to be seduced by it.

Young man, God has given you talents, will-power, and more,—a body to be the temple of the Holy Spirit. Do not bury your talents, lose your will-power nor defile your body by allowing yourself to be mocked in the use of strong drink. Be a man. Be wise.

Fostoria, Ohio.

LOVE.

RICHARD SEIDEL.

THE Savior's command was, "Love your enemies." How purely unselfish must be the heart that really obeys the divine injunction; but the Savior both by precept and example illustrated the worth of this love; not only did he love those who were kind to him, but those who reviled and persecuted him. Of all the influences brought to bear upon the human soul, the work of love is the most wondrous and divine. It sheds a halo of heavenly light over all with whom its possessor is associated. A soul in the possession of the love of God is rich beyond comparison. The earth may withhold her treasures and the fortunes of this world never smile; but the wealth of love is a mine that can never be exhausted. When earthly riches shall have taken wings, love shall remain as the Christian's abiding treasure,—the test of the soul's discipleship.

THE KINGDOM OF THE WEAK.

RICHARD BRAUNSTEIN.

Kings choose their soldiers from the strong and sound,
And hurl them forth to battle at command.
Across the centuries o'er sea and land,
Age after age the shouts of war resound;
Yet at the end, the whole wide world around,
Each empty empire, once so proudly planned
Melts through time's fingers like the dropping sand.

But once, a King—despised, forsaken, crowned
Only with thorns—chose in the face of loss
Earth's poor, her weak, her outcast, gave them love,
And sent them forth to conquer in His name
The world that crucified Him, and to proclaim
His Empire. Lo! pride's vanished thrones above,
Behold, the enduring banner of the cross!

"WE may say that Providence put Joseph next to the throne and made him the real ruler of Egypt, but after all it was his purity of life and unselfishness of purpose that gave him his preëminence. Even Providence must have character with which to work its triumphant way among men."

THE CALL OF DUTY.

We Christians are not only to be loving children of our heavenly Father, but the dutiful servants of a Divine Master. And there are times when the clarion call of duty is better for us than the caressing accents of love. Never give up doing what you know to be right because you fail to find pleasure in it. For you it may be best to do steadfastly the duty of the day simply because God ordains it. And though you find the path to heaven steep and hard to climb, the severe and bracing effort will develop your strength and raise you into a purer atmosphere.—*Rev. Alfred Rowland.*

DRAWN, NOT DRIVEN.

"I have loved thee with an everlasting love; therefore with loving kindness have I drawn thee." (Jeremiah 31: 3.)

I understand the word "drawn" to be used here as the opposite of "driven." I take the meaning to be: "It is because I love you that I do not force you; I desire to win by love."

We often express surprise that human life does not reveal more traces of God's omnipotence. We see the visible universe subject to inexorable law and yielding submissively to that law. But man does not yield submissively; he resists the will of the eternal. Why should he be allowed to resist? Is he not but an atom in the infinite spaces—these spaces that obey the heavenly mandate? Why not put down his insane rebellion and crush his proud will into conformity with the universal chorus? The Bible gives its answer. It is because love is incompatible with the exercise of omnipotence. Inexorable law can rule the stars; but the stars are not an object of love. Man is an object of love, and therefore he can only be ruled by love—or, as the prophet puts it, "drawn."

Omnipotence can subdue by driving—but that is not a conquest of love; it is, rather, a sign that love is baffled. Therefore it is that our Father does not compel us to come in. He would have us drawn by the beauty of his holiness; therefore he veils all that would force the will. He hides the glories of heaven. He conceals the gates of pearl and the streets of gold. He reveals not the river of his pleasures. He curtains from the ear the music of the upper choir. He obscures in the sky the sign of the Son of man. He forbids the striking of the hours on the clock of eternity. He treads on a path of velvet, lest the sound of his coming footsteps should conquer by fear the heart that ought to be won by love.—*The Advance.*

A smile is a good investment—when backed by an honest heart and a sober mind.—*Gospel Witness.*

THE PERSONALITY OF JESUS CHRIST.

(Concluded from Page 749.)

stead of giving a stinging reply. It requires self-control always to think chaste thoughts about virtuous womanhood, but it can be done.

A third thing fundamental to a fine personality is *the spirit of service,* in other words, a purpose that aims at an absolute lack of selfishness. Selfishness lies at the root of all sin. Trace every wrong act, every evil thought down to its inception and self is there. Ask Christ what contributed most to his magnificent personality and he will tell you it was his spirit of unselfishness. His soul grew beautiful under the stress of his work for others. Work for others is the essence of Love. Phillips Brooks preached an immortal sermon about "The Beauty of a Life of Service" and this simple truth has enriched the lives of a thousand thousand men. All men are more or less selfish, but Socrates and Plato, Wyclif, and Newman, Luther and Savonarola, Gladstone and Lincoln are great in just such measure as they devoted their lives to helping the race in its struggle towards God. Here is where the life of Christ transcends all life before or since. Someone has said, "There is one thing better in this world than making a living and that is making a life." Jesus says, "I am come that *ye* may have life and have it more abundantly." "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." These are Jesus' own words. In this work his great personality shone through. In service for others he found his truest freedom and in helping up the race he grew close to the Father. In real life itself is where his high purposes, his self-control, his unselfishness counted. "In all points tempted like as we are, yet without sin." In the garden of Gethsemane he fought out in his own soul the greatest battle in history. It was the greatest victory of ages. Had he yielded to one temptation of ambition, passion, or self-aggrandizement he could not have been the Savior of the world.

Living the life of the Spirit he grew into a tremendous consciousness of God and became like unto the great *I am that I am.* Always master of his best self and keeping sweet under all circumstances, he grew more beautiful than the Rose of Sharon. In keeping the world up and radiating love and kindness he came into a personality only less great than the Great Unseen Himself. Such was he, our Lord and Savior, Jesus Christ.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

FACING A DIFFICULTY.

THE real success of a man or woman must always be measured by the wisdom used in meeting difficulties. Almost anyone can succeed when everything moves along smoothly. Of course there are certain characteristics by which the really successful may be recognized even in smooth sailing, but they never appear to such advantage as when the storm sweeps down.

It is soberly believed by some that one has given to him in a moment the strength and wisdom he needs for the trial hour,—that the crisis makes the man. No idea concerning man's social or business life is more fallacious. The one who is waiting for such a miraculous intervention to bring him to the top may just as well accustom himself to the place where he is, for he is likely to stay there till doomsday. Difficulties are faced and conquered by the accumulated strength and wisdom of uneventful periods, and when that strength has been no more than these uneventful times demanded, the difficulty is pretty sure to have its own way when it appears.

A long step toward victory is gained by the one who can size up appearances and indications and judge as to their real weight and influence. The remedy for a disease is very likely to be sought by the one who plainly recognizes its presence, and ways of facing a difficulty will begin to suggest themselves to the one who sees it bearing down on him from a distance. When it arises without any forewarning there is nothing to do, of course, but depend on the strength that has been laid up from past experiences, as stated above. In any event one's past has much to do with the way he faces the present, whether fraught with great issues or small.

Another important matter in meeting a difficulty is the disposition we make of self. In fact in many cases the circumstances would not appear at all formidable if it were not that they happened to cross the inclination of self. When self is set aside and the highest good alone consulted, the way often appears easy and plain. Given a disposition to make the most of the common experiences of life and to keep self in the background, and the man or woman will make little ado about the difficulties he may have to face. He will look upon them as splendid opportunities for testing and increasing his strength and putting him in better shape for future service.

Last, but by no means least important, is the consciousness of a power beyond ourselves that will help us over the hard places. It is a common thing in the world to measure a man by the reserve power he has at his command. When the man whose reserve power rests in the Almighty is measured in this way, it is impossible to place an estimate upon his capabilities. The greatest difficulties offer no terror. He rests in the promise, "It shall not come nigh thee," and this confidence increases his own strength and life is a series of victories.

A MIDSUMMER DAYDREAM.

IT was at that season when nature had just passed the climax of her labors and was resting amid the luxuriant results of her efforts. The sun beat down with its harvest-ripening power. The breeze moved slowly, sometimes almost losing itself in the rich growth of leaves. It was after noon and even the noisiest birds seemed to have spent their strength and sat silent. The insects alone continued their monotonous and dreamy song.

The dreamer, who all morning had toiled in the world's busy mart, lay in the shade of a tree. Competition's game had taxed all his energies and given him a restless anxiety that threatened to rob him of the little courage that still remained. He sighed and for a moment covered his upturned face with his hands. Then he looked about him and slowly the influences of the place began to steal upon him.

Through the protecting branches overhead could be seen patches of deep blue sky. Here and there floated a fleecy cloud, adding perspective to the blue expanse which alone seemed to lead one to unfathomable heights. The drowsy hum of the insects quieted the strained nerves. The pure air and refreshing shade ministered to the comfort of the physical man, and noting the thread of sympathy that seemed to bind all the surroundings together, the dreamer realized that this was a world of itself.

The realization brought a feeling of relief, for with it came the conviction that the other world, with its toil and turmoil, was not all of life. The cares that laid claim to all one's time and strength began to lose some of their importance. The bargains that had once brought a feeling of pride were now a cause rather for shame. With the waning of interest in the people's world came an inexpressible feeling of renewed life and energy, the nature of which accorded perfectly with the character of nature's world.

The dreamer pinched himself to see whether he was really awake and shrugged his shoulders that he might know whether the burden that once bore down so heavily upon him was in truth a phantom that had taken wings. To his great joy he found that he was indeed a free man. The world with its blue sky of infinite space, with its care free birds with its insect life, with its quiet restfulness, had brought that other world into the proper perspective, robbing it of its power to monopolize the whole man. Under the influence of this conviction the dreamer fell into a dreamless sleep. When he awoke he went back to his work with a new light in his eyes, and a new purpose in his heart.

WHO IS TO BLAME?

A JULY number of the *Independent* discusses briefly the alarming situation in many American colleges and universities which would seem to indicate that the very purpose of these institutions has been changed in recent years.

"The first significant fact to be observed in certain large universities," says the writer, "is that outside interests are primary and university works proper is secondary—from the standpoint of the student. Athletics and social affairs of different kinds demand so much time, and the students keep such late hours, that they are unable to do good work, even when they have any desire to do so. A student who shows his interest either by asking questions or answering them is laughed at. The student prominent in university life is not often the one doing good classwork from day to day, but is a member of one of the many athletic teams, debating teams, or is prominent in fraternity circles for some reason entirely apart from good scholarship."

Of the fraternities, the writer says that not a few are an evil, fostering idleness, false and abnormal attitudes toward work and life, and breeding all sorts of immoral life and practice. "They are reputed to foster college spirit, but it is not a spirit that will do a college any good."

In fixing the blame, the writer says that perhaps it belongs to no one in particular. However, he makes some statements which make it clear that certain ones can help improve conditions. First, he says the situation is due to the fact a large number of students are at the university who have no business there; they are *sent* there, when if they are to be sent any place, it should have been to the farm and workshop where they would be compelled to work. While it is true that no one laments conditions more than does the faculty, and no one tries harder to change them, the university authorities must bear part of the blame. "They are always striving to increase the attendance, as if great numbers make a great university. The authorities yield to the demands of students in a desire to keep their good will."

Any one who has taken any interest at all in the life of the young men and women in school, as revealed in their school publications and in other periodicals, must confess that the writer above quoted has not exaggerated. And any one interested in the welfare of our students as a body, and in the earnest, upright studious ones in particular must be deeply pained by these revelations. If the wrong people go to the universities, it argues that the influences surrounding them while in their preparatory course may have given them that tendency. At least it is not too much to expect our preparatory schools to labor with all their might against these harmful influences.

"GIVEN TO HOSPITALITY."

AMONG the virtues that go toward the making of a fully rounded out Christian character is this of entertaining friends and acquaintances in one's home. Some people would have us believe that the practice is not as common as it once was, and it may be that the unselfish, spontaneous sort is not. However, even this genuine kind is not so unusual that most of us have not at some time or other experienced its blessings as giver or receiver.

This is the season when the pleasure of entertaining is especially indulged in and in order that it may include all the elements of real hospitality, guest as well as host needs to be familiar with the golden rule. If one cannot keep out the selfish element either as entertainer or guest, it would be better not to pose as either, for this has had the effect not only of making the custom less common but also less praiseworthy.

WORTH REPEATING IN THIS ISSUE.

ASK Christ what contributed most to his magnificent personality and he will tell you it was his spirit of unselfishness. His soul grew beautiful under the stress of his work for others.—*Harry W. Mack.*

OF all influences brought to bear upon the human soul, the work of love is the most wondrous and divine.—*Richard Seidel.*

YOUNG man, God has given you talents, will-power, and more,—a body to be the temple of the Holy Spirit. Do not bury your talents, lose your will-power nor defile your body in allowing yourself to be mocked in the use of strong drink.—*G. A. Snider.*

NOTHING can really harm us unless we let it.—*Hattie Preston Rider.*

Echoes from Everywhere

After experimenting for sixteen months with the briny waters of the Great Salt Lake one of the Western railroads has adopted them as a weed-killer. Stored in tanks the water has been hauled over the line and sprinkled upon the right of way. The weeds which have been the bane of section hands withered under the treatment and do not come up any more.

A very interesting experiment in the way of a boy's city is under way at Winona Lake, Indiana. Hundreds of boys from different sections have gathered there to camp for a few weeks and receive lessons in citizenship and "the square deal," under the direction of Judge Willis Brown, of Salt Lake City. They will establish a regular city government, a bank will be organized, and a morning publication will be issued every Friday while the camp is in existence.

Returns of deaths from the plague in India show the appalling total of over one million for the six months ended June 30. The monthly total is at present decreasing, however, the death roll for June being placed at 69,000. The total for the first six months of 1907 already surpasses that for the entire twelve months of 1904, when one million persons died. This total is the highest ever recorded previous to the present year.

Cotton thread is advancing in price. In May it went from five to seven cents a spool and now the announcement comes that there will be a further increase to 10 cents a spool. This thread is manufactured almost exclusively by the trust. Increased cost of raw material and an advance in wages is the reason given for the contemplated increase in price. Independent manufacturers declare that neither of these reasons are good ones, for when cotton was selling much higher than it is now thread retailed for five cents.

Judge Hunt, in the federal court at Helena, Mont., has decided that one telephone company may not withhold the use of its lines from another, and the decision is likely to be regarded as a precedent throughout the entire country. The Montana and Wyoming and the Mutual telephone companies had asked the courts to compel the Rocky Mountain Bell telephone company to furnish connections at reasonable compensation. The judge so ordered, and named a commission to fix the division of charges.

A new way of making foundations is being employed in Europe, the method being known as the compressed system. A tapering arm makes holes through the soft soil down to the hardpan, the arm being forced down like a pile driver. Then the holes are filled in successive layers with stones and rubble solidly driven down. The result is a monolithic block of great strength with the advantage that no ground has been removed while making the hole for the shaft, thus securing great compactness of the sides.

Feimgriek, a plant recently introduced into this country by the department of agriculture, possesses unusual properties in its power of adding flesh to the user. It grows close to the ground and yields a seed, yellow and odorous, which is the material that produces the flesh when properly taken. To the surprise of the investigators it has been learned that this seed is not a stranger, but has long been in use in America as the principal ingredient of condition powders for stock. Owing to its property to give added strength by the accumulation of flesh, it is thought that it may prove a powerful agent in combating the ravages of the tuberculosis bacteria.

The Board of Directors of the Merchants' Exchange of San Francisco has announced that it does not favor any immigration law that will discriminate against the people of Japan or that will permit them to be treated any differently from the people of any other foreign country. It is regarded as desirable, the board contends, that the Japanese people enjoy the same privileges in this country that are accorded the people of this country in theirs. The members consider it important that there be no barriers to the most friendly trade relations between the two countries.

THE report of the special examiner in Alabama to the legislature of that state concerning Booker Washington's Tuskegee institute for colored people shows that it is in excellent condition. Not an error was found in the bookkeeping department. He found that the school had an endowment of $1,479.150, and owned two thousand acres of real estate, the value of which is $700,000. The examiner says the general moral conduct of the pupils is uplifting, and that the teachings are of such character as to win commendation. At the close of the school year there were 1,505 students and 149 teachers.

PRESIDENT HARRIMAN, of the Southern Pacific, a short time ago gave orders to have a number of new fine passenger coaches built at the company's car shops at Sacramento with side doors instead of end doors, notes the *Scientific American*. Harriman believes that cars thus constructed will be much stronger and more durable than the style now used; and also that in case of wreck, there will be little danger of the coaches telescoping each other. There will be a small passageway by which the passengers may go from one coach to another, but this will be so arranged that it will not weaken the end walls of the cars. Another feature of these coaches is the use of round instead of square windows.

KING OSCAR is anxious to secure the return to Sweden of the hundreds of thousands of Swedes who have emigrated to America, and has begun an investigation to determine what were the conditions which prompted his people to leave the fatherland, and what would be necessary for Sweden to do to induce them to return. Editors of Swedish newspapers have been asked to publish the request for information at intervals, and to send data to the Royal Swedish consulate in New York City. Sweden is said to desire particularly the return of skilled mechanics, of which there is a great scarcity in Sweden, owing to the better opportunities for high grade workmen in the United States.

AN American penny slot machine is accountable for a shortage of copper coins in England. A series of inquiries made among the companies which supply gas, electricity, matches, chocolates, etc., on the penny slot system have developed the fact that more than 60,000,000 pennies, valued at $1,250,000, are continually locked up in these machines, and consequently withdrawn from circulation. The effect of this may be realized when it is remembered that this amount exceeds the total issue of pennies during the years 1900, 1903 and 1905. The mintage of gold in Europe has also been far in excess of previous years, and this is taken as an indication that times are abnormally good. The mint brought over $62,500,000 worth of bar gold during the last fiscal year, and, in addition, took $13,500,000 in specie for recoinage.

THERE are many conflicting stories in regard to the treatment of natives in the Congo. Now we hear of unspeakable cruelties perpetrated when our indignation is aroused to the highest pitch, and again we are lulled into a state of do-nothing by the statement that the reports are greatly exaggerated. At present the public is taking notice again as a result of the exposure being made by Major Lemair, who for eighteen years had charge of native troops in the Congo. On entering the service he was taught that the only way to bring the natives to their senses was amid the rattle of musketry, the banging of cannon, and the burning of villages. After four years he was convinced that the course was not the right one and since he has defended the blacks, upheld the work of the missionaries, and realizing the danger of a continuance of irresponsible control in the Congo, has become a champion of annexation as the sole remedy.

THE foreign trade of the United States for the fiscal year ended June 30 last, according to the bulletin issued by the bureau of statistics, aggregated $3,315,252,116, for the first time passing the three-billion mark, and exceeded that of the previous twelve months by $344,825,170. Imports comprised $1,434,401,092 of the total, and increased $207,836,646; while the exports valued at $1,880,851,024, gained $136,986,524, leaving a balance of trade in favor of the United States for the twelve months of $446,449,932. The year was the first in the country's history when neither the imports nor exports fell below $100,000,000 in any month. The imports for December amounted to $134,349,760, high-water mark for shipments, and the exports for the same month, valued at $190,399,977, were exceeded only by those of December, 1905. The gold movements for the year aggregated $155,884,852, of which $114,485,676 were imports, being an increase of $18,263,946 over those of the previous twelve months and the exports were $51,399,176, a gain of $12,825,585.

Mrs. Barnett's "Wandering Boy"

Hattie Preston Rider

In Four Parts. Part Two.

A PHYSICIAN'S auto drove away from the curb as she came opposite; otherwise there was no sign of life about the handsome house. Aunt Hetty crossed the street, her heart beating tumultuously. Past the entrance a narrow walk led to the side door under the port-cochere. She followed it, and mounting the marble steps, tapped softly. The door was opened, after a moment, by a maid in white cap and apron. Well-trained as she was, the girl hesitated, staring, and uncertain in what status to place the intruder.

"I haven't come to make you extra steps," Aunt Hetty hastened to assure her, quaintly, "but I—won't you please tell me how the poor laddie is doing? I met his mother at the Circle yesterday, and it's made my heart ache all day, that I couldn't do a thing for her."

The maid colored, stammering something unintelligible. But a quick step sounded behind her, and Mrs. Barnett herself, pale and heavy-eyed, looked past the white cap.

"Oh!" the president gasped; and in an instant she had pushed the maid aside and drawn Aunt Hetty forcibly into the hall. With a dry, tearless sob, she wound her arms around this one-time stranger's neck, and buried her face on the motherly shoulder.

"It was beautiful of you to come," Mrs. Barnett said, when she had gotten possession of herself somewhat, and seated her visitor. "Most people are intruders; but I've wished for you all the while."

She still held the worn hand. Aunt Hetty laid her other over the soft white one.

"I wanted to remind you it is partly the suddenness that makes it so hard. Rarely things are as bad as they seem at first."

"The wound is not the most serious," Mrs. Barnett said, after a moment. "But the shock has brought on fever, and the doctor fears for his brain." Her voice broke a little. "The worst is that we haven't a satisfactory nurse. There is so much sickness in the city it was difficult to get any at all."

Aunt Hetty's fingers closed spasmodically. She had forgotten for the moment, that the modern mother is not to be trusted with the care of her own sick ones.

"You do not know of any nurse, do you?" Mrs. Barnett asked, eagerly.

Aunt Hetty thrilled to her finger-tips, forgetting even Alicia, whose guest she was. Back in Riverdale, her homely skill had brought a hundred patients safely to recovery.

"Dear," she said, "I couldn't speak the Latin name of half a dozen diseases, but I have taken care of the sickest people we had in town, for twenty years. Couldn't you and I together manage, at least till some one else is found?"

A glow of joyful surprise lit Mrs. Barnett's face, quenched an instant later.

"It is blessed in you to offer; but,"—doubtfully, "the doctor might object."

"The doctor might be reminded that he is only your paid helper," Aunt Hetty rejoined, dryly.

Mrs. Barnett suddenly raised the hand she held and hugged it against her cheek. A sob, heavy with relief, rose in her throat. "God bless you, my dear, dear friend. I can never in the world repay you for this."

Alicia's solicitude was promptly quieted by her husband's declaration that the idea was heaven-sent. Mrs. Barnett discharged the incompetent nurse, passing over the physician's dictum regarding her successor with that sweet, suave finality that made her the ablest executive in her set. So Aunt Hetty was installed in the pleasant, roomy sick-chamber, and the following days saw her fighting out the grim fight with death. Many a night-vigil the white-faced mother shared with her; many a quaint bit of wisdom, fresh with keen unconventionality and common sense, passed from the elder woman's active mind into the younger one's, taking root to bear precious fruit, later.

For Ralph lived. Back from the queerly-peopled land of delirium he came, one afternoon, to find a pleasant-looking stranger sitting quietly beside him. A soft call brought his mother like magic from the next room, her soul shining in eyes so big and shadowy Ralph wondered weakly if in truth they were his

mother's. Under the care of these two he crept slowly back to life. Then, when he was able to walk feebly to the great easy-chair, Aunt Hetty was summoned home to Riverdale.

The two missed her more even than they had guessed. All at once Ralph realized that getting well was tedious business. The "cranky" stage of convalescence set in, and Mrs. Barnett found herself at her wits' end to amuse him. Yet not a fraction of her patience gave way.

"I'll be thankful enough when I can get out of this lonesome hole and see something!" he exclaimed petulantly, one afternoon. "Beg pardon, mother; but a fellow gets to feel like a regular bear, when he's cooped up; and that story's a trifle slow, you know."

Mrs. Barnett laid the book, which she had been reading aloud, on the table beside her.

"I'd be glad if you should think of something jolly we might set going here," she answered, unruffled as if his words had been a sugared compliment.

A sudden perverse impulse seized the lad. He leaned forward, his eyelids narrowing.

"Yes?" he said, with the faintest trace of mockery in his tones. "We might have a nice little game of poker, you and I."

"I haven't a pack of cards," she said dubiously.

Ralph was watching her, blankly curious.

"Oh! well, I have," he assured her, laughing a little unnaturally. "You'll find them in my second desk drawer. Bring the box of chips, too."

So great was his astonishment that he had not mustered two consecutive thoughts, when she returned with the cards, an article heretofore rigidly tabooed in the house of Barnett. Her thin cheeks burned; but her manner was ease itself as she cleared the little table and set it close to his chair.

"You'll have to teach me," she laughed, as she handed him the pack. "I like games; but I haven't the faintest idea how this is played."

Ralph's sensations, like the look on his face, defied description. But he shuffled the pack, cut, and dealt. Then he laid their two hands, face upward, on the table, and exclaimed, with an odd, rasping note in his voice, what constituted a pair, a flush, or a full house. How strangely the familiar terms sounded, in the pure presence of his mother, only he knew; and as the game progressed, mechanically enough on his part, he realized that all his life he had classed her and her like as bigots, those next of kin to the hypocrite. What now? Behind his set lips and inscrutable eyes some very vigorous thinking was going on.

His mother proved a bright pupil. Save a slight awkwardness in handling the cards, she might have passed for an experienced player. With the novice's luck, the pile of little ivories at her right grew, till Ralph, forcing a laugh, told her he should be obliged to take refuge in the bankrupt law.

"Is this all?" she asked at last, in some surprise. "I had supposed poker to be a very scientific game. It seems rather a matter of luck, after one has the terms in mind."

Ralph did not reply. They played on, and at last by bluff he won heavily. When he laid down his hand, a faint exclamation escaped her lips. Looking up, he met her eyes, smiling but hurt a little, and with infinite comprehension in them. The hot color mantled his cheek.

"Some things about it are not exactly simple," he said shortly; "and there's a good deal in shuffling, too. Some fellows will do 'most anything, when they've a pile up."

"It is nothing against a game that mistaken people abuse it," was her only comment.

He bid past the value of her cards, on the hand following, and after a moment's hesitation she laid them down, face upward, on the polished table.

"It's yours," she said, regretfully.

"Why didn't you bluff?" asked the boy, with a queer intonation.

His mother flushed, but she made no answer. Ralph leaned forward, a sudden resolve lighting his face. Some truths had worked out very plainly in his mind, during that remarkable afternoon.

"You didn't," he cried, almost fiercely, "because you can see it would be the same as lying! And that's all that saves the whole thing from being a baby's game! You shall not touch another chip, mother!" With a quick nervous movement, he swept the piles from the table into the grate; then with a laugh that was half a dry sob he commenced gathering up the scattered cards.

"There are some clean games, though. We might try them some other day. Would you bring me a glass of fresh water, mother?"

When Mrs. Barnett came back she found Ralph lying on the couch with his face buried in his arm. He was breathing deeply and regularly. She set the glass near him and went softly out.

"Nothing can really harm us, unless we let it," Aunt Hetty wrote back in answer to Mrs. Barnett's letter recounting the story. "When you've thought that over a good deal, my dear, you'll see it is true."

THE LETTERS WE WAIT FOR.

MANY of our readers, and especially the young people, will be going away on a vacation of longer or shorter duration during the hot months now at hand, and in their joy at their own release they should not forget the ones they leave still in the tread-mill of home duties. Among the things packed away in the trunks or suit-cases should be a liberal supply of stationery, pencils and postage stamps, and these should

be used freely in giving the home folks a share in the merry outing-joys. Many will be inclined to put off the letter-writing, even the briefest, with the excuse that the day's doing left them too tired for pen work; but this should not be. If they could only see the expectant faces at the approach of the post-man as it turns slowly into a sorrowful disappointment when there is no letter, or could feel the touch of heartache that comes with the thought that we are lost sight of by our loved ones who have learned in so short a time to live without us, they would not so readily turn away from pen and paper. Many things occur during even a brief absence that in after times make us wish we had sent the loving word, or written the cheery letter. Many unhappy things, that have taken from us the power forever more to gladden or to comfort the dear hearts we so carelessly neglected.

It is a little thing—just a few words, assuring us that we are not forgotten—that even in other joys, our presence is missed; that the young heart turns, in joy or in sorrow, to the "old folks at home" for the sympathy none others can give—is it a little thing to slight such love? Dear boys and girls, write the letter to the home folks. It takes so little to make them happy, and come what may, they will always love you. Give them glimpses of your outing joys, and let them at least touch you in your journeyings. The partings are so new, and they so long for you! Bye-and-bye, when you have gone out to make a life of your own, if the world fails to receive you kindly, or takes from you that which you can ill-spare, you will realize that in the old home there are love and shelter and a faith in your strength that can be found no other wheres.—*Exchange.*

SUGAR FOR CHILDREN.

Many mothers think nature must have erred in giving children a sweet tooth, but children, on the other hand, regard the jam pot and the sugar bowl as the depositories of all that is most delectable. Neither side is quite right and neither quite wrong. Sugar is not the poison and the spoiler of digestion that the careful mother thinks it is; neither is it better as a food than roast beef and bread and butter, as the hearty youngster thinks.

The truth is that sugar is a food and a necessary one; but it may be taken in too great amounts. Foods are divided into two great classes—the proteids (meats, eggs and legumes), which contain nitrogen as their most important element, and the sugars, starches and fats, composed chiefly of carbons. Both of these are necessary—the proteids to build up the framework of the body and the others to supply energy; the proteids are the iron of the boiler and the machinery, the fats are the packing, and the sugars are the fuel; all are necessary to the perfect working of the human machinery.

The danger of taking sweets is in overdoing. The world's consumption of sugar has increased enormously in the last half century, although the necessity for muscular exertion (and therefore the use of fuel) has, through the introduction of labor saving machinery, decreased. Much of this sugar has gone into the stomachs, not of rollicking boys and toiling men who can use up a lot of it, but of girls and young women, who are using it to saturate their blood with unnecessary fuel to load their liver with sugar, and to spoil their complexion. Children may and often do eat too much candy, but will not suffer much as long as they are in the active state of existence, for while they romp they are expending energy and their little machines consume a vast amount of fuel. The danger is in forming a habit that may be carried on into a sedentary form of life.—*Chicago Tribune.*

DRIED CORN AND APPLES.

People say my dried corn looks and tastes as well as the evaporated product. This is the way I do it: In the first place, I have some home-made driers about three-fourths of a yard square, with bright, tin bottoms. Late in the evening I gather as much tender, juicy sweet corn as I think will fill the driers. Early next morning I remove the husk, and silk and with a sharp knife cut the corn from the cob. If the grains are large, I aim to cut them about in two the first stroke, and the next severs them from the cob entirely. By doing this the grains will not be so large and will dry quicker. Put a cloth in the bottom of a dripping-pan, and spread the sliced corn on it one inch deep; then set the pan in a moderate oven until the corn is well heated, but not the least bit cooked. Stir up the corn several times while heating. In the meantime have the driers set in the sun to get hot. Do not try to dry corn only on a bright, hot day. After heating the corn, remove from the oven and spread thinly on the driers, and keep the driers where the sun will shine on them all day. At night the corn will be nicely dried, and will need no more sunshine. Always get it out early in the morning.

To cook dried corn, wash and put it to soak for several hours. Cook in the same water in which it was soaked, season with butter or cream, salt and pepper, and add a spoonful of flour, rubbed smooth in some milk. Nice for a change from canned corn.

To dry apples, pare them nicely and cut into very thin slices, not pieces, spread very thinly on the driers, and keep driers in the hot sunshine all day. By night the apples will be dried, and look just as nice as evaporated apples. Air them frequently after taking from driers. Any kind of fruit may be dried much nicer with tin bottom driers.—*Farm and Home.*

LIGHT BREAD FROM "YEAST FOAM."

So many of our friends say, "Your bread is so good, how do you make it?" And when I say: "I use yeast foam," they will exclaim, "Why, I don't have any luck with yeast foam." So thinking some of the friends we never see, might like to know how we use it too, I will send it to them.

For a large baking (eight loaves) take one pint of potato water and a cup of mashed potatoes saved from the dinner supply and when cool enough add one-half cake of yeast foam, keep in a warm place, and at night add one pint warm water and flour for a stiff sponge; let rise over night and in the morning, warm flour, add salt, one-half cup sugar and one-half cup lard, (if liked); let rise and knead once, when light again mold in the pans. Save a piece of dough for next baking as it makes much the best bread, in fact we save the fresh dough for several bakings in cool weather; it does not hurt to let it freeze.

I think the secret of using yeast foam is not to use too much.—*Selected.*

NEW WAY FOR MAKING PLUM JELLY.

A NEW way to make plum or other jellies is to place the fruit dry in jars. Two-quart jars are good for this purpose. Either place the jars in the oven in asbestos paper or in a fruit steamer and cook till fruit is tender. Take out and strain through a flannel bag. Add as much sugar as juice and stir until the sugar is dissolved. Place on the back of the stove and heat slowly until it forms jelly drops on the spoon. During boiling skim carefully. It will take but a little boiling, as this is pure juice. The process produces the clearest and finest plum jelly.

The pulp may be used for jams or butter by straining through a sieve and adding equal amounts of sugar and heating slowly until thick enough. Place in jars and seal as usual.—*Selected.*

For the Children

WHAT DOLLS THINK.

It is true we're stuffed with sawdust
And can never learn to walk;
It is true we have no organs
And can never learn to talk;
It is true we're only dollies
And dollies must remain;
But we're free from faults and follies
That might cause our mammas pain.

Can you tell us when you ever
Saw our faces spoiled with frowns?
And we're sure you never heard us
Make a fuss about our gowns!

Then, we do not tease the kitty,
We are always kind in play;
And we think 'twould be a pity
For a doll to disobey!

When the parlor clock strikes seven,
Not a fretful word is said,
As our little mammas tell us
It is time to go to bed.
So you see, though we are dollies,
And dollies must remain,
We are free from faults and follies
That might cause our mammas pain.

—Little Men and Women.

THE FAULTFINDER.

THE woodchuck lived in a hole, and he asked the rabbit to make him a visit. Now the rabbit was very glad to go, and the woodchuck did his best to make him have a good time.

The first day the rabbit said, "Mr. Woodchuck, when you eat you always pick things up in your paws and put them into your mouth. Now that is not very nice, because your paws might be dirty. I put my mouth down and just eat it up," and the woodchuck, who was very polite, said, "Thank you, sir."

A little later the rabbit said, "Mr. Woodchuck, when you eat you sit up on your hind legs. That is not the right way to do. When I eat, I put my front paws down," and the woodchuck said quite politely, "Thank you!"

Pretty soon the rabbit said, "Mr. Woodchuck, when you are thirsty you go to the pond and drink. Now my mother taught me to get up early in the morning and eat the clover with the dew on it and you won't need to drink. That is a nicer way." And the woodchuck said, still politely, "Thanks."

Next day the rabbit said, "Mr. Woodchuck, when you go to sleep you put your nose down between your paws and curl yourself up in a little ball, so you can't see anybody. Now I lay my chin down on the ground on my paws and always sleep that way, which is much safer." And the woodchuck said, pretty politely, "I'll think about it."

Next day the rabbit said, "Mr. Woodchuck, when you eat carrots you strip off all the outside with your teeth and then eat the carrot. That is very wasteful. But I eat the whole thing right through—" and Mr. Woodchuck said, "See here; if my way of living doesn't suit you, you can just get out." Then he felt that he had been a little bit rude, so he said, "Good-by, Mr. Rabbit, good-by." And the poor rabbit had to get out.—*St. Nicholas.*

"IT is a blessed thing to speak reverently of the character and teachings of Jesus Christ. It is more blessed to show by an obedient life that this reverence springs from the heart."

THE RURAL LIFE

Home of the Honey Bee

D. J. Blocher

WE herewith present some views of our own bee yards to give the readers of the Nook a better idea of beekeeping at the present time. To see illustrations with the writing is of great importance to people who know nothing about the work.

The first is a view of our Caucasian yard which we have located at A. Bryan's. (He stands in the background.) These bees were furnished us by the United States government with the understanding that we offer this bee to the general public. The bee was imported into this country with the idea of originating something better than we yet have. Our government has a man appointed who travels about and looks into the merits of various races of bees. This is how our country came to import this bee.

To keep this bee in its purity we located this yard where we did. As a second precaution we use various means at the yard to prevent other blood from entering. We have, however, a number of crosses between the Italian and Caucasians which we have in close confinement. The bees can work, but queens and drones must stay indoors. This gives us the advantage of testing crossed blood and not injuring the other stock. The little device on the second hive in the second row is what we use. Just to the left of the first tree is one of these devices in operation on a tall hive. The last hive in that same row has one of these devices.

In these two hives we are testing one cross of bees and at the same time not allowing any mixing of other bees. On the third hive in the second row is a bee smoker, which is indispensable in working with bees. A whiff or two from this smoker quiets the bees so we can work. We use a veil in connection.

Near the end of this same row is one of our bee tents which must be used more or less in any yard of any size, and especially where one is rearing queens. When honey is scarce we could not carry on work unless we had these tents to work under. The appliances and methods used in this yard are used in all our yards. All our operations are conducted under personal supervision as competent help is scarce and hard to get.

This yard is located about three rods from a cross-road. No one that we know of is ever molested on the highway. The arrangement of the hives helps some in this matter. One-half the yard faces the other half and so causes the bees to enter differently from

what they would if all were faced one way. It also throws those closest to the road farther away in the manner of entering the yard.

The second yard is located one and one-half miles from town in the midst of alsike clover. This is a great clover for bees and makes the finest of hay. This yard is known as the Shirk yard. The picture does not show the yard complete. As we do not want much tree shade, about half of these bees are in the sun all day and the other half only about half the day. Nearly all our dark Italians are in this yard. We have placed our bees in various yards to avoid overstocking, also to grade up our stock better.

Much is said by bee men in overstocking a locality with bees. Some also are advocating that the law should prohibit new men from going into extensive bee-keeping where a locality is already occupied by enough bees. This idea is gaining ground and looks reasonable to many men when the nature of bee-keeping is understood. I shall not venture to discuss the subject only to say that if a locality is overstocked the new man is likely to go out of business on short order. Yet every family could keep one or two colonies of bees and every one be benefited, everything being equal.

Between the last two rows is our wax extractor. All broken combs, scraps and damaged combs go into this as we get them and the sun does the work. This is known as the Solar Wax Extractor. It does away with all fussing over the fire in rendering wax. Neither do the bees bother. This also does away with affording a home for the moth, the enemy of bees. Some men who are behind the times in bee culture have lots of broken combs and refuse laying around and then wonder why the moth gives them trouble. If any one has combs which he wishes to save to use again in the hives, they should be set in the cellar where it is too cool for the moth to hatch. This will save them from the moth.

For ventilation we raise the lid of the hive a little or raise the hive body a little on the bottom board, or both, if need be. Combs will occasionally melt down in any hive whether in the shade or in the sun. Where bees are in the sun it is nice to have a shade board standing on the sunny side of the hive or one lying on the hive. But we do not use any, as that would add much to expenses and labor with so many bees. We are starting a wind-break for this yard. Some of the trees can be seen back of the apiary. There was one planted on the north this last spring. This is an essential thing in any yard. Our other yards have wind-breaks.

The third picture is our home yard. This is located in the village in the sun. The whole yard is not shown. As this is the home yard we can keep it cleaner and in trim. It is mowed with a lawn mower. Around the hives we scatter salt to keep the grass down. This makes less work and the bees are not always falling into the grass when they come home heavy loaded with honey and pollen. The lawn mower is seen in the first row of hives. Behind this row is seen the barrow and comb basket. About half way behind the first row of hives is the watering trough. In this water is kept a little salt. Bees need much water in brood rearing and here they go all the time to get it.

We do not bother ourselves about a place for clustering in swarming time. This subject will be treated later. We shall give views on bees and honey later and transportation packages with our written work. Also combs and their constructions. Various subjects of bee-keeping will be given with illustrations.

Our fourth yard is located so that we could not get a view, and so is omitted.

Pearl City, Ill.

A RAPID PRODUCER OF LUMBER.

One of the largest cottonwoods in the West was cut down not long ago in Ray county, Mo. It measured sixty-five feet from the ground to the first knot, and made more than five thousand feet of lumber.

The cottonwood endures great extremes of temperature, and when the roots can reach a good supply of moisture it successfully withstands severe droughts. It is a fast-growing tree and demands plenty of light. On irrigated lands cottonwoods have been known to attain a diameter of fourteen inches in eight years.

The cottonwood is extremely easy to cultivate from seed, cuttings, layers or grafts. The commonest way of securing them is from the natural nurseries which spring up along the sandbars of the Western rivers. These nurseries are killed each year by inundation from the high waters, but they are also renewed annually by the seed floating on the water. A thousand with roots intact can be pulled out of the sandbars, in the fall, in an hour. These seedlings are often planted close together in furrows, and in this manner several thousand can be planted in a day by two men using a team and plow.—*The World To-day.*

The Home Yard.

NATURE IN A FOREST.

When you wander through a forest you feel what the ancients called "the sacred horror of the woods;" you understand that mystery surrounds you, and in the undefined shades spectres float whose outlines you dare not fix. It seems as if you were intruding upon and disturbing the solitude, and that at your approach some one had retired. The trees, plants and flowers appear to change the subject of their conversations, as it is done in a drawing-room when an intimate chit-chat is interrupted by some unwelcome visitor.

Perhaps you were on the point of detecting nature's secret, which man seeks to unravel; but were you to tread as light as that of a red Indian in his moccasins, your foot has moved a stone, made some grass rustle and dewdrops fall from a wild flower. All at once a little bird darts away and goes to inform the old oaks of the approach of an enemy. The forest is circumspect, and says only insignificant things; the flowers fold up their corollas and the singers are hushed. For a while life seems to be arrested; after a little time, when you are found to be a harmless dreamer, a poet incapable of those useless murders so remorselessly committed by sportsmen, all that timid world is reassured. The trees talk with the wind; the birds, resuming their prattlings, hop through the branches; the gnats recommence their waltzes in the luminous streaks of light wherein their balls are given, and Nature attends to the little affair exactly as if you were not there.

Sit down, like Tityrus, the Virgilian shepherd, under the canopy of a spreading beech tree, and look at that delightful chaos of vegetation, the thousand details of which are brought out by the sun. Here the holly exhibiting its indented pricky leaves; there in the bright sunbeams, the fern spreads its flexible stalk, furnished with little leaves dotted with stigmas, which in the spring become the flowers; you might think they were palms; indeed, in the tropics the fern has the appearance and size of a palm tree—they rise to a height of more than forty feet.

Between the ferns and hollies, herbs and grasses and little flowers are crowded together, and at their feet the mosses spread softly in green or brown patches. From all these plants, warmed by the sun, perfumes arise and spread in the air—as from a sachet. Intoxicated with these odors, the insects hum and fly about with unusual activity. The tipula, or daddy-long-legs flutters round the oaks; the can-

tharis, a brilliant emerald, glitters like a point of green gold on the silvery bark of the birch; the ant, nimbly plying its delicate feelers, makes its way through the grass; the cicindela, that messenger with the green livery, hovers in front of the lounger, while the stag-beetle—the rhinoceros of insects—caparisoned with its heavy black armor, runs over the warm sand in quest of its prey. To him who comes from a noisy town, where human clamor never ceases, the silence at first appears deep. Little by little the ear becomes accustomed to it and discerns a thousand little noises which at first were unnoticed, and these are the voices of solitude.

The restless leaf is always shivering and rustling, like a silk dress; invisible water is rippling over the grass; a branch, tired of being so long in the same attitude, rises abruptly and makes its joints crack, as if stretching itself; a stone, losing its equilibrium or moved by an insect, rolls down a slope, and this miniature avalanche carries away with it a few grains of sand; a sudden quivering of the wings of an insect or of a bird rapidly lashes the air; an acorn breaks from its stem, bounds from leaf to leaf and falls upon the earth with a dull sound; something goes by, producing a grating noise among the grass; a bird jabbers, a squirrel squeaks while climbing a tree, and the woodpecker, with a beat regular as that of a pendulum, strikes the bark of the elms to drive out the little beetles on which it feeds.

The wind sweeps over the top of the forests, producing undulations which roll like waves on the sea and give out low moanings which might be taken for the distant roar of the ocean. In all these inarticulate plaints it seems as though Nature were heard to breathe. How pleasant it is to abide there for long hours, forgetting all the little troubles of civilization, allowing one's self to be penetrated by the essence of things and impregnated with the life that is around us, immersed in the world of nature like a madrepore in the sea.—*American Farmer.*

FUNNYGRAPHS

"What was the most thrilling moment of your life?"

"It occured last night. I walked the floor with the baby for two hours and, just as he had finally dropped off to sleep, I trod on a squeaky board."—Cleveland Leader.

She—Sometimes you appear really manly and sometimes you are quite effeminate. How do you account for it?

He—It's hereditary, I suppose. One-half of my ancestors were males and the other half females.—London Illustrated Bits.

Little Ethel—Mama, don't people ever get punished for telling the truth?

Mama—No, dear; why do you ask?

Little Ethel—'Cause I just took the last three tarts in the pantry and I thought I'd better tell you.—Cleveland Plain Dealer.

Brooks—Where do people get the idea that two can live as cheaply as one?

Newton—Perhaps it comes from the same source as the idea that two hearts beat as one!

"My friend," said the philosopher, "you should try to be content with what you have."

"I am," said the man who had been grumbling. "It is what I ain't got that I am dissatisfied about."

SATISFACTION GUARANTEED.

A Baltimore man had until recently a darky in his employ, about as shiftless and worthless a darky, says he, as ever came across.

One day the employer, his patience exhausted, called Sam into his office and told him to look for another job.

"Will yo' give me a letter of recommendashun?" asked Sam, pitiously.

Although he felt that he could not conscientiously comply with this request, the Baltimore man's heart was touched by the appeal. So he sat down to his desk to write a non-committal letter of character for the negro.

His effort resulted as follows: "This man, Sam Harkins, has worked for me one week and I am satisfied."—Harper's Weekly.

AS USUAL.

"I am laying by something for a rainy day," remarked the man as he stowed his umbrella in a closet.

The next day it rained, and the man discovered, on going to the closet, that his son had got there first.—The Commoner.

Register—Lady's name, please?

Nervous Young Man—Lydia Amelia Jones.

Register—Spinster?

Nervous Young Man—Oh, no, sir; typewriter.—Bystander.

"Bliffers gets his new car out several times a day. Matter of pride, I suppose?" "Yep, pried it out of a mudhole three times last Monday."—Cleveland Plain Dealer.

"A cyclone never visits Oyster Bay," notes the Savannah News. Even a cyclone, it is to be presumed, has some discretion.—Washington Herald.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

Wanted—Matron. Man and wife to cook. Fireman. Fine position. Address: McPherson College, McPherson, Kans.

NEFF'S CORNER

I've been threatened with a hemorrhage from the lung recently, spitting some blood as the result of a little too much physical exertion. My condition is such in fact, that I cannot safely do any heavy work. But those of you who have made investments here through me have helped me to some work suited to my strength, by which I have been able to earn a livelihood. You are no doubt gratified by the fact that these transactions have worked some benefit to me, but I am only satisfied as I make them profitable for you. As to how I succeed in making it profitable for the investor here is another instance:

Last spring I told you some stock could be bought in the bank organizing here at $100 per share. Some money came with which I bought a few shares March 6. It was soon all sold and a little later there was a scramble among others who wanted in, but who had come too late to get in. However, the pressure became so urgent that several of us put a price on our stock a few days ago, and July 18 $19,000 of this stock sold at $115 per share, or an advance of 41 per cent per annum on the investment. And now do you wonder what I will invest that money in next? Don't know yet. Better wait for another bank to organize, hadn't I? But in order to keep the money at work all the time I loaned it at once at 12 per cent with good real estate security and hope to find another place for it in the near future where it will do better than that. If you have funds you would like to have placed you might write me, stating amount and what kind of an investment would please you best. Address:

JAMES M. NEFF,
Lake Arthur, New Mexico.

Song Praises

Popular Edition

10,000

We have just published an edition of **"Song Praises,"** in heavy paper binding. There has been a demand for a cheap song book for missions and weak churches, and we now are able to supply all such at a price that cannot be duplicated.

Will Go Fast.

We do not expect our large edition of 10,000 to last long when it is once known that we are selling them at **Only 10c.**

Sunday Schools

Who are not using this book and do not feel able to supply themselves with the cloth-bound book will do well to get their order in quick before this edition is all gone.

The book is printed on an excellent grade of paper, substantially bound in heavy paper and we are sure will give good service.

Price each, ... **10c**
Postage extra, ... **4c**
Per hundered f. o. b. Elgin, ... **$ 9.50**

Cloth Bound.

LITTLE BROWN HANDS.

They drive home the cows from the pasture,
Up through the long, shady lane,
Where the quail whistles loud in the wheat-fields
That are yellow with ripening grain.
They find in the thick, waving grasses,
Where the scarlet-lipped strawberry grows;
They gather the earliest snow-drops,
And the first crimson buds of the rose.

They toss the new hay in the meadow;
They gather the elder-blooms white;
They find where the dusky grapes purple,
In the soft-tinted October light.
They know where the apples hang ripest,
And are sweeter than Italy's wines;
They know where the fruit hangs the thickest
On the long, thorny blackberry vines.

They gather the delicate sea-weeds,
And build tiny castles of sand;
They pick up the beautiful sea-shells,—
Fairy barks that have drifted to land.
They wave from the tall, rocking tree-tops,
Where the oriole's hammock-nest swings;
And at night-time are folded in slumber
By a song that a fond mother sings.

Those who toil bravely are strongest;
The humble and poor become great;
And so from these brown-handed children
Shall grow mighty rulers of state.
The pen of the author and statesman,—
The noble and wise of the land,—
The sword, and the chissel, and palette,
Shall be held in the little brown hand.

—M. H. Krout.

THE MONEYLESS MAN.

Is there no secret place on the face of the earth
Where charity dwelleth, where virtue has birth,
Where bosoms in mercy and kindness will heave
When the poor and the wretched shall ask and receive?
Is there no place at all where a knock from the poor
Will bring a kind angel to open the door?
Oh! search the wide world, wherever you can,
There is no open door for the moneyless man.

Go, look in your hall where the chandelier's light
Drives off with its splendor the darkness of night;
Where the rich hanging velvet, in shadowy fold,
Sweeps gracefully down with its trimmings of gold;
And the mirrors of silver take up and renew,
In long-lighted vistas, the wildering view—
Go there at the banquet, and find, if you can,
A welcoming smile for the moneyless man.

Go, look in yon church of the cloud-reaching spire,
Which gives to the sun his same look of red fire;
Where the arches and columns are gorgeous within,
And the walls seem as pure as a soul without sin;
Walk down the long aisles; see the rich and the great
In the pomp and the pride of their worldly estate;
Walk down in your patches, and find if you can,
Who opens a pew for a moneyless man.

Go, look in the banks, where mammon has told
His hundreds and thousands of silver and gold;
Where, safe from the hands of the starving and poor,
Lie piles upon piles of the glittering ore;
Walk up to the counters—ah! there you may stay
Till your limbs shall grow old and your hair shall grow gray,
And you'll find at the bank not one of the clan
With money to lend to the moneyless man.

Go, look to your Judge, in his dark, flowing gown,
With the scales wherein law weigheth equity down;
Where he frowns on the weak and smiles on the strong,
And punisheth right whilst he justifies wrong;
Where lurles their lips to the Bible have laid
To render a verdict they've already made;
Go there in the court-room and find if you can
Any law for the cause of a moneyless man.

Then go to your hovel—no raven has fed
The wife that has suffered too long for her bread;
Kneel down by her pallet and kiss the death-frost
From the lips of the angel your poverty lost;
Then turn in your agony upward to God
And bless, while it smites you, the chastening rod;
And you'll find at the end of your life's little span,
There's a welcome above for—a moneyless man.

—H. T. Stanton.

HOW BETSY AND I MADE UP.

Give us your hand, Mr. Lawyer; how do you do to-day?
You drew up that paper—I s'pose you want your pay.
Don't cut down your figures; make it an X or a V;
For that 'ere written agreement was just the makin' of me.

Goin' home that evenin' I tell you I was blue,
Thinkin' of all my troubles, and what I was goin' to do;
And if my hosses hadn't been the steadiest team alive
They'd 've tipped me over, certain, for I couldn't see where to drive.

No—for I was laborin' under a heavy load;
No—for I was travlin' an entirely different road;
For I was a-tracin' over the path of our lives ag'in,
And seein' where we missed the way, and where we might have been.

And many a corner we'd turned that just a quarrel led,
When I ought to've held my temper, and driven straight ahead;
And the more I thought it over the more these memories came,
And the more I struck the opinion that I was the most to blame.

And things I had long forgotten kept risin' in my mind,
Of little matters betwixt us, where Betsy was good and kind;
And these things flashed all through me, as you know things sometimes will
When a feller's alone in the darkness, and everything is still.

"But," says, I, "we're too far along to take another track,
And when I put my hand to the plough I do not oft turn back;
And 'taint an uncommon thing now for couples to smash in two;"
And so I set my teeth together, and vowed I'd see it through.

When I come in sight o' the house 'twas some-'at in the night,
And just as I turned a hill-top I see the kitchen light;
Which often a han'some pictur' to a hungry person makes,
But it don't interest a feller much that's goin' to pull up stakes.

And when I went in the house the table was set for me—
As good a supper's I ever saw, or ever want to see;
And I crammed the agreement down my pocket as well as I could,
And fell to eatin' my victuals, which somehow didn't taste good.

And Betsy, she pretended to look about the house,
But she watched my side coat pocket like a cat would watch a mouse;
And then she went to foolin' a little with her cup,
And intently readin' a newspaper, a-holdin' it wrong side up.

And when I'd done my supper I drawed the agreement out,
And give it to her without a word, for she knowed what 'twas about;
And then I hummed a little tune, but now and then a note
Was busted by some animal that hopped up in my throat.

Then Betsy, she got her specs from off the mantle-shelf,
And read the article over quite softly to herself;
Read it by little and little, for her eyes is gettin' old,
And lawyers' writin' aint no print, especially when it's cold.

And after she read a little she give my arm a touch,
And kindly said she was afraid I was 'lowin' her too much;
But when she was through she went for me, her face a-streamin' with tears,
And kissed me for the first time in over twenty years.

I don't know what you'll think, sir,—I didn't come to inquire,—
But I picked up that agreement and stuffed it in the fire;
And I told her we'd bury the hatchet alongside of the cow;
And we struck an agreement never to have another row.

And I told her in the future I wouldn't speak cross or rash
If half the crockery in the house was broken all to smash;
And she said, in to regard to heaven, we'd try and learn its worth
By startin' a branch establishment and runnin' it here on earth.

And so we sat a-talkin' three-quarters of the night,
And opened our hearts to each other until they both grew light;
And the days when I was winnin' her away from so many men
Was nothin' to the night when I courted her over again.

Next mornin' an ancient virgin took pains to call on us,
Her lamp all trimmed and a-burnin' to kindle another fuss;
But when she went to pryin' and openin' of old sores,
My Betsy rose politely and showed her out-of-doors.

Since then I don't deny but there's been a word or two;
But we've got our eyes wide open, and know just what to do;
When one speaks cross the other just meets it with a laugh,
And the first one's ready to give up considerable more than half.

Maybe you'll think me soft, sir, a-talking in this style,
But somehow it does me lots of good to tell it once in a while;
And I do it for a compliment,—'tis so that you can see
That that there written agreement of yours was just the makin' of me.

So make out your bill, Mr. Lawyer; don't stop short of an X;
Make it more if you want to, for I have got the checks;
I'm richer than a National Bank, with all its treasures told,
For I've got a wife at home now that's worth her weight in gold.

—Will Carleton

Webster's Unabridged Dictionary

This is the original Webster's Unabridged Dictionary, with supplement and revises by Chauncey A. Goodrich, of Yale College. An American dictionary of the English language, containing the whole vocabulary of the first editions and the corrections and improvements of later editions. To this is added a table of synonyms, peculiar use of words and terms of the Bible. If you do not care to spend $9.00 or $10.00 for Webster's International Dictionary, which is the latest and best made, then get this book, which, for nearly all practical purposes, will serve you quite as well. It is printed from good, clear type and contains 1,600 pages. Cloth, $1.25.

Brethren Publishing House, :: Elgin, Illinois

500 Scriptural Anecdotes

A Hand-book for Preachers, Teachers and Christian Workers.

COMPILED BY

HAROLD F. SALES

An entirely new collection of short, sharp Scriptural Anecdotes, invaluable to those who are being called on to conduct meetings and are compelled to prepare on short notice.

A large variety of subjects are treated, and it will be found more helpful than some collections costing four times its price.

The entire collection is carefully classified under fifty different subjects and arranged alphabetically.

SAMPLE ANECDOTES.

(As they appear in the book.)

The Obscured Light.

There was a great lighthouse out at sea. One night the men lighted the lamps, as usual. Some time afterward they saw that there appeared no light upon the water where ordinarily there was a bright lane of beams. They examined their lamps —they were burning brightly. But they looked outside, and there were millions of little insects on the glass, so thickly piled there that the light could not get through. In the morning they learned that a ship had been wrecked close by because the light had been obscured by the insects.

Glorified God in Our Homes.

A saintly bishop once said: "I never move about my home, I never step out of my house, I never pass along any street or path, I am never anywhere without being likely to be seen by some one who knows me. A knowledge of this fact always makes me watchful of myself and cautious. I want it to be so that whoever sees me, at any time, or anywhere, will be able to see nothing in me that is inconsistent with the character of a loyal and faithful servant of Christ." Such a spirit cannot help glorifying God wherever it is lived.

Price in limp cloth binding, 25 cents.

Lady Canvassers

Successful in Selling the

INGLENOOK COOK BOOK

Lady canvasser can and do make just as much money canvassing as men when they take the right article. We have a number of both lady and gentlemen canvessers selling the Inglenook Cook Book, and the ladies are taking the banner. Hear what a few of the many have to say.

32 SALES ONE DAY.

I have found the Inglenook Cook Book a splendid seller. Better far than I expected. I have sold 127. The most I sold in one day was 32. Send me 150 at once. Grace Gnagey, Meyersdale, Pa.

41 SOLD FIRST DAY.

Another agent says, "The first day out I sold 41 copies. It sells much better than I expected."

SOLD 31 IN ONE DAY.

Find enclosed draft for 200 Cook Books. I am getting along well and like the work fine. The most books I have sold in a day was 31. Suppose I would have sold more, but finished the town and had to quit. Ida Brower, South English, Iowa, June 25, 1907.

HELPING WOMANKIND.

"I do not feel that I could devote my whole time in selling the Inglenook Cook Book just at present, but would like to work at it what I can. I feel it will be helping womankind to introduce it into these homes for the recipes are so easy to understand and so many every day wholesome things that it makes any one hungry just to read them. Please send me a cook book to use in selling the same." Mrs. J. W. Hoover, Sunfield, Mich., July 15, 1907.

REMEMBER

that these reports are nearly all from inexperienced canvassers.

$2.00 TO $5.00 PER DAY.

Ladies can you make anything like that at your present vocation?

Large sales. Big Commission.

Eternal Revenue Stamps

A carefully-selected collection of 120 Scripture verses, beautifully printed in three colors on gummed paper and perforated to tear out like postage stamps.

They are neatly bound in book form, with a stiff cardboard back and with waxed tissue paper between the pages to prevent sticking. Every page is printed in a different combination of colors, giving a variety in color, as well as in verse.

The stamps are classified under twelve different headings, making ten different texts on each of the following subjects:

Invitation, Salvation, Prayer, Purity, Faith, Love, Courage, Comfort, Integrity, Prohibition, Deportment, Miscellaneous.

A traveling man writes from Centralia, Ill., saying: "Enclosed find one dollar. Send me Eternal Revenue Stamp Books for it. I got three of them yesterday from a man in Paris, and Christian workers who saw them to-day persuaded me to part with them and send for more."

Price, each, ...10 cents
Per dozen, ...$1.00

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,

CHAS. B. WESTOVER, Pres.

An Interview With J. C. Funderburg, the first Settler in BUTTE VALLEY Under the Auspices of the California Butte Valley Land Company

When did you settle in Butte Valley?

August 1906.

Was there any one brought there by the California Butte Valley Land Company prior to your settlement?

No.

Did you buy land there before you went?

No.

Has it improved during the year you have lived there?

Yes; I think it has.

Do you like the Valley as well as when you first went there?

Yes; the seasonable rains and the composition of the soil, which responds readily to cultivation, makes the future even brighter to me than when I first arrived in the Valley.

What seems to be the result of your investigation concerning, soil, climate, rain-fall, etc?

The results are most favorable.

What is your opinion of the soil and climate?

I think they are of the very best. I have taken daily weather observations, and have found the climate fine. The coldest temperature was three degrees below zero, but this was only on two or three occasions. Spring months' season was a little backward, but lots of good prospects for excellent crops.

Do you have frost?

Yes; but it didn't seem to have any bad effect on the fruit.

What kind of fruit do you know of in the Butte Valley?

Apples, pears, cherries, peaches, plums and smaller fruits. I saw currants on the stock.

Do you think the peaches compare favorably with peaches of other fruit belts?

Peaches do not; but the apples and pears are highly flavored, far more so than in other parts of the State of California. The apples are as good as those raised in the "apple belt" of Oregon; free from worms, large and of excellent flavor.

Did you ever see any onions in Butte Valley?

Yes; gathered forty bushels and stored them away last fall. They were fine, very sweet.

Did you help dig any Irish potatoes last fall?

Yes; one hundred bushels.

How about the size?

Large, well developed.

Bothered with scab?

No; they were nice smooth potatoes, running about 300 bushels to the acre.

Have you sown any alfalfa or timothy?

I have sown alfalfa, and it promises very well.

Is there any wheat in the Valley?

Spring wheat. Prospects good, as the spring wheat has come out wonderfully. Mr. Truax was surprised to see the wheat growing in the Valley in such fine condition.

How long has Truax lived in the Valley?

About twenty-five years.

Is it true that corn will not grow in Butte Valley?

No; for it is growing there now and did last year. There was good sweet corn also. This year the corn seemed to escape the frost.

Have you ever been to the North end of the Valley?

Yes.

Do they have corn up there?

Both corn and wheat.

Do you consider winter wheat would be better than spring wheat?

In my opinion better.

From your experience living in Butte Valley, do you consider the climate is sufficiently mild for winter wheat to be perfectly safe?

Yes. I was raised on a farm and am satisfied that wheat will do well.

What is the progress of building in general, in Butte Valley? Are the people putting up new homes?

Yes. They are all pretty busy.

Any saw-mills in the Valley?

Yes; there are two with ten thousand feet daily capacity. Schnider's mill is a permanent one.

Is the Brethren church at Macdoel under construction?

Yes.

Who is doing the carpenter work?

Hufford and Wagoner.

Have they begun work on the railroad station at Macdoel?

Not yet. The railroad is rapidly pushing northwest to the Valley.

How far do the trains run now?

Six miles beyond Grass Lake. McGuire is Agent for Weed Lumber Company. The company figured on the lumber for the church and wanted to donate $200.00.

I understand there is an organized church, Sunday school and Christian Workers' meetings?

That is true. Have regular service; two each Sunday.

Now taking everything as a whole, the Brethren who have moved in from all parts, all sections of the country, do they seem to be well satisfied with their selection or not?

I would say they are.

Do you think that the plan of the California Butte Valley Land Company in colonizing in Butte Valley, is a success from a missionary standpoint?

Yes.

California Butte Valley Land Co.

Mt. Hebron, California

The Span of Life

is three score years and ten. That is the record of a well-lived life. We cannot all live to that advanced age, but we can live longer, healthier and happier lives if we keep a wise and careful watch over our health. In order to do our full duty in life's battle, it is necessary to have good health.

If we're sick, broken down, weak and poorly, we cannot enjoy life, neither are we able to do the part required of us; we are a burden to ourselves and our fellow-beings.

But nobody needs to be sick, that is, for any length of time. You may feel that something unusual is the matter with you. You may lose strength, your appetite, your ambition.

You may feel tired, worn out, dizzy and nervous. You may have a headache, pains all over, you may feel sore in the muscles, the back and kidneys. You know that you are sick, but still you don't know what ails you. These are nature's danger signals. It is your blood. Impure blood is the cause of most diseases of the body. It produces rheumatism, gout, la grippe, neuralgia, kidney complaint, jaundice, backache, fevers, skin diseases and other ailments. It causes trouble for both sexes, men and women; for all ages, young and old.

In order to enjoy good health, your blood must be in a normal condition, as blood is the life. It is the element of life.

It is, therefore, important that we should know something about this life element and how to keep it pure and in a healthy state. Every movement of our body wears out some flesh or tissue and these "wearouts" must be repaired. The material for these bodily repairs comes from the blood. The blood builds up the vital organs, strengthens and regulates them and enables them to perform their functions regularly, according to the laws of nature. It carries the waste matter from the different parts of the body and removes it through the pores of the skin and other channels. If the blood is thick and sluggish it will fail to perform this work; the channels become clogged up and disease follows.

What is needed is an agent that will help nature remove the cause and build up the system. Nature has wisely provided for these emergencies. You must look to the vegetable kingdom for relief. In its herbs, roots, barks, flowers, seeds, etc., lies your salvation. These act without hurting your system.

Among known remedies there is probably none which has met with such marked success in accomplishing this as **Dr. Peter's Blood Vitalizer,** a purely vegetable preparation. It does not remove the cause temporarily, but attacks the evil at the root, destroying the evil, roots, trunk, branches and all. It does this because it not only purifies but makes new rich, red blood. It builds up, strengthens and invigorates. Thousands have testified to its merits.

A BUSINESS MAN WRITES.

Wagner, S. D., April 14, 1905.

Dr. P. Fahrney, Chicago, Ill.:

Dear Sir.—I must write and tell you what your **Blood Vitalizer** has done for me. I had rheumatism for a number of years, and finally got so that I was unable to walk. Last summer I went to New York to be treated for it, but I returned home without being any better. I then thought I would try the **Blood Vitalizer,** and must admit that it is the best medicine there is. My own case proves it. I am well known through South Dakota, having been in business for over eight years. I can not describe the wonderful change the **Blood Vitalizer** brought about in my condition. People wonder what cured me. If it had not been for the **Blood Vitalizer,** I would have become an invalid. Yours respectfully,

M. Kennedy.

NO MEDICINE LIKE IT.

Lone Grove, Texas, Feb. 18, 1906.

Dr. Peter Fahrney & Sons Co., Chicago, Ill.:

Dear Sirs.—The **Blood Vitalizer** which I ordered of you arrived in good time and order. It gives me pleasure to state that it is all that you recommend it to be and a great deal more. It has been a great blessing to me. I am sixty-four years old and all broken down in health. Through God's blessing I am a new man since using the **Blood Vitalizer.** There has never been any medicine like it. I could not walk when I sent for your medicine, but now I am well and in better health than I have been for twenty years. I shall ever feel grateful to you. May God bless you in your work. I gained nine pounds in twenty days and my case is the wonder of this country. Yours very truly,

W. H. Bates.

Do you wish to gain strength, to gather flesh, to acquire an appetite, to enjoy a regular habit of body, to obtain refreshing sleep, to feel and know that every fiber and tissue of your system is being braced and renovated? If so commence a treatment with **Dr. Peter's Blood Vitalizer** at once. The very first bottle will convince you of its merits. **Dr. Peter's Blood Vitalizer** is not an article of commercial traffic. It is not put up in a humdrum way for the purpose of sale but is prepared with the most scrupulous care and exactness as a medicine for sick people. Every bottle, as it leaves the laboratory, is supplied with a registered number duly recorded. For good reasons, the proprietors do not supply the **Blood Vitalizer** to druggists or others interested in "traffic" goods, but to the people direct through special agents appointed in every comunity. IN ANSWERING ADVERTISEMENTS PLEASE MENTION THE INGLENOOK.

Lomita, California

Our aim is not to grow luxuries but actual necessities.

Some questions received.

1. What kind of water at Lomita?

So far as developed the water is soft, pure and abundant. Better water one does not need. It is fresh and cool.

2. Can oranges and lemons be grown for family use?

Assuredly. We make no claim to raise oranges as in Redlands, but with care and good cultivation a very good orange can be grown. A neighbor at this writing is selling his lemons at a good price.

3. How deep is the soil?

Deep enough for any agricultural purpose. We have not dug deep yet but at three feet the soil is just as at the surface.

4. What are the prospects for an electric line on Weston Street?

Mr. Huntington said: "Get the produce and we will get it out." That is as near as he promised an electric railway, and now we are after the people who are willing to **grow** the products. Will you be one of them?

5. How many Brethren have selected land?

Quite a number have made selections and some are now on the ground. Others have gone to arrange their affairs to come into the colony. In order to get some of the unsold land to farm next year, you should buy now and make your selection, for we shall soon be obliged to lease the parts that will go to grain. Here the leases begin and end Nov. 1st. Those who farm ought to make arrangements early. Two men will take for farming purposes all that is left. Again we urge you to speak now.

If you wish us to select you five or ten or more acres, write a check of $100 made payable to us and send it to M. M. Eshelman, who acts as trustee for us and you, and when you come if our selection does not suit you after examining it, then you can choose some other unsold piece and the money will apply just the same. There is a good demand for small tracts. We have started out to give the Brethren inside chances and are willing to do our part but we cannot do it all. Co-operation is just as essential in colonization as in any other business. We are at your command to do the best possible things for you to build up Lomita colony.

This climate is worth something—any climate that will grow necessary products, is worth something. One cannot expect much growth north of the Artic Circle, but whatever grows there for mankind is by virtue of climatic conditions. The country that produces corn and cattle does so because the climate and soil are adapted to that kind of growth. So our climate is valuable in just the proportion that it will produce foodstuffs and raw material for manufactures. We know that if it were not for these genial climatic conditions in Southern California, the great variety of produce could not be raised and put upon the market. It is this tremendous growth, both in variety and quantity, that gives value to land and water. If a country will produce only **one** crop a year on account of its climate, land is worth just what it brings on a reasonable per cent basis. But if the climatic conditions are such that from four to six crops can be produced annually, then that land is worth from four to six times what the one crop land is worth. This is the only correct way to bring about a just conclusion in making comparisons as to value of land. Then again there is a vast difference between depending upon rain from the skies for crops and rain from under the surface of the ground and turning this latter on at your pleasure. Hence one crop land might be worth $100 per acre and six crop land $600. When you say land is too high priced in Southern California do you calculate the income per acre from the land? Or do you just think of your eastern $100 per acre land and compare from that? One must be fair in his deductions. There too, land is worth what it sells for, or else thousands of people have been fooled for twenty-five years, a thing not possible. Our prices are certainly within reason when all things are duly considered. We think it not far distant when nearly all land between the city and the sea will be worth $1,000 per acre. Much of it is worth that now. With the constantly increasing population and with added industries good soil cannot fail to bring high prices. Now is the time to get some of the good soil at Lomita. Californians are learning this rapidly and do not hesitate to get in on the "ground floor." When are you coming? Write us your thoughts. We are busy people but will find time to write you personally if you desire.

An Important Date

OCTOBER 1, 1907

FOR ALL

HOMESEEKERS

150,000 Acres of Land Under the Carey Act Will Be Thrown Open For Entry on October 1, 1907

This will be a great opportunity to the settler to secure a Homestead in a mild, equable climate, where crops grow to perfection by irrigation. No failure of crops on account of drought. This tract is on the North side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho.

THE BRETHREN

should now be arranging to go to the opening for entry of 150,000 acres of land on the Twin Falls, North Side Canal in Idaho on **Oct. 1, 1907.**

These lands are sold at 50 cents per acre and the water right $35.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms, crops of all kinds are grown to perfection. Fruit growing is a success, as well as the growing of sugar beets. To see these lands take the Oregon Short Line, R. R., to Minnedoka; there change cars for Milner.

Homeseekers' Round Trip Tickets

will be sold to points in Idaho on 1st and 3rd Tuesdays of each month in 1907.

Table of Rates

	From Chicago	From Peoria
Boise, Idaho,	$49 50	$47 50
Caldwell, Idaho,	48 80	46 80
Idaho Falls, Idaho,	36 60	34 60
Mountain Home, Idaho,	45 00	43 00
Nampa, Idaho,	48 30	46 30
Ontaria, Oregon,	$50 80	$48 80
Pocatello, Idaho,	33 60	31 60
Salt Lake City, Utah,	31 50	29 50
Shoshone, Idaho,	40 10	38 10
Twin Falls, Idaho,	41 90	39 90
Weiser, Idaho,	51 90	49 90

One-way Rates in Effect September 1.

THE INGLENOOK

VOL. IX. AUGUST 13, 1907. NO. 33.

Mount Wilson

A. W. Vaniman

A FEW miles north of Pasadena, California, and in plain view, towers, to the height of 6,100 feet, the most noted mountain of Southern California, Mount Lowe. A very large per cent of the tourists in Southern California consider their visit incomplete until they have taken the electric car to Rubio Cañon, where they transfer to the cable incline which takes them three thousand feet at an incline of fifty per cent, where they reach Echo Mountain, and change to an electric car that carries them five miles further to Alpine Tavern. There a three-mile trail carries one to the top either on foot or horseback, from which point one can look down over the San Gabriel Valley stretched out before him, a panorama that must be seen to be appreciated. He finds it dotted with orange groves, towns and cities. Electric lines and steam roads stretch themselves like threads across the landscape. Off in the distance lies the blue Pacific with the noted Catalina island breaking its smooth surface.

Just east of Mt. Lowe a few miles and in plain view is another mountain that will likely become more known as time passes. For many miles one can see a winding trail along the edge of the mountain, turning here and there, rising higher and higher until it reaches the top of Mount Wilson. The place has been selected for the location of the finest telescope the world has yet produced, when exactness, size and mechanical perfectness are considered. This place has been selected because it is considered by astronomers to have the most suitable atmospheric conditions for astronomical purposes that they have been able to find. The atmosphere is more uniform at all seasons of the year than at other places that have been tested and there is a small telescope there now, called the Snow Telescope.

The telescope now being made for that place is a sixty-inch reflecting telescope, and is being manufactured on Santa Barbara street, Pasadena. One hundred and fifty thousand dollars a year are furnished by the Carnegie Institute of Washington, D. C., for the construction of this splendid piece of mechanism. The heavy castings are being made in San Francisco, and the earthquake a year ago interfered quite materially with the progress of that part of the work. The heaviest casting weighs five tons. How to get this to the top of the mountain was a problem to be solved. A trail, already existing must be widened, and arranged for a wagon road. Next a specially constructed automobile truck has been purchased. The motive power is gasoline, which propels a dynamo that furnishes electricity to four electric motors, one in each wheel, making it a very powerful machine. This is to be used to convey the parts of the telescope to the top of the mountain, where they will be set up. The total amount of material to be transported about five miles to the foot of the mountain, and about mine miles up the mountain trail to the top is about one hundred and fifty tons.

The telescope is of the reflecting type; instead of lenses such as are used in smaller instruments, there is a large concave mirror in the bottom of a tube. This mirror focuses the rays of light at a point toward the top of the tube. At the point where the rays of light are focused is a small mirror set at an angle, which directs the said rays of light to an opening in the side of the tube. So instead of looking into the end of the tube one looks into the side. The glass from which the large mirror is made comes from France. It comes in round blocks of required size. The glass for this telescope is five feet in diameter, eight inches thick and weighs a ton. It requires months of constant grinding and polishing to get it in the proper condition. The greatest care is taken to keep all dust out of the room, as the smallest particle of sand in dust might scratch the smooth polished surface. So sensitive is the glass, that a finger laid on the surface for a few minutes, would cause it to so expand at that point as to entirely spoil the surface until that defect could be removed. The telescope will have a clock work attached that will permit the operator to direct it to a star and the instrument will move with it, so that a camera can be attached and remain for hours without blurring the image. That means

pretty accurate mechanism. On the top of Mt. Wilson is a hotel and some accommodations for camping, and some persons spend some time there camping during the hot weather. It is cool and invigorating, and the air is so pure that fresh meat hung out in the open air can be kept for days without tainting.

Prof. G. W. Ritchey has charge of the construction of this immense instrument. A few months ago a Mr. Baker in Los Angeles donated fifty thousand dollars to make a hundred-inch mirror, which when completed will be by far the largest ever made. It is the intention to make that when the one now under construction is completed. These mirrors are made by silvering the front side instead of the back like the ordinary mirror.

Pasadena, Cal.

SONNET.

RICHARD SEIDEL.

Is future life a shadowy dream,
A myth that puzzles still the brain?
Or closely folded as a ream
Of unwrit leaves, without a stain?
Closed volume, to material sense,
That governs with imperial rod,
And brings the meagre recompense
A final home beneath the sod?
* * * The soul recoils; a secret spark
Flames with the light of endless day;
No longer veiled in dungeon dark,
Or screened by perishable clay,
It rises up on Hope's bright wing,
Of immortality to sing.

Literature -- Its Mission to Man

Richard Braunstein

LITERATURE may be defined as the record of all that men and women of all climes and all ages have felt, thought, seen and done in the world. It is in spirit, catholic; in scope it embraces all the sciences. It is aristocratic, it is culture, it is education and recreation. The question is asked by the skeptic, "What good does it do to man?"

Why, the fact is that literature is the very atmosphere, in which we all, *not some of us,* live and breathe and have our being. We drew in the air as soon as we began to think. Long before we could read for ourselves, before even we could listen understandingly to the reading of others, we felt unconsciously, but most really, and most profoundly, the effect, the beneficial effect of literature. The home in which you were reared, the character and spirit of the mother who gave you birth, that nurtured and tended your infancy—these were different, and they were better, because literature had done something to make them and mold them. And were they not literature, those lullabies that quieted us in our cradles, the fairy tales that fed our fancy, in our wondering childhood, the stories from the Bible that expanded our infant minds to embrace the idea of a God, of a Savior, of a future life, of heaven, of hell? Those men who sneer at literature, who seem to have no time to *waste* on a book; those men who talk of expunging literature, and bringing up the new generation on science, know not what their words mean. Take literature out of the world and we have a dense, black, howling wilderness.

I am very well aware of the fact that comparatively few out of any human generation ever become widely or deeply conversant with literature. It is but the one person out of ten or a hundred, or out of a thousand it may be, that reads books. This I freely acknowledge. Readers of books, take the civilized world at large, are few and far between. But no matter for that. Literature is a universal good. It benefits even those who do not read. How many of you spend time looking at the sun? But you see by the light of the sun nevertheless. You may ignore the sun. But you *must* benefit by it. The sun lights the world in thousands and tens of thousands of places where he does not directly shine. And *literature is a sun.* It blazes high in the heavens and spreads its beneficent illumination everywhere abroad among the civilized haunts of mankind. There are coverts, to be sure, into which its rays cannot immediately pierce. But even into such coverts *its* rays enter. There is such a thing as diffusion of light by refraction and reflection and transmission. In this way literature becomes a light that lighteth every man that cometh into the world. *A light,* I say—for I use those sacred words with reverence. One is *the* light that lighteth every man. And, by the way, let us remember that it is greatly through literature, that is, through a book, *the* Book, the Bible, that Jesus himself shines hither, across seas and continents of space and across centuries of time to light us here as in a city in the wilderness to-day.

Of the hundreds of thousands of people who hear our great preachers and speakers, perhaps not one in a hundred are great readers. But they like to hear our speakers, they go to church, to the opera, and they read the daily newspapers. From all these they receive the benefit, the teaching of literature. Everything that is being said, done, and written owes something to literature. It is the life, the breath, the soul of our present-day life, as it was in days gone before, as it will be in days to be.

Seeing the West Through the Eyes of a Missourian

Ada Kircher

In Five Parts. Part Three.

NEXT morning we awoke in about the same kind of country where we went to sleep and rubbed our eyes and looked again to see if it were really true. Then we were informed that there was trouble with the engine and we had gone only twenty miles.

"No wonder I slept so good," said Mrs. C. "No wonder I could hardly sleep," said I.

After breakfast we stopped at Pueblo Indian Village. It was a beautiful morning and as we climbed the hill that leads to the village we looked the country o'er. What a lovely place, and did the Indians have a taste for the scenic when they located here?

Their houses were made mostly of stone and some had the appearance of being unoccupied and in need of repair. As we rounded a corner we came upon three Indian women. One was holding a baby. I say baby because it did not look like a papoose and was not put up like one. One of our party asked if he might take the baby's picture. She told him for a dollar he might.

It is said the Pueblos are the wealthiest of all Indians and they surely know how to get money and believe in making a display of it, as they had money sewed down the sides of their skirts and on their sleeves. Some had quarter pieces, others dimes, and still others dollars.

We were admitted into the church for a dime and it was worth that much to see their quaint drawings which were all we saw.

We then went to the Governor's Mansion to shake hands, as some informed us they had, but he was out. Likely got tired of holding a reception. His wife kindly invited us in, which invitation Mrs. C. gladly accepted and stepped inside.

One glance was enough for me, as here civilization and barbarism were so badly mixed as to spoil it for either side. I went in search of something more to my taste, but missing my companion I went back and found her still in the Governor's Palace as contented as you please. I became alarmed lest the Governor's wife was gaining a fast friend and that would deprive me of a pleasant traveling companion.

After some persuasion we went on and found a huge rock with a place hollowed out where they mixed their bread, and we peeped into their ovens to see something baking but were disappointed. Those ovens were made of clay and were like the Dutch Ovens.

We then went to the corral and saw four or five burros so thin the less said about them the better.

Indian girls were seen everywhere selling pottery. It wasn't pottery, it was beads I wanted and when I asked one woman to sell me her beads she would not have been more surprised if I had asked her to sell me her papoose, which Mrs. Culp, (there, I have told!) said she thought I was going to ask next,—because I was so taken with those papooses.

We went to the car and there I was informed I missed the best part of my life, as there was fine stock further on somewhere and a dance.

We saw several other Indian villages along the way. We also saw beds of lava. It looked like very brown, very rough soil. There were acres of it.

We passed the famous Mesa mountains and along the way saw sand hills, which they tell us are one place to-day and somewhere else to-morrow.

Our engine gave out and progress was very slow so we had time to spend socially. The men got out, at one stop, and one threw up an old coal-bucket found there and the rest threw at it. The women gathered in groups and some talked, some sang, some told stories, some renewed old acquaintances, others traced relationship and still others rendered recitations, and in one car there was a spelling class.

But there was one group that did not seem to be so happy. The tears of sympathy were rolling down the cheeks of neighbors who but two short days ago were strangers, as one sister related the events of her dark hour in life. As she finished they all wept in silence and then another told of her bereavement and so each one took her turn, for who is there who has not had a dark cloud crossing her pathway?

And thus the time was spent, and as one brakeman remarked, "There is not a deck of cards in the whole train and yet time does not seem to hang heavy on their hands." Far, very far from hanging heavy on our hands. If there is another church, society club, or any other order that can enjoy such pleasant relationship together as we did I should just like to hear about it. No, more than that, you'll just have to show me.

We crossed Canyon Diablo and the train stopped a few moments for us to look at it, but as we were expecting so much greater sights we did not really appreciate this as we should.

As we neared Flagstaff we saw the San Francisco Mountains. The weather was rather cool.

It was the hour for retiring again. We again assembled at the family altar, more closely drawn to

each other by our pleasant associations together and more closely drawn to our heavenly Father by his protection, as we realize the many perils that might befall us, and for his kindness in allowing us this sweet fellowship together. We are truly thankful for the many blessings of life and especially the great blessing we have in our church membership.

LITTLE BY LITTLE.

Discontent stalks abroad through the world, and lurks in every corner. There is a screw loose somewhere in the modern style of living. Is it not that we are too impatient, too bent on having everything come about in a hurry, as illustrated by the current phrase, "I want what I want when I want it"? Talk with your neighbors and you will find this spirit of restlessness omnipresent. The old virtue of patience is becoming well-nigh extinct, for it is little taught. No one is willing to do things by degrees but everyone must accomplish big things suddenly. And yet this is against nature. "What wound did ever heal but by degrees?" asks Shakespeare. All the king's horses and all the king's men—with all the wealth of the world thrown in—cannot hasten the period of incubation required by an egg to hatch; hurry the process and you disgust nature and spoil the product.

Many people will do nothing unless they can do something big and soon; they are comparatively few who are content to accumulate a store of savings by virtue of persistent industry and economy, a little at a time; the current aim is to get rich quickly, by some sort of speculation, if not peculation, and the manner is considered less important than the matter. Certainly the examples of so many men around us making big fortunes in a few years by exploiting the country's supplies of timber, minerals, etc., or by contriving to connect with the "unearned increment"—such examples tend to stimulate a spirit of unthrift among the general herd, for it takes Spartan fixity of purpose for one to keep pegging away and practicing homely economies when he sees others making some lucky strike, almost over night, as much as he, with all his sacrifices, could save in years.

Young married couples must now set up in life with more costly houses and outfits than their parents, even after years of frugality, could afford; few are content to begin with just the bare necessities, and add to their possessions little by little, but they must have everything that everyone else has right on the start, even if they have to pay for it on the installment plan. Verily they have their reward, but no doubt they miss much of the pleasure of true earning and true ownership.

After all, it is the little-by-little principle that counts, and how much better off the great mass of mankind would be if they were to adopt this principle as the guiding rule of their life. It is truly astonishing how much can be accomplished in the course of months or years by doing just a little at a time. A letter-carrier in France for 25 years made it a practice to carry home all the stones he found on his rounds. The people laughed at him for a crank, but with those stones he gradually built a house, so massive and grand that by common consent it has come to be called the "palace." By his persistence he has erected for himself a monument better than any fortune he might leave, for it is and will long remain an object-lesson of what patience and faith can do—and the influence of his example will spread thousands of miles away. Men like that are the true millionaires, and it is their ways and not the ways of the money-maniacs which should be studied and followed. Don't be discouraged when you find that things do not come your way in a minute; and have faith that if you keep your eyes on the ideal and labor steady toward it you will, as time goes by, make more progress than those who hope to be wafted to their goal by some outside force. As Longfellow said:

"Still achieving, still pursuing,
Learn to labor and to wait."

KIND WORDS.

As the breath of the dew on the tender plant, they gently fall upon the drooping heart, refreshing its withered tendrils and soothing its burning woes. Bright oases they are in life's great desert. Who can estimate the pangs they have alleviated or the good works they have accomplished? Long after they are uttered do they reverberate in the soul's inner chambers and send low, sweet, liquid strains that quell all the raging storms that may have before existed. And, oh, when the heart is sad and, like a broken harp, the sweetest chords of pleasure ceased to vibrate, who can tell the power of one kind word? One little word of tenderness gushing in upon the soul will sweep the long neglected chords and awaken the most pleasant strains. Kind words are like jewels in the heart, never to be forgotten, but perhaps to cheer up their memory through a sad life, while words of cruelty are like darts in the bosom, wounding and leaving scars that will be borne to the grave by their victims.—*Saturday Evening Post.*

"The emperor of Germany has the grandest railway train in the world. It cost one million dollars, and took three years to build. Included in its gorgeous saloons are two nurseries, a gymnasium, a music-room, and a treasure-room. The drawing-room is finished with oil paintings and statuary. The treasure-room—a unique feature—is constructed on the safe deposit principle, with two large burglar-proof safes."

Catching Crayfish

N. J. Miller

DEARLY everyone, sometime or other, has had something to do with crayfish (often called craw-fish and erroneously crabs). Perhaps it was studying the animal swimming or feeding in an aquarium, pond, or stream, or walking on dry land. The chances, nine to one, are that it was a bit of experience in catching them. It requires little skill to pick them up when slowly traveling out of the water, a habit they sometimes indulge in. Such migrations or pilgrimages often occur after a rain or when the pond is going dry. Should the pilgrimage not be made, but one thing remains to be done—burrow into the soil until water is reached where life is tided over. Some species always burrow into the soft soil in meadows, of which the verse says:

"All night the crayfish deepens out her wells
As shows the clay that freshly curbs them round."

But catching crayfish on land isn't very exciting and is a slow task. It is like hunting rabbits when there aren't any, or bears when only their old tracks can be seen.

It has been my privilege to supply various laboratories with crayfish which I had to deliver alive. These I often captured with a small net supported by a wire circle and attached to the end of a stick. This simple apparatus served as a dredge to draw the living forms from pond or stream; sometimes as a net or trap. The latter was usually successful in clear water, especially beneath a bridge. I frequently went to such a place to successfully fish the big, fat creeping fellows. On one occasion I visited the spot and could see scores of them creeping close to the rocks. They were fine specimens, large and mature, just what I wanted. I stepped beneath the big bridge and lightly from rock to rock lest I frighten the animals.

Where One Makes Successful Hauls.

Quietly I inserted the net into the water behind them and carefully touched their heads or antennæ with my hand or a stick. Like a flash each darted backwards into the net which was quickly lifted out of the water and emptied into a pail. I kept drawing them out singly until the big pail was nearly full. Then, becoming too bold in the exciting enterprise I made a misstep, slipped, became overbalanced and splashed into the water. I was surprised, even frightened at my plunge but the uncaught crayfish even more so. Everyone had scampered out of sight. Crayfishing under the bridge was at an end that afternoon.

The average country lad knows that crayfish can be allured from their hiding places by a piece of meat

tied to a string. They will cling to meat with their "pincers" until lifted out of the water and usually landed safely in the boy's can. A good plan is to take a piece of liver, weighing about one-half pound, tie to a string and throw into the pond or stream. In a short time the crayfish, perhaps a dozen, will climb over the liver and pinch on. Lift the meat out of the water and the crayfish are yours provided you pull gently and rapidly enough before they can let go. It is a good plan to insert a dip-net beneath the liver just as it comes above the water's surface to catch all crayfish letting loose before they are certainly on land. Should one have several such baits at a very suitable place, there is enough work, excitement and success to make the fishing genuine sport.

But why does the crayfish hang on to the meat long enough to be captured? A bit of animal psychology is involved in it. In your boyhood you accepted more than once a challenge to climb a tree twenty feet to the first limb. In a moment your hands, arms, and shins gripped the trunk. Quickly you went the first ten feet, but oh, how far the other ten seemed! Your hands bled, your muscles ached, your shins were skinned and you felt so weak you were almost tempted to give up. But you had grit and went to the top though you began to fear you might fall and be obliged at once to give an account of you deeds on earth. Any time on your way up you could have let go to come down. Not so with the crayfish having pinched on to the liver. In spite of the danger, it still holds on even after being lifted out of the water. It isn't a case of mere grit that makes it hold on either. It perceives the danger ahead but is captured "before it has time to think the matter over and let go." The liver bait method simply takes advantage of its sluggish thinking.

Perhaps the use of a good-sized minnow-net is the most satisfactory way to catch the ten-legged fellows. More than once have I helped to catch a bushel of these in less than two hours. We simply waded in the water, held the net well down to the bottom and pulled what ever came in the net to the shore. If the place was suitable, not too sunny, either on mud, gravel or limestone bottom, we usually had a good haul. How the crayfish flopped their tails to turn over! How they opened up and reached out their "pincers"! But the fighting and threats were soon over as the forms dropped into our buckets.

Crayfishing is getting to be more and more of an industry. The French people eat large numbers of them every year. The large crayfish farms there do not even supply the demand. Germany makes large shipments to the markets of France every season. In the large cities of the United States there is quite a demand for the jointed animals too. The muscles in the abdomen, "the tail part" of the animal, is the portion eaten. I have never tasted the delicate dish but have acquaintances that prefer it rather than chicken. An acquaintance of mine once told me he ate one hundred and fifty-six crayfish at one meal! One hundred and fifty-six seems incredible; but a glance at the man's stature and waist satisfied me he was equal to the occasion and that he was accustomed to the woes of indigestion. One hundred and fifty-six! He liked them, yes, he did. I haven't any doubt now that crayfish are a delicate dish.

THE HABIT OF NOT FEELING WELL.

FEW people realize that their ailments are largely self-induced. They get into a habit of not feeling well. If they get up in the morning with a slight headache, or some other trifling indisposition, instead of trying to rise above this condition they take a positive pleasure in expatiating upon their feelings to any one who will listen. Instead of combating the tendency to illness by filling the lungs with pure, fresh air, they dose themselves wtih "headache tablets," or some specific, "warranted to cure" whatever ill they think they are suffering from. They begin to pity themselves, and try to attract pity and sympathy from others. Unconsciously, by detailing and dwelling upon their symptoms, they reinforce the first simple suggestion of illness by a whole army of thoughts and fears and images of disease, until they are unfitted to do a day's work.

It is said that man is a lazy animal. We are all more or less prone to indolence, and it is the easiest and most natural thing in the world for young people to accustom themselves to lying down or lounging on a sofa because they think they are tired, or not well. Much so-called "invalidism" is simple laziness. There is a great danger that girls who are delicate while growing up, and lounge around the house and lie down whenever they feel the least bit out of sorts, will form a habit of invalidism when they reach maturity. How often do we see such girls "brace up" at once whenever anything happens which interests or excites them! And invitation to a reception or a party, or any other pleasant social occasion, acts like a tonic. For the time being an instantaneous cure is effected. They are as well as anybody—until after the entertainment.—*Success.*

CULTIVATE the habit of truth. Let it become the very genius of your life. It will strike all hypocrisy out of your life; it will inspire in all men confidence in you when they come to know that at all times and under all circumstances you will be as your custom is —*J. F. Carson.*

SACRIFICES TO RUBBER INDUSTRY.

EVERY ton of rubber costs a human life. No one can live and work in the river bottoms of the great Amazon region and the Congo Free State, except a native. The mortality in the state of Amazonas, Brazil, corresponds almost exactly to the number of tons of rubber produced, and, although there are no such atrocities in Brazil as are charged against the Congo, nevertheless it is true that the laborers who are brought into the rubber fields from the coast do not average more than three years of life, and are, if not in law at least in fact, subjected to hardships never known or endured by the slaves in the United States or even by the slaves in the coffee countries of Brazil. Columbus first had his attention attracted to the peculiar qualities of the gum. It is said to be first mentioned in a "Universal History of the Indies," published in Madrid in 1536. A little later a Jesuit, Father Charlevoix, called attention to the bouncing qualities of the ball made of it. The word gumma was first used by Tordesillas in speaking of the balls used by the Haytiens which they called gumana. The Englishman Priestly in 1770 found that the material was good for rubbing out pencil marks, whence it has ever since been known in England as India rubber. Rubber is an absolute essential to modern life for the railway train, automobile, insulation in electrical communications and lighting, and for medicinal and surgical purposes.

DOING HONEST WORK.

THE other evening when a party of pleasure seekers was entering the city in an automobile, the machine became unmanageable, ran into a ditch, and two of the number were badly hurt. These facts so nearly resemble those making up hundreds of other accidents, that they have little interest for the average reader. The cause of this accident, however, is said to be an unusual one. A small piece of the mechanism under the floor of the machine gave way, putting the machine beyond the chaffeur's power. The piece thus giving way is so simple in construction that nothing short a bungling job in the making of it could have brought about the accident in this way.

This is only one instance of countless thousands where people have been in danger of and have even lost their lives because of the dishonest work of some one. No wonder honest workmen are at a premium in the business world, when so much is depending upon their honesty.

The man who slights his work must be of the most thoughtless sort. In the first place by a little thinking he could easily see that the one who accepts the work as genuine is bound to be cheated. Perhaps this cheating will take the form of a demand for the person's life, as in the case of defective rails for railroads. Besides this, there is the injury done the man or company purporting to do honest work. More than this, there is the injury that the man does himself. The harm the dishonest worker brings to others is not lasting,—it cannot go beyond this life. The injury he does himself lasts forever. A never-ending eternity cannot relieve him of its influence.

And what is to be gained by doing such work? Perhaps a few paltry dollars. Perhaps a few moments of time. But these last are not really gained, for whatever time is spent in idleness, or in work which cheats the demands of one's first duty, is worse than lost because of the train of evils to which it gives existence. And how the few dollars thus gained can really add to one's worth we must still question till better argument than we have yet heard on the subject has been brought forward.

In any event, doing honest work pays, not only for the present and as long as the work stands, but it yields a satisfactory income long after the work has crumbled to dust.

ABOUT BEADS.

Do you know how the pretty colored glass beads are made that are so much used for necklaces and fancy work? The process is very interesting and curious. First, the glass is melted in a pot, and while in this state is colored. It is then taken from the pot by two workmen, who expand the mass and form it into tubes by blowing into it down their blowpipes. Then while it is still soft they draw the tubes out to a great length, while the tubes, of course, get more and more slender as they grow longer. On cooling, these are broken into lengths of about a foot—twelve inches—each. Next these lengths are "annealed," or toughened, and cut evenly into short bits. After this the roughly cut beads are mixed with ashes and sand, then put into a metal cylinder over a brisk fire, and turned round and round very rapidly as they soften with the heat. They are thrown into water and shaken until all the ashes and sand are cleaned away, leaving the holes free; and finally they are threaded on strings, ready for packing and selling. This is the process through which the common beads go before they are fit for use. Beads of finer quality undergo a great deal more cutting and polishing before they leave the factory.—*New York Christian Advocate.*

AMERICAN vessels, it is said, are never seen in India or other Eastern ports. Other nations, even small ones like Belgium, send their own ships to Oriental ports, and therefore reap large commercial profits, while United States manufacturers are not able to compete with them. American products are shipped to England, and from there reshipped aboard British vessels to India.

LOWLY BUT CROWNED; OR, SYBIL THE OUTCAST

A Story by Sadie Brallier Noffsinger

Chapter XXIII. The Waste is Spanned.

"DO you think his injuries are fatal?" asked Mrs. Chester of the white-robed nurse.

"I fear so," answered the other. He has been unconscious ever since he was brought to the hospital, two days ago. The doctor says there is but little hope."

"Can you give me the details of the accident?" and Mrs. Chester bent forward and laid her hand upon the forehead of the injured man.

"All I know is that he was struck by an electric car about midnight Thursday. I do not even know in what street the accident occurred."

"Poor Mr. Deane!" the Dunker lady said. "When consciousness returns, please tell him that Mrs. Chester was to see him"—and she handed a card to the gentle nurse. "You will be sure to tell him that?" she added.

"I will," replied the other, while Mrs. Chester passed through the corridor and out into the street.

The next day and the next was a blank to John Deane, but on the following morning Mrs. Chester was informed that the patient was conscious and wished to see her. She followed the nurse to the cot and taking his hands in hers, told him how glad she was to see him better.

"I'm mighty glad as you have cum," he whispered with an effort, then closed his weary eyes again.

"I shall try to come every day while you are here. In the meantime you must be very quiet and get well—Nay," she added as he tried to speak, and she saw what pain the effort cost him, "you shall talk to me when you are stronger. And now good-bye!" she said, and passed from his side.

But the days wore on and a time came when John Deane was allowed to talk as often and as much as he desired. Ever patient, ever gentle, ever cheerful, Mrs. Chester was, as from time to time she conversed or read to him.

He had told her how it all happened,—that dreadful accident. "I had struggled that night, Mrs. Chester,—God only knows how much. I b'lieve as it wuz the darkest night o' all my life, an' the bridge what I wuz buildin' all along, cum almost crashin' down; but I clung to the floorin' ov it, and wuz saved.

"W'en I seed the fellers laughin' over the sparklin' glasses, somethin' made me dizzy an' I well-nigh gev up, and w'en I went to cross the threshold I don't know what it wuz 'at pulled me back. I never felt as much forsook an' all alone as w'en I went a trudgin' down them steps an' out into the darkness. But all uv a student like, yer face riz up before me jest as you looked that day w'en I thought as yer was Bessie; and then still clingin' to the floorin' ov't, I driv another spike inter that bridge. Sez I: 'Humanity is not all bad.'

"An' so I wandered up an' down thinkin' an' resolvin' till it must hev been miles as I had walked. Then all to once a roarin' cum an' then a mighty pain—then all wuz dark to me."

The matron often wondered why the Dunker lady tarried in the accident ward so long, and mentally queried whether she was in any way connected with the bandaged man, who rarely had any other visitor and whom no one else seemed to care about.

He had been one long month in the hospital when Mrs. Chester in ascending the steps to the accident ward, met the physician of that department. She asked him whether he still regarded John Deane's case as hopeless.

"I do," replied the doctor gravely. "He may linger on for weeks, perhaps, but owing to grave internal injuries sustained, recovery is an impossibility."

For a time the injured man seemed to have been gaining strength, but gradually grew weaker until he was reduced to a mere shadow of his former self. Still he was always cheerful and if he knew that the massive gate through which he must make his exit from earth forever, should shortly swing ajar, the truth did not seem to cause him pain.

Upon several occasions Mrs. Chester had taken Sibyl to his bedside. He told her to be a good girl and remember everything that Mrs. Chester told her. "She will not tell you nothin' what'l lead you inter wrong," he said.

And the days wore on and the form grew more shadowy and the eye more dim. He had once said to Mrs. Chester: "I think the bridge is mighty nigh completed. Since layin' here, I hev done a good deal uv buildin' on't and I reckon it'l soon be strong enough ter bear me inter that blessed and redeemin' future what hez no past."

And still the days wore on, until that one came when the Gate swung open and a cool breeze from the mystic valley fanned the sick man's brow. His lips moved and the gentle nurse bent low to catch the broken message: "Tell—her—as—the—waste—is—spanned." This was all he said.

Chapter XXIV. Only a Cry in the Night.

THE days which followed this conversation were days never to be forgotten by Sibyl. Now hope reigned supreme within her heart; now fears struggled for mastery. Now that "peace which passeth understanding" seemed to possess her entire soul; now doubts arose and almost triumphed. One hour was song and sunshine; the next was tears and darkness.

And thus the days dragged slowly on, and with it dragged the perplexity in Sibyl's mind—Could she be faithful? Could she withstand the taunts of all the village girls? Could she endure the sharp rebukes of Mrs. Treadle and Mrs. Trot? Could she renounce all anger, all ill-will? Could she forsake her sinful life entire? Repentance answered, "Yes," but Faith had not yet done her work. And still the days dragged on.

What is it that disturbs the stillness of Shady Brook in the lone watches of that starless night? Only a sad girl's cry, yet hark!

"Oh, Lord, my life is awful wicked but I want to be forgiv! I come to thee for help. Dear Lord, don't cast me out nohow!"

Only a cry in the night! Yet oh, Sibyl, thou hast made the angels around God's throne rejoice!

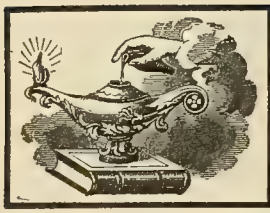
FROM LOUISIANA.

J. I. MILLER.

IT seems there is still some anxiety on the part of some to see something in the NOOK from the South, so we will have a fruit article. First we shall notice the figs. They commence to ripen the later part of June and the everbearing varieties last until frost. We have a tree in our yard grown from a cutting that was about one foot long and was stuck in the ground seven years ago last spring. It commenced to bear the second year and has never missed a crop. The tree is now eleven feet high, the top is twelve feet in diameter, the body one foot above the ground and just below the lower limb is seventeen inches in circumference, and the tree has not had any special care.

When the fig trees are let alone, they grow very full of branches from the ground up. The fig tree is rather unique in its way, from the fact that it never blossoms as other fruit trees do. The tiny fig comes out of the new growth and as the tree keeps putting on growth for six or seven months the figs keep coming so the last ones are often nipped by frost late in autumn. We have about forty fig trees, about fifteen bearing, three of them large ones, and how much we do wish we could share some of the luscious figs with our friends in the North. *De figa sind gore griselick gude.* So ends the fig for the present.

Peaches have been ripening for the past two or more weeks and by planting the different varieties one can have peaches from four to five months each summer, but on account of the warm past winter the pear and peach crop is very small in southwestern Louisiana. Texas seems to have a fair crop. We have a pomegranate bush in our yard that was planted about seventeen months ago when it was perhaps twenty inches high and not much thicker than a lead pencil. It is now six feet tall, five feet through top and body is five and one-half inches in circumference, and has twelve pomegranates on and some blossom.



Concord grapes grow and bear immense crops. We picked our last ones about two weeks ago. The scuppernong (grapes) are ripening,—picked about a gallon yesterday. Our concord vines made a growth of from six to eight feet first year, and second year were loaded with grapes.

The most delicious of all small fruits is the guava. Our bushes planted seventeen months ago are so full they lay on the ground. Watermelons and muskmelons are ripe and have been for three weeks or more. Much more might be said about what can be done in the great South, but let this suffice. All letters and inquiries answered to the best of our ability when stamps are sent for reply.

Roanoke, La., July 21.

OF the 20,000,000 people inhabiting Spain, only about 35 per cent can read and write; another 2½ per cent of the population can read without being able to write, but the remaining 62½ per cent are absolutely illiterate. In the south of Spain it is impossible to get a servant who can read or write, and many of the postmen are unable to tell to whom the letters they carry are addressed. They bring a bundle of letters to a house and the owner looks through them and takes those which are (or which he thinks are) addressed to him. The Spanish postmen are not paid by the state: the recipients of the letters have to remunerate them according to the amount of their correspondence, and each letter costs the addressee at least 1 cent. It is a joke among the easy-going Spaniards that he who treats the postmen best receives the most letters—whether they are intended for him or not.

THE smoke-stack of an ocean liner does not appear to an observer as large as it really is. One must see a section of the funnel to appreciate its enormous size. There is room for the largest locomotive ever built to pass through with plenty of room to spare.

THE QUIET HOUR

Sermonette.—Our Savior To-day.

NELSON SHIRK.

"Wherefore he is able also to save them to the uttermost that come unto God by him."

Of inestimably great value is our salvation. Most precious is Jesus who brought it to us. Continually does the growing Christian learn to more fully appreciate what Christ has done in coming to earth and living for us and dying in our stead. Stronger and deeper becomes the love to the One who so loved us.

Yes, Jesus is our Savior. We look to his death as the time when our sins were taken away. We celebrate his resurrection as the final triumph over death and the grave. Next we remember that he left this earth and ascended to the Father. How does this last event affect us? Does it give us sadness and regret or are we indifferent or do we have the "great joy" that filled the disciples as they returned from the ascension mount to praise and bless God? Well, we know that we observe Easter and preach resurrection sermons, but does it not largely end there? The number of Christians who have been permitted to hear reference to the ascension as it ought to be considered, may be small indeed.

The work of Jesus for us did not end at the cross on the glorious morn at the tomb. Christ did not start the work and then go away and leave it to get along as best it could, until he comes again. True is it, that through his death we are reconciled to God. Precious to us is the truth. But being reconciled is not all of salvation. We continue to live on this earth with sin about us and its scars upon us. But good cheer to all, he who overcame and died to reconcile, now as priest stands and intercedes for us before God. Greatly should our hearts exult in the fact of his present life in heaven. His going to the Father to take up this work in our behalf will always greatly comfort us when we realize its full meaning.

For Christ to be with God and the Holy Spirit to be in us, means for us to have personal fellowship and union with him, and that continually. For him to be interceding for us is not only to our lifting up again if we fail, but also, and abundantly so, to the empowering of our hearts to know that we are sons of God and to walk worthily of that high relation. Our text tells us that he is able to save us to the *uttermost*. Other scriptures hold the same glorious possibility before us in equally strong light. Then what can there be in this life to destroy? All kinds of experiences and circumstances meet us, but in everything we may look to Jesus. Nothing is too great for him.

What a difference all this should make to us as we serve here. How inseparable and joyous should be our union with him. How fully he should have our hearts. How consistent and pure should be our lives and how great should be our power for service. Brother and sister, let us arise and enter into that blessed personal fellowship with him that it is our privilege to gain.

Mt. Morris, Ill.

THE LOST BIBLES.

J. KURTZ MILLER.

Several years ago I went to a very poor home, the day of a funeral. As soon as I had entered, the mother noticing that I was a minister came to me and said, "We have not invited a preacher but now since you have come, perhaps you will conduct a short service."

I replied that I had not come for that purpose, and therefore did not have my Bible, but if they would kindly give me theirs I would gladly hold a short service for them. Then began something like this: "Frank, where is that Bible you got once in Sunday school?" "Indeed," says Frank, "I've not seen it for some time." "Well, then, Jennie," said the mother, "You go and get the one you got in Sunday school." But alas, it also could not be found. A little next door neighbor girl said, "I know where my Bible is, for I take good care of it," and in several minutes she handed it to me. From this Bible which was given out at the mission Sunday school I read a lesson, then prayed and after commenting on the "Words of Life" prayed again. I have kept my eye on that family for the past three years and they still seem as dead spiritually as a lost book.

They had many pretty flowers, and the thought came like this, flowers indeed are pretty, but oh how ugly sin is! And it is only the Word of God that will take this ugly sin which makes our lives ugly, out, and yet the blessed Book is lost in the home even at the time of a funeral.

Indifference looses many Bibles. It is also the indifferent, who will miss heaven.

LEND A HAND.

Lend a hand to help the weary
On the way of life so dreary,
And you'll see
How your help their sorrows lifted,
Bright their skies whence clouds have drifted,
Oh, so free.

Lend a hand to help the lowly,
Who are plodding on so slowly
O'er life's way;
And you'll see their faces brighten,
As the heavy loads you lighten
Ev'ry day.

Lend a hand to help your neighbor,
When o'erwhelmed with care and labor,
On his way;
Then his burdens will be lighter,
And his face will grow much brighter,
Day by day.

Lend a hand to help your brother,
And much joy you'll give another,
On the way;
Ready be to heed the calling
Of a brother who is falling
By the way.

—S. Houston Proffitt.

THE NECESSITY OF BIBLE STUDY.

THE Bible school has in it the supreme standard of life for the Christian. The neglect of Bible study is responsible for a multitude of destructive propaganda that would not otherwise get audience. Christian Science, for example, uses the Bible by way of illustration, and in the minds of certain credulous people gains authortiy by this strategy. The *Bible student* cannot be deceived in the perversion of Scriptures endorsed in the books of Mrs. Eddy. The new theologians have dishonestly redressed their creed in the language of revelation, and many of them hope by such means to deceive the elect as to the revolutionary character of their teaching. Here again we may suggest the urgent necessity of Bible study. The foundations of faith are built upon the the Word of God. It is the text-book of the spiritual life. It has no substitute. In the Scriptures alone has God revealed himself to his church, and these must be the basis of instruction, if we are to be saved from apostasy.—*Home Herald.*

"THE real curse of life is not toil but unillumined toil. It is the task to which we go while hating it. It is the labor we perform under the pressure of necessity, with no heart and no joy in it. It is this sense of bondage and slavery that withers and debases life and industry. Shops are prisons, farms are purgatory, the cradle, motherhood, bread-making are a misery, when there is no window to the soul which opens from bench or kitchen toward the unseen, toward the light of love and heaven. Where there is no vision the people perish."

"ONLY A TEACHER."

A BEAUTIFUL legend tell us that Jupiter once issued a proclamation, setting forth that to the most worthy person in all his realm he would give a golden crown, upon which should be engraved the following inscription: "To the most worthy." From all regions and climes of his vast empire came applicants and submitted their claims. The farmer, the physician, the lawyer, the minister, and various other applicants came and each eloquently set forth his claim showing why the golden crown should be given him.

When all the applicants had presented their claims and retired in almost breathless silence to await the decision, the mighty Jupiter cast his impartial eye over the assembled multitude, and far in the rear he beheld a man, whose locks were white with the snow of time. He was leaning upon his staff and looking with admiration and pleasure upon the applicants. His classic appearance and gentle demeanor held the attention of Jupiter. He beckoned the man to come forward and asked him if he had any claims to present. The old man answered: "I have none at all, sir; I am only a teacher and these applicants are my pupils." Instantly there rang out from Olympus' summit the decision of the great Jupiter: "Let the golden crown be brought and placed upon the head of the teacher, for there is none more worthy to bear it than the successful teacher of men."

In this progressive age there are many who would not approve Jupiter's wise decision. They often speak of the worthy teacher who is giving his life to the successful training of the young as "only a teacher." I believe there is no calling in life more worthy than that of teaching, and none in which the rewards are richer. The teacher may never achieve what the world calls success yet the truly successful life is the one that helps others to higher planes of living and usefulness, and such is the sphere of the true teacher.

The laurels of fame may never entwine the teacher's brow, his name may never appear upon history's pages, no stately monument may be reared to his memory, yet if he is a true teacher doing his whole duty he will leave living monuments in his pupils, who for many years will speak praises to his memory, and his influence will be felt in coming ages. When the "Mystic River" has been crossed and "the mists have cleared away," eternity will reveal what a power for good has been the work of the man who in this life was content to be known as "only a teacher."—*Ohio Teacher.*

SELF-DENIAL is the first lesson to be learned in Christ's school, and poverty of spirit is entitled to the first beatitude. The foundation of all grace is laid in humility. Those who would build high must begin low.—*Matthew Henry.*

THE INGLENOOK

A Weekly Magazine

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

"THE OUTLOOK AT THE HAGUE."

In view of the fact that the readers of the Inglenook are strong advocates of the principles of peace and must therefore be interested in the work of the Peace Conference now in session, and considering that many of them do not receive any report of this conference except that which comes piecemeal in the daily papers, we are giving below a number of paragraphs from a very comprehensive write-up of the subject, appearing in a recent number of *The Independent*. The writer is in attendance at the conference, and is therefore in a position to discuss its work.

"When the Czar issued his manifesto summoning the First Hague Conference in 1898, it was received with ridicule, or, at best, polite incredulity on the part of the world, and when it assembled in 1899 it was amid the skepticism of its own members. As it convened very soon after its call the Governments had no time to formulate their plans, or to know clearly what they wanted. Everything was new, suspicion was rife, there were no precedents for procedure, and even those who came with the best intentions had little conception of what they might reasonably hope to accomplish.

"No one can have talked with the delegates to the present Conference without realizing that the long period of doubt which characterized the early half of the first Conference has no place at this one. Members of the various delegations, especially those who were also members of the first Conference, are continually commenting on the fact that this Conference is composed of men who came confident that much could be accomplished and determined to accomplish it.

"In the opening address of welcome by Von Tets, the Dutch Minister for Foreign Affairs, the hope was expressed that this would not be the last of the Peace Conferences to be held at The Hague, and in his inaugural address, Nelidoff, of Russia, the president of the Conference, while expressing the opinion that we shall never arrive at universal peace and justice, declared that these ideals ought to inspire the effort and action of the nations. This limitation upon the possible achievements of the Conference was received with displeasure here in the Conference as well as generally throughout the world."

A part of the first week's work of the Conference was the forming of four sub-commissions. "These commission, of which Beermaert, of Belgium, is presiunquestionably the most important of all and over which Bourgeois, of France, presides. It is divided into two sub-commissions, the first dealing with the subject of arbitration, taking for its basis the Hague Convention of 1899, and the second dealing with the question of a prize court and those other propositions not included within arbitration proper. The second commission, of which Beermaert, of Belgium is president, deals with warfare on land, and is considered the least important.

"The third and fourth commissions, which are of about equal rank, standing midway in importance between the first and second commissions, deal respectively with warfare at sea and maritime law. Tornelli, of Italy, is president of the former, and Martius, of Russia, of the latter.

"The presidents of these various commissions immediately called for propositions in writing, and within the first fifteen days a number of important proposals have been submitted, although it is believed that several of the nations, especially the United States, are holding back some of their most important ideas.

"The chief propositions so far submitted are as follows:

"By Russia: An annual conference of the members of the Hague Court for the purpose (a) of choosing three of their members to constitute during the following year a permanent tribunal ready to try cases at fifteen days notice, (b) of performing certain duties in connection with the administration of the international bureau at The Hague, (c) of expressing their opinion upon questions of present importance in the international affairs, and (d) of conferring together on the progress of international arbitration in general.

"By Germany: The constitution of an international prize court to try questions arising out of a state of war.

"By Great Britain: A similar proposition as that made by Germany and also abolition of contraband of war.

"By the United States: (a) The immunity of private property at sea, and (b) no recourse to force for the collection of debts until after the claim has been submitted to the Hague Court:

"By France: Provision for simplifying the procedure of commissions of Inquiry and for increasing their utility.

"By various other nations: Propositions looking toward the regulation of submarine mines, the protec-

tion of unprotected places from bombardment, the abolition of ransoms, etc.

"The Russian proposition for strengthening the Hague Court by making it a more permanent organization is probably the most important proposition, but it is unlikely to serve for more than a basis of discussion. As Secretary Root, in his striking speech before the New York Peace and Arbitration Congress, took the ground that judges should be substituted for diplomatists in the composition of this Court, it is perhaps safe to assume that the United States delegation will offer modifications to Russia's proposition, or more likely an entirely new one of their own as a substitute. Every one expects that a proposition for strengthening the Hague Court will in some form be adopted.

"The propositions of Germany and England for an international prize court have been referred to a subcommittee and it is expected that the plan will go through with little opposition.

"Of the two propositions submitted by the United States the one relating to the collection of debts by force is the most important. Now the strongest probability of our country's being involved in a war with a European Power is the failure of a South American Country to meet what are considered by European Powers their just demands. By the adoption of this proposition, European Powers would be compelled to prove the justice of their claims before an impartial Court before proceeding to collect them by force. The best informed sentiment predicts that this proposition will be adopted. In such a happy event the chief danger of conflict between the Old and New World will be averted.

"America's second proposition has already been informally opposed by Russia and England, and its fate is somewhat in doubt.

"No action is likely to be taken on the question of disarmament. There is absolute agreement on this point. Indeed it is doubtful if even the question of limitation of future armaments will be discussed, and that, too, despite the fact that England and the United States have suggested it as a part of the program. As *The Independent* has held from the first, the disarmament must be preceded by an increased sense of national security, through the development and application of legal principles in the settlement of international disputes. It seems certain, moreover, that the failure to accomplish anything at this time toward the limitation of armaments is not an unmixed evil. Indeed, it is likely to strengthen the hands of those delegates who are working to give permanency to the international Conferences, and more authority to the Hague Court. It is becoming plain to many that the way which leads to relief from the oppressive military burdens which now weigh so heavily upon Europe is to be blazed out by the pioneers at these Peace Conferences, and can be made practicable only when the system of law as a substitute for war is well developed and successfully operated."

SPIRITUAL DISCERNMENT.

Among the many advantages that come to the true Christian is that power of discernment by which one is able to determine values and judge of this or that course in harmony with eternal principles. The worldly-wise, of course, do not see where the advantage comes in, judging by the way they sometimes sneer at the one who thus marks out his course in life. But he is not disturbed by the conflict with the wisdom of the world. The thing that disturbs him most of all is his neglect to increase this power,—to be so well acquainted with the Author of it that he need not falter when great issues are sprung upon him. He knows that he can tell almost to the letter what his most intimate earthly friend would do or have done under certain circumstances, and when he is not able to move along with perfect assurance when the will of his heavenly Friend is concerned, he feels that he has not lived up to his possibilities.

It is much to our discredit that most of us, as professing Christians, place too low an estimate on the value of spiritual discernment. And that may account, in a measure, for our ignorance of the One who dispenses that power. We are so much entangled with the affairs of this life that we cannot get away as far as the spiritual vision requires. Or we are so besotted of the world and the world's opinions that we would be ashamed to take a position that would bring us in opposition to it. In any event, if all professing Christians would use this power, as they might, the world would stand in awe instead of mocking as it now does.

There is little love lost between the Chinese students who are flocking in crowds to Tokyo to learn western civilization at second hand and their Japanese fellows. The Chinese students live their own life apart from the Japanese, with whom they mix as little as they can. This Chinese mode of life is wholly repugnant to Japanese feeling. The Chinese student refuses to smoke Japanese cigarettes, which have the names stamped on the paper in Chinese characters, since they look upon it as a profanation to burn their sacred letters.

"Never be contentious. Concern yourselves with your duties, and your rights will take care of themselves." A bit of parting advice from a general to the graduates of West Point, but applicable to all men, young or old, college graduates or not.

Echoes from Everywhere

August is to be the month of electrical outbursts, rainstorms and hurricanes, says Irl R. Hicks, the weather predictor.

The American proposition, regarding the establishment of a permanent court of arbitration at The Hague, was adopted Aug. 3 by the sub-committee. This is a step in the right direction.

Owing to the continued shortage in the supply of efficient help for the American railway systems, there is to be a school established in Chicago, in which thorough instruction in railroading is to be given.

In Abyssinia it is a penal offense to smoke. The law forbidding tobacco was at first intended to prevent priests from smoking in church, but later on was applied to everybody. Even foreigners must be careful not to be seen smoking

The situation in Morocco is steadily growing worse. The inability of the government to control the insurrectionists will likely lead to active intervention upon the part of France. Cruisers have been dispatched to the scene of the disturbances.

Only twelve years old is Frances Bradley Storr, the child revivalist of Doncaster, England. At present she is arousing the people of Yorkshire, just as Evan Roberts roused Wales. Her marvelous success in the evangelistic work is simply remarkable.

A German merchant, who recently died at Cottbus, has left $25,000 to build a church in Constantinople, to be used by any of the Protestant churches. The sermons are to be preached in the new, universal language, "Esperanto." Another opportunity for missionaries.

A party of Scotch engineers were recently visiting France. They investigated the sewage-burning plant at St. Ouen, going into the big ovens and later turning on the heat to watch the process. It was not discovered till too late that one member of the party had been left behind in the ovens, the door being shut and fastened so he could not get out, and when he was found he was burned to a cinder.

It now appears that $5,000 was offered as a bribe to a head official of the street car employés' union by the Aurora, Elgin and Chicago Electric Road if a strike would be averted. It happened that the official in question was honest and indignantly refused th proffered bribe.

Although Columbus never saw the mainland of North America, he is to be honored with a monument in Washington. Congress has appropriated a hundred thousand dollars for the purpose, and the commission appointed to spend the money met the other day to select a site and a design.

Abdul Hamid, the Sultan of Turkey, has a hobby for carpentry and cabinet work. Before he came to the throne and when there seemed little prospect of his succeeding to the heritage of Osman, he spent a good deal of time in the joiner's shop and, indeed, became a fairly skillful workman, capable of earning his living anywhere.

Trout fishermen in the east have cause for amazement and envy in the news that a three-foot, twenty-pound salmon trout has recently been caught in Colorado. The big trout, the largest ever caught in that state, is now being mounted for exhibition in one of the Denver railroad offices, and his dimensions seem pretty well established.

The Standard Oil Company, of Indiana, has been assessed the maximum penalty of $29,240,000 by Judge Landis in his verdict of Aug. 3. The usual appeal to a higher court was taken by Mr. Rockefeller's attorneys. If the huge fine is finally paid, it will be interesting to note who foots the bill,—Mr. Rockefeller or the consumer of his products.

To secure the right material for street paving is still an open question. A new system of paving is being tried in Paris. Steel is laid on a bed of cement, after the fashion of wood-paved roads, the interstices, too, being filled with cement. It is hoped, in this way, to avoid the dangerous holes which soon appear in wood-paving, owing to the unequal wearing of the blocks. The new pavement is expected to last for ten years.

THE provisional government in Cuba will spend all the money in the insular treasury on improvements, so as to remove temptation for revolutionists.

AN eminent Spanish scientist has made the recent discovery that the sunflower yields a splendid febrifuge that can be used as a substitute for quinine. Accordingly, the sunflower should not only, by its growing exert great fever-dispelling effect, but also yield a product which is used advantageously in all fevers.

JERUSALEM now has a summer resort at Ramalagh, which is situated several hundred feet higher, and commands a view of the Mediterranean. A new hotel has been built there for Europeans by an Arab. Most of the work of construction was done by women, whose wages are eleven cents a day, and who never think of strikes either.

A CHICAGO man named E. W. Bailey who failed during the hard times fourteen years ago has just succeeded in paying back the last cent he owed. We all know people—most of us have suffered at their hands—who with debts against them will make no effort to get square with the world but will spend on themselves all they can get hold of.

ONE woman in every five, the census man tells us, is now employed in industries outside the home. Out of the whole list of 303 available callings, women have entered all but eight. The interesting query that presents itself to the "sterner sex" is: How long will it be until the fair sex will be wanting to do all the work—and getting all the pay?

THERE seems to be no limit to the uses of paper. Preparations are being made to furnish the soldiers of the German army with paper kettles, a Japanese invention. Although the utensils are made of pliable paper, they hold water readily. By pouring water into them they can be hung over the fire without burning for a length of time sufficient to boil the water. One kettle can be used about eight times.

A CORRESPONDENT in the interior of China complains in the *North China Daily News* of high prices. "The cost of living," he says, "has gone up enormously. The staple products have doubled in price. Rice sells at from 800 to 900 cash per Chinese bushel; flour at from 40 to 50 cash per catty. And this in spite of the fact that the crop just harvested was an exceptional one. Enormous quantities of grain are being shipped down river. The local authorities tried to put a stop to this export, but were reprimanded by the viceroy." A catty is about one and one-third pounds. A cash is about one-tenth of a cent.

IN a recent lecture at Chautauqua, N. Y., Mr. John Graham Brooks charged the alleged "race suicide" to the continually-increasing cost of living. Is the professor entirely right in this matter? Is not the luxurious style of living to blame, more than anything else, for the condition spoken of?

THE wars of the future may be fought not so much on either the land or the water, but in the air, if the forecast of Major Baden-Powell is a correct one. France and England are already experimenting successfully with airships for military purposes, and the British authorities are preparing to construct something equally efficient. War on land and sea is bad enough; if war with airships is added, the result will be simply terrific.

WITH many there is a hazy idea as to the duties and privileges of citizenship. Austria has passed a law by which its citizens are not only given a vote but are compelled under penalty to use it. About forty thousand are to be called up and fined for neglecting their duty. This is a revival of the exquisite simplicity of the Athenian legislators who literally "roped" in the citizens with a reddened rope. The man who had a red mark on him was fined.

RECENT careful surveys on the Isthmus of Panama prove that Gatun lake, the great storage reservoir which will be formed by the building of the Gatun dam near Colon, will have an area of 225 square miles. The former estimate was 110 square miles. The result will be beneficial to the canal, as the greater quantity of water stored up will allow of fifty-six lockages a day instead of only twenty-six, the former estimate.

IT is said that a long time back the Bank of England discovered that mathematical errors of the clerks were at a minimum in the early morning hours, but progressively increased as fatigue occurred. The worst time was in the late afternoon, and there was so much money loss due to errors at that time that as a matter of economy the clerks were forbidden to work after a certain hour. In France the same law of sequence was brought to light, as was to be expected.

A COMPANY of American tourists, who have been visiting points of interest in Scandinavia, under the leadership of Charles I. Webb, of Chicago, have just returned. In their report they speak of the ruddy faces, sturdy figures, and modest bearing of the boys and girls of the northern countries. They also comment favorably on the very pleasant relations existing between employer and employés. Labor troubles seem to be, comparatively speaking, unknown. In some things this country can profitably learn lessons from other nations.

Mrs. Barnett's "Wandering Boy"

Hattie Preston Rider

In Four Parts. Part Three.

RALPH did not refer to the occurrence again. None of the lad's former objectionable associates called, to his mother's infinite relief. If he missed them, he did not betray the fact. Then one day during her brief absence, a slim, well-knit, bright-faced young fellow, presenting the card of secretary to the local Young Men's Christian Association, was shown into Ralph's room. The visitor had a unique proposition to unfold. He was organizing an athletic club, its prime object being walking excursions through various parts of the state, somewhat on the plan of those student foot-tours so popular with German youth. Ralph became interested at once.

"We expect to accustom ourselves to a tramp of twenty or thirty miles every day," explained the secretary, "There are a score of desirable routes; and provided with a light outfit one can roll up and sleep under the sky like a modern Daniel Boone."

Ralph laughed heartily.

"Who are going?" he asked suddenly.

The secretary named a dozen young fellows whom Ralph knew slightly, either employed or finishing preparatory school.

"I don't understand—" the lad began, and paused, coloring.

The secretary laughed genially.

"We hunted you out, partly because we hoped you would enjoy us, and very much because we knew we should enjoy you. Noble suggested your name. All the fellows are active members of the 'Y,' though the project is not directly connected with the institution. Of course they have access to the gymnasium; but this outdoor proposition suits them more exactly. I trust you will be perfectly able and willing to go at the date we have fixed for our first trip?"

The frank, hearty manner, reinforced by Ralph's own wild desire for a "real out-doors," carried the day.

"I'll go!" he declared. "That is, if I can get leave. I'm under the captain's orders for a while yet, I suppose," he concluded, with a comical grimace.

"None of us are the worse for that," the secretary responded quickly.

When Mrs. Barnett returned, she found Ralph glowing with eagerness.

"Would there be any objection, mother?" he questioned.

"To your having a good time? Or to your trying the best of tonics?" she asked, archly.

Ralph was silent with sheer delight, which grew as the evening wore on, his mother giving it entire to a discussion of the subject.

"We shall explore all sorts of queer places, taking our time exactly like a pack of tramps, he said," the lad exclaimed gleefully. Only after he was in bed a thought occurred to him like a cold douche:

"When I'm perfectly well, I suppose it will be all clubs and societies with her again. It's no wonder she gets on so many committees, she can think of such interesting things! Well, anyway, there's this;" and he fell asleep.

He had more visitors now. Several of the Cross-country Club came to see him, firing him anew with descriptions of former good times. Ralph noted with delighted pride how charming his mother could be with young guests. His next revelation came one afternoon when, passing a half-closed door beyond which she was entertaining some callers, he heard her say:

"Oh! no, thank you! Now the anxiety over Ralph's illness is past, I enjoy our being together so much that I never dream of feeling lonely. In fact, I have withdrawn from all but one or two of my clubs."

* * *

"HOME."

IN none of the ancient languages, nor in those of modern times aside from the English, is there a word expressing the ideas and associations which are aroused at the sound of the simple yet heart-reaching word "home." Even the Greeks, whose language was the most forceful, expressive and flexible of all spoken speech, had no word which conveyed the meaning understood by us when "home" is mentioned. Their word, and also the Latin word, simply means

a house or domicile, a place to stay or sleep, but the indefinable something or combination of things which instantly occur to an Englishman or American when "home" is mentioned were wholly unknown to these ancient people. The German "heim" it too general to have any particular value and their "haus" refers to a building of some kind or other. The same is true of the Italian and Spanish "casa" and the Russian "doma," as well as the corresponding words in other languages of modern Europe. A Frenchman once translated Cardinal Newman's hymn, "Lead Kindly Light," and in his hands the beautiful line, "The night is dark and I am far from home," became "La nuit est sombre, et Je suis loin de mon foyer," the translator having been obliged to use for "home" the French word which describes the green-room of a theater.

When an American farmer, after a protracted absence, starts to return "home" he does not think of it as simply a domicile, a place to stop at. The word means to him far more. His affections, his aspirations, his whole being are touched and wrought upon by the visions in a whole panorama; the farm and its adjuncts, the lowing cattle, the barking dogs, the cackling chickens, all the sights and sounds made familiar to him by long association. In the center of it all is a figure called "mother," without which "home" in the real sense cannot exist. It is because of the peculiar regard bestowed upon woman among the English-speaking people, the estimation in which she is held, the deep respect and almost reverence felt for her that "home" as we know it becomes possible. It is impossible among any people who look on woman as an inferior, a drudge, a mere convenience, a chattle. No polygamous people, of course, can have any conception of "home" in its best sense. The languages in which the Bible was originally written, the Hebrew, the Aramaic, the Greek, the Arabic, the Assyrian and Egyptian had no word meaning "home," because the writers and the people written about had no conception of its meaning. Women were degraded, little better than slaves or mere breeders; they were bought and sold like cattle, never consulted in business affairs, were in no sense true wives.

In this great fact of "home" lies the superiority of the young people who enjoy it and know full well what it means. It is the center, the unit, the hub, around which everything revolves, from which everything of national good flows. There can be no great people, no great nation without its inspiration, "Home, Sweet Home," the song which so touches the universal heart of this country, could not have been written in any language except English, would have been impossible to a Greek, Latin, French or Spanish poet. "The Old Folks at Home" is meaningless except to the people of happy America. Search the poetry of the ancient world, the songs and psalms of the Hebrews, the icily regular lyrics of the Greeks, the graceful pentameters of the Romans, the ricocheting iambics of the French, the ponderous periods of the Germans, and you will find nothing equal to the simple melodies which convey to an American audience the full significance of the endearing memories that cluster around the word "home."—*American Farmer.*

CHILDHOOD MEMORIES.

D. MAXCY QUELLHORST.

How oft in fondest memory wafted,
Back through the vista of childhood days,
In infinite glee we ramble wild-woods
And hear the birdies warble their lays.

Again, upon papa's dear knee climbing,
He's hearing us say our A, B, C;
Dear mother busy sewing or knitting,
And all are as happy as can be.

Again, we're playing in mother's parlor,
'Tis neat and clean, but not over fine,
We're not afraid of soiling the laces,
Or shades that shut out the bright sunshine.

And when we're tired and weary with playing,
Father's and mother's days work done,
We gathered around the family altar,
There to learn of the Infinite One.

Of childhood memories none are dearer
Than the altars we builded for prayer,
If no human hand has dared remove them
Kind "father time" has still left them there.

The sacred spot where childish knees bended,
Where hearts were lifted to God in prayer,
Is still in fondest memory blended,
For Jesus smiles on his children there.

Alvo, Nebr.

RICE AS A FOOD.

RICE is a much more nourishing food than the potato, is more easily kept and much less expensive, and agrees with even the most delicate digestion. It is as good for the invalid as for the laborer, and can be made into the daintiest of dishes for the fastidious. One reason that it is not more generally liked is that it is not properly cooked, and not agreeably seasoned. Here is a way that is much liked: First, wash and free the grains from all foreign or objectionable matter, and put into a sauce pan (a double boiler is best), and cover with boiling water; keep boiling briskly for half an hour, but do not let burn. When the water is all gone, put the rice into a fine colander over a sauce pan filled with boiling water, and finish your cooking by steam. If properly cooked, each grain is separate, then it may be seasoned as one likes. Sugar, butter, eggs, cream, a little salt, are all used for seasoning rice, and many use finely-flavored broths to cook it in. If one has a steam cooker, one pint of boiling water should be added to one cupful of rice, which should

be salted to taste, and then set in the steamer and steamed one hour. It can be cooked in the dish in which it is to be served, as the steam heat will not hurt the dish. Or, milk may be used instead of water, which gives a richer flavor and more creamy body than water, and the seasoning, after the rice is done, may be two beaten eggs, one cupful of sugar, and a large spoonful of butter, with or without the addition of a cupful of chopped, seeded raisins or currants. After these ingredients are added, turn into a buttered dish and steam for half an hour longer, then it can be browned in the oven, if liked. If one has no steam cooker an old-fashioned steamer to be set into the top of an iron kettle over boiling water, and closely covered, will do very well. Many things are better steamed than cooked over dry heat, or top of the stove, and the danger of scorching or burning is done away with.—*Selected.*

SWEET PICKLES.

Peaches.—With a coarse, clean towel rub the down from the peaches. Stick 2 cloves in each. For 25 lbs. of fruit use 12 lbs. of sugar, 5 pts. vinegar, and a handful of stick cinnamon. Make a syrup with the sugar, vinegar and cinnamon. When it is boiling put in the peaches, a few at a time, and cook until done. Strain them out into a 2 gal. jar and when all are cooked boil the syrup down a little, and pour it hot over the fruit. Cover with a plate to keep the peaches under the syrup, and tie up. In a few days pour off the syrup, boil it down thick, and pour it boiling hot over the peaches again. Cover with a plate as before and tie up.

Pears.—Wash and wipe 12 lbs. pears. Make a syrup with 1 qt. vinegar, 6 lbs. sugar, and a small handful each of stick cinnamon and whole cloves. Put in the pears, a few at a time, and cook until tender. Finish in the same way as directed for peaches.

Grapes.—Take 7 lbs. ripe grapes, 1 pt. vinegar, 1 tablespoonful each of cloves, ginger, allspice and cinnamon, and 3 lbs. sugar. Make a syrup with the vinegar, sugar and spices. Separate the grape pulps from the skins, stew the pulp, and strain out the seeds. Add the skins, and cook in the syrup until thick, seal.

Watermelon.—Use 2 lbs. melon rind to 1 lb. sugar. Pare the melon, cut it into pieces two inches square and soak in salt and water over night. Drain, cover with water, place a piece of alum in the water, and boil until tender. Make a syrup of 1 qt. cider vinegar to 1 pt. sugar. Place in it a muslin bag containing 1 tablespoon each of ground cinnamon and allspice, put in the melon, and cook gently 15 minutes. Then skim out the melon, pack it in glass jars, strain the syrup over it, and seal at once. Be sure that the syrup covers the melon. Ripe cucumbers may be done in the same way.—*Mary Foster Snider, in Farm and Home.*

MAKING APPLE BUTTER.

This recipe has met with general favor with those who have tried it, as it takes up only odd times and the flavor is improved by the use of the skins: Wash the apples through at least two waters; do not peel, but cut in two in order to remove any worm eaten or defective core. Put them on to cook in plenty of water and cook until very soft; then turn them into a colander which is set over a crock or jar, and use the water which strains through for cooking the next kettle of apples. Rub the apples through the colander with a potato masher or other suitable instrument. When there is a crockful of pulp set the crock in the oven and let cook for two hours, then take out; it should by this time be boiled down one-fourth in quantity. Put into this two and one-half cupfuls of sugar (or more if you like it very sweet) and one stick of cinnamon, and set it back in the oven to cook two or three hours longer. Several crocks—as many as the oven will hold—should be done at one time. When all are equally done fill one crock from another until all crocks are full, or until you have enough. Gallon crocks are a good size for an ordinary family, but smaller may be used for a small family. At the last filling, the crocks should be set in the oven until the top of the butter is "glaced" or smooth, which will help keep it closed from air. By having the apples prepared when a fire must be kept up for hours, as on wash day, the oven can be used without interfering with one's other duties. The pulp should be stirred occasionally to keep it thoroughly mixed and cooked in all parts.—*The Commoner.*

CAKE COLORING.

Did you ever wish to color a cake or frosting a lovely pink and have nothing at hand to do it with? Try beet juice. This we know is harmless. Cut a blood turnip beet into thin slices, boil in a very little water, and use the water thus obtained. If you want to keep some always ready for use, take more beets and more water (do not boil too long or the color will be ruined), add 1 cup sugar to 1 of juice, boil syrup 20 minutes and bottle. When I make frosting, I take powdered, or better still, confectioner's sugar, add some beet coloring, water and flavoring and beat until smooth.—*Selected.*

The sky-rocket serves the Tongans well. On account of many reefs, landing of steamers is very dangerous. A few letters to be delivered by vessels passing the Tonga group are therefore attached to large sky-rockets, which are fired and reach the shore in safety.

For the Children

THE HORNED TOAD.

"What is he?" Maisie asked her mother. "He can't be a hoppy toad, and he's not sleek and slimy enough for a lizard."

Just then uncle's letter came, and that explained that the newcomer was a horned toad, and would make a gentle, interesting pet. His little, dark body was rough and jagged, and even to his comical tail covered with sharp, spiny scales that gave him a bristling appearance that, with his horns, made him look quite warlike. His legs were about equal in size, and not used to jump with, as you would guess from his name, but for walking purposes alone. Really, while he goes by the name of "toad," he is not a toad, but belongs to the lizard family.

The little fellow soon became so gentle that he would take food from the hand of his mistress, and acted as if he realized a difference between her and the other members of the family. He did not enjoy being noticed too much, but seemed really bashful about strangers. He was very fond of being left out for a summer shower to fall upon him. But Maisie found that she could not trust him. As soon as he thought she was out of sight, he would shuffle away and try to escape. So Maisie hit upon the plan of tying a good strong cord to one of his horns, fastening the other end to a tree, and so Mr. Scrubby could not get beyond the length of his tether. He had the greatest dislike for dogs, and when old Nero came in sight, would puff up his body and wriggle and hiss in the most comical manner.

Maisie found that "horned toads" were not confined to California, but that they were found widespread over the Western plains, yet most of them considerably alike. Difference of climate and soil cause difference in color. Often the little creatures so exactly match the color of the soil where they dwell that it is impossible to distinguish them. They live on flies and other small insects, and consider ants a particular dainty.—*Sabbath School Visitor.*

JESUS' LITTLE GIRL.

A little girl in India was in a small village school just long enough to learn that Jesus loved her. She was taken sick, and before she died her mother heard her say: "Satan, don't you touch me. I am Jesus' little girl." Then she said: "For God so loved"—This was all her mother could recall to tell the missionary. But up in heaven they were glad to see "Jesus' little girl."—*Children's Missionary Friend.*

DONKEY-RIDING IN ARABIA.

In Arabia the men ride donkeys on a side-saddle, and the women ride astride just as men do in our country. When a lady missionary went to a village in Arabia, the boys saw her riding a donkey side-saddle, and as they saw only one side, they called out: "Come see the lady with no feet."—*Selected.*

SORRY ENOUGH TO QUIT.

A gentleman once asked a Sabbath school what was meant by the word "repentance." A little boy raised his hand. "Well, what is it, my lad?"

"Being sorry for your sins," was the answer.

A little girl on the back seat raised her hand.

"Well, my little girl, what do you think?" asked the gentleman.

"I think," said the child, "It's being sorry enough to quit."—*Selected.*

After asking about Satan, our little six-year-old said his evening prayer, closing with this: "Dear Jesus please kill old Satan—but I'm afraid you'll have a hard time of it."

David, aged six, heard the story from the morning paper that the world was coming to an end. He seemed a little troubled at first, but soon reassured himself, saying: "Well, if the earth comes to an end, *heaven won't!*"

WHY MOTHER IS PROUD.

Look in his face, look in his eyes,
Roguish and blue, and terribly wise—
Roguish and blue, but quickest to see
When mother comes in as tired as can be;
Quickest to find her the nicest old chair;
Quickest to get to the top of the stair;
Quickest to see that a kiss on her cheek
Would help her far more than to chatter, to speak.
Look in his face, and guess, if you can,
Why mother is proud of her little man.

The mother is proud—I will tell you this;
You can see it yourself in her tender kiss.
But why? Well, of all her dears,
There is scarcely one who ever hears
The moment she speaks, and jumps to see
What her wants or her wishes might happen to be.
Scarcely one; they all forget,
Or, are not in the notion to go quite yet.
But this she knows, if her boy is near
There is somebody certain to want to hear.

Mother is proud and she holds him fast,
And kisses him first and kisses him last;
And he holds her hand, and looks in her face,
And hunts for her spool which is out of place,
And proves that he loves her whenever he can
That is why she is proud of her little man.

—Selected.

THE RURAL LIFE

THE TRUCK PATCH.

It is claimed by some that rust spores live over winter in soil when infected plants are plowed under. It might be a good plan to mow, rake and burn badly infected plants and vines. At all events it is unwise to try to grow successive crops, which are subject to rust, on the same land.

Spinach for late fall and early winter market should be sown the latter part of August. It requires a rich, moist soil, and it is useless to attempt to grow it on any other. The melon, cucumber or tomato patch, plowed as soon as the crop is off, and thoroughly worked down and fined, is an ideal place for spinach. A liberal top dressing of fertilizer will be a big help. Use plenty of seed,— from twelve to fifteen pounds per acre. Grasshoppers are very fond of spinach and they often play the mischief with young plants.

All truck patches not wanted for spinach, winter onions, turnips and the like should be plowed as soon as the crops are off and seeded to crimson clover, rye or other cover crop. This will keep down weeds, hold the soil from washing during the winter, and, if plowed under, adds humus to it.

As a rule, turnips sown the first of September are of better quality than those sown in August. But it is not always safe to wait till September. To make sure, sow during both months. The difficulty about August sowing is to catch a time when there is sufficient moisture in the soil to germinate the seed.

Don't let weeds and grass go to seed on the truck patches. If you can not plow them as soon as the crops are off, use the mower or scythe. It will save a lot of work and worry next summer.

The dryer the weather the greater the necessity for cultivating rhubarb, asparagus and other growing crops. Following the cultivator in the hot sun and dust is not pleasant work, but it pays.

Like all others of their kind, winter onions require a rich soil, and it is not worth while to plant them on any other. It is highly important to have the land in fine condition. Both bulbs and "tops," or bulblets, are used for seed, but the bulbs will produce larger crops and finer onions. They are planted by hand about the last of August in rows about fifteen inches apart, and the bulbs are stuck "top up" into the bottom of the furrow an inch apart. The furrows should be deep enough so that they will not be quite filled up when the onions are covered with an inch or so of earth. After the plants are well started the soil is worked in and the furrows filled. At the last cultivation the rows should be slightly ridged up.—*Farm Journal.*

COTTON FIELDS WITHIN THE ARCTIC.

The climax of Nature's irony in the arctics is the cotton-plant. Wherever cotton blooms, declares the miner, ice is not far below. One may trudge for miles through fields of cotton, the white, silky tops swaying defiantly in the arctic breeze. The blossom is silky, dainty, illusive as the down of our own yellow dandelion on its way to seed. From June until late August the *tundra* is white with the cotton-plant. Unlike the cotton of the Southern States, the fiber is short and soft, having more the texture of silk than that of cotton. The cotton-plant will, in all probability some day, be the means of developing an Alaskan industry giving employment to thousands. To-day, however, the cotton fields are purely decorative—a splendid sweep of immaculate bloom in a bleak, timberless landscape guarded by hills ever hung in veils of deepest purple. In great bouquets it is occasionally met in a miner's shack, while not a few housewives gather the cotton for pillow-filling.

Throughout the cotton-fields flowers bloom in abnormal splendor, as becomes a country in which the sun shines continuously during summer's voluptuous reign. It is an intoxicating joy for the flower-hunter to gather great armfuls of purple larkspur, bluebells, monk's-hood, primroses, sweet peas, beautiful purple and red asters large as the most cultivated, lilies of the valley, baby-breath, yellow arrow, sage-rose, pink and white straw-flower, gentians of many hues, arctic geranium, crimson rhododendrons, and giant fire-weed, all growing on the hillsides—to enumerate further is to reproduce a florist's catalogue!—*From "A Wild-Flower Quest in the Frozen North," by Lida Rose McCabe, in the August Circle.*

DISINFECTANTS.

During the hot months one should not relax their vigilance in sanitary matters. Disinfectants should be freely used, and for drain pipes sinks, and like things. Concentrated lye, dissolved by boiling water, should be poured in them, boiling hot, to cut the grease and remove other impurities; follow this with

a solution of one pound of copperas crystals to one gallon of hot water, pouring it slowly into the sinks, pipes and water-closets, repeating it at least once a week. Lime should be used plentifully in cess pools, damp, mouldy places, cellars, and around garbage pails or boxes; especially use it freely in the cellar. Lime sweetens and absorbs damp, sour air. As a disinfectant to be used for vessels and clothes about the sick room, the following is said not to stain the most delicate fabrics. Dissolve one-half drachm of nitrate of lead in one-half pint of hot water, and one salt-spoon of salt in a pail of cold water; mix together and use. Carbolic acid, and chlorate of lime are excellent disinfectants, and the acid may be use with good effect in all scrubbing and scouring waters, while the chlorate of lime may be sprinkled about as needed.—*Brethren Evangelist.*

PROPAGATION OF ROSES.

The rambler rose and similar varieties are usually propagated from cuttings at this season of the year. Wood from this season's growth is removed from the old plant, cut into sections bearing about three buds (leaves) each. Cut the bottom of the cuttings close to one of the leaves, then remove all except the top-most leaf and plunge the cuttings in a cold frame containing a layer of sand about 3 inches deep so that about one inch of the lower end of the cutting is buried in the sand. If the sand is kept moist and the bed covered with sash which has been whitewashed, or by muslin, the cuttings will root satisfactorily in about two or three weeks. After the young roots have appeared the cuttings should be potted into individual pots filled with rich loam, containing at least one-fourth its bulk of sand. Later on the plants may be planted in the open air in their permanent home.—*Selected.*

HOW BURBANK GRASPED OPPORTUNITY.

Luther Burbank's early life in California was attended by many hard experiences. He was very poor, and was obliged to take any work that came to hand. He cleaned out chicken-coops, helped in market-gardens, got an odd job here and another there, passed through a very severe illness, went "on the tramp" for work until finally he was able to start a little nursery on his own account. Then he was on his own ground with a fair start. To outsiders he seemed an honest, hard-working young fellow, who might make his living, but not much more. Then all at once, he did something that made those who knew about it look at him. An order came for 20,000 prune-trees. Could he fill it in nine months? He hadn't a prune tree on his place, and how was he going to supply 20,000 in nine months? He got together all the men and boys he could find to plant almonds for him. They grow rapidly. When they were ready he had 20,000 prune-buds ready for them, and in a short time the prunes were budded into the growing almonds, and before the time was up the trees were delivered to the delighted ranchman. And I have seen these 20,000 prune-trees. They are growing to-day, and it is really one of the finest orchards in California.—*From "A Little Visit to the Home of Luther Burbank," by George Wharton James, in the August Circle.*

CURING SHEEP SKINS.

This is sent in "By one who knows:" Take a spoonful of alum and two of saltpetre; pulverize and mix well together, then sprinkle the powder on the flesh side of the skin, and lay the two powdered sides together, leaving the wool outside. Then fold the skin up as tight as you can, and put in a dry place. In two or three days, or as soon as it is dry, take it down and open and scrape the flesh side with a blunt knife until it is clean and supple. This completes the process, and makes an excellent saddle cover. Other skins which it is desired to cure with the hair on may be treated in the same manner. If it is desired to use the skin for a rug, it should be well washed in soap suds, rinsed in running water, and let get partly dry, then rub together until it is soft and dry.—*Exchange.*

THE EMPRESS DOWAGER A FLOWER-LOVER.

Says Miss Carl, in *The Century,* of China's redoubtable empress dowager:

It seemed to me no one could love flowers and nature as she did and be the woman she had been painted. She had flowers always about her. Her private apartments, her throne-rooms, her loge at the theatre, even the great audience-hall, where she went only to transact affairs of state and hold official audiences—all were decorated with a profusion of flowers cut and growing, but never though, of more than one kind at a time. She wears natural flowers in her coiffure always, winter and summer; and however careworn or harassed she might be, she seemed to find solace in flowers. She would hold a flower to her face, drink in its fragrance, and caress it as if it were a sentient thing. She would go herself among the flowers that filled her rooms and place, with lingering touch, some fair bloom in a better light, or turn a jardiniere so that the growing plant might have more favorable position.

The Chinese do not place certain cut flowers in water, but keep them dry in bowls or vases to get their full fragrance. The empress dowager had some quaint conceits about the arrangement of these. She would have the corollas of the lily-bloom or the fragrant jasmine placed in shallow bowls in curious, star-

like designs, beautiful to look at, as well as most fragrant.

Her passion for flowers being generally known among the courtiers, princes, and high officials, they send daily offerings to the palace of all that is rare and choice in the way of plants and flowers, for they know this is one present her majesty will always accept and appreciate.

There are some quaint customs in the palace as to flowers and fruits that grow within the precincts. Though the princesses and ladies have the freedom of the gardens and may pull as many flowers and cull as many fruits as they wish, it is not etiquette for them to gather the smallest flower or to touch a fruit when in the presence of the empress dowager, unless they are specially told to do so. When her majesty tells them to pull a flower or fruit the permission is gratefully accepted, and that special flower or fruit religiously kept. The first fruits of every tree and vegetable, the first flowers of every plant and growing shrub in the palace grounds, are considered sacred to their majesties, and no princess, attendant, or eunuch would touch a flower or fruit until the empress dowager had been presented with the first of them. All these apparently trivial marks of respect to the sacred persons of their majesties were religiously observed.

KEEP WHERE YOU CAN REACH BOTTOM.

"Be careful not to get in beyond your depth. As long as you can touch bottom with your toes, you are safe."

This is the advice an old man gave a young friend who was just going away to make his place in the world. It was sensible advice.

Have you ever been out wading in a stream? You could not swim, then: that was a thing you still had to learn. The best you could do was to roll your trousers high, and venture carefully out into the cool water. You intended to learn to swim some day, but now all you could do was to wade.

As long as you could feel the firm bottom of the creek under your feet, you were safe. The earth was slippery in places, and you placed your feet very carefully; but once they were down you went on bravely, and all was well; but if all at once you came too near the edge of a deep hole, you drew back, and turned the course of your wading. It was a close call. The chills ran up and down your back for a moment, for you had heard that more than one had ventured too for into these deep places and been lost. In these stories there was a warning for you.

Many a young man has made the mistake of going out into deep water before he had learned to swim.

Here is one that is in a hurry to leave school and get into active business. Listen to him.

"I do not want to spend any more time with books. I think I know enough to do almost any kind of business. I am willing to try, anyway."

It was a worthy ambition. No one could find fault with him for reaching out for the very best in life and doing his best to attain it. It was not long before the same young man said, with the deepest regret in his voice:

"I am so sorry I did not stay in school when I had the chance! If only I had done so, I might take a far better position than I am now holding! A few years more would have fitted me for real work. Now I am all the time getting beyond my depth."

This is what thousands of men have said when it was too late. When the water gets too deep, we long for the shore or a chance to learn to swim.

Have you ever heard a young man rise to speak on a subject about which he was not prepared to say anything? How he flounders about, stammering and blushing, and wishing it were all over, so that he might take his seat and get out of sight once more! He cannot help seeing, by the look on the faces of those who are sitting near, that everyone knows he is beyond his depth. Even his best friends are sorry for him. They sympathize with him, and wish they might help him out of his embarrassment, but the best and the only thing they can do now is to cheer him when he does make a point that has some semblance of force in it. He has simply waded too far into the stream and lost his footing.

Divers, with all their skill and power of endurance can go only about so far under the surface. When they have reached their depth, they hasten to retreat before it is too late. The world is full of men who have risked everything in ventures concerning which they were not well posted, and have lost their last dollar. Everywhere in the business world these wrecks line the shore.

In a great Western city, a prominent gentleman was a candidate for the office of chief executive. When the campaign opened he declared his position on some of the questions of reform which were before the people. He was outspoken in regard to these problems of municipal government, and the people took him at his word, and elected him, believing that when he had the power, he would work out some of these problems to their great good; but those questions are yet to be answered. The gentleman found after he had reached the position to which he had aspired, that he had been mistaken in his premises. The reforms he had promised were not practicable in the present state of society, and all he did was to bring upon himself the sting of reproach and criticism for his miserable failure. The water was deeper than he had supposed. He found himself beyond his depth.

It is the part of safety to drop a line into the water before one steps out into it.

What do men do when they are out at sea and are not sure how deep the water is ahead of their boats? They send down the plummet and sound the depth of the water. As the line is hauled in, very anxiously the story is read from the marks upon it, for life depends on what it tells.

Success is measured by our ability and fitness for the thing we undertake. The part of safety is to get ready while we may, for what we may aspire to, and then keep the solid ground under our feet.—*Glenwood Boy.*

"We are long on vanity in the proportion that we are short on understanding."

FUNNYGRAPHS

What Man Wants.

"Man wants but little here below,
Nor wants that little long."
Who wrote that, I should like to know?
He seems to have been wrong.
Man, I have generally found,
Whatever is his store,
Is all the time just looking round
To get a little more.

Our appetites for gold and fame
Are never satisfied;
With flattery it's just the same,
Our mouths are opened wide.
Of knowledge we can't get enough,
It's nothing to deplore,
But wanting little! That's all stuff
We want a little more.
The wedge of pumpkin pie,

The early morning doze,
The winter's furnace coal supply,
The gift a friend bestows,
The sunshine we so often miss,
The music we adore,
The maiden's shy and conscious kiss—
We want a little more.

—Selected.

"You have been taking a great deal of interest in zoology of late."

"Yes," answered the casual student, "I desired to get afar from the haunts of inconsiderate and unscrupulous men. But I found dumb creatures doing things quite contrary to the rules I had laid down for them in my books. Even the wilderness has its undesirable citizens."

A Live Town Now.

Teacher—How long had Washington been dead when Roosevelt was inaugurated?

Scholar—I dunno, but it hasn't been very dead since Teddy has been there.—Lippincott's.

"Be mine!" he cried, in a voice surcharged with anguish. "If you refuse me, I shall die!"

But the heartless girl refused him. That was sixty years ago. Yesterday he died.—Tit-Bits.

Late Already.

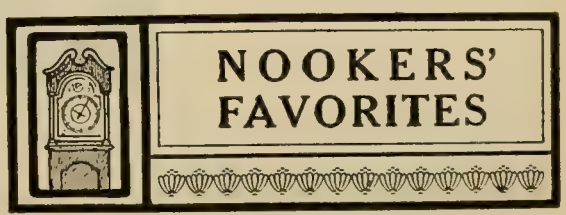
Five minutes after the tardy gong had struck, the principal of the school was walking through the lower hall when he saw a pudgy little fellow scampering toward the first-grade room as fast as his fat legs could carry him. "See here, young man, I want to talk to you," called the principal to the late comer. "I hain't got time to talk to you; I'm late already," replied the breathless beginner as the door of his class-room closed.—The Circle.

"Have you sold your country villa yet?"

"No; I'm not going to sell it now."

"How's that?"

"Well, I gave instructions to an agent to advertise it for sale, and the description he wrote for it was so enchanting that I couldn't make up my mind to part with it."—Pele-Mele.



WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

Wanted—Matron. Man and wife to cook. Fireman. Fine position. Address: McPherson College, McPherson, Kans.

FOR RENT.—A store room at Mt. Morris Ill., where the Brethren college is located; also fixtures for confectionery and bakery for sale. Address: E. O. Startzman, 180 Adams St., Freeport, Ill.

GO, FEEL WHAT I HAVE FELT.

Go, feel what I have felt,
Go bear what I have borne;
Sink 'neath a blow a father dealt,
And the cold, proud world's scorn.
Thus struggle on from year to year,
Thy sole relief the scalding tear.

Go, weep as I have wept
O'er a loved father's fall,
See every cherished promise swept,
Youth's sweetness turned to gall;
Hope's faded flowers strewed all the way,
That led me up to woman's day.

Go, kneel as I have knelt;
Implore, beseech and pray.

NEFF'S CORNER

Some have wondered whether they could rent it out to advantage if they had an improved farm in the Pecos Valley. Well, you perhaps remember that mention was made in this corner recently of a Pecos Valley farm that rented at $9.00 per acre. Bro. Jacob Wyne lives about 13 miles up the valley and I was to see him recently. He is here from Illinois, this being his first season. The farm he bought was unimproved, so in order that he might make hay the first season he rented some land that was set to alfalfa, paying a rent of $10 per acre. But could he afford to pay that much? Would he have done it if he had been better acquainted with the country and understood his business? Let's see. Here are the facts as I got them from him. The first cutting was short. From it (nine acres) he put eight loads of hay into his barn. He called them "jags," so I suppose they were not large loads. From the second cutting he sold $94.00 worth of hay ($4 more than the entire season's rent) and had 29 bales left. He expects two more cuttings this season, each perhaps as good as the second. And this is not at all exceptional. While at Dexter Bro. M. M. Brunk referred me to several of his neighbors whose hay crop this year he thought would yield $80 per acre. Immediately about Lake Arthur the country is more undeveloped and the hay business yet in its infancy. This week, however, ten cars are being shipped from one ranch here and a few others are shipping. But even at $10 per acre there are not many farms for rent. Owners of many of these hay and fruit ranches prefer to have them managed by salaried overseers, and it is presumable that their profits are greater by this plan than if they were to rent out the land at so much per acre. And when I state that unimproved land here capable of such development can be bought at from $5 to $20 per acre you will understand why the real estate market in the Pecos Valley is active.

JAMES M. NEFF,
Lake Arthur, New Mexico.

Post Cards

A Choice Variety of Designs.

Post cards have come to stay. They are more popular to-day than ever. They can be used in so many ways, as a remembrance. Since one-half of address side can be used for writing they are all the more useful. Buy from the following numbers and you will order again.

No. 11. Brethren Publishing House. Price, per doz., ...**15 cents**

No. 21. Elgin Views. Pictures of the most important views in Elgin, such as Watch Factory, Park Scenes, etc., in rich colors.

Price, per pack of four, ...**10 cents**
Per set of 9 designs, ...**20 cents**

No. 31. Foreign Views. Beautiful colored views from foreign countries, such as Italy, France, Egypt, Switzerland, Germany, etc. Each card gives a brief description of the picture it contains.

Price, per pack of 4, assorted designs, ...**10 cents**
Price, per pack of 12, assorted designs, ...**25 cents**

No. 101. Lord's Prayer. Each of the eight cards making up this set illustrate some part of the Lord's Prayer. The first card contains, "Our Father Which Art in Heaven," with an appropriate illustration of same and so on through the entire prayer. All are beautifully embossed in colors and make a unique and impressive set.

Price, per set of eight, ...**20 cents**

The Gospel Messenger

To New Subscribers Only

Gospel Messenger to January, 1908,	$0.75
The Other Half of the Globe,	1.50
Brethren Family Almanac,	.10
The three are worth,	$2.35
All to new Subscribers for only	.95

We want to add 5,000 new subscribers to our list. We can do it if you will help us. If you are not a subscriber, send your subscription to-day. If you are, then tell your friend who is not a subscriber of this offer. The Book alone is worth much more than we ask for the combination. If you have a copy of the Book, you can tell them of its value.

The Other Half of the Globe

BY

D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

Strive the besotted heart to melt,
  The downward course to stay;
Be cast with bitter curse aside—
Thy prayers burlesqued, thy tears defied.

Go, stand where I have stood,
  And see the strong man bow,
With gnashing teeth, lips bathed in blood,
  And cold and livid brow;
Go, catch his wandering glance, and see
There mirrored his soul's misery.

Go, hear what I have heard—
  The sobs of sad despair,
As memory's feeling-fount hath stirrred,
  And its revealings there,
Have told him what he might have been
Had he the drunkard's fate foreseen.

Go to a mother's side,
  And her crushed spirit cheer;
Thine own deep anguish hide,
  Wipe from her cheek the tear;
Mark her dimmed eye, her furrowed brow,
The gray that streaks her dark hair now,
The toil-worn frame, the trembling limb,
And trace the ruin back to him
Whose plighted faith, in early youth,
Promised eternal love and truth,
But who, foresworn, hath yielded up
This promise to the deadly cup,
And led her down from love and light,
From all that made her pathway bright,
And chained her there mid want and strife,
That lowly thing—a drunkard's wife!
And stamp'd on childhood's brow, so mild,
That withering blight—a drunkard's child!

Go, hear and see, and feel, and know
  All that my soul hath felt and known,
Then look within the wine-cup's glow,
See if its brightness can atone;
Think if its flavor you would try,
If all proclaimed—"'Tis drink and die!"

Tell me I hate the bowl—
  Hate is a feeble word;
I loathe, abhor—my very soul
  By strong disgust is stirred,
Whene'er I see, or hear, or tell
Of the dark beverage of hell!

—Author Unknown.

A GEMZE FAWN.

In a sunny Alpine valley,
  Beneath the snowy Wetterhorn,
See! a maiden by a chalet
  Playing with a gemze fawn.

How he pricks his ears to hear her,
  How his soft eyes flash with pride,
When she tells him he is dearer
  Than the whole wide world beside.

Dearer than the lambkins gentle,
  Dearer than the frisking kids,
Or the pigeon on the lintel
  Coming, going as she bids.

Dearer than the first spring lily,
  Peeping on the snowy fell,
Dearer than his little Willie
  To the heart of William Tell.

By a gushing glacier fountain
  On the giant Wetterhorn
Amid the snowfields of the mountain
  Was the little gemze born.

And its mother tho' the mildest
  And the gentlest of the herd,
Was the fleetest and the wildest,
  And as lightsome as a bird.

But the gazer watched her gliding
  In the silence of the dawn,
Seeking for a place of hiding
  For her tender little fawn.

So he marked her, all unheeding,
  Swift and sure the bolt of death,
And he bore her dead and bleeding,
  To his Alpine home beneath.

Then the tottering gemze follows,
  Calling her with plaintive bleats,
O'er the knolls and thro' the hollows,
  Trotting on with trembling feet.

See! the cabin latch is raised
  By a small and gentle hand,
And the face that upward gazed
  Had a smile serene and bland.

Bertha was the Switzer daughter,
  And herself an orphan child,
But her sorrows all had taught her
  To be gentle, kind and mild.

You might see a tear drop quivering
  In her honest eye of blue,
As she took the stranger shivering
  To her heart so warm and true.

"I will be thy mother, Sweetest,"
  To the fawn she whispered low,
"I will heed thee when thou bleatest
  And will solace all thy woe."

Then the tottering gemze stealing
  Toward her seemed to understand,
Gazing on her face and kneeling
  Placed his nose within her hand.

Every day the Switzer maiden
  Shared with him her milk and bread,
Every night the fawn was laid on
  Moss and ling beside her bed.

Blue as mountain periwinkle
  Is the ribbon round his throat,
Where a little bell doth tinkle
  With a shrill and silvery note.

And when morning light is flushing
  Wetterhorn so cold and pale,
And when evening shades are hushing
  All the voices of the vale.

You might hear the maiden singing
  To her happy gemze fawn,
As the kids and lambs she's bringing
  Up and down the thymey lawn.

Spring has come: and little Bertha
  With her chamois at her side,
Up the mountain wanders further
  Than the narrow pathway guide.

Every step is paved with flowers,
  Here the bright mezron glow,
Here the tiger lily towers,
  And the mountain cistus blow.

There the royal eagle rushes
  From his eyrie overhead,
There the roaring torrent gushes
  Madly o'er its craggy bed.

Hark! from whence that distant bleating,
  Like a whistle, clear and shrill,
Gemze, ah thy heart is beating
  With a wild and sudden thrill.

Voices of thy brothers scouring
  O'er sparkling fields of ice,
Where the snow white peaks are towering
  O'er the scraggy precipice.

Bertha smiled to see him listening,
  Arching neck and quivering ear,
Panting chest and bright eyes glistening,
  To that whistle wild and clear.

Little knew she that it severed
  All that bound him to the glen,
And the gentle bands were shivered,
  And the tame one wild again!

To the next wild bleat that soundeth
  Makes he answer strong and shrill,
Wild as wildest off he boundeth
  Fleet as fleetest o'er the hills.

"Gemze! Gemze! come, my darling"
  Echoes faint from height to height.
Dry thy tears, Sweet Bertha, never
  Will he glance again in sight.

But when paling stars are twinkling
  In the silence of the dawn,
Thou may'st hear his bell a tinkling
  Mid the snows of Wetterhorn.

And the kindness thou bestowest
  On the helpless, thou shalt prove
Somehow, when thou little knowest,
  In a blessing from above.

E. RINEHART, M. D.
Cancer Specialist,

CANCER

CURED WITHOUT SURGERY OR PAIN

Our latest book which we will send free of charge tells all about Cancer and all chronic and malignant diseases, and how they can be cured at home quickly and at small expense. Reference, patients cured in every State and Territory, ministers and bankers. Office, No. 50 West Walnut Street.

Address, Drs. Rinehart & Co., Lock Box 20, Kokomo, Indiana.

DR. J. S. FLORA,
Ex-U. S. Examining Surgeon,
Specialist in the Cure of Chronic Diseases.

Scirrhus Cancer of the Breast.

Has been cured for four years and no signs of return. I had a lump the size of a walnut in my left breast for over a year which gave me a great deal of annoyance from sharp pains darting in and around the lump. Seeing that something must be done I consulted several physicians, some advising me to have it removed with the knife, To this I never could consent. While thinking the matter over I learned of Drs. Rinehart & Co. curing cancer without pain. I used three months of their treatment and can truthfully say for mankind that I am perfectly well. I suffered no pain in the least while under their treatment not even breaking the skin. Hoping this will be of some benefit to suffering ones,

Most respectfully,
Mrs. Sarah Miller,
Waupecong, Ind.

Mrs. Sarah Yoder, of Cora, Oklahoma, cured of Cancer of right cheek.

John Slabah, of Conway, Kansas, cured of cancer of the upper lip.

Sherman Hollingsworth, of Russiaville, Ind., cured of cancer of the right cheek.

D. D. Boyd, of Armstrong Ave, Kokomo, Ind., cured of cancer of the neck.

Mrs. Henry Reiber, of Kokomo, Ind., cured of cancer of the nose.

Noah Troyer, Kokomo, Ind., cured of cancer of the back.

Cancer of the Breast Cured.

In behalf of the people who may be afflicted with cancer as I was, and are in need of a real cure by honest physicians, I will say that I had that dreaded disease for about five years. The last year of this time I suffered from a sharp gnawing pain extending from my left breast in all directions and a large lump was formed the size of a half dollar and an inch in thickness.

Words could not express the pain that extended down my arm, but thanks be to God after taking treatment from Drs. Rinehart & Co. for about four months the lump in my breast was entirely gone. The pains also left my breast and I feel so thankful to the Doctors, and the good Lord that I am entirely well. I assure the people and all concerned that this is my true and voluntary statement. I feel that I must tell to those afflicted with Cancer that Drs. Rinehart & Co. cured me without pain or even breaking the skin. This is a true statement of my case and am willing to help anyone to a cure,

Respectfully,
Mrs. Ida C. Dinius,
Dec. 26, 1905. 64 Main St., Huntingdon, Ind.

Michael Troyer, of Twinsburg, Ohio, cured of cancer of the cheek.

Mrs. Rev. Daniel Miller, Greentown, Ind., cured of cancer of the nose.

Mrs. A. R. Rife, of Amboy, Ind., cured of cancer of both sides of the cheek and nose.

Lady Canvassers

Successful in Selling the

INGLENOOK COOK BOOK

Lady canvasser can and do make just as much money canvassing as men when they take the right article. We have a number of both lady and gentlemen canvessers selling the Inglenook Cook Book, and the ladies are taking the banner. Hear what a few of the many have to say.

32 SALES ONE DAY.

I have found the Inglenook Cook Book a splendid seller. Better far than I expected. I have sold 127. The most I sold in one day was 32. Send me 150 at once. Grace Gnagey, Meyersdale, Pa.

41 SOLD FIRST DAY.

Another agent says, "The first day out I sold 41 copies. It sells much better than I expected."

SOLD 31 IN ONE DAY.

Find enclosed draft for 200 Cook Books. I am getting along well and like the work fine. The most books I have sold in a day was 31. Suppose I would have sold more, but finished the town and had to quit. Ida Brower, South English, Iowa, June 25, 1907.

HELPING WOMANKIND.

"I do not feel that I could devote my whole time in selling the Inglenook Cook Book just at present, but would like to work at it what I can. I feel it will be helping womankind to introduce it into these homes for the recipes are so easy to understand and so many every day wholesome things that it makes any one hungry just to read them. Please send me a cook book to use in selling the same." Mrs. J. W. Hoover, Sunfield, Mich., July 15, 1907.

REMEMBER

that these reports are nearly all from inexperienced canvassers.

$2.00 TO $5.00 PER DAY.

Ladies can you make anything like that at your present vocation?

Eternal Revenue Stamps

A carefully-selected collection of 120 Scripture verses, beautifully printed in three colors on gummed paper and perforated to tear out like postage stamps.

They are neatly bound in book form, with a stiff cardboard back and with waxed tissue paper between the pages to prevent sticking. Every page is printed in a different combination of colors, giving a variety in color, as well as in verse.

The stamps are classified under twelve different headings, making ten different texts on each of the following subjects:

Invitation, Salvation, Prayer, Purity, Faith, Love, Courage, Comfort, Integrity, Prohibition, Deportment, Miscellaneous.

A traveling man writes from Centralia, Ill., saying: "Enclosed find one dollar. Send me Eternal Revenue Stamp Books for it. I got three of them yesterday from a man in Paris, and Christian workers who saw them to-day persuaded me to part with them and send for more."

Price, each, ...10 cents
Per dozen, ...$1.00

An Encyclopedia Within Your Reach at Last!

COMPLETE IN EIGHT VOLUMES. SIZE 8x5¾ INCHES.

Over 4,100 double-column pages. Hundreds of illustrations. Extra Cloth Binding. Beautiful Full Gilt Backs. Weight 16 Pounds. Packed in Wooden Case.

THE NEW AND COMPLETE

Universal Encyclopedia

(SELF-PRONOUNCING)

Edited by Chas. Annandale, LL. D., Isaac Thorne Johnson, M. A., Walter Hart Blumenthal, B. S. E., and a corps of eminent specialists.

(Complete in eight volumes.)

This Cyclopedia stands alone in freshness and variety of matter presented in concrete form. It is the only Cyclopedia making a petext of being published in recent years.

IT CONTAINS NEARLY DOUBLE THE NUMBER OF ARTICLES FOUND IN THE ENCYCLOPEDIA BRITANNICA

IT TELLS ABOUT every subject in Science, Art, History, Philosophy, Biography, Geography, Mathematics, Law, Chemistry, Medicine, and scores of other subjects, all of which are treated simply, thoroughly and concisely.

FOR HOME, SCHOOL, OFFICE AND LIBRARY

The Universal Encyclopedia fills the need for an up-to-date, well digested, exhaustive, condensed work.

The correct pronunciation of all obscure words; the variety of subects explained and the simplicity of the explanations; the convenient size of the volumes, the clear print, and beautiful bindings, the **"within the reach of all" price,** all tend to make it **THE GREATEST PUBLICATION OF THE CENTURY.**

The Universal Encyclopedia comprises eight volumes, 8x5¾ inches in size, over four thousand double-column pages, **FULLY ILLUSTRATED,** and is printed on extra quality of book paper.

Bound in Cloth, With Full Gold Stamping on Back.

SECOND EDITION

Annual Meeting Report

On account of the great demand for the report of our late Conference held at Los Angeles, California, we are compelled to run a second edition. The report is of more than ordinary interest this year for several reasons:

1. On account of the unique location.

2. The important questions discussed.

3. The valuable information along educational and Sunday-school lines.

4. On account of its value as a reference book.

If you have not sent your order, do so at once, for this edition will not last long and there will be no more published.

Price, each, ...25 cents

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

A Couple of Interesting Letters

PUBLISHED BY PERMISSION OF MR. COBB

E. M. Cobb,
Elgin, Ill.

Omaha, Nebr.
Aug. 2, 1907.

Dear Brother:—

I was in your office today at Albaugh-Dover Co., but they said you were on your vacation. Sorry I didn't get to see you. However, I ordered a force pump for my windmill on my farm in Butte Valley. You remember I bought the mill of your friend and sent it with the other carload of goods that went to the Valley. Brother Early wrote me that another carload was being shipped soon, so I ask that these articles be put in the car. I bought 100 lbs. more timothy seed, same amount of alfalfa and 300 feet of gas pipe for the boys to use in fitting up the mill.

I just had a letter from Mrs. Wolf, who you know is my sister, stating that the alfalfa, oats, wheat and potatoes are doing fine. She said I would hardly know the place. My interests are growing there. You remember I have one sister there, and another going in September, and one who owns 380 acres there but cannot move just now, on account of business interests in Chicago. I have one son and one daughter with their families there and another daughter and son going in September. I am leaving tonight for the Valley. Brother McDonaugh and I will run another excursion here September 12th, for the benefit of the Brethren who desire to move this Fall. If you know of any going you would do me a favor to let me know of them.

I am informed that the railroad is now running a train as far as Orr's Lake, which is within ten or twelve miles from the new town of Macdoel. I expect to arrive there about the 9th or 10th of August.

Fraternally yours,
D. C. Campbell.

E. M. Cobb,
Elgin, Ill.

Mount Hebron, Calif.
July 30th, 1907.

Dear Brother:—

Enclosed you will find three snap-shots of my garden, which will give you an idea of what we are raising out there. The most of the garden was plowed in the middle of May, and the early garden planted just before we went to Annual Meeting. Our vegetables are in splendid condition, such as cabbage, rutabagas, beans, radishes, lettuce, peas, onions, celery, vegetable oysters, carrots, pumpkins, and potatoes. The potatoes and peanuts were planted the last week in May. Had potatoes out of the garden yesterday for dinner larger than hen's eggs. I found twenty and twenty-two potatoes in a hill. My garden has been cultivated but once, and only partly irrigated once. Brother Maust is going to have a photograph of a wheat field taken in a few days, which I will send you. I never saw grain come out so remarkably as the grain here. The wheat sowed the last of April just after grubbing out the sagebrush will make twenty-five bushels to the acre.

I gave an order yesterday for 550 apple trees and 50 trees of such as pears, prunes, peaches apricots, cherries, plums and walnuts. There is a fruit man from the Albany Nursery here and I think that he will get a great many orders. They are to be delivered in the Fall. I have not had time to prepare an orchard yet. I am going to plant twelve acres in trees to start with. Everybody's crops are looking fine, and everyone is satisfied with the yield of their ground since they had such a short time to get the land in order and put out the crops and move.

We will show you next year, what can be done.

Fraternally yours,
M. D. Early.

A Great Drawback

One of the greatest drawbacks of the poor and those of limited means in the never-failing doctor-bill. It has brought discouragement into many a household. To such the knowledge of a reliable household remedy is worth much. Then, again, there are thousands of families located at such a distance from physicians and drug stores that to obtain prompt medical aid is almost out of the question. How many are there not so situated who are mourning the loss of some dear one whose life and usefulness might have been saved had prompt medical assistance been procured! These possibilities are always sad and harrowing thoughts for those who are left behind, and it surely gives food for reflection; but "What is to be done?" thinking people will ask. In the first place, watch the condition of your health. Experience has amply proven that by the exercise of sound, common sense, a little observation and adherence to plain hygienic rules, long and tedious spells of sickness can be avoided. If you feel dull, drowsy and despondent when you arise in the morning, if you have a nasty, bitter taste in your mouth, if your tongue is coated, do not ignore these signals. Something is the matter. You are not well. You are on the straight road to sickness. Take heed! Your system needs looking after.

If your children are peevish, cross and fretful, if their appetite is gone, the luster of their eyes has vanished and a feverish glow is on their little faces, act at once! They are getting sick.

If your husband feels unusually tired, dull and discouraged, if he fails to enjoy his meals, if his temples throb, and he complains of aches here and there, do not delay, but commence treatment with DR. PETER'S BLOOD VITALIZER. A bottle costs much less than a doctor's visit, and the probabilities are that a dose of it in time will save you much expense, worry and anxiety.

"MOTHER'S MEDICINE."

Stanardsville, Va., Sept. 9th.

Dr. Peter Fahrney & Sons Co., Chicago, Ill.

Gentlemen:—Your **Blood Vitalizer** has cured me of sick headache and neuralgia. I hope never to be without the remedy in my house, and honestly believe there is no other medicine equal to it as an all-around family medicine. No praise could be too great for the great relief it has given me. Whenever anyone of the family feels badly they say they want a dose of "mother's medicine," meaning the **Blood Vitalizer.**

Yours very respectfully,
Mrs. E. Beasley.

FROM HOME TO HOSPITAL.

Driftwood, Pa., Sept. 26th.

Dr. Peter Fahrney & Sons Co., Chicago, Ill.

Dear Sirs:—It used to make me heart-sick when I lay in bed and saw my wife and children at my bedside crying. I was sick all over, suffered with nervousness, was unable to sleep, and all of my bones ached. I was taken to the hospital at Williamsburg, where I was treated, but as they failed to help me they sent me home.

On leaving the hospital, a friend advised me to use your **Blood Vitalizer.** I did so, and it has produced wonderful results with me. It did what nothing else has been able to do. I am now well, have a good appetite and can sleep. Please accept my thanks. Yours truly,
John Gorney.

SAVED HUNDREDS OF DOLLARS.

Portland, Oregon, Sept. 3rd.

Dr. Peter Fahrney & Sons Co.,
112-118 S. Hoyne Ave.,
Chicago, Ill.

Dear Sirs:—The last shipment of **Blood Vitalizer** has just arrived, and many were anxiously awaiting it, as you see there is a great demand for the **Blood Vitalizer** here. I myself could not think of being without it. Although I do not now use it, I always like to have it on hand in case of emergency. It has saved us hundreds of dollars, which we used to pay to the doctors. My mother, who is now in her seventieth year, suffered for over twenty years with a weak stomach and indigestion. At times she was obliged to take to her bed; but since using the medicine she is so spry and active that she is able to do her own housework. Many a young woman envies her her activity and good health.

I would like to say to the many sons and daughters throughout our land who have parents living who are in any respect ailing, that they could gladden their hearts in no better way than by making them a present of a few bottles of the **Blood Vitalizer.** It would bring happiness all around. Respectfully yours,

J. J. Anderson.
295 Creshy St.

DR. PETER'S BLOOD VITALIZER is not a drug-store medicine. It is not an ordinary article of traffic but is supplied to the people direct by special agents of the proprietors. Address, for further information

Lomita California

The development of San Pedro Harbor, only five miles from Lomita, is being rushed. The government has spent several million dollars in its improvement and will put in more. The demands upon freight factilities are proving inadequate in handling the many vessels making this port a call. The "Miner Fill," when completed will cover 170 acres. This is to be used for bonded warehouses, factories, ship stores and repair shops. In filling in this shallow water, the deep water frontage will be increased 8,000 feet; besides this, the city of San Pedro owns 1,000 feet of water front.

In due time, this frontage will be lined with wharves for deep-water vessels, and then ships from all parts of the world will find excellent facilities for dockage. Deep sea ships can then proceed to their berths and unload their cargoes just as they do at San Francisco. The port of San Pedro is growing very rapidly, hence acreage adjoining the wharfage is rising in consequence. One piece of property on the inner harbor, having only 350 feet of water frontage, and containing about one acre rents at the rate of $400 per month, and the lease carries with it an option to buy at $60,000. Another with 480 feet frontage and embracing about one acre of land rents for $500 per month. At San Francisco an acre of frontage is worth $150,000. The amount of lumber unloaded at San Pedro last year was $451,314,000 feet. A great deal of lumber is brought here from Oregon and Washington and cured because of the many days of sunshine. The reader will better understand our relation to this harbor by knowing that it tends inland to and beyond Wilmington and when the tide of commerce will demand more room it will be built up towards Lomita and within two miles of our colony. With the opening of the Panama Canal, San Pedro Harbor will be one of the great ports on the Pacific Coast. The development of Southern California, Arizona and New Mexico, will demand the very best facilities for export and import shipments.

We deem this harbor of great advantage to the settlers of Lomita. With the great market at Los Angeles on the north and the good one at San Pedro on the south, no produce need to beg for purchasers. Even now the things one raises are eagerly sought by dealers and consumers. It is a question of farmers, not one of market. The industrious ones are sure to meet with their desires.

The season for autumn rains is fast coming on; hence the "busy farmer" should plan to get here soon, put up his buildings, and prepare to sow barley from November to March, and plant corn in May. In the "between time," he can plant cabbage in October and November, harvest it in March or April, plant the same ground to potatoes, and dig these in July and then put in some corn for the cows that are supplying the cities with pure, fresh milk. Or if he chooses, he might set strawberry plants in August, and have ripe berries in November or December. It is well to make some plans now so as to get things to eat for the ship people at San Pedro and the citizens and tourists in Los Angeles and other notable places in this climate that deals so kindly with all. Our terms are one-fourth cash, balance in 1, 2, 3 years at 6 per cent interest. Five per cent discount for all cash. The people are coming. Who shall be next?

W. I. HOLLINGSWORTH & CO.,
314-316 Wilcox Bldg., Los Angeles, Cal.

M. M. ESHELMAN, Tract Agent,
Same Address.

Join Our Party Sept. 17th

And investigate the possibilities of the TWIN FALLS, north side tract to be thrown open for settlement

October 1

150,000 Acres of Land Under the Carey Act will be Thrown Open for Entry on that Date

This will be a great opportunity to the settler to secure a Homestead in a mild, equable climate, where crops grow to perfection by irrigation. No failure of crops on account of drought. This tract is on the North side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho.

The Brethren

should now be arranging to go to the opening of this 150,000 acres of land on the Twin Falls, North Side Canal for it will be taken up quick when once opened. Be there ready for entry Oct. 1. A good sized party have already made arrangements to go.

These lands are sold at 50 cents per acre and the water right $35.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms. Crops of all kinds are grown to perfection. Fruit growing is a success as well as the growing of sugar beets. To see these lands, take the Oregon Short Line, R. R., to Minnedoka; there change cars for Milner or Twin Falls.

"WE MADE NO MISTAKE"

Twin Falls, Idaho.

Twin Falls Land and Water Company.

Gentlemen: On the 6th day of April, 1906, I landed on the Twin Falls Tract to stay. I had been here twice during the winter "to see" and thought I had seen the opportunity of a lifetime for a man of small means to make a profitable investment and establish a comfortable home. Our experience has convinced us that we made no mistake.

Respectfully,
John R. Newton.

Pullman, Washington.

C. O. Morrell, Twin Falls, Idaho:

Professor Fulmer, Chemist, of Washington State University, has made his seventh test of soil from lands under the Twin Falls Canal system. He finds a small trace of alkali and thirty percent more plant producing qualities than in the Yakima Valley, and there is only one place on the Pacific coast where it is equaled, and that is in the Pajaro Valley in California. A. T. Farris.

Mr. B. F. Hurst, Fruit Inspector of Dist. No. 5, of Idaho states: "The Southern part of Idaho is second to no other part of the known world as a fruit producer, both in variety and quality."

HOMESEEKERS' ROUND TRIP TICKETS

will be sold to points in Idaho on 1st and 3rd Tuesdays of each month in 1907, good going, leaving selling station on date of sale and for return passage, leaving destination on day of execution which must be within final limit of 21 days from date of sale.

THE INGLENOOK

VOL. IX. AUGUST 27, 1907. No. 35.

The Afterglow

Richard Braunstein

The weary day has reached its end at last,
Rich sunset tints to darkness slowly turn;
Now night descends o'er all, while flitting past
The dainty firefly's signals brightly burn.
Shrill pipe the crickets and the katydid,
The swallow sweeps in dusky circles low—
The whip-poor-will calls, in the woodland hid—
Suddenly gleams the west in crimson—lo!
There comes the afterglow.

Love's weary day is done and fades in pain;
Though love has fled, 'tis better to forget;
Letters and broken pledges yet remain,
Sorrow, remorse, and every late regret.
Darkness is o'er my life, yet when at eve
As twilight gathers and the shadows grow,
Fond thoughts of her, my love of yore, I weave;
My heart beats strangely quick again, for lo!
It is love's afterglow.

His First Sermon

Richard Braunstein

THE slanting rays of the morning sun were gilding the snow-capped peaks of the mountain range.

Out across the vast prairie, dotted here and there with the lonely cabin of the pioneer, herds of sheep and cattle were nipping the dew-sweetened grass, while the herder galloped across the fields, taking invoice of stock.

The air was pure and wholesome, the day was glorious, one of those rare days when Nature seems to be at her best.

After a hard week of toil, the laborer rejoiced in the return of the Sabbath, for it brought not only rest, i. e., cessation from ordinary toil, but also communion with God, and worship in the little sod schoolhouse on the plains.

As the shadows pulled themselves in and the sun mounted higher and higher along his path of light, a young man might have been seen riding on horseback along the well known "Bald Eagle" trail.

He pushed forward rapidly, urging his bronco on, for already the hour was near at hand when he must appear at the little schoolhouse of logs and mud, and preach his first sermon in this new country—a country of broad plains, tall grasses, and stirring winds. It was an hour of intense anxiety to him, yet withal an hour big with lofty purpose and sweet with perfect concentration.

His face was interesting and attractive—high forehead, penetrating, gray eye, prominent chin. He bore the clear-cut feature of a scholar, and seemed all out of place in the weird and lonesome land. He had broken in health while pursuing his studies at the seminary, and came West to "rough it," fondly hoping that while he "roughed it" himself, he might smooth the pathway for the lonely dweller in the prairie cabin.

How many would come to the service? Of what character and degree of intelligence? How would they receive his message? These questions passed through his mind in rapid succession. But the chief solicitude of his thought was: *How* can I help the people who this day shall wait upon my ministry?

And he breathed a prayer as he journeyed: "*Lord bless me and* make me a blessing—help me to be true to thee and to thy Word to-day."

As he reached the summit of a well-rounded hill, the little schoolhouse "hove in sight," and all around it were saddle-horses, carts, buck-boards and wagons. It was to be a great day for the settlers, many of whom had attended no religious services since coming West. Their lives had become monotonous as they worked at the irksome round of every day toil, and anything by way of diversion would be acceptable. But the thought of attending Church Service, carried them back to the days long gone, when, in the happy innocence of their childhood, they had regularly accompanied their parents to the meetinghouse and listened with rapt attention to music and sermon.

Those days would never come back. Father and mother sleep in the church-yard; brothers and sisters are scattered to the four points of the compass. The old home is occupied by strangers, and the once familiar haunts are now frequented by a new generation.

The schoolhouse is reached, the hour for service has arrived. The young preacher stands before his congregation. Expectant faces are lifted as he begins the service. The old hymns bring tears to eyes unaccustomed to weeping, and when he prays to the God of their fathers, hearts and heads are involuntarily bowed in the humble reverence of worship.

The text was peculiarly appropriate and suggestive: "In my Father's house are many mansions." He spoke to them of the instinct for home. The heart longs for an abiding place, where the tent may be folded up and laid aside to give place to the more pretentious and substantial house.

No matter where we wander, we carry with us this longing for an abiding habitation.

"We are here in this Great West," he declared, "seeking homes. For this we left Eastern cities and friends, and employment that we might build for ourselves homes of our own. But the houses we build are constructed of perishable materials—lumber, brick and stone will yield to the gnawing tooth of time. Every foundation will crumble. No structure erected by human hands can stand amid the 'wreck of matter and the crash of worlds.' The heart cries out against this prospect and yearns with an unquenchable longing for a permanent abode." The preacher then told of the Christ. He spoke of the simple way in which he lived, how he came to earth to reveal to men the Father's love, show them how to live, and died for their salvation. But before going back to his Father he promised them a home, a mansion. 'Where I am,' said he, 'there ye may be also; for I go to prepare a place for you.'

"That's home," said the speaker, his eyes shining, "the home of the soul. There the hurts of time shall all be healed in the *balm of the eternal morning*. No more sickness, no more sorrow, no more death. There we shall walk through evergreen fields, where fragrant flowers are swept by gentle breeze. There we shall walk upon the streets of gold, and in the city of light find the loved ones lost awhile."

The preacher paused. Soft sobs broke the stillness. New resolves were forming; new purposes were taking shape. The whole atmosphere was surcharged with spiritual energy.

"Will we be true to this native instinct of the heart?" he asked. "Will we listen to the Master's voice? The feast is spread. The invitations are to you. Will you accept? When the books are opened and the names are called, will you be there to answer to your own?" The speaker turned his burning face toward the sky and gazed intently, as if lost in contemplation of some great, grand vision. Then his voice fell in subdued tones on their attentive ears. "I see the palm branches waving over the battlements. I catch the vision of glorified faces. I hear the shout of glad voices. They call us. They beckon us."

His sermon was ended, and he lifted his hands in blessing and benediction upon the congregation. The people arose quietly and passed out of the house. They had seen a vision, and its realization became the ambition of their lives.

It was a day of *Destiny* for many a soul.

Seeing the West Through the Eyes of a Missourian

Ada Kircher

Chapter Five.

We start homeward in a party of twenty-five. We go up the San Joaquin Valley about which you have all heard so much. It is not quite the Paradise I expected to see, neither was Southern California, for that matter, or any other portion in the West.

The towns were located where there was plenty of water near them, on each side, everything looked well, but on farther there was the desert that, instead of enhancing the view, gave a dreary look to the landscape.

The entire San Joaquin Valley was like this, with some very flourishing towns. It was quite hot. August at home is pleasant compared with this.

There is one thing in favor of this western country that I cannot forbear to mention. It is this, that one farmer may enjoy a shower upon his farm and his neighbor can go right on with his haymaking.

Because of the strike, our visit to San Francsco was short. However, we saw the results of earthquake and fire still quite plainly. Every building but two that we saw was undergoing repair.

After leaving San Francisco we saw some pretty country where crops looked well. We went through some picturesque little towns. Some contained six houses and five saloons. At Newcastle the cheery boys "stormed" us, and at some other place we gave a free concert. As the train stopped there quite

awhile, a crowd gathered outside, to listen to our singing.

It is strange how a boy with pies and sandwiches can cry down the best of speculation projects, or interrupt the most interesting story.

Coming home we learned that water is not an absolute necessity but a luxury, not to be looked for on all roads. We soon became accustomed to dampening one corner of our handkerchiefs at the water tank and wiping our eyes for our morning ablution, and sometimes even that was denied us by reason of the tank being empty. We hoped no one would notice our dirty faces.

One evening a brother on our train was taken very sick and grew worse and worse until we were all very much alarmed. He called for the elders to anoint him. The elders came, but no oil could be bought or found any where. He then called for singing and prayer. We thought he was breathing his last. After singing several songs and prayer, he began to recover. A doctor was secured later, but he was already on the road to recovery. Never before was I so impressed with the fact that, "The effectual, fervent prayer of a righteous man availeth much."

That night we went through snow three feet deep at an altitude of seven thousand feet. An Indian man and woman, with a papoose and a child of perhaps five years of age, got on the train somewhere in Nevada. A sister asked me if I would like to see the papoose. Being a friend of children in general, and papooses in particular, I gladly acquiesced. So we went to the other car to see the papoose. On our return we gave such splendid report that the other women from our car went also, and finally others from the car back of us went. All reported it a splendid baby and a good traveler, for being only fifteen days old. So the men decided to see it too. When they reached the other car they were informed it would cost five cents to see the baby. The little girl had a papoose doll, about fifteen inches long. When they got off the train the doll was fastened on the little girl's back, and the papoose reposed upon the back of its mother.

We saw many mountains covered with snow and that means plenty of water to irrigate with.

At night we crossed Great Salt Lake, and next day paid the Mormons a visit. You have heard so many descriptions of their grounds and buildings that I will pass on. The country surrounding Salt Lake City is very beautiful,—one of the best farming sections we have seen. Here four of us left the main party and went to Grand Junction, where a sister of the writer is living.

As we again boarded the train at Grand Junction, we met two of our former party, but they were only going a few miles further on, and we were left to join ourselves to a new party or travel alone. We preferred the latter, as we had become quite independent by this time. My companion had contracted a severe cold in this western, healthy climate and we were alarmed, lest it would become serious, so we wanted to get home as quickly as possible.

The scenery along the way from Grand Junction to Pueblo is beyond the power of speech or pen to describe. It was the finest we saw, which is saying a good deal. As we went through the Tennessee Paso, we felt impressed by its grandeur as never before.

At last we are nearing home. See how strong the wheat and corn stands! No little, yellow stuff or puny, irrigated crops, with dust all over it.

Look, right down there in the orchard is timothy five feet and four inches high. Curious we never thought of measuring it before. The foliage of the trees look so waxy and there is no dust on it. The roads are not oiled, no sickly smell, no danger for dress skirts, neither is the dust ankle deep. The water is good and cold. The sun is not so bright, but that is all the better for my eyes. The breeze is not so cool, neither is it mixed with dust.

True, we have some unpleasant features here, just as there are some everywhere. Let no man look for Paradise on this earth, not even in Missouri, though this State never did look so good to me as now. Even the detestable weeds are pretty now.

Harrisonville, Mo.

GUIDE MY FOOTSTEPS.

MARTHA SHEPARD LIPPINCOTT.

Dear Father, guide my footsteps
O'er life's mysterious way,
So that they never, erring,
May be allowed to stray.
Sometimes the way, uncertain
And doubtful, seems to be,
O, then, dear Father, guide me,
Let me, thy wisdom, see.

I am not always knowing
Which way that I should go,
And then I seek thy guidance,
For thou wilt surely know,
Thy loving eyes will watch me
And lead my soul aright,
Whenever I am careful
To follow in thy light.

Dear Father, what a comfort
That we can lean on thee,
And that a safe protection,
Thy love will always be.
It is the greatest blessing
That man can ever know,
For guidance and sweet comfort,
That we, to thee, can go.

Moorestown, N. J.

A Tour With the Inglenook

Fred V. Kinzie

VERY few readers of the INGLENOOK, or any other paper, have any idea of the mental and physical labor required to produce a periodical. Although they may have a general knowledge of the publishing business, a brief description of the making of a NOOK may prove of interest.

First the editor must go over all manuscripts, correct errors, etc. This is often a very tedious task, and sometimes manuscripts must be rewritten on a typewriter. Then the copy is sent to the linotype room, where it is "set up" in lines of type.

These linotype machines are the mechanical marvels of a printing house. They resemble a gigantic typewriter. The linotype weighs over one ton, and has for its main working principle the dropping of tiny brass moulds for certain letters and figures, when certain keys are depressed. These moulds are called matrices, and when a line of them has been set, it is brought in contact with a combination of molten lead and zinc, thus forming a line of type.

After a line is cast, a long arm reaches down and picks up the matrices and returns them for distribution into the magazine from which they came.

Now the type is put on "galleys" (long, shallow pans), and a "proof" is taken. This proof, with the copy, is taken to the proofreading room where, by comparison with the copy, the errors are marked. Typographical mistakes are anxiously watched for until the paper is off the press.

The corrected proof is brough back to the machine, and the defective lines are reset and properly inserted.

The galleys of type, numbering over twenty, are now made up into pages, and the cuts are inserted as the editor directs. Later these pages are put in place on the make-up stone, and a "chase" (a steel frame) is placed around the pages. By means of quoins (wedged-shaped pieces of steel), the pages are firmly locked, so that everything remains in the proper place.

Now another proof must be taken, in order to see if all mistakes marked by the first proofreader have been corrected. When these and further corrections have been made and inserted, a third proof is taken for final comparison. Now the form is ready for the press.

The locked-up forms (two of them for each side of the paper) are loaded on a truck and are by elevator taken from the composing rooms on third floor to the pressroom on the first floor. The pressman gets ready a press and then lays the forms on the bed of the press, securing them by means of clamps.

Before beginning the needed "make-ready," in order properly to print the paper, it is necessary to make sure that all is O. K. A sheet is therefore run through and taken to the editor, for his final O. K. If it is pronounced correct, the needed adjustments are made by the pressman to proceed with the printing. The press is started and one by one the sheets are fed through the press at the rate of about twelve hundred per hour. It takes about five hours for each side of the INGLENOOK, and the same amount of time for the cover.

There are eight other presses of various sizes in the press room and when all are in motion, it makes quite a stir.

Part of the presses are hand fed; others have automatic feeders. The latter do their work very accurately. If two sheets try to get through at the same time, it immediately brings the press to a stand-still. Any other obstruction will do the same. In these cases the power is automatically turned off, and a brake applied.

From the pressroom the INGLENOOK is being taken on trucks to the bindery on the second floor. Each of these sheets represents one NOOK, and they must now be folded, placed between covers, bound, and trimmed. The sheets are automatically fed into the folding machine. By means of long blades the paper is forced between a series of rollers, which deliver the loosely folded sheet properly folded. After being nicely pressed, the sheets at once are inserted into the cover. Next they go to the stitcher, which puts in the two wire stitches so familiar to each Nooker. A quick, expert operator can do this work at a very rapid rate.

The papers now appear to be complete, but on trying to open one you will find the edges are still uncut, therefore they must undergo a trimming process, which is done by means of a paper cutter, which automatically trims the edges. This completes the papers and they are now ready to be mailed.

Preparatory to this the mailers have printed the names and addresses of the subscribers on sheets of yellow paper, making a continuous roll of many hundred names. This ribbon of paper is wound on the reel of a mailing machine, and automatically coated with paste, just previous to attaching each separate label to the papers. In this way the addressing is done at the rate of fifteen hundred papers an hour. They are then ready to be thrown into the mail bags, properly assorted to the different routes.

Thus the papers are started on their journey, long or short, east or west, north or south, or even across the waters. Thus you receive weekly your long-looked-for INGLENOOK.

A Summer in the Rockies

Hattie Dell

A Trip to Grand Mesa.—Part Two.

THE next morning most of us started out afoot, and walked to the cabin, where we waited while the first wagon went on up. They had to double-team, and even then it was hard, being quite steep for a mile and a half and the ground soft. They had to let the horses rest every few minutes. While we waited for the return of the horses, all entertained themselves, I suppose, to their highest enjoyment. I did, at least, by following up the stream to where the pine trees hid me from human eyes. I could hear the sweet, soft music in the trees, hear and see the rushing, crystal waters, look up and around and see the hills covered with flowers and grass. If such a spot as this would not call forth the best and deepest thoughts, what would it take? Rich, precious, blessed moments are these to the Christian.

Where We Camped.

"To sit on rocks, to muse o'er flood and fell
To slowly trace the forest's shady scene,
Where things that own not man's dominion dwell,
And mortal foot hath ne'er or rarely been;
To climb the trackless mountains all unseen,
Alone o'er steeps or foaming falls to lean;
This is not solitude, 'tis but to hold
Converse with Nature's charm,
And view her stores unrolled.

"There is a pleasure in the pathless woods,
There is a rapture on the lonely shore,
There is society where none intrudes,
By the deep sea, and music in its roar;
I love not man the less, but nature more,
From these our interviews, in which I steal
From all I may be or have been before
To mingle with the universe, and feel
What I can ne'er express, yet cannot all conceal."
—Byron.

We were waiting at the ford for the men to come back, when two strange men came down and offered to help us part way up. (They were on their way to pick wild raspberries.) We were getting anxious to get to our camping place, for it was past noon now. They helped us over the hardest places, and we gave them a lunch for their kindness.

There were two springs between the creek and the camp. Katie Smith and mother rode to take care of the little ones. Effie and Pearle went in the first wagon, and we hoped they would feel how hungry we were and make ready a feast, which they did. Mother Gnagey knows how I enjoyed her fried chicken. They found an empty cabin which they took possession of. It had a stove, table and a bed,—just the frame of one built across one end of the cabin. We all had enough to eat and some left.

After dinner we put up our tents, west of the cabin a few steps. The lakes were a quarter of a mile from us, and the creek almost at our door.

We did not get out to see much that evening, as it rained. It was hard to keep things dry in the tent, and it rained about every day we were there. We went to see the lakes next day, and fished for trout, but did not get any. One evening Lizzie, Ida, Hall and I, went out on a raft. We had a nice ride but got no fish. Mr. Gnagey and Hall each caught several small trout The men hunted some and brought in squirrels. So we had squirrel potpie one dinner. Two nights we had a camp fire and all gathered around to talk and sing.

Thursday morning, as soon as we could get off, twelve of us started for the top of Grand Mesa,

about two miles from where we camped. Up a little ways from the lakes were several acres of flat land that looked as though it might have been a lake at some time, but was now covered with grass, and flowers of many different kinds. There were several colors of daisies as large as a dollar. They looked more like asters. I'm sorry I do not have a picture of that flower garden. It seems like a pity that so much beauty should be hidden away where human eyes so seldom feast on it. As we went on up, we came to where the columbine grows. This is the Colorado State flower. Its colors are light blue and white; it is a beauty. We saw several small lakes and water lilies growing in them.

Following the trail we at last came to the top. Here were large rocks that looked as though they had been thrown up by a volcano. We could see ice down

The Top of Grand Mesa.

between the rocks. Grand Mesa is said to have been a volcanic mountain at one time. We could see the tops of the range north of us for miles and miles. We did not stay long, as we had no lunch with us. I would like to have stayed near the top all day. There were more flowers there than we saw anywhere else on our western trip, and I never tire of flowers.

The afternoon was spent in getting things ready for our homeward trip, and in the morning, as soon as we could get packed, we were off. By stealing off a few moments, good-bye was said to the rivers, the lakes and all that is dear to the nature lover. Would we ever be permitted to take a trip like this again? If God wills it so we shall.

SAVING THE BIRDS AND SEALS.

Good news comes o'er the seas from London town, where it is said there is a decided falling off in the sales of heron plumes, aigrettes, "on account of the absence of American trade." For this, thanks be given the Audubon societies which are powers behind the throne of the laws of the land. At a recent meeting the Federation of Women's Clubs of New Yersey and Pennsylvania adopted a resolution against the use of aigrettes by club women. Each month there is news of a decided advance in the work of bird protection. It is to be hoped that every nature study teacher is helping in the great movement toward making the coming generation of women realize their full responsibility for the utterly barbarious practices connected with securing birds' skins for ornamental purposes. The destruction of the Pribilof Islands fur seals meanwhile continues, as the President noted in his message. The herd which, according to the surveys made in 1874 by direction of Congress, numbered 4,700,000 and which according to the survey of both American and Canadian commissioners in 1891 amounted to 1,000,000, has now been reduced to about 180,000. This has been brought about by killing the female seals while in the water. As a rule, the female seal when killed is pregnant and also has an unweaned pup on land, so that for each skin taken by pelagic sealing, as a rule, three lives are destroyed, the mother, the unborn offspring, and the nursing pup. In 1896 over 16,000 young seals were found dead from starvation on the Pribilof islands. In 1897 it was estimated that since pelagic sealing began upward of 400,000 adult female seals had been killed at sea and over 300,000 young seals had died of starvation as the result.

IN VIRGINIA.

The roses nowhere bloom so white
As in Virginia,
The sunshine nowhere shines so bright
As in Virginia.
The birds sing nowhere quite so sweet,
And nowhere hearts so lightly beat,
For heaven and earth both seem to meet
Down in Virginia.

The days are never quite so long
As in Virginia,
Nor quite so filled with happy song
As in Virginia.
And when my time has come to die
Just take me back and let me lie
Close where the James goes rolling by,
Down in Virginia.

There nowhere is a land so fair
As in Virginia,
So full of song, so free of care,
As in Virginia.
And I believe that Happy Land
The Lord prepared for mortal man
Is built exactly on the plan
Of old Virginia.

LOWLY BUT CROWNED; OR, SYBIL THE OUTCAST

A Story by Sadie Brallier Noffsinger

Chapter XXVIII.—Sybil Asks Some Theological Questions.

"DON'T you think no one ken get to heaven unless he is baptized?" The voice was Sybil's and it was full of pleading and anxiety.

Mrs. Chester looked up quickly, a trifle startled. This was the first time Sibyl had ever asked a question directly relating to theology. Mrs. Chester had often admonished her as to her duty of a confession of faith toward God, and though she always listened attentively to everything that was said to her, she gave no sign that the Divine Spirit was knocking at her heart. It is true, she had seemed somewhat changed of late, sometimes refusing to eat or play, and acting as though something troubled her. More than once she had followed Mrs. Chester from place to place, and several times, when on the verge of speaking had abruptly left the room. Daily, since her advent to Shady Brook had her benefactress prayed that Sibyl might seek salvation through repentance and holy baptism. Should her prayers be one day answered? Sooner perhaps than Mrs. Chester dreamed.

It had been a custom at the Chester home to devote an hour each day to the study of God's Word. The devotions for the day had been concluded and Mr. Chester was already gone, while Sibyl and Mrs. Chester were in the library alone. As was her wont Mrs. Chester had asked her to sing,—for she had a deep, rich voice,—whereupon she began, "There is a fountain filled with blood," but ere the first stanza was finished, her voice trembled, and though she tried to control it, it finally failed completely. She told Mrs. Chester that she would rather not sing any more that day. At the moment this chapter opens she was leaning her head upon her hand, gazing intently beyond the library and everything which it contained,—even beyond Lily, who had climbed up at her knee, and was vainly trying to entertain her with her winsome chattering. She saw and heard nothing; and she felt nothing save that tremendous burden that had grown so heavy until at last it had well nigh crushed her soul.

She tried to speak but her tongue clave to her mouth. With her spirit on the alert, Mrs. Chester divined the truth. She advanced gently toward the statue-like girl and in her sweet, mother way whispered: "Sibyl, my child."

Then the fountains were opened and the pent-up feeling spent itself. "Oh, my heart is well nigh broke. Do you think I am too desperate a sinner fur to be baptized?" It sounded like the wail of a lost soul to Mrs. Chester, and she folded her closely to her breast, while the weeping girl continued:

"Mrs. Treadle says I am too wicked ever to belong to the Dunker meetin' an' Mrs. Trot she says that the Dunkers are respectful folks, who never yet have lowed no beggar person to join their church."

Mrs. Chester was deeply moved. Never before had she felt such utter compassion for that branded girl, and she drew her still closer to her as she began:

"You know Mrs. Davids, Sibyl. You are aware how she is respected and loved by every one. Perhaps you will be surprised when I tell you that she was once a homeless, loveless, outcast girl. She was obliged to beg the scanty bread which fed her poor, unhappy body. Moved with pity, a lady one day took her in, and ever afterwards kept her as her very child. She never had occasion to regret that deed of mercy, for Mary proved to be a faithful and devoted daughter. When she grew older, she embraced the faith of her benefactress who, by the way, was a Dunker lady, and was ever looked upon as a shining light by all who knew her. I need not tell you that she is the wife of the pastor of that pleasant country parish and queen of as sweet a home as ever bloomed beneath God's smiling sun. But when did Mrs. Trot and Mrs. Treadle tell you these things?"

"That day you sent me to the Dorcas meetin' with them dresses for the poor. I was hardly in the door when Mrs. Treadle asked me if I meant to ever change my sinful ways. I said, I wanted to most powerful and was a-going to. Another woman, what they called Sister Sharp asked what I meant by that, and when I said it was my mind to be a Dunker member, they all laughed sort o' fierce like, an' Mrs. Trot *she* said as the Dunker folks was mostly respectful people an' that I had best go back to a certain alley in the city an' mingle with my like an' kind I couldn't help it, Mrs. Chester, as the tears came to my eyes. I tried to keep them back. An' then Mrs. Treadle said

as them was hypocrite tears, an' that if I ever got baptized with such a deceivin' heart, 'at God 'ud never forgive me for it—not in this world nor in the next. Mrs. Chester I know as I am awful wicked, but I want to be forgiv."

"And you can be, Sybil," soothed Mrs. Chester, with the other's hand still clasped within her own, "for the Son of God hath plainly said: 'Him that cometh to me I will in no wise cast out;' and again: 'Whosoever will, let him come.' That 'whosoever' embraces everybody,—the grossest, the vilest, the most sinful, the most distressed. But every follower of Christ must have a cross to bear. Remember this always, Sybil, and thank God from the depth of your heart, if yours be not a heavier one than the frail reproaches of Mrs. Treadle and Mrs. Trot."

So it was that a shart time afterward on a bright, warm day the peaceful Shady Brook became the gateway through which Sybil entered upon the new way.

Chapter XXIX.—"Mine Own New Name."

A WHISPER, a hush, a solemn pause. The crowd advances, the men reverently uncover their heads and a multitude of faces are bent above the gentle, peaceful stream which flows by Shady Brook.

And what to see? The grass is parted and a young girl assisted down into the water. Her raiment is white as snow, yet scarcely eclipses the shining brightness of her countenance. Calmly she kneels with clasped hands and eyes upturned. The rippling wavelets kiss her breast and toss her raven hair afloat, but she stirs not from her attitude. Another murmur from the crowd and then a death-like hush again:

"Dost thou believe that Christ is the Son of God? Dost thou believe that he came to earth to draw all men unto him? Dost thou promise before God and in the presence of these witnesses to join thyself unto him, cleave unto him, and be faithful unto him till death?"

"I do." Reverently, solemnly, yet joyfully the vow is spoken. A few words of exhortation from the man of God, and she is baptized beneath those symbolic waves and arises to indeed walk "in the newness of life."

Ah, Sybil! well mayest thou pass amidst that throng with queenly step! No longer art thou a beggar girl, for thou hast this day found an Eternal Father. Never again shalt thou be an outcast, for the glittering name which is written upon thy forehead and within thy heart, declares thee forever to be an heir of Heaven!

Chapter XXX.—The White Shadow.

As all things have a beginning, even so must all things have an end. My tale is drawing to a close.

What need to further lengthen it? Its mission is, I trust, fulfilled,—and yet one brief glance more.

The sun is bidding good-night to the inhabitants of Busy Homes and most of the guests have already assembled at Mrs. Trot's. They are to drink tea there tonight to eat plum cake. I ween Mrs. Treadle is seriously conferring with her hostess in an undertone, yet loud enough to deeply interest several guests who are seated near. I incline my ear to catch a few words of the conversation—only a few—and then pass on.

"It grieves my spirit, Sister Trot, for the sake of the sons and daughters round about. When that gal come into their midst I said it was a fateful day for them. I say so still.

It's wonderful how she's improved since that day we spoke her duty to her, I must confess, and when I first perceived that her virtues was a risin', in the opinions of the multitude, "Sisters' Trot an' Treadle will figger in her reformation, thinks I. But strange as 'tis, the gal herself don't seem to see it so. Of late I've cautioned Jemima to make up friends with her an' ask her to the picnics round about, but what do you think she told Jemima? She said her heart haint sot on picnics anymore,—that there is too much sufferin' in the world for her to take the time to go to pleasure parties, an' too much sin. She has improved, I must confess, an' it would be for the good of the sons an' daughters round about, if she'd associate with them a little more."

"The heart is deceivin' above all things, Sister Treadle. The day we spoke her duty to her, I washed my hands from humanity. I wash them now. I don't begrudge the good I did her,—forbid me that,—I only wash my hands."

And what of Sybil? It is hardly probable that the world will ever honor her as a poetess, yet time must tell. Meanwhile she is wisely consecrating her talents to the more prosaic accomplishments of life, and doing honor to "the vocation wherewith she is called," to minister to the needy, to visit the fatherless, to tell the story of Jesus to those who know it not.

In these goodly deeds she is often aided by her staunch friend Stella, who is still a star and causes not only Mrs. Chester, but also many others, to look heavenward.

The name of Liz is but a memory to the inhabitants of Busy Homes. The atmosphere of that religious neighborhood was never congenial to her, and as the years passed her face gradually faded away, until it was seen no more within its streets nor near its borders.

Lily has grown somewhat older than she was when we first beheld her, and is at present reveling in the new joy which has come to Shady Brook. A little

son has been sent hither and the hearts of Mr. and Mrs. Chester are more comforted than they had yet been since Clifford died.

And if Clifford's death had caused them sore pain, had it not also been instrumental in causing them great rejoicing? For might not the mission of his death have been the salvation of Sybil's soul?

Mrs. Chester thinks about all this, regretting nothing but counting all God's dealings kind. And as she muses a white shadow descends upon her and throws a halo about her head. Does she dream, or has the spirit of her beloved and departed child indeed been borne to her on angel wings?

Who may tell?

THE END.

HE DUG.

He wanted a job, and, like everyone else,
He wanted a good one, you know,
Where his clothes would not soil and his hands would keep clean,
And the salary mustn't be low.
He asked for a pen but they gave him a spade
And he half turned away with a shrug,
But he altered his mind, and, seizing the spade,—
He dug.

He worked with a will that is bound to succeed,
And the months and the years went along.
The way it was rough and the labor was hard
But his heart he kept filled with a song.
Some jeered him and sneered at the task, but he
Plugged just as hard as he ever could plug;
Their words never seemed to disturb him a bit—
As he dug.

The day came at last when they called for the spade
And gave him a pen in its place.
The joy of achievement was sweet to his taste
And victory shone in his face.
We can't always get what we hope for at first—
Success cuts many queer jigs,
But one thing is sure,—a man will succeed—
If he digs.

TWENTY TONS OF WASTED ENERGY.

IRA P. DEAN.

Did you ever bite your tongue? How many pounds pressure was on your tongue when your teeth caught it? Ever cut a piece of raw meat? Remember how you bore on the knife? Oh! yes you remember; felt like a ton coming down on your tongue when you bit it.

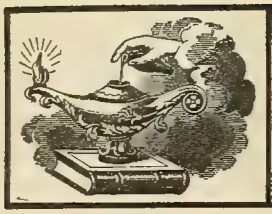
Well, there may have been nearly ten pounds pressure on just before you stopped your teeth from cutting clear through.

An average bite upon meat is about five to eight pounds perhaps ten according to scientists.

Well, let's say five pounds? All right! The man who chews tobacco—five pounds pressure per bite, how many bites does he make per minute? Thirty to forty-five. Let's say twenty bites. Well, how many pounds are gone at the rate of five pounds per bite and twenty bites per minute? One hundred pounds. All right; in one hour that would be just sixty times one hundred pounds or 6,000 pounds, or three tons of energy gone every hour.

Well, how many hours per day does a man chew tobacco? Ten. Yes, some men only stop to eat; some fall asleep chewing; keep it up on Sunday too. Well, let's say, seven hours as an average. Get to the railroad shops, and you will think this is only half the average.

Well, at three tons per hour, or six thousand pounds in seven hours, there will be wasted just forty-two thousand pounds or twenty-one tons of energy. Believe it? Well, it's true. Cut off a ton and you still have twenty tons of wasted energy every day for the habitual tobacco chewer, while the cause of Christ and the church suffers for lack of just what is wasted—ENERGY. Now, I'm not through yet. The habitual tobacco chewer spits from a quart to two and one-half quarts of saliva away per day, as he chews. Is that a waste?



Yes, but he has a good appetite. Well, bless you, if he didn't have, he'd die. He's got to make up that energy some place. He has a continual strain on the blood from spitting. It is wasted energy! *Wasted energy!!* WASTED ENERGY!!! *And twenty tons per day.* Now get out, and down from the tobacco habit.

CULTIVATE PATIENCE.

BE patient with your friends. They are neither omniscient nor omnipotent. They cannot see your heart, and may misunderstand you. They do not know what is best for you, and may select what is worst. Their arms are short, and they may not be able to reach what you ask. What if also they lack purity of purpose and tenacity of affection; do not you also lack these graces? Patience is your refuge. Endure and in enduring conquer them, and if not them, then at least yourself. Above all, be patient with your beloved. Love is the best thing on earth, but it is to be handled tenderly, and impatience is a nurse that kills it.

HUFFORD REUNION.

F. P. HUFFORD, 3522 W. Michigan St., Indianapolis, Ind., is writing up history of Casper decendents to date. He will have a prospectus ready for the reunion, Aug. 28 and 29, 1907. Descendents welcome. President, E. A. Hufford, 394 S. Washington St., Columbus, Ohio, Corresponding Secretary, Daisy Hufford, Bremen, Ohio.

THE QUIET HOUR

SERMONETTE. The Lord is With Us.

D. L. FORNEY.

Fear them not.—Num. 14: 9.

How different is the simple declaration of faith "we can," in contact with the shrinking, timorous wail of unbelief, "*We be not able.*"

Israel had been resting on her oars for quite a while, while twelve chosen men were up in Canaan, spying out the land. Feeding, as they were, on angels' food and the refreshing waters from the rock, they forgot God, their strength. On the return of the spies, one strong, united pull together would have landed them all safely in Canaan. The land and its inhabitants would have been theirs. The trials and dangers of the wilderness way they would have escaped. But now, since they choose to believe the evil report of the ten, in preference to the faithful report of the two, God declares that they shall fall in the wilderness, and while the ten die at once of plague, the two lived still.

But how true to life to-day is this event in the wilderness history. How often does God's Word urge the weak and vacillating child of God to greater faith and greater diligence! Did he always say, "I do believe," how great would be his reward.

So many go softly all their days, fearing, or doubting rather, than stepping out firmly and boldly on the promises of God. The declaration of faith "*we can,*" would often help "Little Faith" or "Timorous over the danger." How often do we approach the lions, only to find them chained.

How many there are who, when asked to become Christians, hesitate and say, "I fear I could not hold out." But, remember, "The Lord is with us; fear them not." "He is able to save to the uttermost all who come unto God by him."

The alcohol fiend may be in the community: How often is heard the cry, "He is too strong; there's no use trying." It is the cry of unbelief; not the declaration of faith. But, remember, the Lord is with us, fear them not. Who? THE LORD. Yes, the Lord *he* is with us. Had it not been that the Lord is on our side, then might Israel fear. The way may be discouraging and dark at times, but we need not fear when *the Lord is with us.*

SECRET THOUGHTS.

I hold it true that thoughts are things,
Endowed with beings, breath and wings,
And that we send them forth to fill
The world with good results—or ill.

That which we call our secret thought
Speeds to the earth's remotest spot,
And leaves its blessings, or its woes,
Like tracks behind it as it goes.

It is God's law. Remember it
In your still chamber as you sit
With thought you would not dare have known,
And yet make comrades when alone.

These thoughts have life, and they will fly
And leave their impress by and by,
Like some marsh breeze whose poisoned breath
Breathes into homes its fevered death.

And after you have quite forgot,
Or all outgrown some vanished thought,
Back to your mind to make its home—
A dove or raven it will come.

Then let your secret thoughts be fair;
They have a vital part and share
In shaping worlds, and molding fate—
God's system is so intricate.

—Ella Wheeler Wilcox.

BRAVE HEARTS IN HUMBLE HOMES.

THERE is a dear old lady who has not left her bed for twenty years. She can hardly move a limb, and is often full of pain, yet the mind is clear, strong, and cheerful as marriage bells. No murmuring word ever escapes her lips. She orders he household in righteousness, she fills it with the radiance of hope and gratitude. Her life is like one long, sweet song. Yet that lady has a hard battle with herself and her pain every day, and she always comes off conquerer.

There is a domestic servant, one of the best Christians I ever knew, who for ten years has been doing service in a family of avowed atheists. It is true they never interfere with her beliefs, and they respect her goodness, but the whole atmosphere is uncongenial, and she sees and hears a hundred things which trouble and wound her finest feelings. She might have gone to fifty happier and better paid places, and I have often asked: "Why do you not make a change?" She invariably answers: "Christ has put me here to bear witness for him, and if I leave, there will be no one left to keep the light burning." And she means to stay on until her witness-bearing yields its due reward.

There is a widow with her two daughters living in a meager cottage, now working hard and struggling bravely to keep the gray wolf hunger from the door. Fifteen years ago they were comparatively rich, and lost everything in a huge financial wreckage. Now it is one long pinch, self-denial, and hardship. Yet that little cottage is full of sunshine and noble content. Its windows are palace windows looking out on beauty, love, and heaven, and the three hearts which beat in that abode are among the bravest hearts you could find in the world.

"YE ARE NOT OF THE WORLD."

"SEPARATED unto the Gospel." This may fairly be interpreted as the condition of discipleship. "Ye are not of the world." Immersed in it we may be and crowded into its activities, but there is a great gulf between.

There ought to be a gulf between the business methods of the Christian and those of the nonchristian merchant. The man who does "eye service," even though he allows no eye but his own "to take his measure," cannot attain the dimensions and the charity of the men of God. The business texture of the Christian man is of necessity unique and distinct. A conscience sensitized to sin by fellowship with God allows no compromise or indiscretion.

But the separation means more than this. The theme of life is different after a man has had the vision. The Christian life takes a new center, and the activities of the man of God all focus upon one clear purpose. To this he is consecrated and pledged. He may be immersed in the world but on him God has placed a seal, and he is kept from the contamination. He is separate.

GOD'S ANSWER TO PRAYER.

MR. SPURGEON tells of a young woman who was in great concern about her soul. "I placed Christ before her very plainly, but she did not seem to understand the way. One morning she came to me after service. 'Dear sir, will you pray for me?' She was thunderstruck when I said 'No.' 'But, sir, I am anxious to be saved; won't you pray for me? 'No.' 'O sir, you don't mean it. 'I do. I have set Jesus Christ before you; if you will not have him, there is no use praying; you will be lost. There is no other way, and I don't want there should be any other way. Will you have Christ, or will you not?' There was a pause; then she said, 'Yes, I will, if I may.' 'May? He has put it, "He that believeth shall be saved, and he that believeth not shall be damned." Surely you may have him, when there is such a dreadful' threatening against unbelief.' 'Well, I will. 'Then let us get down directly and pray now. If you are willing to obey God's command, then we may pray.' We did pray," said Mr. Spurgeon, "and I am sure that young woman has never doubted that she was saved from that hour. If you won't believe in Jesus, all the praying between heaven and earth won't save you. But if you seek him in simple faith, soon shall you say with rejoicing—'I have found him whom my soul loveth, and I will never let him go.'"

DRAWING MEN.

THE holiness of Christ did not awe men away from him, nor repel them. It inspired them with hope. It was not that vulgar, unapproachable sanctity which makes men awkward in its presence, and stands aloof. Its peculiar characteristic was that it made men enamored of goodness. It "drew all men unto him." This is the difference between greatness that is first rate and greatness which is second rate—between heavenly and earthly goodness. The second rate and earthly kind draws admiration on itself. You say, "How great an act—how good a man!" The first rate and the heavenly imparts itself—inspires a spirit.

CHRISTIAN SINCERITY.

MRS. CHAS. S. LININGER.

CHRISTIAN sincerity means Christian purity. How many of us have that sincerity which our Savior has taught us to have?

How do we show our sincerity for Christ? Are we putting our light under a bushel? If such is the case, pray often and ask the Lord to help us do better.

Do we love our brother and sister just enough to salute them with a kiss and still hold envy in our hearts?

Do we join church to be carried along by a few laboring brethren and sisters while we sit still and do nothing?

Are we sincere and careful with our daily language that it may be to the honor of Jesus? I regret to say that some expressions and actions of professed believers are far from the standard of Christian sincerity.

May we all be more prayerful and ask the Lord to help us to be more sincere in our Christian warfare, and come to the realization of what we are doing. May God help us all in our work for him!

Huntington, Ind.

I do not feel one atom older than I did at three-and-twenty. Nay, to tell the truth, I feel a good deal younger. For then I only felt that a man had to take up his cross, whereas now I feel that man has to follow him; and that makes an unspeakable difference.—*George Macdonald.*

THE INGLENOOK

A Weekly Magazine

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE DAYS OF BETTER THINGS.

Is it too much to say that Americans, as a people, are better and happier in 1907 than they were in 1807? We believe they are.

Our material prosperity is unprecedented. It is true, the pessimist tell us of hard times to come, but that need not trouble us now. There is no poverty to-day as hopeless as it was a century ago. There is work in abundance for those who want work. The rights of the individual are more carefully guarded than in the old days of white bond servants and black slaves,—days when even a luckless debtor was imprisoned.

As people grow in enlightenment they respect more and more the rights of others. Monstrous wrongs, long upheld by force of law, are wiped out by law. The people are learning the fact that justice is greater than the grasping power of wealth. The people's sacred right to happiness is more important than any man's vested right to oppress them by virtue of old privileges. Because a man is wealthy, he shines no longer with a divine light. He is a mere man, after all.

When a judge of the federal court fines a great corporation millions of dollars for breaking the law and the people applaud the verdict, the country feels that the reign of dollars is over. Just laws must be obeyed. Money is worthless when weighed against right. Here is a great gain for humanity. In this day of better things the best thing is the earnest striving after justice for every man.

JUST WEIGHTS AND MEASURES.

The New York inspector of weights and measures has found some remarkable facts as he goes the rounds of his duties. At least once in ten years he must inspect each dealer's weights and measures. He declares that most small dealers take advantage of their customers, and that the loss from these petty thefts amounts to $20,000,000 per year, or $2.50 for each person of Greater New York.

In New York City eighteen men are kept busy trying to prevent these petty frauds, but what are they among so many thousand? Butchers, icemen, coalmen, and grocers are the principal offenders. The most conspicuous cases of fraud were discovered among the dealers of various sorts who sell to the poorer classes,—the people least able to bear the loss being the greatest sufferers from this petty thieving.

Of course, what is going on in New York state, is taking place in other parts of the country. Inspection once in ten years is a farce; what we want is a law which will insure just measure and weight to every purchaser. Some people are naturally dishonest. Such persons can be made honest only by the strong arm of the law, when they see that it is the only way to do business. The buyer needs the protection of the law in his purchases and must have it in order to insure equity and justice.

THE POWER OF PICTURES.

It is a well-known fact that lasting impressions are made on the mind by pictures. A good picture cannot help but impress the mind favorably, just as a vicious picture will inflame the passions and drag downward. For some time it has been an admitted fact that the very suggestive pictures in most saloons are responsible for many assaults made by wine-inflamed and lust-filled degenerates. Mrs. Curtis, national organizer of the Women's Christian Temperance Union, recently said in an address:

"The saloons have robbed us white women of our loved ones, of our homes, and now they have robbed us of our clothes and have hung us up on the walls of saloons to inflame the passions of drunken brutes."

There is some food for reflection in the thought expressed in the words above quoted. The saloon, in and of itself, is bad enough, but give to these dens the added power of crime-inciting pictures, and you have one of the main reasons for the present epidemic of lustful crimes, sweeping over this fair country of ours.

Surely, it is time to call a halt. The remedy is in the hands of the people. Let them insist that every indecent picture displayed in a public place be removed, and the authorities will be bound to put in force the laws, made and provided for such cases. We have an ample supply of laws on our statute books to meet every case; what we lack is backbone and grit on the part of the proper officials to enforce the laws and mete out deserved punishment.

A JUST REPROOF.

Recently a storekeeper in Lewiston, Maine, was prosecuted for selling a small article on Sunday to a customer who, having just returned from a vacation, was unable to secure it earlier. Suit was brought

against him by the church people on the grounds that secular traffic would interfere with the church work in general. This point was, of course, well taken, if only the churches had not been guilty of practices equally wrong. The storekeeper defended himself through the press as follows:

"They told us we encroach upon the churches. I claim that the churches encroach upon us. They have suppers, fairs, and all kinds of things, where they undersell merchants, half the time soliciting the materials from the merchants, and expecting them to buy tickets."

This seems to us a pertinent reply. While we do not excuse the storekeeper for his Sunday traffic, we certainly agree with him in his arraignment of the churches referred to for their unholy practices, diametrically opposed to Christ's teachings. When the churches learn to be about the Master's business, they will find plenty of work to do without setting up tables for the serving of suppers, fairs, and other things of very doubtful propriety. These things, that are done under the cloak of raising money for the Lord's work, are without excuse. It is better to get a *man* than to get his money. And if the man is converted, his pocketbook will not be closed to the needs of Christ's cause. Let the Lord's house be a house of prayer!

HOW ARE THE MIGHTY FALLEN!

With the sale of the lace factory of Zion City to Marshall Field & Co., of Chicago, Aug. 6, the mainstay of John Alexander Dowie's industrial community has passed away. Much had been expected from this venture, and while the factory, in the hands of the Chicago concern, may prosper more than ever before, yet the unique character of the religious community, as planned by its founder, has been lost.

While Wilbur Glenn Voliva, the present leader of the little flock, has not given up all hopes of "saving" the material resources of the community, he does not attempt to conceal his discouragement when he says:

"I realize in a continued fight for Zion City the possibility of losing and, therefore, in view of the sale of the lace works, I feel free to say that while doing all I can to save the situation in Zion City, I shall at once inaugurate plans for establishing elsewhere a large Zion colony on a strictly agricultural basis with no less than 25,000 acres at the start. While carrying forward these plans I shall keep my headquarters in Zion City for two or three years, even if I lose the fight and shall erect a tabernacle here. I can't say now where I may locate the new colony."

Mr. Voliva claims that his adherents will undoubtedly follow him to the new colony, even at a financial loss. He says the glory of the city is in the past, and there will be no inducement to remain at Zion City.

There is food for reflection in the history of Zion City in its marvelous prosperity and subsequent decay. There is a lesson of warning, also, in the career of John Alexander Dowie, that future reformers might do well to heed.

NOTES AND COMMENTS.

Many of our readers who have been thinking of building with cement blocks will be pleased to learn that in a recent fire test at Nashville, Tenn., the superior, fire-resisting qualities of cement construction were shown. The building was a five-story structure, built of blocks made under the American hydraulic system. Though subjected to the most intense heat, and deluged by great volumes of water, the walls remained intact, and no damage resulted except of a trivial nature. This is considered an excellent demonstration of the fire-resisting qualities of concrete blocks made of the materials used in the construction of this building, namely, crushed limestone, granite screenings, and Portland cement.

State Health Commissioner of New York, Dr. Eugene H. Porter, comes out in an outspoken attack on patent medicine frauds, and for the benefit of our readers we quote a few of his arguments: "Patent medicines may be divided into two classes: (1) Those that are harmless without any positive benefit; (2) Those that are really injurious, while leading the users to believe they are benefited. Some of the most widely-advertised patent medicines contain the following: Chloroform, prussic acid, morphine, hydrocyanic acid, ferrus sulphate, etc. Yet, in spite of all this, the people continue to buy these worse than useless decoctions. Often precious lives are sacrificed that might be saved by timely, rational treatment."

Not every one can go to college, but Tuskegee Institute in introducing a "College on Wheels," brings instruction within reach of some who need it most. The purpose of the movement is to teach the blacks of Alabama how to better cultivate their patches of ground and show how to make a better profit out of their agricultural opportunities. The outfit consists of a large wagon, carrying two well-dressed negroes, plows, cultivators, a cotton chopper, a variety of seeds and samples of fertilizers, a churn, a butter mold, a cream separator and a milk tester. The outfit bears the name, "Agricultural Wagon." The wagon is driven up to a negro plantation, and the proprietor is allowed to make trials with the new and improved machinery. Instructions and suggestions are also given, and then the wagon drives off to another plantation. It is claimed the negroes take well to the scheme and good results are hoped for. Nothing like object lessons to impress the truth of new teachings or the benefit of improved methods.

Echoes from Everywhere

THE storm, early in the morning of Aug. 16, did great damage in parts of Chicago and vicinity. Five persons were killed and several injured.

A DYNAMITE explosion at Doenitz, Germany, Aug. 15, killed one hundred persons and injured many others. The deadly explosive wrought havoc in the town, and many are homeless.

A BATTLE to the finish is said to be imminent between Harriman and the Standard Oil people. In that event every citizen may, with complacency, look on and await further developments.

LAND-SEEKERS will note with interest that the Wyoming land board has thrown open to settlement 150,000 acres of irrigated land in the Eden Valley, in Sweetwater and Fremont counties.

THE annual Bible Conference opened Aug. 17, at Winona Lake, Ind., for a ten days' session. Prominent speakers and a consideration of live topics will be of the greatest interest to Bible students.

THE telegraphers' strike at date of this writing (Aug. 20) is still in force, though there are prospects now of an early adjustment of the difficulty if the matter can be satisfactorily settled by arbitration, as suggested.

EVERYWHERE in the West, and especially in North Dakota, a great scarcity of farm hands prevails, and even the offer of high wages does not seem to overcome the difficulty. Good crops and good wages should certainly give profitable employment to every one willing to work.

POSTMASTER-GENERAL MYERS is taking active steps toward the introduction of parcels post privileges for the United States, and it is to be hoped that the necessary aid will be given by Congress. The many advantages of such a move would be obvious to every citizen who has occasion to send packages by mail.

NOTWITHSTANDING the heavy fine now pending, the Standard Oil Company has declared a quarterly dividend of $6,000,000. The stockholders are undoubtedly well looked after,—at the expense of the people in general.

MRS. EDDY, the noted Christian Science promoter, is to be examined as to her mental condition by several noted experts in insanity. A thorough investigation will be made by order of the court at Concord, N. H., Aug. 17.

AN official report that has reached the war department says there are ten cases of yellow fever among the American troops at Cienfuegos, Cuba. Officials think the cases can be handled successfully and do not fear a spread of the disease.

THE California Limited of the Santa Fe road, bound for Chicago from Kansas City, was saved from destruction Aug. 15 by Mrs. Minnie Hartushel, a cook in a railroad camp, who swung a lantern, and stopped the train at the edge of a broken trestle.

FIVE cases of the bubonic plague, so prevalent in India, are reported from San Francisco. Four deaths have already occurred. Prompt and active measures are being taken by the local, state and federal authorities and a spread of the disease is not feared.

FOUR floors of the Hudson Tunnel Company's building, in New York, have been rented by the Steel Corporation and nine affiliated concerns at the annual rental of $60 000 for each floor, or $2,400,000 for the four floors. This is said to be the largest rental paid anywhere on earth.

AUG. 18 a large force of Moors suddenly descended upon the French camp at Casablanca, Morocco, but were driven off after a sharp conflict. The fighting covered a front of about sixteen miles and lasted several hours. The effort of the French, to settle the Moroccan difficulty as quickly as possible, has the full endorsement of the Powers.

It cost the State of Pennsylvania $90,000 to learn how a little group of men could steal millions of money from the State, in connection with the building of the State Capitol. The money used, in bringing out the evidence of the corruption, will not be spent in vain, if justice is meted out to the offenders.

When a war vessel of vast dimensions has been constructed, it does not require much time to supersede it by one still greater. Naval circles in Washington are agitated over a report that the British admiralty is about to build a battle ship that will be 50 per cent greater in tonnage than the Dreadnought.

The plant of the Cumberland (Md.) Steel Company was totally destroyed Aug. 19 by fire of unknown origin. The loss is estimated at $350,000, with insurance of $100,000. The plant produced accurate steel castings and is said to have been the only one of the sort in the world. The company has offices in London and Paris and in all the leading cities of the United States.

The Indians of the Pacific coast of British Columbia use a curious candle. It is a little fish called the "enlanchon," or "candle-fish." It is not more than an inch in length, and looks like a smelt. It is richer in fatty material than any other fish, and so makes a good substitute for a candle. The Indians dry it, when it will burn with a bright flame. Sometimes they run a wick through the body.

Mr. Harriman's personal profits in manipulating sales of Union Pacific stock have been of vast proportions, but it has been done at an immense loss to stockholders of the road, and to the detriment of the Union Pacific Railroad Company. It is estimated that there is a net loss of $32,426,038 by means of his manipulations. Just why robbery of the people on so large a scale is allowed to go unpunished, is a question that puzzles the unbiased observer.

The finding of a stick of dynamite in a shock of oats about to be thrashed near Durand, Ill., Aug. 16, has aroused the people of that vicinity as nothing has in years. Had the shock been thrown into the machine, it is certain that many would have lost their lives. The finding of the dynamite is the latest development of a series of crimes placed at the door of certain men violently opposed to the no-license faction, and is fully characteristic of the advocates of the nefarious liquor traffic. A search was made among some of the remaining shocks, and pieces of iron, horseshoes, lead pipes, etc., were found in fifteen.

Robert A. Pinkerton, the world-famous detective and head of the detective agency bearing his name, died on the steamer "Bremen," Aug. 12, while on his way to Germany. He was born in Dundee, Ill., in 1848, and by remarkable talent achieved an international reputation in tracking criminals, that has never been equaled.

Harrisville, the county-seat of Ritchie County, W. Va., will be without any municipal taxation this year for the first time in the town's history. The city owns its electric light plant, and the income from this, and the interest from accumulated city funds, will afford ample revenue for all needed expenses. No other town in West Virginia ever enjoyed this distinction. It is an example, also, for the imitation of other cities, which, by proper management, could do the same thing.

Lewis Wilding, only eleven years old, an inmate of an orphan asylum, has, by his bravery won for himself a home and probably a good future. Aug.16 Rose McGowan, thirteen years old, was gathering moss along the river's bank near New York, when she slipped down the bank and would have drowned, had she not been rescued by the courageous lad. The girl's father says he will care for the orphan and will also bring his act to the attention of those in charge of the Carnegie medal fund.

Another illustration of the old adage, that truth is stranger than fiction, is found in the experience of N. Sture Mattson, son of ex-governor Hans Mattson, of Minnesota. After squandering an inheritance of $1,000,000, he roamed the country as a tramp for years, but is now earning an honest living with a steam shovel gang in New York. While he appears to like his present employment, he has much to regret in the wasted opportunities of his former years, when he deliberately squandered his means to no purpose.

One of the most complete climatic changes has occurred in South Dakota. Where, in former years, there was a decided tendency to drouth, the very opposite condition seems to prevail. In the Sioux Valley a large acreage of the best land has been so wet this year that it either could not be used at all at the time of planting, or that it became worthless after the crop had been started. In the Jim River Valley, while not so bad as the Sioux Valley, similar conditions prevail. The man who could farm his land without any trouble whatever, in those sections, up to a few years ago, now finds that drainage is the only remedy for prevailing conditions.

MY DREAM HOME.

There's a cottage on whose gabled roof the slanting sunlight shines,
Through a lattice work of maple leaves and honeysuckle vines,
And just beneath the sloping roof high up among the leaves,
The birds their nests are building, hidden safe among the eaves.
There's a fragrance of a wild rose about the winds that blow,
Like a half-forgotten memory, from the land of long ago;
And a hush that's almost music, like a thin mist, seems to sway,
From the quaint, old-fashioned cottage to the cornfields far away.

The cowbell softly tinkles as along the paths they go
To the fields all white and scented, where the downy clovers grow;
And the sun moves slowly westward, till it sinks from sight away,
Where a few faint beams of scarlet mark the resting place of day.
And from the shadow shrouded east a flood of silver light
Is showered, like a blessing from the monarch of the night.

There's a woman who stands sometimes in that garden, sweet and mild,
With a wealth of untamed flowers in the grasses at her side,
And a heart that fain would linger 'mid the beauty of that way,
Where the wild bird calls a welcome to the first red blush of day.
Then the purple mists uprising from the meadows, dewy sweet,
Change and merge into the grayness of the wall across the street,
And the heart comes back awakened to life's old dull round again,
And the curtain drops till dream time on the cottage down the lane,

"TAKING THOUGHT FOR TO-MORROW."

Are you one of those who never plan out the work for the days to come? Do you act upon the impulse of the moment, with no thought of how the work will stand the test of time, or what the outcome, under unforseen conditions may be? If so, I pity you, for few people can do this without making mistakes for which, when too late, they are sorry. Besides, there is a great deal of pleasure in planning ahead—"making believe," as the children say. You can thus have your dream, though the reality may never be yours, and the grayest life may be made very beautiful by dreams of beautiful things.

These dark days, when the family is kept indoors because of the cold and storm, is a good time to lay out and plant the garden (on paper). By this means, you will know just what you want to do, and get your seed order off and the seeds in hand before the "rush season" crowds you. One of the very best preventitives against the "blues," house-nerves, stupidity and yawning, is to keep the mind busy—hard at work, as the material business in hand progresses. Most of hand-work will allow the worker time to brood and "think thoughts," and one might as well think good, cheerful, healthy thoughts as to grow discouraged and discontented by giving way to the "doldrums." The most common tasks will never become drudgery if the mind is kept stirring. It is the child that is kept idle indoors, that gets into all manner of mischief and mishaps, from sheer idleness. The busy child, busy about something he likes, is rarely the saucy, disobedient one.

While plying the needle or running the sewing machine, the home-keeper can look out on her yard and, in imagination, plant her shrubs and perennials, so that when the time comes for the actual work, she knows just what is wanted and where. So, as she busies about the kitchen, she can plan for her back yard. Some of the prettiest things in the way of vines and flowers should be planted in sight of the kitchen window—the most cheerful, and the prettiest, so she can see them instead of the dishpan when the "three-times-a-day" dishwashing has to be done. If she wishes to shut out some disagreeable view, plan for the screen of vines—and let the vines be beautiful ones—bearing beautiful flowers and fragrance, and, it may be fruits. But have beautiful, cheerful things. Plan for your dreams, then work for your plans. Live, and grow, into the cheerful, beautiful life.

THE TOILET.

It is said that $6,000,000 are annually spent by the people of the United States (not all of them women) for cosmetics and beautifiers. Many of these aids to the toilet are the rankest of frauds, many are worthless without being positively harmful, while many others are positively injurious, if not poisonous to the

human system, used either externally or internally. Many preparations which are really beneficial fail of their purpose because of the carelessness or indolence of the users, for few men or women will give to their personal appearance the constant, persistent, persevering care which must be given to insure success. The remedies, removers and renovators are given but spasmodic trial, or, failing to do what is expected of them after a few days' trial they are thrown aside, whereas they should have been used for months, or even for years, in some cases, in order to produce satisfactory results.

It is an old saying that "beauty is but skin deep," and the saying is true, in regard to the beauty brought about through surface bleaching, and the like. But true beauty must come from within. If you want something that will wear and "stand tubbing," you must begin deeper than the cuticle. There is nothing which beautifies so absolutely as perfect cleanliness and good health, and to have good health, all the organs of the body must act normally. The body is like the family; if one member gets "grumpy," or out of sorts, it affects the whole of them, and before peace can be restored, the one member must be set to rights. In this age of hurry, worry, selfishness and greed, it is a little hard to get or maintain good health, but there are certain rules which all may follow, and these rules must be studied from each individual's standpoint, for what will apply to one will not do for another. The study of hygiene and sanitation is of far greater importance than many of the fads taught so assiduously in the schools, but a few more generations must be sacrificed before our youths shall be liberated from the chains of ignorance with which our so-called wiseacres so heavily weight them down.

KITCHEN GYMNASTICS.

"Madam, you are not ill, but suffering from too much help in the kitchen. Dismiss one of your maids and try housework yourself for two or three months and report the results to me."

In accordance with the doctor's advice, Mrs. Farniente dismissed one of her maids and began to learn how to use a broom, a dusting cloth and her own muscles, which had grown limp and flabby from disuse. In the morning, Mrs. Farniente made beds and found that the various twistings of the torso, required by the exercise, caused her to take deep breaths and started her circulation, which had been sluggish for years. At the suggestion of her doctor, she left all the windows of the chambers wide open while she was making the beds, so she might have fresh air with her exercise.

For the first time in her life, she began to notice how many different muscles were called into play by the ordinary duties of housework. Later, she began to observe a decided improvement in her health and spirits, and at the end of two months she reported to her physician that no prescription she had ever had filled had helped her so much as the last one he had given her.

This is only one instance out of many thousands that have never been chronicled in print, in which the practice of a woman's natural gymnastics, housework, has changed a semi-invalid to a healthy woman.—*Good Housekeeping.*

SUGAR AS FOOD.

Some interesting experiments with reference to the nutritive value of foods containing sugar were recently made known at the instance of the War Office at Berlin.

It is a fact well known to Alpine tourists that on difficult climbing excursions an increased desire is felt for sweets and sweetened foods, and many who never touch such things at home devour large quantities of them on these tours. It is also frequently remarked that the guides eagerly appropriate any sugar that may be left over, and consume it on the journey. Whether the sugar afforded real benefit to the mountain climber was the subject of the German investigation; that is, did the consumption of sugar render the tired muscles capable of renewed exertion?

To answer the question conclusively, the subject of the experiment was not allowed to know that a test was being made. One day a sweet liquid, containing thirty grams of sugar, was adminstered; on the next a similar liquid, sweetened by saccharin to render it indistinguishable from the other, as far as taste was concerned, took the place of the sugar.

The result was a complete triumph for the sugar. It was found that a greater amount of work could be accomplished on the days when the sugar was given than on those when saccharin took its place. This serves as far as it goes to prove that sugar is food in a true sense, and that it is in particular food for the muscles.

MONEY IN MAKING RAG CARPETS.

Rag carpet is an article seldom seen in the city, but in the smaller towns and rural districts the homely combination of rags and twine is preferred to the more beautiful and expensive but less durable mill woven product. More than 20,000 people in the United States earn a livelihood by the individual manufacture of rag carpets and small rugs. Of these the greater number use the improved machinery, but at least one-fourth of them cling to the old fashioned hand loom of our grandmothers on account of the superior quality of its product.

Practically all of the workers are women, and the field is a good one for the woman thrown on her own

resources without sufficient education or ability to become a stenographer or a saleswoman. The work can be done at home, is less arduous and more agreeable than that of the kitchen maid, scrubwoman, or factory employé and offers a degree of independence and an income that is gratifying to a self-respecting woman.

The process of manufacture is simple, and a person of intelligence can master all details by a few days' observation. One with little capital can purchase an improved loom and all apparatus for $150 or $200 that will turn out twenty or more yards of carpet a day at a profit of from 15 to 25 cents a yard, or a hand loom can be built by any skilled woodworker for not more than $20 that will weave ten or twelve yards daily.

There is not such a great demand for rag carpet as there is for rugs. One woman in a western city has a novel plan out of which she makes a profitable business. She attends auction sales and buys cheap, worn, wool carpets, which she cuts into strips half an inch wide and weaves on a small hand loom into rugs, which she sells for a dollar each.

HEALTH AND BEAUTY.

Eating at regular intervals is more important for good digestion than the number of times each day or the quantity of food taken.

The most perfect form will be unattractive unless the skin possesses that brightness, polish and cleanliness which is its finishing touch.

A foot bath, providing a handful of common soda is added to the water, will very often relieve a severe headache, especially followed by a brisk rub.

Train the lungs to free, full and vigorous action. A human being can exist for days without food, but when the breath is cut off life ceases.

A good recipe for an antiseptic mouth wash is one part of thymol, twelve parts of benzoic acid, sixty parts of the tincture of eucalpytus, three parts of oil of peppermint and 400 parts of alcohol. Add a few drops to a glass of water and use for rinsing the mouth out night and morning.

Cotton serves as a better bandage than linen, for the reason that the linen more readily absorbs the albuminous serum in burns and skin diseases of a moist character thus keeping the surface dry and causing pain. It also absorbs the fatty substances used in dressings and thus prevents their action on the skin.

It often happens that a change in one's toilet soaps and powders will benefit the skin. When pimples appear again and again and the entire complexion seems to be thick with blackheads and pustules it is high time to go to a specialist and have the diseased tissues properly healed by means of massage and the proper applications and treatments. In the long run it will not cost any more than experimenting with lotions and ointments. Keep the digestive organs active, drink a great deal of water, bathe the entire body every day and keep the finger tips away from the eruptions. Open the pustules and apply hydrozone. Twice a week bathe the face with green soap. Don't use cold cream or anything oily when the acne persists. What is needed is some drying application like spirits of camphor to dry the poisonous liquids and to cause the old skin to shed itself in tiny particles.

FOUR HINTS WORTH TRYING.

Try turning down the wicks in your lamp when they are not in use, and you will find no oil collects on the outside of the lamp. The wick acts as a siphon to draw the oil up where it stops.

If your iron sink springs a leak do not buy a new one if the holes are small. Whittle some wooden plugs to fit the holes. The water will keep these swelled and they have been known to last for years.

Use a knitting needle to lift doughnuts from the grease. It will not perforate them like a fork and allow the grease to soak in. Also, three or four may be taken up at once and in that way they may be better drained and in less time.

Now that the day of the griddle cake is at hand again if you are lacking in a maple syrup supply try the following: One cup of white sugar, one cup of dark brown and one cup of water. Boil to the desired thickness and add two or three drops of vanilla when cool.

A NEW APPLE SAUCE.

Baked apple sauce is a very different dish from the ordinary stewed fruit. The *Boston Cooking School Magazine* gives a good recipe for the former. Pare and core the apples, cut in quarters, and put them in a deep crock with a cupful of sugar and half a cupful of water to two quarts of fruit. This is less sugar than stewed apple sauce requires, but the long cooking develops the natural sweetness of the fruit. Cover the crock closely and cook for an hour and a half, or until the apples are a deep red color. If they cook too fast, they will be mushy, but cooked slowly each piece will be left whole in a delicious syrup. Let the apples cool in the crock. Serve them with cream and hot biscuit or cake for dessert. For the filling of pies this sauce is considered very fine.

USES OF ORANGE PEELS.

Orange peels never should be thrown away. Before using orange peel the yellow rind off carefully and dry in moderately warm stove. When dry and cool store away in jar. When your tea is boiling drop in a slice in the water, and your tea will be delightful.

When making gravy for roast meats use a bit of your orange peel. When stewing dry fruits or for apple sauce a little slice of orange peel will make a rich flavor. When you boil a few slices of orange peel in water you obtain a wonderful remedy against indigestion or biliousness.—*Mrs. L. Vitak.*

FOUR HINTS WORTH TRYING.

If you find the glue cracking off, after drying, use one part of glycerine to four parts of the glue and this will be prevented.

If you have stained the window-sill by placing flower crocks on it, remove the stain by scrubbing with fine wood ashes and rinse with clean water.

Buy a nickel's worth of assorted corks once in a while from the druggist. You will get about a dozen and a half and will find them decidedly useful many times.

When the bottom of the deep flower vases become discolored from water standing in them, mix half a cup vinegar and a tablespoon of rock salt together and pour into vase. Shake and let stand a while and the sediment will come out.

For the Children

A BOY'S FIRST ROOM.

I've got a room, now, by myself,
A room my very own,
It has a door that I can shut,
And be there all alone:
It has a shelf, a closet, too,
A window just for me;
And hooks where I can keep my clothes
As neat as neat can be,
A lovely paper is on the wall;
A rug is on the floor—
If I had known how fine it was,
I'd had a room before.

I like to go there after school,
Way off from every one;
I felt—well—sort of scared at first,
But now I think it's fun.
The voices of the folks downstairs
Seem faint and far away.
I hear the rain upon the roof;
I watch the birds at play;
Oh, yes, it's often very still,
At night there's not a sound—
But I let mother in, of course,
When bedtime comes around.

Youth's Companion.

A JOKE ON "OLD BUTTY."

Elizabeth's father had a flock of sheep, and among them was an old ram that was very fond of butting. The boys loved to tease him and then take to their heels; but sometimes he was too quick for them. Once Olin got a bump that sent him flying into a thistle-patch. But it was Elizabeth who played the best joke on "Old Butty," as the children named him. She was out in the pasture one day and called to the ram, "Hallo, 'Old Butty'!" He looked up and started for her. Now, Elizabeth's heels were not very swift, but her head could do some quick thinking for a little girl of ten years. She ran to an old stump that was near, and over it she threw her large apron. On came "Old Butty." Here was a fine chance to give a telling blow. His head came up against the gingham drapery of the stump. Why, there stood the little girl smiling, even laughing! There must be some mistake. "Old Butty" tried once more, but still Elizabeth seemed to think it very funny. He was puzzled and disgusted, and back he went to the flock. The little girl walked to the house and told her joke on the ram, a joke that her brothers and sisters still like to tell now that she is a woman.

A BOY'S COMPOSITION ON GIRLS.

J. S. FLORY.

Girls are the most unaccountable things in the world—except women. Like the wicked fleas, when you have them they ain't there. I can cipher clean over to improper fractions, and the teacher says I do it first rate, but I can't cipher out a girl, proper or improper, and you can't either. The only rule in arithmetic that hits their case is the double rule of two. When they try to be mean they are as mean as purseley, though they ain't as mean as they let on to be, except sometimes, and then they are a great deal meaner. The only way to get along with a girl when she comes with her nonsense is to give her tit for tat, and that will flummix her; when you get a girl flummixed she is as nice as a new pie. A girl can sow more wild oats in a day than a boy can in a year, but girls get their wild oats sowed after awhile, which boys never do, and then they settle down as calm and placid as a mud puddle. But I like girls first rate, and I guess all boys do. I don't care how many tricks they play on me—and they don't care either. The hoity-toitiest girl in the world can't always boil over like a glass of soda water. By and by they will get into the traces with somebody they like, and pull as steady as an old stage horse. That is the beauty of them. So let'm wave, I say; they will pay for it some day, sewing on buttons, and trying to make a decent man of the fellow they have spliced onto; and ten chances to one if they don't get the worst of it.

THE RURAL LIFE

THE CORN.

RICHARD BRAUNSTEIN.

O! the rustle of the corn
On a cool September morn;
The tassels whisper to the leaves
Of mysteries unborn.
And the wind that softly blows
Through the arching sylvan rows
Breathes a greeting from the woodland,
Where the crimson sumac glows.

O! the drowsy noonday corn,
When the distant dinner-horn
Winds faintly 'cross the stubble fields,
All brown and newly shorn;
When the dreamy Autumn sky
Seems to shimmer with a sigh,
And the noonday heat has hushed to sleep
The cricket's rasping cry.

O! the silence of the corn,
When the moon's ethereal form
Bathes the peaceful fields in dimness
That is misty and forlorn;
In a leaden blackness gowned,
Like the shadow on the ground,
And the stalks, grim phantom guardsmen
Stand in solitude profound.

WHAT MODERN MACHINERY HAS DONE FOR THE FARMER'S WIFE.

HARVEST time, in days gone by, was a great strain on the farmer's wife. It is different now.

This is the thrashing season in southern Kansas and in the wheat fields of this section can be seen the busy crews hauling the shocked wheat to the machines and then hauling the grain away to the elevator or to the bin, says the Coffeeville correspondent of the *Kansas City Star*. The little cloud of smoke which used to mark the location of the thrashing engine over the hill can no longer be relied upon absolutely, for in many fields here the engines are hooked up with gas pipes and natural gas is burned instead of coal. In thrashing, as in everything else, the last few years have brought many changes and the task of getting the grain separated from the garnered sheaves has become an easy one compared to what it was ten years ago.

Where thrashing used to be considered an annual event and would call forth the combined assistance of all the men in the neighborhood, it is now little more than ordinary every-day affair, and the interest and enthusiasm that used to be anticipate the coming of the thrashers in the rural community has in this strictly commercial epoch given way to calculations on the amount of grain per acre or the price it will bring when sold to the nearest elevator.

Improved Machinery.

THE machinery of thrashing has been perfected wonderfully in the past few years and the "hands" that were formerly summoned long in advance of the great thrashing day are needed no longer. The crews once consisted of an engineer, water hauler, two separator men, two feeders, two cutters, three weighers, and three stackers. The forces have been reduced until now the only men who accompany the thrasher in its rounds through the wheat belt are the engineer, water hauler and separator man. The farmer, instead of spending a day driving over the community seeking all the help he can get as he used to do, now calls up his nearest neighbor, hires two or three teams and men to help haul away the grain and waits the coming of the thrasher with no more anxiety than he does the coming of the rural mail carrier or some other perfunctory event.

The thrasher these days is a self-feeding affair and when it has taken the grain from the straw it separates the two with all the skill and thoroughness that can be devised. The men with their wagons haul the shocks to the machine, throw in the sheaves and the machine does the rest. The band cutters and the feeders who used to face the rapidly revolving cylinder as they fed it with the loosened straw are no longer in the deal at all. The separator sends the grain to the scales, which dump it in thirty-pound lots into wagons, count it and thus calculate exactly the amount thrashed.

Building the Stack.

The straw is blown out at the other end of the machine through a long tube which revolves in a semi-circular form, building a crescent-shaped stack. Here three more men have been dispensed with. In olden days the straw fell from a moving ladder device at the end of the separator. Then later the ladder was made to travel in a crescent-shaped circuit, but three men had to be used to place the straw as it fell from the crane-like dumper. Now, however, there is a strong, large fan in the center of the separator from which the wind blows the straw through a long tube

out to the stack. The straw by this time is nothing more than a fiber, for the thrashing machine of today cuts it completely and breaks it up into chaff. No man could stand in front of this blower on a stack for the straw comes out more like dust than original stalks of wheat. Some of the farmers say that the new method of stacking loses them some of their wheat by blowing it out with the straw, but the thrashermen come back at this by saying that their machines of today thrash much cleaner than the old ones did and they thus offset any loss by stacking by getting so much more grain out of the straw.

Cost of Thrashing.

There has been no advance in the price per bushel for thrashing because the machines can do so much more work in a day than they used to. The charge here is three cents a bushel for wheat and two and one-half cents for oats. The thrashermen, however, have caught the spirit of the times and are talking of organizing and demanding four cents for wheat and three cents for oats. The capacity of the machines runs all the way from 600 to 1,800 bushels of grain a day, and at this price the men owning them can prosper. The new machines can be set up quicker than formerly and offer much less danger from fire. The farmer has to furnish coal for the engine where no gas is used. This is working hardships on some of the farmers, for in the gas towns of this section there are few dealers who handle coal at any time of the year, to say nothing of having it on hand in the summer.

Farmer's Wife Profits.

The farmer's wife also profits by the new era in thrashing. Formerly she bore the brunt of the day's work in having to cook for all the thrashing crew and the other hired men. Now the thrashing gangs carry their own kitchen wagons and get their meals out in the fields. The farmer's wife has only the usual number to cook for, and it is a safe statement to say that she appreciates more than any one else this relief from the trials of the old-time thrashing season.

FARM LIFE A CENTURY AGO.

Life on farms and in villages a hundred years ago was very different from that of the present day. The houses were built of logs, the chinks daubed with clay, the roof thatched with grass, or, in the case of the more prosperous owners, the logs were hewn square, so as to need no chinking, or a frame of heavy timbers, sometimes eighteen inches in diameter, was made. Two small, lead frames, set with diamond-shaped panes of glass or oiled paper, served for windows.

The principle rooms were the kitchen and best room. The chief feature of the kitchen was the great fireplace. The room was six or seven feet high, and from the joists hung bunches of herbs and seed-corn and strings of dried apples. The furniture usually consisted of a tall wooden clock, a dresser or sideboard, a spinning wheel, some wood chairs, a wooden table with hanging leaves, and sometimes a loom for weaving. There was no carpet in the best room of a hundred years ago, but the floor was sanded and marked off in some simple design. The andirons before the fireplace shone like gold, and the fireplace itself, in summer time, was filled with feathery branches of asparagus.

The course but plentiful food of those days was usually served on wooden platters. It consisted mainly of salt pork or beef, salt fish, vegetables, "rye-and-Indian" bread or "bannocks," which was something like the present "hoecake" of the South, and bean porridge. Tomatoes, called "love apples" were cultivated only for the beauty of their fruit, as they were thought to be poisonous.

Sweet corn, rhubarb, head lettuce and the finer varieties of pears, grapes and peaches were unknown, and the foxgrape was considered a luxury. There was no thought of ice in summer, and the butter was kept cool by hanging it in a pail down the well. The flowers that filled the garden and delighted the eyes of our great-grandmothers were single hollyhocks, pinks, sweet-williams, sunflowers and peonies and lilacs.

CARE OF CALVES.

Why Seven Guernsey Heifers Were Sold at Good Prices.

In March last two men came into this neighborhood looking for grade dairy calves, says a correspondent of *Hoard's Dairyman*. They were men who knew what they wanted. They purchased seven grade Guernsey heifers, dropped last fall, of one man and paid him an average of $24.28 for the lot. At the same time they said they could purchase calves of the same breeding and age of neighboring farmers for from $10 to $15 a piece.

What made the difference in price? Simply the way the calves were handled. The seven calves were handled as follows:

They were kept dry and clean with plenty of fresh bedding every night and their quarters well kept, well disinfected.

They were fed skim milk fresh from the separator, after the first ten days, with a little ground flaxseed and blood meal added.

When the milk was fed they were put in stanchions and the milk set before them in pails. Afterward they were given a small feed of oats, followed by alfalfa hay. But the great care was to keep them dry and clean. As soon as they were through eating their oats they were let out of the stanchions and ran together loose in the compartment.

They were fed milk morning and evening. When

sold they were in fine, clean condition, but not fat. They consumed apiece in the six months they were kept about 3,500 pounds of skim milk, one dollar's worth of oats, two dollars' worth of alfalfa hay and flaxseed meal and fifty cents' worth of blood meal.

After paying for the oats, hay, flaxseed meal and blood meal, $3.50, and allowing $3 for the value of the calf when a week old—the price allowed by calf-buyers—we have $17.78 per calf as pay for 3,500 pounds of skim milk and the labor.

Twelve calves were kept in the compartment. Does it pay to make a little study of calf life?

DAIRY NOTES.

It often happens that the dairy cow suffers from cramps of the muscles, especially of the neck and sometimes of the hind legs. This can be overcome by giving an ounce of bromide of potassium in the bran mash twice each day for ten days.

Cart away the manure as fast as a load collects around the barn. It is better for the soil to cart it out at once and there is less danger of odors around the barn during the hot weather. After small grain harvest there is generally a good place to apply the manure on the stubble field.

Raw linseed oil is the best remedy for constipation. It acts more quickly than any of the other simple remedies. The cow, having a very complicated digestive tract, is very hard to treat for any bowel trouble, but raw linseed oil will usually act in from ten to twelve hours. Give a half pint at a dose and repeat in three or four hours till relief is brought.

There is no danger of using too much disinfectants around the dairy barn. Air-slacked lime is one of the very best disinfectants that can be used. Crude carbolic acid in warm water is also good. About a tablespoonful to a gallon of water is effective. Bichloride of mercury at the rate an one ounce to each eight gallons of water is another mixture that will prove death to germs.

WHAT FIFTY HENS DID.

During 1905 my fifty hens of the Barred Plymouth Rock variety, produced 6,952 eggs, which brought in cash $121.10; chicks sold on the market, $8.65; thirty pullets kept for use, at sixty cents each, $18; twenty-five bushels of hen manure, sold at twenty-five cents per bushel, brought $6.25. Total receipts, $154. Grain fed to hens, including meat scraps, $44.61; net $109.39, or $2.18 profit per hen for the year. These hens are kept in the yard the year round. This is a pretty good showing for a woman in her seventy-first year.—*Mrs. C. L. P., in Weekly Times.*

FEEDING MILK CATTLE.

Green food seems to demand more salt than dry. It does not cost much. The cows should have all they will use. The cow of good milking strain, with a good appetite, will do her best if she has plenty of variety in feed which she enjoys. The more food consumed the more milk she will give.

Feeding Alfalfa Hay.

At an experiment station it was found that the cost of producing milk and butter could be greatly reduced by replacing part of the concentrates in the daily ration of the cow, with some roughness rich in protein, such as alfalfa or cowpea hay. In substituting alfalfa hay for wheat bran it will be best in practice to allow one and one-half pounds of alfalfa to each pound of wheat bran, and if the alfalfa is fed in a finely chopped condition the results will prove more satisfactory.

Dry Feed in Summer.

Cows seem to long for dry feed in summer and even when in luxuriant pasture will eat considerable hay of very common quality if it is supplied them night and morning in the barn. Dry hay is an excellent regulator of the diet and should be furnished as long as the cows will eat it. With a fair amount of dry feed the pasture will maintain an increased amount of stock in full yield of milk.

The Silo Question.

The silo provides a feed that the cows will eat freely because it tastes good, not because they are starved to it, said a noted dairyman. If dried corn were considered as good as canned corn we wonder why some of our factories pay out $125,000 or more per season for tin cans, all of them to be thrown in the ditch when emptied. In like manner, if dry fodder is as good and valuable as silage, why do the best dairymen all over the country buy silos? They are keen business men—in fact, the business men are the first to see the silo merits.

A Cow Ration.

A well known eastern dairyman says: For cows weiging 1,000 pounds and giving twenty-five pounds of four per cent milk daily, a ration consisting of twenty-five founds silage, ten pounds mixed hay, four pounds each corn and oats and one pound of cotton-seed meal would be about right.

EGGS IN WINTER.

At an Illinois state farmers' institute the reader of an essay on poultry gave his method of feeding to get eggs in winter. Take one part of corn and two parts of oats and have them ground together quite fine. To 200 pounds of this add 100 pounds of ground wheat or of bran and middlings. To 10 quarts of this

mixture add 1 quart of animal meal, and moisten with skimmilk if you have it. Feed this in the morning in V-shaped troughs, giving as much as they will eat in fifteen minutes, and gather up what is left at that time.

At noon, give green feed of cabbage, beets or turnips cut up. An hour later give light feed of small grains, scattered in chaff or straw. The night feed, at 3:30 P. M. is equal parts of wheat, oats and corn, scattered in the straw so that they will work until dark to find it. Keep oyster shells where they can pick them when they please. Have dust bath of road dust or coal ashes for them, and provide plenty of fresh water. Use kerosene oil on the roosts and insect powder in the nests. With early hatched pullets or young hens through their moult this gives eggs all winter.

CULLING THE HERD.

It is the constant aim of progressive dairymen to improve their herds, and such improvement must depend largly upon culling the herd and getting rid of the unprofitable animals. From the breeders' standpoint records are especially valuable in assisting in finding customers for their stock. Many buyers insist on seeing records of dairy performance before purchasing.

There is no coinage in any kingdom that comes out so finely marked, or rings so clear as that human currency which bears the mint-mark of a Christian home.

FUNNYGRAPHS

"My wife simply pelted me with beautiful flowers when I came home from the club last night." "How nice!" "Not much. They were all in flower pots."

Molly—"When you spoke to father did you tell him you had $500 in the bank?" George—"Yes." Molly—"And what did he say?" George—"He borrowed it."

Young Gotrox (admiring picture in parlor)—"Does your sister paint, Margie?" Little Margie—"Yes, sir; but she's finished now, and as soon as she puts a little powder on she'll be right down."

A colored preacher took some candidates for immersion down to a river in Louisiana. Seeing some alligators in the stream, one of them objected.

"Why, brother," urged the pastor, "can't you trust the Lord? He took care of Jonah, didn't he?"

"Y-a-a-s," admitted the "darky," "but a whale's diff'rent. A whale's got a mem'ry, but ef one o' dem 'gators wus ter swaller dis nigger, he'd jes' go ter sleep dar in de sun an' fergit all 'bout me."

"If you look over the hedge of that fine estate you can see the trust magnate who lives there taking the air." "Goodness! I hope he will leave enough of it for the rest of us to breathe with."

Manager—"I can't do a thing with Smith, the new clerk. I've had him in three departments, and he sleeps all day long." Proprietor—"Put him at the pajama counter and fasten this card on him: 'Our night clothes are of such a superior quality that even the assistant who sells them cannot keep awake.'"

"Your family plays the piano late every night," said the visitor. "Yes," answered the suburban resident, "we're trying to keep the people next door up so that they will be too sleepy to mow the lawn in the morning. And they're trying to mow the lawn so early that we won't feel like playing at night."

"I am afraid you don't like work." "Yes, I do," answered Plodding Pete; "I have so much respect for work that when I see a piece of it to be 'tended to I allus feel like turnin' it over to somebody else that wouldn't be as likely to spoil it as I would."

"Grandpa says his stay in the mountains did him no good. His room was right off the piazza, and people made love under his window until all hours." "But couldn't he sleep after the lovers went to bed?" "No; as soon as the lovers went to bed the children got up."

Mrs. Youngbride (sobbing)—"That horrid Mrs. Falsetop has broken up my home." Horrified Friend—"You don't mean to say she has enticed away your husband from you?" Mrs. Y.—"No-o-o! It's worse than that! It's the cook!"

"Explain," said the teacher to the class, "the difference between 'the quick' and 'the dead.'"

"Please, ma'am," answered Johnnie, "the quick is them as gets out of the way of motor-cars, and the dead is them as doesn't."

The visiting missionary at an almshouse stopped for a moment to speak to a very old lady and inquired after her health and welfare. "Thank you, sir," replied the old lady. "Yes, indeed, I've a great deal to be thankful for. I've two teeth left, and they're opposite each other."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

Wanted—Matron. Man and wife to cook. Fireman. Fine position. Address: McPherson College, McPherson, Kansas.

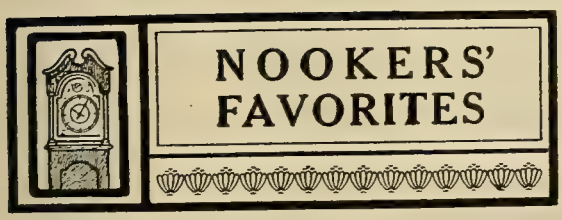
The Other Half of the Globe

BY



D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

OVER THE HILL TO THE POOR-HOUSE.

Over the hill to the poor-house I'm trudgin' my weary way,
I, a woman of seventy, and only a trifle gray,—
I, who am smart an' chipper, for all the years I've told,
As many another woman that's only half as old.

Over the hill to the poor-house,—I can't quite make it clear!
Over the hill to the poor-house,—It seems so horrid queer!
Many a step I've taken a toilin' to and fro,
But this is a sort of journey I never thought to go.

What is the use of heapin' on me a pauper's shame?
Am I lazy or crazy? am I blind or lame?
True, I am not so supple, nor yet so awful stout;
But charity ain't no favor, if one can live without.

I am willin' an' anxious an' ready any day
To work for a decent livin', an' pay my honest way;
For I can earn my victuals, an' more, too, I'll be bound,
If anybody only is willin' to have me around.

Once I was young an' han'some,—I was, upon my soul,—
Once my cheeks were roses, my eyes as black as coal;
An' I can't remember, in them days, of hearin' people say,
For any kind of a reason, that I was in their way.

'Tain't no use of boastin', or talkin' over free,
But many a house an' home was open then to me.
Many a han'some offer I had from likely men,
An' nobody ever hinted that I was a burden then.

An' when to John I was married, sure he was good an' smart,
But he an' all the neighbors would own I done my part;
For life was all before me, an' I was young an' strong,
An' I worked the best that I could in tryin' to get along.

An' so we worked together; and life was hard, but gay,
With now an' then a baby for to cheer us on our way;
Till we had half a dozen, an' all growed clean an' neat,
An' went to school like others, an' had enough to eat.

So we worked for the childr'n, and raised 'em every one;
Worked for 'em summer and winter, just as we ought to 've done;
Only perhaps we humored 'em, which some good folks condemn,
But every couple's child'n's a heap the best to them.

Strange how much we think of our blessed little ones!—
I'd have died for my daughters, I'd have died for my sons;
And God he made that rule of love; but when we're old an' gray,
I've noticed it sometimes somehow fails to work the other way.

Strange, another thing; when our boys an' girls was grown,
And when, exceptin' Charley, they'd left us there alone;
When John he nearer an' nearer came, an' dearer seemed to be,
The Lord of Hosts he come one day an' took him away from me.

Still I was bound to struggle, an' never to cringe or fall,—
Still I worked for Charley, for Charley was now my all;
And Charley was pretty good to me, with scarce a word or frown,
Till at last he went a courtin', and brought a wife from town.

She was somewhat dressy, an' hadn't a pleasant smile,—
She was quite conceity, and carried a heap o' style;
But if ever I tried to be friends, I did with her, I know;
But she was hard and proud, an' I couldn't make it go.

She had an edication, an' that was good for her;
But when she twitted me on mine, 't was carryin' things too fur;
An' I told her once, 'fore company (an' it almost made her sick),
That I never swallowed a grammar, or et a 'rithmetic.

So 'twas only a few days before the thing was done,—
They was a family of themselves, an' I another one;
An' a very little cottage one family will do,
But I never have seen a house that was big enough for two.

An' I never could speak to suit her, never could please her eye,
An' it made me independent, an' then I didn't try;
But I was terribly staggered, an' felt it like a blow,
When Charley turned ag'in me, an' told me I could go.

I went to live with Susan, but Susan's house was small,
And she was always a hintin' how snug it was for us all;
And what with her husband's sisters and what with childr'n three,
'Twas easy to discover that there wasn't room for me.

An' then I went to Thomas, the oldest son I've got,
For Thomas's buildings'd coved the half of an acre lot;
But all the child'n was on me—I couldn't stand their sauce—
And Thomas said I needn't think I was comin' there to boss.

An' then I wrote to Rebecca, my girl who lives out West,
And to Isaac, not far from her some twenty miles at best;
And one of 'em said 'twas too warm there for any one so old,
And th' other had an opinion the climate was too cold.

So they have shirked and slighted me, an' shifted me about—
So they have well-nigh soured me, an' wore my old heart out;
But still I've borne up pretty well, an' wasn't much put down,
Till Charley went to the poor-master, an' put me on the town.

Over the hill to the poor-house my childr'n dear, good-bye!
Many a night I've watched you when only God was nigh;
And God'll judge between us; but I will always pray
That you shall never suffer the half I do to-day.

—Will M. Carleton.

An Encyclopedia Within Your Reach at Last!

COMPLETE IN EIGHT VOLUMES. SIZE 8x5¾ INCHES.

Over 4,100 double-column pages. Hundreds of illustrations.
Extra Cloth Binding. Beautiful Full Gilt Backs.
Weight 16 Pounds. Packed in Wooden Case.

THE NEW AND COMPLETE

Universal Encyclopedia

(SELF-PRONOUNCING)

Edited by Chas. Annandale, LL. D., Isaac Thorne Johnson, M. A., Walter Hart Blumenthal, B. S. E., and a corps of eminent specialists.

(Complete in eight volumes.)

This Cyclopedia stands alone in freshness and variety of matter presented in concrete form. It is the only Cyclopedia making a petext of being published in recent years.

IT CONTAINS NEARLY DOUBLE THE NUMBER OF ARTICLES FOUND IN THE ENCYCLOPEDIA BRITANNICA

IT TELLS ABOUT every subject in Science, Art, History, Philosophy, Biography, Geography, Mathematics, Law, Chemistry, Medicine, and scores of other subjects, all of which are treated simply, thoroughly and concisely.

FOR HOME, SCHOOL, OFFICE AND LIBRARY

The Universal Encyclopedia fills the need for an up-to-date, well digested, exhaustive, condensed work.

The correct pronunciation of all obscure words; the variety of subects explained and the simplicity of the explanations; the convenient size of the volumes, the clear print, and beautiful bindings, the **"within the reach of all" price,** all tend to make it **THE GREATEST PUBLICATION OF THE CENTURY.**

The Universal Encyclopedia comprises eight volumes, 8x5¾ inches in size, over four thousand double-column pages, **FULLY ILLUSTRATED,** and is printed on extra quality of book paper.

Bound in Cloth, With Full Gold Stamping on Back.

SECOND EDITION

Annual Meeting Report

On account of the great demand for the report of our late Conference held at Los Angeles, California, we are compelled to run a second edition. The report is of more than ordinary interest this year for several reasons:

1. On account of the unique location.

2. The important questions discussed.

3. The valuable information along educational and Sunday-school lines.

4. On account of its value as a reference book.

If you have not sent your order, do so at once, for this edition will not last long and there will be no more published.

Webster's Unabridged Dictionary

This is the original Webster's Unabridged Dictionary, with supplement and revises by Chauncey A. Goodrich, of Yale College. An American dictionary of the English language, containing the whole vocabulary of the first editions and the corrections and improvements of later editions. To this is added a table of synonyms, peculiar use of words and terms of the Bible. If you do not care to spend $9.00 or $10.00 for Webster's International Dictionary, which is the latest and best made, then get this book, which, for nearly all practical purposes, will serve you quite as well. It is printed from good, clear type and contains 1,600 pages. Cloth, $1.25.

Brethren Publishing House, :: Elgin, Illinois

The STORY of the HYMNS and TUNES

By Theron Brown and Hezekiah Butterworth

A new book that will interest and bring joy to all lovers of music.

In the introduction Mr. Brown writes: "In the following pages no pretense is made of selecting all the best and most used hymns but the purpose has been to notice as many as possible of the standard pieces, and a few others which seem to add or reshape a useful thought or introduce a new strain." The story of hundreds of hymns with their tunes are given. The portraits of twenty-four noted musicians are inserted in the book.

The book contains nearly 600 pages and is bound in good cloth binding.

The fine gilt top and gilt stamping on the cover makes it a very attractive book.

If you are a lover of music you will want this book.

Price, prepaid, ...$1.50

BRETHREN PUB. HOUSE, Elgin, Illinois.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,
CHAS. B. WESTOVER, Pres.

Colfax, Ind.

OR

Geo. L. McDonaugh,
Colonization Agent
UNION PACIFIC RAILROAD
Omaha, Neb.

Who will accompany the excursion through to California. NEW descriptive printed matter FREE. "Write for it."

SNAP SHOTS OF BUTTE VALLEY

Bro. Early's Garden, with Buildings in the Distance.

The accompanying photographs recently taken give a very good idea of the growing vegetation in Butte Valley. You remember that the latter part of March and even the forepart of April, the land where these vegetables are now standing was in sagebrush. This all had to be cleared, the ground broken and the vegetables planted. Bro. M. D. Early, who owns this garden, was exceedingly busy with the business of the Company in caring for visitors, etc., that the proper amount of attention was not given to the Experimental Station. The majority of this garden was planted just a short time before going to Annual Conference. In one of these photographs you will notice sugar beets which show every evidence of being well filled with saccharine qualities. To the right in the sweet corn, stand Mr. and Mrs. Early with whom many of the readers are acquainted.

In the next photograph are to be seen tomatoes, beans, turnips, cabbage, rutabagas, lettuce, potatoes, vegetables oysters, beets, peas, etc. The facts are that this garden was cultivated once and partly irrigated once.

As above stated, the abundance of visitors to the Valley, the attention requires to treat them cordially, in assisting them to make purchases of homes, select building sites on what they had already purchased, etc., rendered it impossible for them to give the proper amount of attention to the gardens; yet Bro. D. C. Campbell last week brought from the Valley direct from this garden, a radish, measuring fifteen inches in length which is of the second sowing; also a turnip measuring seventeen inches in circumference and weighing sixteen ounces. The radish was not sixty days old from time of planting, and the turnip was of the second sowing. He also brought some very excellent peas and a fine lot of samples of wheat from the fields of H. F. Maust, John Campbell, Mrs. Wolfe and others, and some fine oats from his own farm. If possible we will show you some more pictures in a week or so of some of their wheat fields. Several of the brethren say that this wheat that was just coming up at the time of the Annual Meeting will average thirty or thirty-five bushels to the acre.

Bro. and Sister Early Standing in Their Garden.

We may show you, in the near future a photograph of their Fourth of July service in the woods. You will no doubt be glad to recognize the faces of some of your friends. An excursion of some forty or fifty brethren and friends will leave Chicago on Sept. 12, at 10 P. M. and Bro. D. C. Campbell will have charge of the excursion to Butte Valley. If you would like to accompany this excursion please write Bro. Geo. L. McDonaugh, Omaha, Nebr.

SECOND EDITION

Annual Meeting Report

On account of the great demand for the report of our late Conference held at Los Angeles, California, we are compelled to run a second edition. The report is of more than ordinary interest this year for several reasons:

1. On account of the unique location.

2. The important questions discussed.

3. The valuable information along educational and Sunday-school lines.

4. On account of its value as a reference book.

If you have not sent your order, do so at once, for this edition will not last long and there will be no more published.

Lomita California

In nearly all parts of this Coast country, and in fact in most places west of the Missouri River, the alkaline properties in the soil are abundant. California is not exempt from alkalis. Hence in purchasing a home one should be certain of natural drainage facilities. If the ground is too level you are likely to suffer loss from alkali. Agents will try to persuade you with theories and sometimes with much worse than theories, but you insist on drainage. You Eastern people, fathers and mothers especially, well remember the old ash hopper. When soap making time came round the father or the boys had to fill the ash hopper with stove wood ashes and then pour on water to get the lye with which to make soap. Mother made the soap and it was a dirt killer sure. Well, out on this Coast if you have fall enough in your land, you can make ditches to carry off the alkalis when you irrigate, but if you have not sufficient decline in the surface to leach out the extra potashes you can be certain the waters you put on your land will bring up the alkali and this will eat up your trees and vegetation. Good drainage will permit the surplus water to go out below and carry away the alkalis. Now at Lomita there is good drainage. The tract lies from 70 to 200 feet above the sea, and the surplus water is carried out and whatever alkali may be in excess, is harmless. We have not yet discovered any alkali, but if it is in the soil it cannot come up and do harm. Drainage is so good that any hurtful properties will be carried away. Any land in Southern California that descends at the rate of six to ten or more feet to the mile can be kept free from injury by alkali. We are explicit about this because we have been asked concerning alkali at Lomita. Some potash is necessary in any soil but its excess is not necessary, and the management of the extra amount is what the settler needs to be concerned about. You can manage it at Lomita or rather nature manages it for you. It certainly is a pleasure to work with nature and to have her do so much for you. No drainage ditches are required here. The road graders are very busy putting our streets in good condition, and the sidewalk and curb builders are busy in town, and the well drillers struck 60 feet of water at 155 feet depth but are going on down into the gravel bed where the water is exhaustless in quantity, houses are being built and lands sold right along. Our hopes are being verified. And the outlook is very encouraging.

However, we should like to see more of the Brethren lay hold of this opening for homes in acreage. It was offered them in good faith as beginners, but as other industrious people are seeking homes, we cannot shut them out, hence a number have taken hold with the members who are there and doubtless others will get in, for Californians know these good things, because they have studied intensive farming and saw much of it the past twenty years. A man from Riverside traveled through the colony one day, and stopped to get a drink out of M. M. Eshelman's well of pure water. He made some inquiries, looked at eight acres, and chose it, saying, "The price is all right." He easily apprehended because he was informed as to the value of twelve-month farming lands. It is not acres alone,—not the big body of land that each man needs here but the acreage well farmed, so conducted that he has an income all the time. The possibilities are great where the soil is rich, the water abundant and the mind willing to employ these elements. The time is coming when the "big farming" will be done mainly on small acreages. As the population increases, more homes will be necessary, and better farming must be done, and a higher state of exercise in mind applied. A good farmer works his head more and his hands less each year. He studies how to get the most out of his soil with the least muscle exercise.

The interest of the people who live near Lomita is commendable. All seem glad at the opening and prospective growth. They know it means a happy, prosperous community in due time, a community that carries with it, social, religious and cultural qualities. We are still willing to give you all necessary information and to do business that will be mutual. Address:

Join Our Party Sept. 17th

And investigate the possibilities of the TWIN FALLS, north side tract to be thrown open for settlement

October 1

150,000 Acres of Land Under the Carey Act will be Thrown Open for Entry on that Date

This will be a great opportunity to the settler to secure a Homestead in a mild, equable climate, where crops grow to perfection by irrigation. No failure of crops on account of drought. This tract is on the North side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho.

The Brethren

should now be arranging to go to the opening of this 150,000 acres of land on the Twin Falls, North Side Canal for it will be taken up quick when once opened. Be there ready for entry Oct. 1.. A good sized party have already made arrangements to go.

These lands are sold at 50 cents per acre and the water right $35.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms. Crops of all kinds are grown to perfection. Fruit growing is a success as well as the growing of sugar beets. To see these lands, take the Oregon Short Line, R. R., to Minnedoka; there change cars for Milner or Twin Falls.

"WE MADE NO MISTAKE"

Twin Falls, Idaho.

Twin Falls Land and Water Company.

Gentlemen: On the 6th day of April, 1906, I landed on the Twin Falls Tract to stay. I had been here twice during the winter "to see" and thought I had seen the opportunity of a lifetime for a man of small means to make a profitable investment and establish a comfortable home. Our experience has convinced us that we made no mistake.

Respectfully,
John R. Newton.

Pullman, Washington.

C. O. Morrell, Twin Falls, Idaho:

Professor Fulmer, Chemist, of Washington State University, has made his seventh test of soil from lands under the Twin Falls Canal system. He finds a small trace of alkali and thirty percent more plant producing qualities than in the Yakima Valley, and there is only one place on the Pacific coast where it is equaled, and that is in the Pajaro Valley in California. A. T. Farris.

Mr. B. F. Hurst, Fruit Inspector of Dist. No. 5, of Idaho states: "The Southern part of Idaho is second to no other part of the known world as a fruit producer, both in variety and quality."

HOMESEEKERS' ROUND TRIP TICKETS

will be sold to points in Idaho on 1st and 3rd Tuesdays of each month in 1907, good going, leaving selling station on date of sale and for return passage, leaving destination on day of execution which must be within final limit of 21 days from date of sale.

THE INGLENOOK

VOL. IX. SEPTEMBER 3, 1907. NO. 36.

When I Have Time

When I have time, so many things I'll do
To make life happier and more fair
For those whose lives are crowded now with care;
I'll help to lift them from their low despair,
When I have time.

When I have time, the friend I love so well
Shall know no more the many toiling days;
I'll lead her feet in pleasant paths always,
And cheer her heart with words of sweetest praise,
When I have time.

When you have time the friend you hold so dear
May be beyond the reach of all your sweet intent;
May never know that you so kindly meant
To fill her life with sweet content
When you had time.

Now is the time. Ah, friend no longer wait,
To scatter loving smiles and words, or cheer,
To those around whose lives are now so dear;
They may not meet you in the coming year.
Now is the time.

Eleanor West, Smile Specialist

"ONE, two, three, four, five holes in that pair! Papa Doctor, do you think red darning-cotton looks artistic on a background of brown?"

Doctor West looked up from his medical magazine, glanced with a smile at the decorated sock, then let his eyes rest on the laughing face above it. "It certainly sets forth the fact that my daughter is an artist," he solemnly declared. For some reason he did not turn back to the fascinations of the medical magazine. "Do you get tired of it, daughter?" he suddenly inquired. "Your work at home is pretty humdrum."

"As if taking care of a Papa Doctor could be humdrum!" Eleanor exclaimed indignantly. There was a silence; then under the influence of those questioning gray eyes she admitted: "Well, I'll confess, Papa Doctor, that when I hear John and Alice talk, it does gives me vague and soulful longings for a career. Not one that would take me away from home, you know; I wouldn't leave you, Papa Doctor, for twenty careers. You see, John is famous as an eye specialist, and Alice in literature; but poor, little, insignificant me, I have no prospect of ever being famous in anything. You see, I have lots of spare time, and if I was only an artist or a writer, I might have a career too."

The doctor smiled at the mock-doleful tone. "I can suggest a career that you are eminently fitted for; in fact, you are a past master in the profession now, and it is one that this old world needs even more than it needs eye specialists," he remarked half-humorously. "How would 'Eleanor West, Smile Specialist,' do for a sign? Watch the faces about you, and see if you do not think there is demand for such a profession."

Eleanor laughed at the queer conceit; but the next day she could not get the suggestion out of her head. She found herself watching for the faces that "needed a smile," and was surprised to find how many of them there were.

"I guess Papa Doctor was right; this old world does seem to need a few specialists of that kind."

The next week was one in which the busy doctor had scarcely a moment of leisure; so it was nearly two weeks before there came another evening when he could settle comfortably down in his own sitting-room in his own easy chair.

"Now, Papa Doctor, you needn't think you are going to bury yourself in any medical magazine this evening," Eleanor exclaimed rebelliously as he picked up a magazine. "You went to sleep last evening when I wanted to talk to you ever so much, so now you have to do penance and listen to me for two hours with never a chance for a look into that old medical journal," she warned him with mock severity.

The doctor laid down the journal with an assumed air of resignation.

"Allow me to present you with one of my professional cards," Eleanor remarked, gravely handing him a bit of cardboard on which was neatly lettered, "Eleanor West, Smile Specialist." "I don't distribute these to the general public," she explained. "I just keep one tucked in the corner of my mirror to remind

myself of my vocation; and you have no idea how fascinating it is, nor how many cases there are that need treatment."

"The first one was Mrs. Watson. She was having a headache, the baby was cross, the cake she baked fell; I didn't very much blame the corners of her mouth for drooping as they did. I prescribed an hour's nap while the baby and I looked after the cake. It didn't take very long to coax a smile to the baby's face; it was a pretty sticky smile, owing to the frosting-dish, but it was genuine. And at the end of the hour his mother smiled, too. And you have no idea, Papa Doctor, what fun it is to watch the metamorphosis. There, doesn't that sound learned? And it took so little to cure them, too; lots of times only a smile, or a 'good morning,' or a wee bit of help or encouragement.

"But there were some cases that were harder than those," she went on. "Some that made me think I wasn't wise enough to be a smile specialist; it does take such a lot of wisdom to know what to prescribe sometimes, and you know Papa Doctor, I never was very wise."

There was a very tender light in the doctor's eyes as he answered the troubled question in the blue eyes. "You have wisdom of the heart, daughter, and that is better than any wisdom of the head."

"There was Tom Wentworth," Eleanor went on. "He was here on an errand last Friday, and his face was so hard and set I knew something must be wrong. At first he was dreadfully glum and wouldn't talk, but it wasn't very long before he started in and told me the trouble. It was about school. You see, Tom had been suspended until he would apologize before the school for some piece of mischief. Well, you know how stubborn he is; he declared he wouldn't apologize, so, of course, that would end school for him this year. He is in the graduating class, and expected to go to college next year; so his folks felt dreadfully. Tom felt dreadfully himself, but he had said he wouldn't apologize. I suppose the medicine I prescribed was pretty bitter, and I didn't expect Tom would take it. But he did, and the cure was complete. You should have seen the broad smile on his face when he came in to tell me about it after school. You see, he apologized, and Professor Curtis shook hands with him and was ever so nice, and the pupils all seemed so glad to see him back."

There was silence for a few minutes. The doctor's hand gently stroked the fair hair, and his keen eyes were misty. By and by he inquired, "And were there any more important cases?"

Eleanor nodded. "Oh, yes, there were ever so many more!" Then she laughed as at some funny reminiscence. "You know that queer groceryman on the corner who always looks so cross. Well, I made up my mind that he must smile. But it is too funny! You see, his smiling muscles have got stiff from non-use, and they work as if they needed oiling. I always want to laugh. But if I can keep him exercising them enough, I think perhaps they will get in easy working order in course of time. His is a chronic case, you see, and we couldn't expect to cure it in one day.

"Then another one is old Mrs. Riley. It's just possible that she knew how to smile once, but she forgot years ago. I'm not sure but the smiling muscles are paralyzed. I've tried every way I could think of to get her to smile, but I havn't had a bit of success. I'm not going to give up, though.

"Now, Papa Doctor, you have done penance nobly, and I will let you rest and read while I go and set bread." She flitted away, followed by her father's adoring eyes.

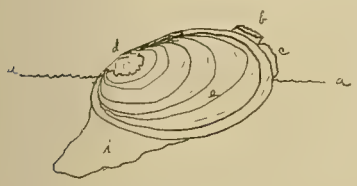
Several weeks afterwards, both Alice and John sent word that they were coming home for a short vacation. Both had become famous in a small way, and their home town determined to do them honor. The doctors of the town arranged a banquet in John's honor, and the ladies planned a reception for Alice.

"Doctor West ought to be proud of his children," a lady remarked during the informal discussion of the plans. "Not many fathers can boast of two famous children."

"Don't you dare speak as if Eleanor was not the equal of the other two," Mrs. Rankin spoke up quickly with warm partisanship. "It is true our town is proud of Alice and John, but I believe we are all still more proud of Eleanor, and I really believe she is doing even more to make life worth while than they are. Do not think I am belittling John's and Alice's work," she added hastily. "I am not. I think they are both doing a great work in the world, but I really think that Eleanor is doing a greater. She scatters courage and faith and kindness everywhere she goes, and the world needs those more than anything else."

There was a chorus of appreciation from every side. Each had a story—yes, many stories—to tell of courage and help received from Eleanor.

"Let's give a reception for Eleanor, or a banquet, and have toasts and let her know we appreciate her," impulsive Mrs. Sherwood proposed enthusiastically.



But Mrs. Rankin shook her head. "I do not think we could express what we feel toward Eleanor by banquets or receptions," she objected. "It is something too deep and tender to be expressed in that way."
—*Adapted from the Circle.*

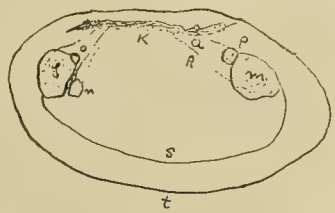
Most people want large guaranteed slices of life. They would not be satisfied as the children of Israel were with manna fresh every day—they want grain elevators filled with daily bread.

The Marks and Scars of a Mussel's Shell

N. J. Miller

ANYONE who has examined the resistant shell of the fresh-water mussel recognized various lines and scars on both surfaces. These have more or less meaning involved in the development, experiencce and anatomy of the animal. The small elevations (*d*), perhaps, are the first to be recognized. They (umbones) are the oldest portion of the shell, some of which was formed before the mussel began its sedentary life. They enclosed the entire animal for about the first six or twelve months of its existence. From the egg the animal developed into a small form (*v*) with two valves, each provided with teeth (*u*). Finally, dropping from its parent's gills to the bottom of the water it met a fish nosing along the sand and mud. Since the latter didn't succeed in gulping the small form for food, the little waving thread stuck fast to the fish's gill, fin or skin. Immediately the constantly opening and closing valves stuck their teeth into the flesh and a gristle-like sac fastened the animal to the finned form for weal or woe. For several weeks, about ten, its fate was bound closely with that of its host which may have gone to distant branches of the stream, or even by way of the sea to more distant parts. Perhaps the host picked it up in the Cedar River and carried it to Minneapolis, Pittsburg, Denver, or by way of the sea to another river system. When the proper time came, the gristle-like sac dissolved and the young mussel and its host parted company.

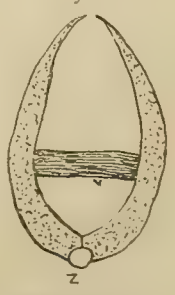
A Fresh-Water Clam in Water and Sand.



Having been dropped in a favorable place, it sank into the sand or mud and there went through the usual sedentary life of its more aged kin. Now five, six, eight or more years have elapsed since the umbones were the entire limit of the shell.

Larva or Young of Clam.

About the odlest portion of the shell, as an excenter, is a series of lines (*e*) parallel with the free edge of each valve. They are lines of growth, marking successive stages of the shell's development, each line being at one time the edge of the shell. New layers of shell are formed under the older portions, as secretions from the animal. As the animal continues to increase in size, the newer layers project beyond the older ones, thus producing a series of overlaps, like shingles on a house-roof. The successive overlaps produce the lines of growth, very similar to the annular rings about an ox's horn.



Sometimes the outer portion of the shell, usually colored, is worn off in the regions of the umbones (*d*) sufficiently to expose the white, pearly layer beneath. Often a line (*a*—*a*) can be drawn to mark off the area thus affected, which corresponds to the area projecting above the sand or mud in which the animal, in its usual position, is embedded. The constant rubbing of small particles, like sand, carried by the flowing stream and the carbonic acid in the water, are responsible for this condition. Sometimes the abrasion is sufficient to wear holes through the shell. It is not at all difficult for one to realize this battered and abraded condition when he recalls that telegraph poles in the deserts are nearly cut off near the earth's surface by the sand constantly blowing across the dry plains.

Inner Surface of a Valve.

On the inner surface are delicate scars and projections, everyone of which has some definite meaning. The most conspicuous are the projections (*k*) and groove on the upper side of the valves, arranged so as to fit into each other. They allow the valves to gape open about an inch or more to the locking point and prevent little twisting or side movement of the valves on each other. This can not occur when a strong current pounds the clam over a stony surface.

Nearly parallel with and a short distance from the free margins is the "pallial line" (*s*), a delicate streak. This marks the limit along which the thin, fleshly mantle of the "clam" is attached. The latter structure secretes the three layers of the shell, the two outer ones being laid down by the margins of the lobe and the pearly layer by the surface of the mantles and body of the animal. The shell consists of calcium carbonate and conchiolin, the calcuim carbonate or lime having been converted from its soluble form in the water to the hard, insoluble shell. It is very much like the white, shaly substance that one finds in teakettles in which "hard-water" is boiled.

Cross Sections of Valves and Muscle.

Anteriorly the pallial line ends into an oval area

(*l*) slightly depressed, associated with two smaller areas back of it; posteriorly into a similar large area (*m*) touching a smaller one above (*p*). The larger ones are the impressions marking the attachment of two large muscles (*x*), extending crosswise from valve to valve. On their contraction the valves close with a snap and with sufficient force to pinch one's fingers quite hard, should a living animal clasp them. Their sudden contraction will force the water to squirt out the siphon (*b*—*c*) like a small stream from a squirt-gun.

This phenomenon is best noticed when taking the animals from the water. Should these muscles (*l. m. x*) relax, the ligament joining the valves above causes them to gape, which allows the foot (*l*) to protrude. This is the only organ of locomotion. How slovenly it moves! The muscular foot is slowly pushed forward and downward into the sand. When pushed into the sand far enough and fastened, the foot suddenly contracts and by the aid of the retractor muscles, responsible for a little scar (*o* & *p*) near each large muscles scar, inside the shell, shortens. Since the foot is secure in the sand, the animal and shell are drawn forward about one-half the length of the shell. This plowing method of movement leaves a furrow in the sand, the usual markings one should find where clams abound. Sometimes the animal chooses to rest wholly in the sand and so, by its foot, makes an excavation sufficient to conceal the form. The protractor muscle used to push out the foot, is responsible for one of the little scars (*n*) on the anterior part of the shell.

Should one look more closely about the scars on the inner surface of the shell, delicate lines (*q*) will be seen extending from the umbones to the edges of the large muscle scars. These indicate the paths traveled by the muscles during the animal's life, their attachment being in the young stage beneath the umbones.

Denver, Colo.

"FOR IDLE HANDS TO DO."

The loafing habit is a menace to the boys of both country and city. Every wise mother must be on her guard against it for her sons. The grocery-store furnishes only too easy a lure for village boys, and hundreds of idlers frequent the public squares of the great cities.

There is no accounting for the seeming leisure of the army of grown-up loafers. Most of them are able-bodied although some are anemic or badly nourished. But the sad truth probably is that a doting mother began the useless career of each of them, and that a hard-working wife continues the indulgence.

It is not easy for a mother to invent occupation for her little son. The daughter may early be taught the use of broom, duster and needle. Then the doll is an unfailing and exacting taskmistress. She always needs new clothes. But work for boyish hands and feet is less abundant. The supply of family errands is small. The coal-hod has supplanted the wood-pile. In the end the boy sees through the device of trumped-up-work, and runs away from it.

Happy the mother who discovers in her boys some taste or talent. The passion of the carpenter for tools, of the draftsman for pencil and paper, or of the gardener for growing things ought to be hailed as a safeguard against the loafing disease. If no occupation of the usual boyish sort can be contrived, the boy may better be put to bread-making or sweeping than given over to idleness. There is scarcely a boy to whom a paint-pot and brushes will not appeal, and fence and blinds and steps will bear fresh coats of paint at frequent intervals.

Every device is worth considering if it will erect one new barrier against the loafer's habit—the destroyer of every manly virtue, from industry to self-respect.

STARS AND STORMS.

Much of the beauty of the stars depends upon their scintillation. The multitudinous flashing of their tiny rays gives a wonderful life and brilliance to a winter's night. The great star Sirius excites the most admiration when, near the horizon, it corcuscates with rainbow hues. But the astronomer would be glad if he could put a stop to the scintillation of the stars. That unsteadiness of light is one of the chief obstacles he has to overcome in studying them with the telescope.

Scintillation has generally been regarded as due only to slight disturbances in the atmosphere. But as recent observations have shown that red stars scintillate less than white ones, it has been suggested that the causes for some of the essential differences in the scintillations of different stars may be in the stars themselves. There is no doubt, however, that the main cause of scintillation depends upon the condition of the air.

Most people suppose that when the stars appear to lose their liveliness of light, and shine without twinkling, as minute, bright points in the sky, fair weather is in prospect. Studies lately made in this country seem to contradict this popular belief. It has been found that when the stars are feeble in their scintillations, foul weather is at hand. The night before a most violent storm in the south, for instance, the stars hung so quietly in the sky that they seemed to have entirely lost their scintillating power.

This is said to be only one instance among many which show that the unusual steadiness in the light of the stars precedes the appearance of storms.—*Selected.*

The Largest Bird

Harry B. Bradford

All should be interested to know something of the appearance and habits of this magnificent creature, which furnishes those beautiful plumes that are such a delight to behold.

This, largest of all existing birds, inhabits the hot, sandy desert of Central Africa, for which locality it is most wonderfully fitted. With feet as hard as rocks and head held high aloft, he may defy the

The Largest of Existing Birds.

desert's burning sand, and what would be withering heat to a smaller bird. These same horny feet and powerful legs can, with great swiftness, carry this huge bird well beyond the reach of its enemies, except man, who overtakes almost all things by one means or another. The feet have but two toes, the smaller being on the outside, and hunters find great difficulty in tracking him, as his feet leave only two round impressions in the sand.

His strides at full speed measure from twenty-two to twenty-eight feet, and at least one horse is usually "wind-broken" and killed in trying to overtake him. He can keep his pace for a long while, and at its end can deliver vigorous kicks with his powerful legs, which would do credit to a government mule. He is finally captured by a sort of lasso—a rope with a ball attached to its end, called a "bolas,"—which is swung around his long neck and must feel like a rather close-fitting collar for awhile.

In captivity he becomes very tame, and tribes of the Soudan and upper Senegal and the Algerian frontiers raise ostriches like poultry-yard fowls.

He is a gregarious bird, living in flocks, and is often found mixed in with herds of quagga, giraffes and antelopes on the plains, as well as with the zebras in their more rugged abodes.

The nest of the ostrich is a mere depression scooped in the sand, and the male bird shows interest enough in domestic affairs to sit on the nest during the night (you see he selects the coolest and easiest job as usual), while the female sits in the daytime. When the sun is quite hot, it is covered over with sand and left alone. This habit has given the bird the reputation of being a careless mother, but she has more wisdom in that little head than some give her credit for, as the hot sand does more for the eggs than she could.

It must be very handy for those who keep these birds, to bring in one of their eggs measuring about six inches long, this being large enough to make an omelet for half a dozen people, or equal to the weight of two dozen of our hen's eggs. It would be an unusual capacity that could take care of one of these eggs, poached, on an eighteen inch square of toast for breakfast!

David Livingstone wrote that it was hard to tell the bellowing of an ostrich from the roar of a lion, but the two specimens at our zoo, one of which I show herewith (which was sent from King Menelik of Abyssinia, as a gift to President Roosevelt), have not given visitors any opportunity to judge of any vocal culture which their earlier lives may have acquired.

This two hundred pound six-footer struts up and down his apartment at the Washington Zoo with head

held high, gazing at what is transpiring across the room.

He hopes the visitors will use up all their adjectives on the high-priced feathers he is so proudly and carefully cultivating on his wings and "feather duster" in the rear for some lady's bonnet. He probably imagines the elegant plumage will detract their attention from those long, barren bipeds which help to give him the credit of being the tallest of birds.

The appetite of the ostrich is proverbial, but "hardware" does not enter into his bill of fare, at the Zoo at any rate. On the desert he lives on wild melon, herbs and a few reptiles as appetizers, and also eats grass and berries when he can find them. His long neck gives plenty of chance for a well-developed taste, but at the Zoo he seems satisfied with such uninteresting stuff as hay and a few chopped vegetables. When thirsty he takes a great gulp of water from his pail, and then lifting up his head as though to give thanks, it runs down his long neck with a gurgling sound.

The male ostrich is colored a deep, glossy black, excepting the wing tips and tail feathers, the tips of which are white. The female is a little lighter in color. The skin is a drab gray in some and pinkish gray in others.

Last year's ostrich feather yield of South Africa was valued at four million dollars.

THE GOOD WE ALL CAN DO.

"THERE go the Andersons in their new automobile," said Augusta, as they sat on the vine-shaded piazza. "I'm crazy for a ride in a real auto, and I've never even set foot in one. People *are* selfish, and I don't suppose Maude Anderson will ever think of inviting me."

"We-ell," said her friend Mattie, "I don't suppose they realize what a great treat it would be to you or me." She hesitated a moment, then continued boldly, "just as *you* don't realize what an immense pleasure it would be to mama if you would invite her some time when you are going for a long drive. Of course, *I've* been with you lots of times, Gustie, but I've often wanted to ask you to let mama have my place some time. She never has anything but trolley rides you know."

"Why, I never thought of it," said Augusta promptly. "Why didn't you ask me before? We've always had a horse, and have been so used to driving that I never thought it would be any special pleasure. Tell your mama I'll call for her Saturday, and we will take the prettiest ride I can find—where trolley-cars won't take one."

When Mattie told her mother of the invitation that evening, Mrs. Loring's face lighted up. "Indeed, I should like it very much, Mattie, but wouldn't Augusta enjoy it more if you went instead?"

"No, mama; she really wants *you* this time. I'm not invited at all," laughed Mattie. She had not told her mother of the conversation that had led to the invitation, and that the first suggestion of the drive had come from Mattie herself.

"It has been a long day," said Mrs. Loring, "since I've had anything more than a car ride."

"'Dade, thin," said Mrs. Murphy, who had just brought back the laundry, and had stopped a few minutes, at Mrs. Loring's invitation, to rest and enjoy the cool glass of lemonade that was very refreshing after her long walk, "it's meself would be glad to get a car ride now and thin—'way out to the parks, wid me little Maggie—but it's precious few nickles I can be sparin' fer car rides this summer."

Mrs. Loring and Mattie gave a quick glance at each other as the same thought flashed through their minds. Had they not neglected a very simple means of giving pleasure to others? They could well afford the money to give Mrs. Murphy and her ten-years-old Maggie a refreshing car ride at times.

"Mrs. Murphy, when I have my pleasant carriage drive next Saturday, I'd like to think that you and Maggie are having an outing too. You take these dimes and enjoy a good ride. It will give me real pleasure."

"Wasn't Mrs. Loring good to give us this lovely ride?" said Maggie to her mother, as, in the very front seat of an electric car, they rode out to one of the beautiful parks the next Saturday afternoon.

"Yis, indade," said Mrs. Murphy. "And 'tis meself was wishin' we cud 'a' brought Biddy Ryan's little lame Timmie along wid us. How he would 'a' liked to see the green grass and the yaller buttercups!"

Maggie puzzled over this for some time. She knew it cost money for car rides, and she knew her mother had none to spare. It was hard work sometimes to get enough to pay the landlord and to buy food.

Before the ride was over, she had solved the problem. "Mama, I think Mrs. McCarthy would lind me her baby-carriage, and I could wheel Timmie over to the square, where he could see the fountain and the grass and the trees, and it would be nice and cool. He wouldn't be very heavy, if he *is* 'most five. Can I?"

"Yis, dear; an' it's a good thought, darlin'," responded Mrs. Murphy.

So the deed of kindness was "passed along." And each one found it was in her power to give pleasure to others—to share what seemed a simple thing to her, but meant much to others less fortunate than herself. —*Exchange.*

COMPARISONS, it is said, are odious: but someone that suffered by them must have originated the remark.

Sufferings of a Russian Emigrant Girl in New York City

Richard Seidel

Not long ago, a New York newspaper contained an article, pertaining to the sufferings of a newly-arrived Russian emigrant girl, who was saved from a horrible fate by a policeman. She was sold for twenty-six dollars to a man of low morals. Her mother, who had been only a short time in this country, said: "Had my child gone to the mines of Siberia, she could not have suffered more than she has in America."

This girl was enticed into a First Avenue tenement and shamefully whipped into submission. In this den of vice the poor, innocent girl was kept a prisoner for two months. The girl had left Russia, to escape imprisonment by the Czar's agents. Not quite twenty years old, she had attracted the notice of the Russian officials by her lectures on sociological principles. It is to be regretted deeply, that she should meet with such a terrible fate in a country, supposed to be a refuge for those who are persecuted unjustly.

Russian Emigrants.

She left home, accompanied by a fellow worker of the factory where she had been employed. The man was a dastardly imposter, feigning friendship in order to ensnare the innocent girl.

It is a matter of deep concern, how a young woman, working in the large manufacturing establishments of our country, can be protected, especially if she is a foreigner and ignorant of our mode of life. How many perils attack a young woman in our country! How distracted are her parents when they realize that human wolves can sell a young woman at auction, like a slave, to lead a life of shame!

The account given of this auction is something unheard of in a civilized country. The lowest bid was ten dollars. At the conclusion of the auction the man seized his human freight and went out into the streets of the city. Meeting a policeman on the street, the girl cried out, "I am sold! I am sold! Save me! Save me!"

Such is, in short, the dramatic story of Rose Cohen. We are, to a great extent, responsible for the outrage committed on this young girl. She came here to claim the blessings and privileges of a more advanced stage of civil liberty, and instead found degradation and slavery awaiting her. Every good citizen of America should protest against the horrors of vice revealed by this incident. Women should educate their sons to nobler thoughts.

The Russian, and all other emigrants who come to this country, expect to find liberty and equality. They expect to rise in the social scale and wish to enjoy the blessings of progress. What does progress mean? Does it mean the attainments of the degenerate rich? I do not think so! Should not true progress demand the punishment of the captors of this young Russian girl? The cultivation of the truths of life ought to mean progress. All our impulses ought to tend toward the right and we should know and choose the right. Progress should mean advancement toward the state where each is valued for his talents, respected for his work, and paid for his labor.

Stories like the one given show the futility of any kind of reform that does not teach man to govern himself. There is nothing especially new about this story, but it is true. The case of Rose Cohen does not portray the blessings of modern civilization. Modern barbarity greets the immigrant girl on her arrival, and assails her virtue. Men should learn to control their passions!

Brutus and Cassius

Leon F. Beery

THESE two men had many things in common, and yet if their lives and characters are investigated closely, distinct characteristics will be found in each man. They were working together in a common cause, and without harmony between them their plot would have fallen through; but as there are no two persons whose characteristics and manners of thinking are alike, so Brutus necessarily had to differ, somewhat at least, from Cassius, and Cassius from Brutus.

Undoubtedly Cassius is the more enthusiastic of the two. He heartily dislikes Cæsar for reasons both general and personal, and in his convincing fashion tries to persuade Brutus into the same feeling of dislike and even hatred towards the Emperor. Brutus conscientiously feels that Cæsar is becoming too powerful, but, from his personal love for him, and from his very nature, he does not wish to commit himself so freely. Cassius uses persuasive arguments, and by the time he has talked to him over and over, and left the letters at his window in the night, and then comes in person, with the rest of the conspirators Brutus is completely won over to their side. He does it not from a personal standpoint, but, as he says, "for the general good."

After the assassination of Cæsar, both Brutus and Cassius feel that they have gotten rid of a tyrant, and that they have no more reason to fear. Cassius, however, has a little more of a boasting spirit. Brutus feels as if he had done his duty, but Cassius seems to think that they have been a great benefit to future generations and peoples, as is exemplified in Act III, Scene 1, lines 16, 17, and 18. Although Brutus at first, apparently, has no fear, or at most very little, of Antony, Cassius has misgivings that he might somehow get revenge for Cæsar's death; and when Brutus gives Antony permission to speak to the citizens, he tries to persuade him to think more seriously of it, and not endanger himself and the other conspirators to the possible revenge of Cæsar's best friend.

This is probably due to the fact that a person who gets very enthusiastic over a project, and tries to win over to his side as many as possible, and even becomes excited over it (for such a man was Cassius), generally, if the plan is for some misdeed or crime, is the first to become fearful after it is over, as to the outcome of it. Cassius did the deed with more of a malicious spirit than Brutus. Brutus did what he thought was his duty, not with a milignant purpose, and therefore, apparently, did not let the result of it worry him.

There may be in the fact that Brutus wished to speak first, that he said briefly what he did say, and then withdrew before Antony spoke, a reason for believing that he was already feeling just a little tinge of regret,for he says, "As I slew my best lover for the sake of Rome, I have the same dagger for myself, when it shall please my country to need my death." Very likely Cassius also felt mean about it, but his regret was probably a little less dignified and honorable than that of Brutus, owing to his excitable character.

Nearer than any other place in the play do we get to the real and inmost character of each man in Act IV, Scene 3, the "quarrel scene." It is here that each shows forth what stuff he is made of, and here Shakespeare gives us his real conception of the two characters. Here we see the rashness and quick temper of Cassius, and the contemptuous sarcasm of Brutus. Brutus is certainly the best man in a "word-battle," while Cassius must simply listen and utter such ejaculations and threats as come to his mind. Brutus is more cool-headed, and by his tact gradually cools down the hotheadedness of Cassius. Cassius is furious, impetuous, vehement, boisterous; Brutus is contemptuous, scornful, insolent, and almost insulting. It is mainly through Brutus' tact in depreciating Cassius and making him see his wrongs that the final conciliation is brought about. This quarrel is merely an outburst of anger on the part of both men over some mutual wrongs of which they accused each other, and after it is over, Brutus and Cassius are friends again as warm as before.

The ends of the two men are practically the same. They had been worried, haunted, and driven to exasperation by the effects of their deed, and now they know that they must die. The ill luck of their army also helps to bring on their determination to die. Cassius, the excitable, is the first to yield, and being too irresolute in himself he must have some one else perform the deed. Brutus, the firm, carrying out the declaration that he would die if his country needed his death, musters the courage of his own free will

to run upon his sword, as it is held by another. With the death of these two men,—the head of the conspiracy, two of the leading Romans of the day, two men, alike in purpose, yet different in motive,—Cæsar, in the words of both as they die, is revenged.

Huntingdon, Pa.

FILES AND FILE-MAKING.

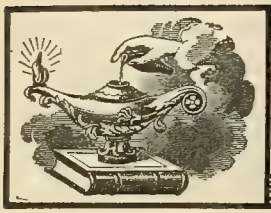
W. C. FRICK.

Of all the most indispensible tools in common use the file is one of the most important. Hardly a single class of manufacture but what uses some one or more varieties of them. Machinists use all manner of files, carpenters and joiners use wood-rasps, and horse-shoers use horse-rasps. Most any article of wood, iron or steel composition is unfinished until a file is used to make the necessary finish.

A file is a file wherever you see it, but there is a great variety of shapes, cuts and sizes. If you saw the entire list, you would be surprised, mill files, flat files, round files, half-round and saw files, feather files, in size from three to thirty inches, some of them, and of several grades of teeth, from smooth to rough. It is the manufacture of these in general about which we wish to tell you.

To see the crude material on its way to a file-plant one is unable to tell if it is meant for files, bolts or wagon tires. The steel comes in long bars, of thickness and width generally, of the files for which it is intended. As in most every other business, nowadays, the work is done by the piece-work method, that is each employee does a certain piece of work, is master of it, but as a rule master of no more.

Three operators prepare the steel bars for the stage when they begin to bear semblance to files. Cropping machines cut the steel bars into lengths somewhat shorter than the resulting files are to be. These are small or large machines, according to the size of files desired. The file-handle is next shaped and the taper put on the end. This is done under power-hammers of various sizes. Several of these hammers produce noise almost deafening. The file being now shaped is very rough and uneven. A number are now placed in a frame and passed back and forth upon large, wide grind-stones until both sides and edges are ground smooth. One more step prepares them for cutting the teeth. The edges of the file are now passed along an emery stone, in order that, when cut, the teeth on one side do not so extend over upon the two adjacent sides or edges as to render proper cutting of teeth there impossible. In case of flat files, teeth are cut only on the edges at the first operation; in case of round files teeth are cut all the way round and in two directions at one and the only operation.



Now the making of files might conveniently be divided into five stages, viz., hammering to shape, grinding, stripping, cutting, and hardening and tempering. The first two we have described. We will now consider that of cutting. The teeth are cut by machinery. Only one file, if large, is cut by the machine at one time, or two if they be small. The machine used is extremely simple, but necessitates several handlings of the file. It consists of a steel table, or conveyor, moving along a horizontal screw, and of an upright cylinder in which works a piston to which is attached a chisel to cut the teeth. The elevation of this piston is accomplished by belt power, while the force applied in the descent of the piston and chisel is supplied by a chunk of rubber. The force is varied at different points by compression or release of the rubber, being light at the tip of the file, and increasing toward the middle. Between the steel conveyor and the file is a strip or bed of softer metal, e. g., a mixture of lead and babbit, to protect the soft teeth against the hard steel during the course of manufacture. Any attempt at straightening is done by the aid of a soft lead block and hammer.

If you will notice carefully you will see that on some files the teeth run in opposite directions on the same side. Stripping a file means to file it lengthwise with a finished file until it is everywhere level and during the course of its making a file is stripped a number of times. The steps taken in the cutting of an ordinary flat file are in order as follows:—(1) stripping: (2) setting its edges on the emery stone; (3) cutting the teeth on the narrow sides, or edges; (4) stripping again; (5) cutting the teeth in one direction on both broad sides; (6) inspection, to see if the teeth are cut perfectly; (7) stripping a third time; (8) cutting the teeth in the opposite direction on both broad sides; (9) a second inspection; (10) cropping off the surplus above the required length, and grinding off the rough corners. Any imperfectly machine-cut files are patched or finished by hand and are sold as second-class goods. Hardening and tempering is done much the same way as in other tools. After testing or inspection they are dipped in oil and wrapped in oil paper, ready for packing.

In a large file factory where the writer spent nearly three years of service, the process of manufacture was jealously guarded against sightseers and not even a photograph of any room or machine was allowed to be made.

Chicago, Ill.

One of the most sincere gestures ever made in this world is that of a dog when he wags his tail.

THE QUIET HOUR

SERMONETTE.—The Healing Serpent.
Num. 21: 8, 9; Jno. 3: 14, 15.

EZRA FLORY.

THIS is Jesus' talk to Nicodemus. (Jno. 3.) If any one should have understood Num. 21: 8, 9 it seems that he, the *best of the best should.* But note the contrast between those two men—Jesus from poor Nazareth and Nicodemus from the rulers. Again; how impressively we see Jesus' mission through the teachings of the Old Testament! 1 Cor. 10: 11.

These people merited punishment and were entirely unworthy. There are always four primary elements in deliverance: (1) Wholly of God. (2) Through a person. (3) By blood. (4) By power.

God here does not remove the serpents but provides a remedy for the poison. It was by a serpent that sin came into the world (Rev. 12: 9). Here we have a type of Jesus, "made sin for us," "to destroy the works of the devil." Rom 8: 3; Heb. 2: 14. This remedy appeared in answer to confession and prayer.

It was a simple remedy. (1 Cor. 1: 26). Think here of the simplicity of the plan of salvation. Again; how God has used numberless simple means. "We preach Christ crucified; to the Jews a stumbling block, and to the Greeks foolishness."

Man could not have thought of such a remedy. We take pride in our intellect, and truly this is an advanced age, yet, with all our achievements, no human can invent a machine or device to save the soul. We are but lost without God's only remedy. Suppose the twentieth-century critics would have been there. Sick even unto death they would have said, "Well Moses, where did you get that pole? Is it oak or hickory? Don't see why the serpent should be of brass? What is the weight? Why have it up on a pole?" "But nay, O man, who art thou that repliest against God?" The serpent-bitten, soul-dying skeptic to-day shakes his head and says, "I don't believe in the story of the quail, Jonah, Noah's ark, the virgin birth, the ordinances."

Next we notice that the serpent was lifted up. Jesus said, "And I, if I be lifted up will draw all men unto me." We can all see it. We can all admire it. "For God so loved the world that he gave his only begotten Son, that whosoever believeth in him should not perish but have eternal life."

"How foolish not to look! How ridiculous to *choose to perish!* Looking stands for faith. Of sight we may equally say three things:

1. It is the easiest of our senses. A babe can do that.

2. It carries us out the furthest. Think of Abraham, Enoch (Jude 14), Job.

3. It is never satisfied. As much can be said of faith which is the eye of the soul.

The results of looking:

1. Universal,—"Whosoever." This is for black, white, high, low, rich, poor. "Look unto me,, all ye ends of the earth and be ye saved."

2. It was sure. We cannot say as much of an earthly doctor.

3. It was triumphant.

THE SECRET OF A HAPPY LIFE.

"Which of you by being anxious can add one cubit unto his stature?"

Here is the next argument. Sit down and fret for a year, and see how much bigger you are. You may well perhaps be something smaller; certainly shriveled in soul if not in body—but you will be no bigger. Put the finger of one hand on the finger of the other, and carry it down to your elbow, that is a cubit. Can you add that to your stature by your fretting and your care?

How quickly should we cease from worry if we did but think within ourselves. What good is it? Can you undo anything by fretting? Can you change it? Can you lessen it? If minding will not mend it, then better not to mind.

Some time ago I was talking with a friend of mine whom I had met in the train. I inquired after the health of his wife. "Well," said he in reply, "my wife is well, always well, and always very well, and what is better still, she is always happy. I used to think that she had not the same sensitive nature that I have. When anything occurs to annoy me I am utterly upset. I cannot eat my breakfast; I cannot do my business; I am really ill. But the other day I found out the secret of my wife's complacency. Something had gone wrong which very much worried me. In the course of the morning I went into the house and found her cheerily going on with her work, actually singing as she bent over it; I felt quite annoyed.

"Really, my dear," I said, "you don't seem at all put out by what has happened today."

"O, no," she said, "I am not."

"Well," I said, rather angrily, "then I think you ought to be."

"No, no, you must not say that. Look here. Years ago I made up my mind that when anythinng went wrong I would ask myself honestly and earnestly—'Can I do any good by thinking about it? Am I to blame in any way? If so, do not let me spare myself. Can I do anything to put a better face upon it?' If after looking at it honestly all round I found I could do no good, I made up my mind that I would give up thinking about it."

"Thank you," said I to my friend. "That is the philosophy of the highest life 'Whatsoever things are lovely, think on these things.'"

"But," said one to me one day, to whom I told this story, "I cannot help thinking about them."

"Then," said I, "you are the slave of the thing, and not the master. You remind me of a story I have heard of a soldier who on the field of battle called to his commanding officer, 'Captain, I have got a prisoner.' 'Bring him on then, my man,' said the captain. 'Please, sir, he won't come,' was the answer. 'Then come yourself,' replied the captain. 'Please, sir, he won't let me.'"

We ask often how much a man possesses. That is not the question. The question is how much possesses him.

Some time ago I was at the house of a gentleman in Yorkshire, who said to me, "I used to be a most irritable man. When anything went wrong I fussed and fumed, was miserable myself, and made all about me miserable. My religious influence was worse than undone. I suffered in health and I suffered in my business. But one day I pulled myself up and said, 'Look here, you are a fool!'"

While we are forbidden to call our brother a fool, it is well to hurl the epithet at ourselves if we deserve it.

"'You are a fool,' I said to myself. 'If your religion does not cure your temper, what has it done for you?' I made up my mind that I would bring all the strength of my will and all the grace of God that I could get to bear upon this besetment. Now I do not want to boast, but I thank God that it is a very long time since I found myself fretting or worried. I cannot tell you the difference it makes, not only to myself in the happiness of my own life, but in the happiness of those about me."—*Mark Guy Pearse.*

CONTENTED LIVES.

CONTENTMENT may be good or bad. It is good when we have peace of mind relating to "the things not in our power;" for this is to submit ourselves to Providence, walking quietly in faith. But contentment is bad, if it be an easy mind as to "the things in our power," when those things are ill, as when we are satisfied with weak effort, with imperfect performance, and a falling short in ourselves. This contentment is like the abasement of a serf who is at ease in being enslaved.—*Christian Register.*

TOMORROW'S TRAGEDY.

CLARA M. PARSONS.

"Tomorrow," so I thought, "I'll pluck the flowers
Close pressed beside the way yet seldom seen;
Tomorrow throng the golden, fleeting hours.
With those fair deeds that might so well have been
In all the long, unfruitful years of yore;
To morrow"—but the chance was mine no more.

"Tomorrow," so I dreamed, "my feet shall tread
Calm paths of beauty, high, serene and bright,
By all brave aims and aspirations sped,
Forever scaling glorious height on height;
And those who love my soul shall joy with me
Tomorrow"—but it never came to be.

"Tomorrow," so I planned; "I'll fill the heart
That, starving, beats so close against my own,
With that pure bliss of answered love a part,
And she no more need, anguished, walk alone;
My tender words shall flood her life with light
Tomorrow"—but, ah me! she died last night.

PEOPLE WHO NEED MORE RELIGION.

THE man who lets his horse stand hitched all day, out in the cold, without a blanket.

The man who growls like a bear with a sore head every time his wife asks him for money.

The woman who whispers it around that some other woman is not any better than she ought to be.

The preacher who is all the time looking for an easier place at a bigger salary.

The man who walks with his hands in his pockets, and lets his wife carry the baby.

The mother who never tries to point her children to the Saviour.

The man whose neighbors never have any idea that he is a Christian.

The preacher whose sermons never help anybody.

The man who keeps a dog and says he can not afford to take a religious paper.

The people who never have anything good to say about other people.

The man who don't see the sense in sending missionaries to Africa as long as there are so many hoodlums in America.

The man who puts a penny in the basket when he ought to put in a dollar.

The man who says that charity ought to begin at home whenever the missionary collection is being taken.

The people who always pray the same prayer at prayer meeting.

People who get their backs up at one another and stay that way year after year, without taking the Lord's way to be reconciled.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter

KEEP YOUNG.

GLANCING through the pages of a popular magazine, the other day, we happened to notice the words of our heading and they struck us so forcibly that we will enlarge on the thoughts presented.

Much depends upon the influence of the mind and the power exercised for weal or woe. Why not greet each new morning with the happy thought, "I am still young"? It will be well to do this, because, as you think, so will you be. This body of ours is not the real man; the power within us,—that something that lives forever,—is immortal. True, the body does get older, but our spirits are ever active, and, spiritually, we need never grow old.

This matter of keeping young spiritually is not as difficult as you think. Brush away the cobwebs of your mental storehouse and think young thoughts. Don't become wedded to old ideas but keep your mind in readiness to receive new thoughts and higher aims. Never class yourself with the "has-beens," but look forward to greater things yet to do.

Do you ask the secret of perpetual youth? Here it is: "Kindly thoughts, good cheer, and the consciousness that you have done to others as you would have them do to you." No one is older than he really feels. Make it your pleasure to feel as young as you can, and the Lord will be pleased to grant you the desire of your heart for further usefulness.

THE SOUTH AND PROHIBITION.

ADVOCATES of temperance are rejoicing to see the South taking up prohibition as a means to an end of solving its race and labor problems. The step is in the right direction; there is logic and wisdom in such a course.

Thoughtful southerners, to whom the so-called negro problem presents many phases, realize that liquor is not only bad for them if they drink it, but that it is bad for the entire community if the laborers drink it. Negro criminals, like white offenders, are mainly the products of liquor and idleness, the two evils going together. A few days prior to the race riot at Atlanta, it was ascertained that there were 2,455 idle negroes in forty saloons, dives and "clubs" in one street in that city.

For these very important and particular facts the Georgia legislature has lately passed a law to prohibit within that state the manufacture and sale of intoxicating liquor. It prohibits the keeping on hand of liquor in any place of business, or giving it away to induce business.

One of the Georgia legislators claims that, economically considered, it will be better for the state to put its new prohibition law into full effect, than to increase the labor market by the introduction of 100,000 desirable laborers, as suggested and demanded by the factory interests of the state. He argues that the laborers of the state, if kept sober and efficient, will be ample to supply all needed demands made upon them.

MAKING THE MOST OF LIFE.

THE toiler in the country, as well as his brother in the busy mart of the city, often, in a time of discouragement, exclaims: "Is life really worth living?" Life stretches out before them like an unending succession of days of drudgery and they fail to see the brightness that might be theirs if they would but look for it.

Most of the INGLENOOK readers are living in the country. With the ripening harvests came days of toil, when the days were warm, the labor unremitting, and rest periods but very few. At such times the question has come to many a weary one, "Is it worth while to live on the old farm?" They look with longing eyes at the apparent ease of the inhabitant of the town or city, imagining that theirs is a life of unalloyed pleasure. The fact of the matter is that the town people miss many things that the farmer, perhaps, esteems very lightly.

Let us, dear farmer friends, look at things as they really are, and you will see that, even on the old farm, you can make the most of life. Do you want health? It is yours by virtue of the pure air and the healthful surroundings of your country home. Do you want to insure yourself a livelihood free from the anxieties and perplexities of the city worker? You find it in the country. Do you like to live among a people where you can feel at home and perfectly contented? You have that advantage among your country friends.

The person who really *lives* is the one who makes the most of his opportunities, and goes on from day to day with the assurance that in the end all will come out right. The end may not be in view as yet, and it may seem as if the top of the hill is not to be attained after all, yet with a brave heart and a stern determination we can press forward, doing for ourselves

and others life's allotted task. So doing we will be captains, indeed, of fate, winning our battles in spite of all obstacles,—making the most of life.

MUTUAL HELPFULNESS.

As we look at humanity in the busy activities of life, from day to day, we cannot help but note the difference between the various ways of dealing with one another. On the one hand we notice stolid indifference, but, thank God, there is still a great deal of mutual helpfulness,—the milk of human kindness. It is by this that the giver is made none the poorer and all who receive it are cheered and blessed.

Passing along the street, the other day, we noticed a poor newsboy who, apparently, was in great distress. Several persons had passed him by unconcerned, but just then a kind-hearted lady inquired as to the cause of his distress. He told a pitiable story of having been robbed and abused by older boys in the same business, so that even the small amount earned had been lost, and he would have nothing to take home to his widowed mother. The lady, after further questioning, gave him means to buy a new supply of papers and promised to call at his home and see to further needs. The boy's face cheered up at once; it fairly beamed with happiness. I thought, as I passed on, that surely this little act of kindness and sympathy would not fail of its reward.

In this connection the words of Cardinal Gibbons are worthy to be recorded. Read them and then put them to practice:

"You may have the wealth of the Vanderbilts or of Rockefeller, but what will it avail without sympathy? You might own Manhattan island, the richest island in the world, but if there was no other man there whose hand might grasp your hand, of what value would it be? While you cannot raise the dead as Christ did, the greatest thing you can do for God is to save your brother from a worldly life."

NOTES AND COMMENTS.

"Can a man who is a Christian actually be engaged in the production of great wealth, according to the present ethics of business?" asked Prof. Shailer Matthews, of Chicago, in a recent address. He continues: "There is constant danger that the Christian attitude may be lost in the unscrupulousness of business. We have too often seen how different is the code of morals which a man prescribes for himself as an individual and as a director of a corporation. What shall be the fate of the church that does not inspire and purify a materialistic age? It will be the fate of the salt that has lost its savor." Here is a voice of warning that is backed by the authority of Holy Writ. There is danger ahead for those who "would be rich," irrespective of methods and at the sacrifice of godliness.

A graduate, with highest honors, of a noted college in the East, was given a $900 position as instructor in a western college, in recognition of his scholarship. The man who graduated at the foot of the class in the same eastern college is the recipient of a three-year contract to pitch for a noted baseball league at $5,000 a year. Thus brawn triumphs over brain—at least there is apparently more money for the expert ball-player than for the erudite professor.

In Boston four school nurses are employed in districts where newly arrived immigrants are most numerous. This has resulted not only in an improvement in the health of the children, but in their personal appearance as well. The nurse examines their heads, hair, nails and teeth. She talks to them about the care of the teeth, the use of the tooth brush and of the handkerchief and personal cleanliness generally. The children soon begin to take a pride in their appearance, and often stop the nurse on the street to exhibit their hands and nails.

According to the latest returns from the Chinese census, the empire has a population of fully four hundred million persons; enough certainly to wield considerable influence on the future of the world, if they once shake off the shackles of antiquated customs and rouse to a consciousness of their power. It is this possibility of an invasion of Europe or America by the "Celestials," that keeps the nations of the world wide-awake and in suspense, knowing that there would be grave danger in dealing with so vast an army as China could muster. Admiral Mahan, some time ago, called attention to this very matter, and there seems to be abundant reason for the warning he gave.

Much of the criticism in the newspapers, concerning Japan's attitude towards the Koreans, is not justified by the facts in the case. When Japan took hold of Korean affairs the peninsula was almost destitute of roads, waterworks, hospitals, schools and banks, and the treasury was so depleted that no funds were available for such works. It was Japan that raised $5,000,000 for Korean needs, of which $750,000 was at once allotted to the building of high roads connecting the chief harbors and cities. A common school system on the Japanese plan was created, and the other needed works were promptly and efficiently undertaken. Courts of justice had been mere auction-rooms, where judicial favor was given to the highest cash bidder, and the royal or imperial court was a veritable sink of corruption. These have been reformed by the Japanese, and are rapidly being put upon a basis which would be creditable to any civilized land.

Echoes from Everywhere

Nelson Morris, of Chicago, the well-known founder of the meat-packing business which bears his name, is reported in a critical condition, and but slight hopes are entertained of his recovery.

As a step towards inculcating principles of honesty into corporations, a new law of the public service commission prohibits stock-watering,—the practice so generally indulged in by many companies.

Anarchists are again making themselves felt in Russia. Recently the chief of police and several Cossacks were killed at Kryvoiosera, Russia, in an encounter with these enemies of organized society.

California fruit-raisers and shippers object to the new rates, to go in effect Oct. 1, by which the rate to Chicago will be $1.10 per hundred, instead of 90 cents, as heretofore. They claim the new rate is practically prohibitive.

Up to Aug. 22 scarcely any rain had fallen in New Haven, Conn., and adjacent territory, for seventy-six days. It is now proposed to employ a battery of field artillery and discharge a sufficient amount of ammunition to secure the needed rain.

The enormous sum of $5,500 was paid for "Star Masterpiece," a Berkshire hog, formerly owned by the Wisconsin State University. Residents of Kirksville, Ill., were the purchasers at the price above given, which is the largest ever paid for a hog.

A rate war between the Cunard and the German steamship lines is in full blast, and has had the immediate effect of causing substantial reductions in cabin rates. The prospective passengers rejoice in the handsome saving they are enabled to make.

President Castro, of Venezuela, has fined an asphalt company $5,000,000 for being implicated in a revolution against his government. He might have decreed the death penalty, but probably the funds were needed more than the funerals of the offenders.

Owing to a lack of funds, four thousand men were laid off Aug. 23 on the new line of the Panama railroad and others will follow. The construction of the road is of great benefit to the canal work, and it is hoped to resume operations as soon as possible.

Bethany Union Church, Chicago, gave a vaudeville performance on the afternoon and evening of Aug. 24, at the residence of one of their members, for the benefit of the church. The question is, What will be next? Does the end justify the means? We think not.

Chicago is making a strong effort to get rid of its undesirable characters,—the vagrants, and especially the criminal element. Numbers of them are rounded up each day and disposed of in such a way as to rid the city of them, at least for the time being. The move is a good one.

J. D. Uzzell, the negro editor who is held responsible for much of the recent race trouble on the eastern shore of Virginia, was brought to Norfolk under strong guard Aug. 21 and locked up in the jail. Uzzell asked to be sent to a safe place, there being great danger that he would be lynched.

Some people find it hard to withstand the allurements of a full treasury. C. J. Camp, of Chicago, treasurer of the Milk Drivers' Union cannot account for a deficit of nearly $20,000, and in consequence will have to face prosecution and the attendant results. Another lesson as to the foolishness of crooked dealings. It don't pay.

About 20,000 post cards are sent each week to the Dead Letter office at Washington from Chicago alone, because the senders fail to comply with the law. Ever since it was discovered that there was danger in handling the tinsel post cards, it has been decided to have all such enclosed in envelopes. A clerk of the post-office in Milwaukee sustained the loss of an arm, on account of handling tinsel post cards while suffering from a wound in his hand. Senders of post cards should bear in mind that the card they send is fully within the specifications of the law, and also that the necessary amount of postage is attached.

So great is the increase of crime in New York, that it will probably be necessary to establish four night sessions of the court, instead of the one that had been arranged for. Evidently some radical action is needed at the eastern gateway of the United States.

THE celebrated steeple-climber, John Goldie, known the world over, fell, on the morning of Aug. 20, from the top of the Townsend chimney in Glasgow, Scotland. This chimney is 448 feet high and the highest in the world. The body of the unfortunate man was mutilated beyond recognition.

FROM a small, barefooted boy on a tramp steamship to the owner of a mansion on one of the handsomest residence streets in Cleveland, is the advancement made by James Corrigan, the ore magnate. The ups and downs of his eventful life read like a romance, and illustrate anew the old saying, that "where there is a will, there's a way."

THE whipping post is every now and then urged as a sovereign remedy for the prevention of crime, but Delaware is about the only State that tenaciously adheres to this relic of barbarism. Recently an official of that State has refused further to employ the cruel method, claiming that it only infuriates the victims, and brutalizes the administrators.

A RED SHAWL, vigorously waved across the New York Central track near Utica, N. Y., prevented a serious train wreck Aug. 25. The train was approaching at the rate of sixty miles an hour, with every seat filled, when two girls, walking along the track, saw a giant tree lying across the rails, near a curve. They promptly gave the signal and the train was stopped in ample time.

JOHN A. BENSON, a wealthy real estate dealer of San Francisco, was found guilty Aug. 22, in connection with extensive land frauds. He was convicted of defrauding the government out of at least 100,000 acres of forest lands. It is refreshing to learn that our authorities are getting after crookedness everywhere, and do not spare the wealthy land grabbers just because they happen to be persons of influence.

RECENTLY the lives of three young men were saved, just outside the harbor of New York, by a fearless girl who was at home on the water, but who positively refused to make known her name or place of abode. In reply to the importunities of sensational reporters, she said: "My desire was to save life, not to gain notoriety." Others, who like to pose in the limelight of popularity, could profitably imitate the example of the unassuming life-saver.

A RELIGIOUS movement of great proportions is said to be sweeping over parts of Germany, according to a cablegram of Aug. 25. Men are freely giving their watches and jewelry, and women are dispensing with finery of all kinds. Conviction seems to have fallen upon many, as to the need of a better life. Time will show how much of the movement is of permanent value. Usually the Germans are not carried away by emotional movements of the kind.

J. PIERPONT MORGAN has offered $125,000 for a famous and ancient dwelling house at Goslar, Germany, which dates back to the sixteenth century, and is adorned with many excellent wood carvings. It is the intention to take down the house as carefully as possible, and re-erect it in New York. Men like Mr. Morgan spend their thousands for a pet whim of no practical benefit to anyone, when hundreds of worthy causes in this country are languishing for a lack of proper support.

KINDNESS, as a general thing, meets with a response of a similar nature. Not so was the experience of a kind-hearted Swede and wife, of Milwaukee, recently. They consented to give lodging to five children during the night, but during the darkness the man and woman who brought them disappeared, leaving the kind entertainers with the five heirs, ranging in age from five months to eight years. The Swedes have agreed to keep the children, and it is to be hoped that they will prove a great blessing to them.

DR. TRIGGS, formerly an instructor of English at the University of Chicago, who attained considerable notoriety some years ago on account of his peculiar views on sociological questions, is again before the public. This time he has so-called "advanced" ideas in regard to the institution of marriage. His theories are such that his wife has seen fit to obtain a decree of divorce. Evidently the learned professor has strayed very far from the old-fashioned gospel idea of marriage,—to say the least.

STOCKHOLDERS of the United States Express Company are demanding to know why the dividends have fallen to less than half the amount of previous years. President T. C. Platt is alleged to have managed the affairs of the company in such a way as to favor competing companies, which own large amounts of stock in the United States Express Company. The fact that Senator Platt and those on his side own one-third of the stock prevents the calling of a stockholders' meeting, as has been desired by those who demand an accounting for the alleged mismanagement.

Before it is Too Late

If you have a gray-haired mother
In the old home far-away,
Sit down and write the letter
You put off day by day.
Don't wait until her tired steps
Reach heaven's pearly gate—
But show her that you think of her
Before it is too late.

If you've a tender message,
Or a loving word to say,
Don't wait till you forget it,
But whisper it today.
Who knows what bitter memories
May haunt you if you wait?
So make your loved ones happy
Before it is too late.

We live but in the present,
The future is unknown—
Tomorrow is a mystery,
Today is all our own.
The chance that fortune lends to us
May vanish while we wait,
So spend your life's rich treasure
Before it is too late.

The tender words unspoken
The letter never sent,
The long-forgotten messages,
The wealth of love unspent,
For those some hearts are breaking,
For these some loved ones wait—
So show them that you care for them
Before it is too late.

A Victory for Home

"ONLY a week more—"

"And sister will be here."

"Oh, I'm so glad she'll be done with that mean old school!"

"She's going to stay with us all the time now, isn't she, mother?"

"We can't tell till she comes, dear." Mother's tone was a little sad, for the thought of her eldest daughter coming home from school to be her help and comfort, to take her share of the home cares and teach her younger sisters, had lain warmly at her heart.

"Why can't we tell, mother?" clamored the little ones.

"Perhaps sister Emily will want to go somewhere else, after spending summer here."

That was it. Latterly, Emily, in her letters, had thrown out suggestions of a desire to go to the city, not far from her home, to teach. It was hard to think of, they had all looked forward so long to the home-coming; but if she earnestly desired it, mother would not let her wishes stand in the way. "I sha'n't let her go," said little Alice, stoutly. "I'll take such tight hold of her she can't get away any more."

A letter was brought to mother.

"I don't know what you'll think of me, mother dearie," it began, "but I want to ask if you will be willing for me to spend the early part of the summer away from you? Margaret Marshall, my chum, has asked me to visit her. I should not wish to do it, except that it will give me the opportunity to attend the summer school and lectures—a great advantage to me, in view of what I hope to accomplish in the future. Of course, the next few years ought to be the most useful of my life, and I'm sure you will agree with me in thinking that I ought to seize on every chance of improving myself.

"As you are coming to see me graduate, I shall have a nice little visit with you. It's too bad I can not see the little ones, but they can wait, and what good times we will all have when sister does comes! Write and tell me what you think of it, mother darling."

A forlorn wail went up from three little voices when the small girls were told of the new plan. Mother felt that she could have joined in it easily; the blessed home-coming had meant so much to her. How could her daughter disappoint her so?

But she could understand it better when she reached school; in the whirl of the closing days, the glow of delightful anticipation, in the crowding in of new interests and new pursuits, was it to be wondered at that the quiet demands of home should be shoved

aside? Certainly, it would require much of the grace of God to turn from all this pleasant excitement to the simple routine so satisfying before years of school. Mother was sure it was all right, but her heart kept on aching.

Music was popular in the school and formed a conspicuous part in the closing exercises. Emily was to sing, and in the glow of loving pride with which her mother looked at her, as she stood before the audience, in her simple white dress, she forgot for the moment everything else. But the shadow fell again. All the sweetness, the beauty of the young life was for others, not for those who loved her at home.

As she paused in her song, Emily's eyes fell on her mother, who sat near the stage. A pain smote her near the heart, for mother's face wore a look of pathetic sadness which her daughter had never seen before. And through the lights and the music and the upturned faces came a rush of feeling so strong that she almost forgot her part. She saw, as never before, the contrast between mother's life, written so pathetically on her gentle face, and her own, filled to overflowing with all the joy and enthusiasm of youth. Her whole heart was in the close of her song, for she sang to her mother as she had never sung before. A burst of applause greeted the close.

The next morning was full of stir. For in the afternoon the young people were to separate, some to return, others to take up a new life. Emily was to travel a short part of the distance with her mother, then to change cars and continue her journey with her friend, leaving her mother to go home alone. All that morning Emily was in wild spirits.

"I'm going to have good times, mother. Such good, good times." Not one word of regret at the prospect of being separated from her again; not a thought, apparently, of the little ones who mourned because sister Emily was not coming. Mother really began to wonder if her daughter was growing absolutely selfish.

When the time came to change cars, Emily was on her feet, still laughing and chatting.

"Aren't you going to wish me good-by, dear?" said mother, as Emily followed her friend to the door of the car. She turned with a merry laugh.

"Good-by, mother. It won't be long before I see you again."

The door closed on her. Mother sank back into the corner of her seat with a sob, while out on the platform the merry voices still kept on. How light-hearted those girls were, and how thoughtless of all besides their own desires and pursuits. She never would have believed Emily could be so.

"You are making the mistake of your life, Em."

"No, I think not."

"It isn't too late yet to change your mind. Come, Emma, you rush down there and change your trunk check while I buy you a ticket."

"Thank you, dear; but my mind is not subject to change."

"You'll regret it when it is too late."

"If I do, you may be sure I'll tell you so. You must write and tell me of all the good things you hear. Now—time for you to go—good-by—good-by."

Farewell shouts echoed back and forth as the train moved away, but mother, who had not heeded the light talk, did not look up until a pair of arms held her in a close embrace, and she looked up in Emily's face.

"Did you think I could leave you, mother darling? It has been my little joke all the morning—to get this little surprise on you. Oh, mother, do you think me the most selfish, undutiful daughter in all the world?"

"How you talk, my dearie!"

"Because if you don't, you and I have a disagreement. Well, mother, I seemed, somehow, to come to my senses all at once, and last night I fought it out with myself, with the result that here I am, going to the dearest home with the dearest mother in the world; and to stay—not to leave you when the summer is over."

"But, Emily, you are giving up so much. You said these next few years were going to be so important to you."

"I said so, and I say so still. But I don't think the next few years can be better spent than in doing what I can at home. You see, I am looking at the other side of things. There are plenty of girls—poor things!—who have no home. I will let them do the struggling and tugging, because they have to. But there is one girl who is not going to throw away the blessing which belongs to her. Now for the precious little ones, and the dear home life!"

"But, my child, you are giving up a great deal. Have you considered it well?"

"I know I am," said Emily, with a serious look on her face. "But I have thought it all out, mother, and believe I am keeping more than I gave up."

* * *

WANTED.

"WANTED.—In one hundred thousand households in America, a willing, sunshiny daughter who will not fret when asked to wipe the dishes, or sigh when requested to take care of the baby; a daughter whose chief delight is to smooth away her mother's wrinkles and who is quite as willing to lighten her father's cares as his pocket; a girl who thinks her brother quite as fine a fellow as some other girl's brother. Constant love, high esteem and a more honored place in the home guaranteed. Employment assured to all qualified applicants. Address Mother, Home Office."
—*Selected.*

SUN-COOKED PRESERVES.

Sun-cooked preserves are among the most delicious of all preserved fruits, tho not so generally known among Americans. The sun brings out all the fresh individual flavor of the fruit, particularly strawberries, currants, cherries, blackberries, loganberries, Tokay grapes, and figs. Peaches, pears, and plums have not juice enough in themselves. Cooked according to the following rule for Barle-Duc, the fruits will retain their native flavor: To every pound of fruit measured before pitting or seeding, allow a scant pound of sugar or even less in the case of particularly sweet fruits. Strawberries, for instance, should have a much scantier proportion of sugar than currants or sour cherries. Prepare the fruit at night, hulling the berries, pitting the cherries, stemming the currants, or cutting out the two seeds of the Tokays, as the case may be, and taking care to preserve every particle of the juice. Have ready hot platters or deep plates, and have the sugar heated in the oven, taking care not to let it melt or color. Spread a thin layer of the hot sugar over the bottom of the dish, then a layer of the fruit, and lastly another layer of sugar. By morning a thick sirup will have formed. This is drained off into the preserving-kettle and allowed to cook slowly for ten minutes, skimming if necessary. At the end of this time, put in the fruit, and cook until it just comes to a boil. Now skim out the fruit, spread fruit and sirup on broad platters, and set in the hot sun, covering with panes of window-glass. As the sun disappears in one place, move the fruit to another where it can have the full benefit of the sun's rays until rich and thick. Put in jelly-glasses, and cover with circles of writing-paper wet with brandy. Put up in this way, the fruit retains its natural color and flavor, while it is really very little trouble to do.—*From "Canning and Preserving Fruit," by Emma Paddock Telford, in the August Circle.*

THINGS WORTH KNOWING.

See that the sides or walls of your refrigerators are occasionally scoured with soap, or soap and slaked lime.

Shabby dark leather will look like new if rubbed over with either linseed oil or the wellbeaten white of an egg mixed with a little black ink. Polish with soft dusters until quite dry and glossy.

Use a silver knife to peel apples, and the hands will not be blackened as when a steel knife is used. The acid of the fruit (acetic acid) acts on the iron in the latter case, but does not affect the silver.

To clean very dirty brass, scrub with a nail-brush dipped in powdered bath-brick dust and paraffin. Even the most tarnished brass can be cleaned in this way. Polish with the dry dust and a soft duster.

In order to keep silver that is not in constant use in a good condition, fill a paper with alternate layers of forks, spoons and other objects, and common flour that is perfectly dry. If the silver is bright and dry when put away it may be used at any time without being cleaned for a year or two. After this time the flour needs drying again.

Nature furnishes us many cures for the successful treatment of diseases, if we will but study her methods instead of following fads. For ivy poison, bathe the poisoned member in a strong lye made from wood ashes. This simple remedy has given almost instant relief in many cases of ivy poisoning. An excellent remedy to reduce swelling or pain of any kind is made as follows: Take one egg, one-half cup of vinegar, and the same of turpentine; put it all together in a bottle and shake thoroughly. After standing a little while it becomes as thick as cream. If desired, it can be thinned with a little vinegar.

A remedy that is said to be fine for asthma is made by gathering about six double handfuls of peach tree leaves, boiling them, and then squeezing the juice out. There should be about one quart. Add this to one quart of good molasses and cook to a candy, then pull and cut into small pieces and take a piece five times a day.

A good remedy for ringworm is made of sugar of lead, dissolved in rain-water, with ten drops of laudanum added. This should be applied with a feather or camel's hair brush.

THE HOME DOCTOR.

Iodine will help neuralgic pain if the spot where the pain is severest be painted with it.

There is nothing to beat rhubarb juice as a cure for gout or rheumatism, except water from medicinal springs. All kinds of scurvy and blood poisoning yield to the juice of lemons or of limes, which are the greatest blood purifiers in existence.

Common mustard used as a plaster or poultice is the best cure for a cold on the chest, and the white of an egg with sugar is the finest medicine for hoarseness To cure a burn an application of the white skin that lines the shell of an egg is unbeatable, while the raw yolk is a capital tonic.

A physician announces that distressing or excessive palpitation of the heart can always be arrested by bending double—the head down and hands hanging—so as to produce a temporary congestion of the upper portion of the body. In nearly every instance of nervous or anæmic palpitation the heart immediately resumes its normal function.

For catarrh a lukewarm solution of salt and milk is sniffed by the nostrils three times a day, one-fourth teaspoonful of the salt being used in a half pint of milk. Chronic sore eyes are bathed frequently with water in which a small amount of salt is dissolved, while it is applied very strongly to sprains and bruises. Moistened salt is bound upon burns, and if applied in time it will prevent blistering. Mixed with the white of the egg, it will abolutely prevent felons.

For the Children

THE REASON WHY.

I know a little maiden who is always in a hurry,
She races through her breakfast to be in time for school;
She scribbles at her desk in a hasty sort of flurry,
And comes home in a breathless whirl that fills the vestibule.

She hurries through her studying, she hurries through her sewing,
Like an engine at high pressure, as if leisure were a crime;
She is always in a scramble, no matter where she's going,
And yet—would you believe it?—she never is in time.

It seems a contradiction, until you know the reason,
But I'm sure you'll think it simple, as I do, when I state
That she never has been known to begin a thing in season,
And she's always in a hurry, because she starts too late.

—Priscilla Leonard.

YOUTHFUL NATURAL HISTORY.

A PAPER submitted in the recent summer examinations contained the two following essays by a youth of ten whose literary talent will no doubt some day shine forth in the land. He is at all events original in his ideas.

The Eagle.

The eagle is the king of all birds.

The eagle can fly right at the sun and never wink its eye.

It is because it keeps its eyes open like all us Americans that we let it be our national burd and emblum.

The young eagles are called signetures.

If you leave a baby lieing around where a eagle can get it it will take it in its beake and fly away with it to its learie.

My father says President Roosefeldt wood sooner have our nationol burd to be a stork, because it bringeth and taketh not away as the Eagle doth.

The Beaver.

The Beaver youst to be yoused all the time to make hats out of, but when peepel wor straw hats and other kinds the Canadions took all the Beavers for ther nationol emblum. thou Canada is not really yet a nation I don't think.

The Beaver is very yousful to cut down trees and holler them out for canoes for the Injuns with its teeth.

Beavers work very hard at that all sumer and sleep in rivers under the ice in the winter. I think that is all ther is to no about Beavers.—*Robert Elliot, in Woman's Home Companion.*

"THE LEDDY WHO SAID 'THANK YOU.'"

NANCY stepped from an electric car late one afternoon on her way to the small upstairs shop where certain artistic wares are found. As she hurried along the crowded street, looking for the familiar front of the building, she saw in surprise that it had disappeared. Its place was partly taken by scaffolding, and for some distance the space in front of the building was boarded in, enclosing piles of lumber, plaster and several workmen.

At first Nancy turned away, but on second thought decided to persevere and indulge in the feminine pastime of "asking."

"Are people still doing business in the upstairs shops?" she inquired pleasantly, looking into the open door in the boarding.

"Sure, Miss, everything's goin' on, same as ever," replied the head workman, coming forward, "excepting in the front, of course."

"But can I get through here?" and Nancy laughed a little doubtfully.

"Sure. We'll fix that all right," was the answer as, with an authoritative wave of the hand, the man motioned two others to lift away a heavy piece of timber, to kick aside some plastery blocks and to place a clean plank in the doorway.

"I'm sorry to trouble you," apologized Nancy, as the workman pulled off his rough cap and gallantly helped her to mount.

If Nancy could ask questions like a woman, she could also select a purchase quickly, "like a man." Before many minutes, therefore, she reappeared in the doorway and, thinking to have slipped out unnoticed, her pretty brow wrinkled in annoyance to find the plank removed and the work going on as before. She was plainly helpless. By this time the friendly man caught sight of her, and with a "Wait a minute miss," he sprang for the plank himself, again ordering the way cleared for "the leddy."

"Thank you," smiled Nancy. "It is too bad to interrupt your work again, especially as I suppose you're here to build this new front and not help persons in and out of the building."

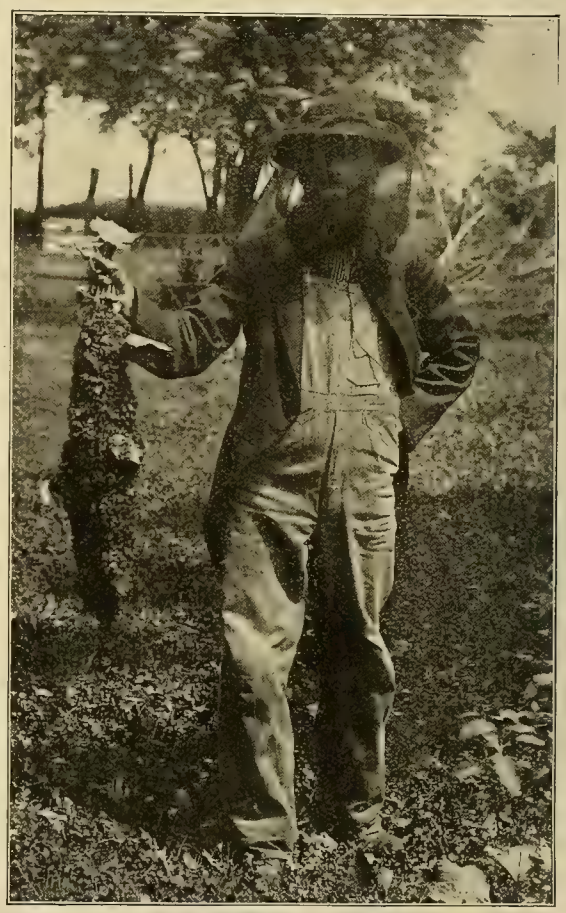
"Oh, no, miss," he replied, "we're used to it; we've been a-doin' of it all day long. But," he added, hesitating as he stood aside to let her pass, "you're the first leddy as has said 'Thank you.'"

THE RURAL LIFE

Home of the Honey Bee

D. J. Blocher

Swarming.



THE very moment we entered one of our yards to get a view of the yard, a swarm began to issue, and before it had clustered, another came out of another hive. The two mingled in the air. We had been wishing for a view of a good swarm, so now we had a chance to get a view. The bees began to settle low on a bush across the fence. I got across and cut the twig and small vine on which they were clustering, and held it till I thought I had about half the bees. Then I returned across the fence for a view. The swarm was good size but not a real large swarm. Sixty thousand bees and over makes a fine swarm and one that can hustle in the honey. The view is not as good as we meant to get for the *Nook,* but is the best we could do under the situation.

When I was a boy it was the custom to rattle pans or ring cow-bells to cause the bees to cluster, but it has been quite clearly demonstrated that bees do not hear, and therefore noise cuts no figure with them. However there are many people who think noise is what counts in everything, ar at least it has that appearance. They forget that the world moves by men and women who *do things* and not by those who make noise.

Again to my subject. Just this season we were reminded of the old-time custom of making noise to have the bees cluster. This was repeated in our own village by several of the neighbors. We do not pay any attention to the bees when they swarm, excepting to know where they have settled. Then we take a hive to the place, and gently shake the bees at the entrance of the hive, and the work of hiving is done.

Bees appreciate good handling which is observable in the handling that different men give them. They are not slow eitheir to give you a "pointer" on the business.

After the bees are hived, they should be taken back to the old stand, the old hive removed, a rod or so, and the new swarm set where the old hive was. This throws all the field bees into one swarm and they are the ones to get the honey. Then, if there were any honey boxes on the parent hive, they should be removed and placed on the new. This puts unfinished honey and the field workers together and if any honey is to be had, it will come by this method.

The Author at Work.

I have handled bees from boyhood and have tried many methods of handling swarms for honey, and the method just described is the most satisfactory. At

this writing some of our swarms so handled have already stored seventy-two one-pound sections of honey. Some people may think it is the young bees that leave the old hives. This is not the case, as can clearly be proved in various ways.

Bee men have been trying to hit on a plan to do away with swarming, and run all efforts into honey. But overcoming the swarming, and yet have a compact body of bees to do lots of work, is hard to do from the simple fact that the swarming is nature's way of perpetuating the race, and, to be successful, this nature must in some way be overcome. Just this summer we heard of one man who has learned to introduce as many as fourteen unrelated queens into one hive, all laying, with no swarming inclination. Bee men have an eye on this move, but have no clue to the work. If his efforts prove successful he will reveal his plan to the beekeeping world for practical purposes.

In a later article we shall speak of the individual bees and also give further description of each.

Pearl City, Ill.

A Pennsylvania Canal Boat

S. Z. Sharp

In Two Parts.—Part One.

Sixty years ago, and longer, the traffic between Pittsburg, Pa., and Philadelphia was carried on by means of boats on the Pennsylvania Canal, which followed the Juniata River from a point near its source to its confluence with the Susquehanna River near Harrisburg.

The waters of the Juniata and of other streams were necessary to supply the locks with water when boats passed through them, and had to be raised to a higher level. This canal was constructed up the sides of the Alleghany Mountains as far as it could be supplied with water. Boats that were required to cross the mountains were built in sections, so that they could be drawn up the sides of the mountain,—a section at a time,—on an inclined plane, by means of powerful machinery, and let down again into the canal on the other side of the mountain, where the sections were joined together again. Boats plying on either side of the mountain only, were not built in sections.

These boats were drawn by horses hitched tandem fashion to a long rope or cable, attached to one end of the boat. A well-kept road, called a "towpath," led along the edge of the canal, and on this path the horses walked.

When two boats met, coming from opposite directions, the driver of the horses going down stream moved his horses away from the canal and stopped. The impetus given to the boat and the slow current of the water, carried the boat forward. This let the cable drop to the bottom of the canal, and the horses and boat going up-stream, passed over the cable between the horses and boat going down stream.

Sometimes the canal followed the foot of a steep mountain, where there was no room for a towpath, which made it necessary for the towpath to run on the other side of the canal. Then horses had to cross over a bridge to the other side. How to get the horses and rope over the bridge, and the boat through underneath, without detaching the rope from the boat, might give the reader some thought.

Well, it was very simple. The horses first went through under the bridge and drew the boat far enough; then turned square around went back, crossed the bridge on the lower side and continued on the other side of the canal.

The horses usually were driven by boys. James A. Garfield one of our presidents, when a boy spent some time as a driver on a towpath.

The water in the canal had to be about sixty feet wide, and from six to seven feet deep, no matter how the land sloped. This necessitated the construction of numerous locks, such as are contemplated to be built in the Panama ship canal.

These locks were always in pairs, a little more than the length of a boat apart.

Before a boat came near a lock, the lock-keeper was notified to get the locks ready, by the boatman's playing a tune on a long tin horn, similar to that used by our grandmothers to call the men to dinner from the fields. When passing through the mountains, the reverberations of the sound from the boatman's horn were often wild and shrill, like that of the hunters in the Alps. We were really sorry when the canal was abandoned and the music of the boatmen's horn was heard no more.

When the boatman went down stream, the lock-keeper opened the upper lock and let the boat in between the two locks. Then shutting it again, he opened the lower lock, letting out the water between the two locks till the boat was on the lower level and went on. In going up stream the order was reversed.

A good deal of travel was carried on by means of a "packet boat," as it was called. It was of light draft, nicely painted, and provided inside with neat parlors and staterooms. Such a boat was drawn by double teams, frequently relayed, and went at a speed of five miles an hour. This "packet boat" was the

lightning express of that day, and contrasted somewhat with the lightning express running now along the same line over the Pennsylvania Central R. R., at a tenfold speed, or fifty miles an hour.

All the traffic between Pittsburg and Philadelphia was carried on through this canal, and at the time it was sufficient for all purposes. To the younger readers of the INGLENOOK it may seem a slow way of moving traffic, yet it was a great improvement upon an earlier age and an earlier method, by which all the goods from Philadelphia west had to be freighted by four and six-horse teams hitched to covered wagons. A description of the life in that age would make an interesting article. What become of the canal boat and what took place later, we must leave for our next article.

THE BLOODTHIRSTY MOSQUITOES.

YES, blood is the aim of these busy little insects who intrude their company so "feelingly" into our presence when we least desire it. "Where in the world do they all come from?" we ask in despair. Go with me to the nearest pool of standing water. Here the "lady mosquito" lays upon the surface a boat shaped mass of eggs which weighs something like one-fifth as much as her whole body. She must have stuff out of which to make them, and the requisite material is furnished by a single good sized drop of blood, which some human being or other animal is expected to supply. When we are bitten, therefore, we have the satisfaction of knowing that we are providing substance out of which a fresh brood of mosquitoes will be hatched.

Mosquitoes are very ancient insects. They have been found fossilized in rocks millions of years old—including one species called *Culex damnatorum* (gnat of the damned), which was of extraordinary size. In so great a length of time, during which only the females had any use for blood, the long disused biting organs of the males have become mere rudiments; so that the gentleman mosquito of today could not possibly perform, even if he so wished, the difficult surgical operation by which his mate procures a supply of gore. He does feed upon the juices of plants, and is often found reposing inside of flowers, which afford a sustenance adequate for his purposes.

The so-called bite of a mosquito, however, is not, properly speaking, a bite at all, but a sting. She is provided with a beak nearly half as long as her body, which contains, neatly packed away, a wonderful little set of surgical instruments, inconceivably sharp. These consist of a lance, far finer and sharper than the smallest cambric needle, and four tiny saws, with which she cuts the skin and the capillary blood vessels lying beneath, so as to allow the blood to flow freely. In addition to the stabber and the saws there is a long-grooved tool, down which flow oily drops of poisonous fluid from the venom glands, to dilute the blood and make it pour out rapidly.

The venom glands are two in number; and in the back of the insect's head is a sort of bulb apparatus, by which the blood is pumped up into the throat and stomach. If one waits until the operation is complete, practically all of the poison will be pumped out of the wound, and the bite will have merely the appearance of a small, red puncture, without itching. But if a slap destroys the creature while she is engaged in the performance, not only does more or less of the venom remain, but the little saws, each of which has forty-two serration, are likely to be broken off beneath the skin, remaining to cause additional irritation.

As for mosquitoes in general, it is not to be denied that in one way they have an important usefulness—that is to say, in purification of standing water. Their larvæ feed exclusively upon decaying vegetable matter, and thus act as scavengers. If proof of this wanted, place side by side two barrels of water, one covered with a gauze net, and the other uncovered. After a few days the uncovered barrel will be found full of "wigglers," but sweet; the other will be found foul and offensive to the smell.

PROGRESS AND VALUE OF TREE PLANTING.

REPORTS from all parts of the country show that the past season has undoubtedly been characterized by a more extensive planting of forest trees than any previous year in the history of the United States. The work is progressing very favorably in every State in the Union. It has been most extensive in California, in the great Middle West, and in the New England States. But even in the South, where planting has been more or less limited because of existing natural forests, the scope of the work has greatly broadened.

The trees planted have been mainly hardwoods. Several large nurserymen, however, report greater sales of conifers for forest planting than they have ever made before. In the Middle West catalpa, black locust, Osage orange, and Russian mulberry were the favorite trees; in the North and northeast preference was given to white pine, chestnut, larch, and spruce; in the South the native conifers held the lead; and in California, where the immense annual planting area has been increased to at least five times its former size, eucalyptus had practically a monopoly.

A few figures readily show the value of forest planting from a commercial standpoint. In Pawnee County Nebr., a sixteen-year-old catalpa plantation gave a net return of $152.17 per acre at the time the plantation was cut. This meant an annual profit of $6.24 per acre. A ten-year-old plantation of the same species in Kansas showed a net value of $197.55 per acre. Still another plantation in Nebraska, gave a net income

of $170.50 per acre when fourteen years old, which amounts to an annual income of $8.69 per acre. Several equally striking cases could be cited throughout the entire Middle West, and it is known that where the catalpa will succeed no other tree will pay so well. Good soil and moisture conditions are, however, essential for success with this tree.

Osage Orange has been known to produce as high as 2,640 first-class posts and 2,272 second-class posts per acre, and it is well understood that no posts are better than those of Osage orange. Land producing such a forest as this could hardly be put to a better use, since timber is the easiest of all crops to raise and from now on will never go begging for a market.

Red cedar in plantations twenty-five years old has reached a value of $200.54 per acre. European larch used for fence posts or telephone posts reaches an average value of $200 to $300. White pine plantations forty years old have exceeded a value of $300 per acre, and it is known that the eucalyptus, even when grown for fuel alone, can compete as to profits with oranges.

It does not take a lifetime to get results. Catalpa often reaches a post size in from eight to ten years, and will give service as a post for from fifteen to forty years. Osage orange, which reaches post size in from twenty to fifteen years, usually lasts longer than calapa. Black locust, though badly affected by the borer in some regions, grows about as fast as the catalpa and has almost the some post value, while it has the great advantage over catalpa of being able to thrive on poor land. European larch reaches a size suitable for telephone poles in twenty-five years. When treated with preservative it will then last from fifteen to twenty-five years. Eucalyptus makes a heavy yield of fuel in seven years, and the crop should nearly always be cut before ten years. On favorable sites white pine will make saw timber in from forty to sixty years. Already the demand for the timber of this tree shows conclusively that the investment will prove immensely profitable.

In every region of the United States there is at least one forest tree, and generally there are several forest trees, which can be planted with a complete assurance of commercial success if the plantation is properly established and given proper care. The Government has made a very careful study of most of the forest plantations in the United States. Its publications on tree planting may be had free of charge upon application to the Forest Service, U. S. Department of Agriculture, Washington, D. C. The studies on which they were based were made especially for the benefit of farmers and other land owners, and to prevent the waste of thousands of dollars annually lost by planting the wrong forest trees or by improper care of plantations.

From the manner in which our natural timber has been cut it is clear that each region will have to be made as nearly self-supporting in timber growth as possible. The lesson of the past is that the right forest trees grown in the right way will bring a big profit.

FUNNYGRAPHS

A Vermont editor claims to have seen a rainbow at night, and the temperance people have given him up as hopeless.

"My dear sir," protested the eminent Senator, "I try to take a broad view of every public question."

"I notice you always stand on both sides of it," said the dissatisfied constituent.

She: "You haven't any confidence in either candidate?"

He: "On the contrary, I have confidence in both. I believe all the things they say about each other are absolutely true."

"Yes, Miss, those ruins over there are of the great lighthouse—blown down in a single night."

"Goodness gracious! How silly of them to put it in such an exposed position!"

The editor of a newspaper that has adopted phonetic spelling in a measure, received a postal card from an old subscriber in the country, which read as follows. "I hav tuk your paper for leven yeres, but if you kan't spel enny better than you have been doin fur the las tu munths you may jes stoppit."

Mrs. Gadd: "You look tired, Mrs. Gabb. What is the matter?"

Mrs. Gabb: "Tired! I'm nearly dead. I've sat at my bath-room window every day for hours seven weeks on end, listening to the sounds in the parsonage next door, and I haven't heard a cross word yet."

"How came these holes in your elbows?" said a widowed mother to her only son. "O, mother, I hid behind the sofa when Colonel Gobler was saying to Maria that he'd take her even if you had to be thrown in; and he didn't know I was there; and so I held my tongue and laughed in my sleeves till I busted 'em."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additioal lies. However, no "want" may exceed six lines altogether.

For Sale.—A nice home in Brethren community, for sale cheap, on easy terms. Large eight-room house, nearly new, new orchard and poultry house. Barn contracted for. Nine or nineteen acres of land. Good schools, markets, roads, water, etc. Telephones and daily mail.—Address: Garfield Nine, Brookside, W. Va.

Wanted.—Matron. Man and wife to do the dining room work and wash and wipe dishes. Some one who wishes to attend school to work for part expenses.—Address: McPherson College, McPherson, Kans.

NEFF'S CORNER

Only a few hours' ride from Lake Arthur, I am still in position to look after the interests of those who have invested there. I have employed a thoroughly responsible helper, who is there every day, to look after rents there, and whenever necessary I can go in person to attend to Lake Arthur business myself. Being fully convinced that I could make the change without injury to any and with advantage to many, I decided to come to Clovis. And the rate at which things are moving here is really lively. A 25-foot vacant lot on Main street sold a few days ago for $1,850. A property that cost less than $1,200 sold inside of six weeks for $2,500. A building that cost less that $900 rents for $75 per month. Contracts for improvements here, such as depot, eating-house, shops and yards, have already said to have been let by the railroad company amounting to $260,000. It is estimated that when all the work now arranged for is in operation, here, Clovis will have a monthly pay roll of $150,000. If you would like one or more lots with three-room houses, such as will rent for $15 per month, you can get them well located now for $450 each. Same sized lot (50x140 feet), as well located, with two-room house, such as will rent for $10 per month can be had for $350. If you would like one or more vacant lots to hold awhile for advance in price, a limited number can be had with good house on lot next adjoining (which, of course, will enhance the value of yours) at $125 for in-lots or $150 for corners. If interested in lands near by the good market which this and other adjacent towns will afford, you can get them. I have none to sell, but I have made inquiry and find prices low. We hope to have a Brethren church and community in the near future, and if you will investigate you may find that there is room for you. Write

JAMES M. NEFF,
Clovis, New Mex.

D. GENSINGER, - Wenatchee, Wash.

Elsie Dinsmore

By Martha Finley.

This is the first, and acknowledged by many to be the best, of that famous series of books known as the "Elsie Series."

This is an exceedingly fascinating story and one that would be beneficial to every boy and girl who would apply the lessons that it teaches.

Only 34 Cents.

This is the only book of the series that is published in a cheap edition. The other books of this series are sold only in a $1.25 edition.

This volume is well bound in cloth with a beautiful cover design. It contains 342 pages and the print is large and clear.

Our price, only .....34 cents
Postage extra, ...8 cents

Send all orders to

The Gospel Messenger

To New Subscribers Only

Gospel Messenger to January, 1908,	$0.75
The Other Half of the Globe,	1.50
Brethren Family Almanac,	.10
The three are worth,	$2.35
All to new Subscribers for only	.95

We want to add 5,000 new subscribers to our list. We can do it if you will help us. If you are not a subscriber, send your subscription to-day. If you are, then tell your friend who is not a subscriber of this offer. The Book alone is worth much more than we ask for the combination. If you have a copy of the Book, you can tell them of its value.

The Other Half of the Globe

BY

D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

ELGIN, ILLINOIS

LIFE.

Life, I know not what thou art
And know that thou and I must part,
But when and where and how we met
I own to me's a secret yet.

Life, we've long been together
Through pleasant and through cloudy weather;
'Tis hard to part when friends are dear,
Perhaps 'twill cost a sigh, a tear.

Then steal away, Choose thine own time;
Say not "Good-night," but in a brighter clime,
Bid me "good morning."

—Mrs. Barbauld.

THE FELLOW THAT'S DOING HIS BEST.

There's a song for the man who is lucky and bold,
For the man who has fate on his side;
There are cheers for the folk that are jingling the gold
And are drifting along with the tide.
But the man who is striving to get to the land
And facing the hungry wave's crest
We quite overlook, for we don't understand
The fellow that's doing his best.

But he has his rewards when the story is done,
Though we smile as he plods on his way,
For his own self-esteem is the prize he has won,
As obscurely he's stood in the fray.
And he knows the affection of home and of friends
And the pleasure of honest-earned rest;
There are peace and good-will, as the twilight descends,
For the fellow that's doing his best.

THE BEAUTY OF THE MORNING.

Oh, the beauty of the morning! It showers its splendors down
From the crimson robes of sunrise, the azure mountain's crown;
It smiles amid the waving fields, it dapples in the streams,
It breathes its sparkling music through the rapture of our dreams.

It floats upon the limpid air in rainbow-clouds of mist,
It ripples through the glowing skies in pearl and amethyst,
It gleams in every burnished pool, it riots through the grass,
It splashes waves of glory on the shadows as they pass.

It steals among the nodding trees and to the forest croons,
In airy note and gentle voice, 'neath waning plenilunes;
It calls, and lo! the wooded brakes, the hills and tangled fens—
A world of life and mystery—swarm with its denizens.

It trembles in the perfumed breeze, and where its ardor runs,
A thousand light-winged choristers pant forth their orisons;
A thousand echoes clap their hands, and from their dewy beds,
A million scarlet-throated flowers peer forth with startled heads.

Oh, the beauty of the morning! It rains upon our ears:
The music of the universe, the chiming of the spheres;
From cloistered wood and leafy vale, its tuneful medleys throng,
Till all the earth is drenched in light, and all the world in song!

—Elisha Safford.

"IT NEVER COMES AGAIN."

There are gains for all our losses,
There are balms for all our pain,
But when youth, the dream, departs,
It takes something from our hearts,
And it never comes again.

We are stronger, and are better,
Under manhood's sterner reign;
Still we feel that something sweet
Followed youth, with flying feet
And will never come again.

Something beautiful is vanished
And we sigh for it in vain;
We behold it everywhere,
On the earth and in the air,
But it never comes again.

—Richard Henry Stoddard.

"NOBODY KNOWS BUT—MOTHER."

Nobody knows of the work it makes
To keep the home together;
Nobody knows of the steps it takes,
Nobody knows but mother.

Nobody lists to the childish woes
Which only kisses smother;
Nobody's pained by naughty blows,
Nobody—only mother.

Nobody knows of the sleepless care
Bestowed on baby brother,
Nobody knows of the pleading prayer,
Nobody—only mother.

Nobody knows of the lessons taught
Of loving one another;
Nobody knows of the patience long—
Nobody knows but mother.

Nobody knows of the anxious fears
Lest darlings may not weather
The storms in after years,
Nobody knows but mother.

Nobody kneels at the throne above
To thank the heavenly Father
For that sweetest gift, a mother's love—
Nobody can—but mother.

—Lillian Dooley.

Lady Canvassers

Successful in Selling the

INGLENOOK COOK BOOK

Lady canvasser can and do make just as much money canvassing as men when they take the right article. We have a number of both lady and gentlemen canvessers selling the Inglenook Cook Book, and the ladies are taking the banner. Hear what a few of the many have to say.

32 SALES ONE DAY.

I have found the Inglenook Cook Book a splendid seller. Better far than I expected. I have sold 127. The most I sold in one day was 32. Send me 150 at once. Grace Gnagey, Meyersdale, Pa.

41 SOLD FIRST DAY.

Another agent says, "The first day out I sold 41 copies. It sells much better than I expected."

SOLD 31 IN ONE DAY.

Find enclosed draft for 200 Cook Books. I am getting along well and like the work fine. The most books I have sold in a day was 31. Suppose I would have sold more, but finished the town and had to quit. Ida Brower, South English, Iowa, June 25, 1907.

HELPING WOMANKIND.

"I do not feel that I could devote my whole time in selling the Inglenook Cook Book just at present, but would like to work at it what I can. I feel it will be helping womankind to introduce it into these homes for the recipes are so easy to understand and so many every day wholesome things that it makes any one hungry just to read them. Please send me a cook book to use in selling the same." Mrs. J. W. Hoover, Sunfield, Mich., July 15, 1907.

REMEMBER

that these reports are nearly all from inexperienced canvassers.

$2.00 TO $5.00 PER DAY.

Ladies can you make anything like that at your present vocation?

Webster's Unabridged Dictionary

This is the original Webster's Unabridged Dictionary, with supplement and revises by Chauncey A. Goodrich, of Yale College. An American dictionary of the English language, containing the whole vocabulary of the first editions and the corrections and improvements of later editions. To this is added a table of synonyms, peculiar use of words and terms of the Bible. If you do not care to spend $9.00 or $10.00 for Webster's International Dictionary, which is the latest and best made, then get this book, which, for nearly all practical purposes, will serve you quite as well. It is printed from good, clear type and contains 1,600 pages. Cloth, $1.25.

Brethren Publishing House, :: Elgin, Illinois

The STORY of the HYMNS and TUNES

By Theron Brown
and
Hezekiah Butterworth

A new book that will interest and bring joy to all lovers of music.

In the introduction Mr. Brown writes: "In the following pages no pretense is made of selecting all the best and most used hymns but the purpose has been to notice as many as possible of the standard pieces, and a few others which seem to add or reshape a useful thought or introduce a new strain." The story of hundreds of hymns with their tunes are given. The portraits of twenty-four noted musicians are inserted in the book.

The book contains nearly 600 pages and is bound in good cloth binding.

The fine gilt top and gilt stamping on the cover makes it a very attractive book.

If you are a lover of music you will want this book.

E. RINEHART, M. D.
Cancer Specialist.

CANCER

CURED WITHOUT SURGERY OR PAIN

Our latest book which we will send free of charge tells all about Cancer and all chronic and malignant diseases, and how they can be cured at home quickly and at small expense. Reference, patients cured in every State and Territory, ministers and bankers. Office, No. 50 West Walnut Street.

Address, Drs. Rinehart & Co., Lock Box 20, Kokomo, Indiana.

DR. J. S. FLORA,
Ex-U. S. Examining Surgeon,
Specialist in the Cure of Chronic Diseases.

Scirrhus Cancer of the Breast.

Has been cured for four years and no signs of return. I had a lump the size of a walnut in my left breast for over a year which gave me a great deal of annoyance from sharp pains darting in and around the lump. Seeing that something must be done I consulted several physicians, some advising me to have it removed with the knife, To this I never could consent. While thinking the matter over I learned of Drs. Rinehart & Co. curing cancer without pain. I used three months of their treatment and can truthfully say for mankind that I am perfectly well. I suffered no pain in the least while under their treatment not even breaking the skin. Hoping this will be of some benefit to suffering ones,

Most respectfully,
Mrs. Sarah Miller,
Waupecong, Ind.

Mrs. Sarah Yoder, of Cora, Oklahoma, cured of Cancer of right cheek.

John Slabah, of Conway, Kansas, cured of cancer of the upper lip.

Sherman Hollingsworth, of Russiaville, Ind., cured of cancer of the right cheek.

D. D. Boyd, of Armstrong Ave, Kokomo, Ind., cured of cancer of the neck.

Mrs. Henry Reiber, of Kokomo, Ind., cured of cancer of the nose.

Noah Troyer, Kokomo, Ind., cured of cancer of the back.

Cancer of the Breast Cured.

In behalf of the people who may be afflicted with cancer as I was, and are in need of a real cure by honest physicians, I will say that I had that dreaded disease for about five years. The last year of this time I suffered from a sharp gnawing pain extending from my left breast in all directions and a large lump was formed the size of a half dollar and an inch in thickness.

Words could not express the pain that extended down my arm, but thanks be to God after taking treatment from Drs. Rinehart & Co. for about four months the lump in my breast was entirely gone. The pains also left my breast and I feel so thankful to the Doctors, and the good Lord that I am entirely well. I assure the people and all concerned that this is my true and voluntary statement. I feel that I must tell to those afflicted with Cancer that Drs. Rinehart & Co. cured me without pain or even breaking the skin. This is a true statement of my case and am willing to help anyone to a cure,

Respectfully,
Mrs. Ida C. Dinius,
Dec. 26, 1905. 64 Main St., Huntingdon, Ind.

Michael Troyer, of Twinsburg, Ohio, cured of cancer of the cheek.

Mrs. Rev. Daniel Miller, Greentown, Ind., cured of cancer of the nose.

Mrs. A. R. Rife, of Amboy, Ind., cured of cancer of both sides of the cheek and nose.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,
CHAS. B. WESTOVER, Pres.

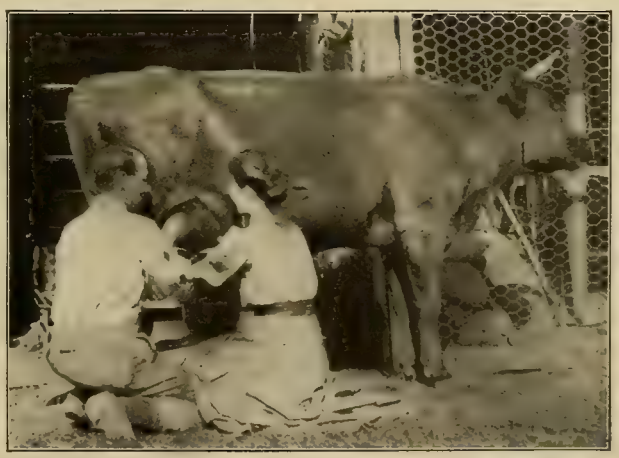
MORE SNAP SHOTS FROM BUTTE VALLEY

Vegetables from Bro. Early's Garden.

Last week we promised to show you some more views from Butte Valley, and here they are. Next week we will show you Bro. Maust in his wheat field, with his self-binder. The two pictures on this page will be interesting to the readers of the Inglenook, because a great many people, on going to Butte Valley, seem to fail to find Silas Smith and his second wife; if this isn't a case of it then it is hard to find one. This was certainly taken in Butte Valley, and those who have been there will probably know the parties. Some people think that because the land will raise five tons of alfalfa to the acre that it takes two to milk one cow, but this is not always the case.

The other picture shows some of the beautiful radishes at close range, as well as some red beets, sugar beets and heads of lettuce. The large, thrifty pumpkin vines certainly denote a fertile soil. The potato crop this year, like everywhere else in California, was something wonderful. We herewith print a clipping from San Francisco Chronicle, Aug. 29, which explains itself.

MAKE FORTUNES IN POTATOES.



Farmers Report Large Yield and Good Prices for Potatoes, Onions and Hops.

The California State Board of Trade, in gathering statistics concerning the crops of California for the present season, has received reports from many districts showing that the yield is very heavy and prices good. Potato growers will make fortunes this year. From reports thus far received, the State Board issued the following statement yesterday:

"San Joaquin county alone has over 18,000 acres in potatoes and they are turning out well, averaging 250 bushels to the acre, making a total of **4,500,000 bushels,** more than twice as many as last year. **Some growers** are getting **over 300 bushels.** One has 420 acres in potatoes and is getting an average of **175 sacks per acre, or 73,500 sacks** in all, which he is selling as fast as he can dig them at from **$1.65 to $2.00** per sack, over **$120,000 for his crop.**

Stanislaus county growers are doing even better as far as yield and returns per acre are concerned, especially with sweet potatoes which are turning out marvelously well. From Southern California potato districts come equally good reports. Good yield, good quality and good prices.

The onion and dried bean crops are also reported good, both in the nothern and southern districts. Hops, too, are generally turning out better than was expected, and as the crop in other quarters of the world is short, the growers in the State who are able to hold on will make money. On the Durst ranch, near Wheatland, which is one of the largest hop-ranches in the world, the crop has been nearly all gathered and the hops are of fine quality.

Wearing Out

That is just what a great many people are doing. They know something is wrong, and yet can't tell what is the matter.

Did you ever think what a large proportion of the American people are sick, or, at least, if not exactly sick, are not well? Something is the matter all the time.

How many people of your personal acquaintance are constantly complaining of being "so tired," having "such a headache," of "not feeling just right," and a thousand and one other things, until it almost seems as if the world had become one huge hospital filled with incurables? ! What is the cause of all this? It is certainly not a natural condition, but on the contrary one that should cause much anxiety and alarm.

The people in America are proverbially in a hurry. They eat in a hurry, work in a hurry and sleep in a hurry, overworking and overstraining nature, and then wonder why it is they don't feel well and strong.

One of the results of the American way of "rushing" things is the impoverishing of the blood, which furnishes the sinews of life. Not being able to respond to the calls made on it, the blood becomes thin and weak and, losing its strength, it soon fails to accomplish the work for which it is intended, and disease in its varied forms is the inevitable result. This weakness becomes sometimes the heritage of following generations.

Nothing will restore failing health, nothing will so quickly and surely bring strength, as DR. PETER'S BLOOD VITALIZER.

AN OCTOGENARIAN WRITES.

Lindsay, Ohio, Dec. 5, 19 .

Dr. Peter Fahrney & Sons Co., Chicago, Ill.

Dear Sirs: -Age is telling on me, as I am 84 years old, and I am thinking of resigning now my agency for the sale of your medicine, although our business relations have been very pleasant.

It has been a blessing to me that I was able to earn my living up to now and that blessing is due to a large extent to the invigorating qualities of the valuable remedy, the **Blood Vitalizer,** which had kept me on my feet for years.

I wish you further luck and God's richest blessing and remain.

Yours truly,
Jakob Artz.

SUFFERED FOR TWENTY-FOUR YEARS.

San Luis Obispo, Cal., July 31st.

Dr. Peter Fahrney & Sons Co., Chicago, Ill.

Gentlemen:—Next to God, I am thankful to you for what your **Blood Vitalizer** has done for me. For 24 years I suffered with stomach trouble. I had fainting spells, cramps and vomiting. I suffered terribly, and would have these attacks as often as once a week. I consulted the best physicians, as they were recommended to me, but they failed to cure me. One doctor had me under his care for four months and said I was cured and did not need any more medicine; but in a short time I was in the same condition again. It is now about eight years ago that I first heard of your **Blood Vitalizer.** I used it for some time and it cured me. I have never had any relapse since and have felt since then altogether like a new man. As long as I live and the **Blood Vitalizer** is to be had, I stand as a champion for your remedy. We would not think of being without it in the family.

Yours very truly,
Box 53. Andrew P. Peterson.

WAS A VERY SICK MAN.

North Plymouth, Mass., July 31st.

Dr. Peter Fahrney & Son, Co., Chicago, Ill.

Dear Sirs:—You will, no doubt, recollect sending me about six months ago a trial box of your **Blood Vitalizer.** I am now in a position to tell you what it did for me. I was a very sick man. The seat of my disease seemed to be my chest and stomach. I cannot give it any name. The doctors said my heart and stomach were badly affected but I cannot place much reliance in what they said, as they all failed to help me the least bit. Your **Blood Vitalizer** cured me, however. and I cannot praise your remedy enough for it. It is the only medicine that had any effect on my trouble. I am glad I learned of it and know where to get it in case any of my friends should need it.

Yours truly,
Frank Hallgren.

A DIFFERENT GIRL.

Edwardsville, Ill., May 15th.

Dr. Peter Fahrney & Sons Co., Chicago, Ill.

Dear Sirs:—I must let you know how successfully your remedy, the **Blood Vitalizer,** has been used in our family. We have a daughter, who is now almost six years old, and who has been sick and ailing almost since infancy. She had no appetite and looked very bad. Everybody who saw her thought that she was troubled with worms. We finally took her to the doctors and they said she had poor, weak blood. We tried their remedies but it seemed of no use. Then we commenced giving her your **Blood Vitalizer** and she commenced to pick up right away. She got a good appetite and people who see her now think she is a different girl. They can hardly believe she is the same one who was sick. We shall always keep your **Blood Vitalizer** as our family medicine.

Yours respectfully,
Box 268. Frank Harbeck.

DR. PETER'S BLOOD VITALIZER is a remedy for young and old. It restores natural vitality, strengthens and builds up the entire system. Not for sale in drugstores. Sold to the people direct through special agents in every community. If there is no agent in your neighborhood, write to the proprietors direct and address your letter

DR. PETER FAHRNEY & SONS CO.,

SENGER'S
SOVEREIGN BALM
BABY POWDER

CORRECTS all Irregularities of the STOMACH and BOWELS in INFANTS and CHILDREN

Such as indigestion, bloating, vomiting, wind colic, sour stomach, diarrhoea, green discharges, constipation, and all troubles that arise from these causes and that lead to cholera infantum. It tones, strengthens, and invigorates the stomach and bowels so that the child can digest and assimilate its food. It is a companion preparation to our **Sovereign Balm of Life** for **expectant mothers.** Those who have used it for their little ones say it is fine. It is free from all opiates, and just the thing to have on hand when any irregularities are observed. Price 25 cts. per bottle. Ask your druggist or order direct from

(MENTION THIS PAPER.) D. B. SENGER & Co., Franklin Grove, Ill.

Our Young People

A Weekly Publication.
An Eight-page Paper.

It contains an outline and a column of suggestive notes each week on the Christian Workers' subjects.

It contains a pointed article on each Sunday-school lesson.

Many helpful articles along scientific, religious and modern discovery lines appear in its pages from week to week.

It is a paper that all young people especially are intensely interested in.

Do you have a boy or girl in your home?

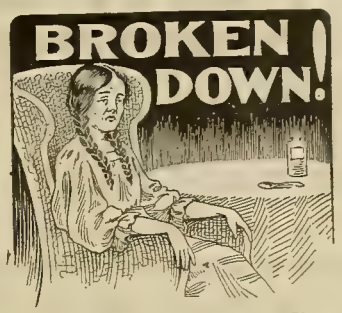
Do you have "Our Young People?"

They go well together and if you do not have this paper, don't wait longer to subscribe, but do it now.

Subscription price, per year, ...$0 65

SPECIAL INDUCEMENT.

In order to introduce this paper into thousands of new homes, we make this offer.



We will send the paper from the date your letter is received to Jan. 1, 1908 for only, ...$0 10

BEFORE OCTOBER 1.

All subscriptions must reach us on or before Oct. 1, in order to be entitled to this offer.

Send now and get the advantage of several weeks subscription free.

BRETHREN PUB. HOUSE.
Elgin, Ill.

Is this your picture Mother, Sister? Is your Nervous System broken down and you can hardly drag along? Brawntawns, The Victor Tonic, was made for you as it builds broken down systems, restores appetites, strengthens the digestive organs. If you have tried other tonics don't despair until you try Brawntawns, The Victor Tonic, for it will build you. Thirty days' treatment delivered to your home for 50c.

Lomita California

"Do you think it advisable to try California a while before purchasing a home?"

It has gone out that people should "try" or "test" California before making a permanent home. We have thought this over, and can see no good reason for such advice, no just ground for such action, but we do find some sound reasons against such a course. Why should you proceed differently here from that in Illinois? Do people as a rule move into Iowa and try it a year before making a home? Why should they do it here?

What brings contentment sooner than to own the land you are on,—own your house, and trees, etc? Every tree you plant is your own. Every flower and shrub that you encourage and cultivate is yours and these things you own are calculated to enlarge and strengthen your likes.

We have known farmers, who each owned 160 acres in the Mississippi valley, lease out their farms at $5 per acre,—and come out to California to "try it awhile" to see if they would like it. Now how did they go about it to find out what they would like? They rented some poor houses in some village, bought "second-hand" furniture with "Stint" thrown in, purchased their meat, butter, milk, groceries, vegetables—everything that they needed to eat and wear, and sometimes worked for $1.50 per day. They owned no horse, no buggy, no cow, no pigs, no hens, no garden—just "cooped" in a few rooms, and then were surprised at "the high cost of living" and utterly amazed that their income was far below what came from the 160 acre farm, where the hens roamed freely and split the air daily with their cackles over the egg business; where the fine hams and sausages came each autumn from the herds of fat hogs in clover, where the fat cows yielded rich cream and yellow butter, where the garden flourished so nicely and the apple bins delighted their owners. Yes, it "surprised" these farmers that they "could not like California," where they made no effort to produce the same kind of things that they had "down east." How unfair to "test" California that way!

Come to Lomita, get some of this good dirt and pure water, mix it in proper proportions, sow some seed, cultivate as you used to in your former home, follow the same economic conditions, look at your revenue and then consult your feelings, your likes and dislikes, and California will be genial toward you, as the East was, with the cyclones and lightnings, and freezings cut out. By making yourself a home, you will more likely be quite contented, and realize for your honest toil what you deserve. Try California as you would any other State, by honest industry and laudable efforts. There are lots of good places to do this and Lomita is one of them. The things that make for industry are awaiting you and we are never "too busy" to point them out to you. We much prefer to **Do** rather than to talk or write. Come look at our offerings and be convinced.

M. M. ESHELMAN, Tract Agent
Same Address.

Join Our Party Sept. 17th

And investigate the possibilities of the TWIN FALLS, north side tract to be thrown open for settlement

October 1

150,000 Acres of Land Under the Carey Act will be Thrown Open for Entry on that Date

This will be a great opportunity to the settler to secure a Homestead in a mild, equable climate, where crops grow to perfection by irrigation. No failure of crops on account of drought. This tract is on the North side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho.

The Brethren

should now be arranging to go to the opening of this 150,000 acres of land on the Twin Falls, North Side Canal for it will be taken up quick when once opened. Be there ready for entry Oct. 1. A good sized party have already made arrangements to go.

These lands are sold at 50 cents per acre and the water right $35.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms. Crops of all kinds are grown to perfection. Fruit growing is a success as well as the growing of sugar beets. To see these lands, take the Oregon Short Line, R. R., to Minnedoka; there change cars for Milner or Twin Falls.

"WE MADE NO MISTAKE"

Twin Falls, Idaho.

Twin Falls Land and Water Company.

Gentlemen: On the 6th day of April, 1906, I landed on the Twin Falls Tract to stay. I had been here twice during the winter "to see" and thought I had seen the opportunity of a lifetime for a man of small means to make a profitable investment and establish a comfortable home. Our experience has convinced us that we made no mistake.

Respectfully,
John R. Newton.

Pullman, Washington.

C. O. Morrell, Twin Falls, Idaho:

Professor Fulmer, Chemist, of Washington State University, has made his seventh test of soil from lands under the Twin Falls Canal system. He finds a small trace of alkali and thirty percent more plant producing qualities than in the Yakima Valley, and there is only one place on the Pacific coast where it is equaled, and that is in the Pajaro Valley in California. A. T. Farris.

Mr. B. F. Hurst, Fruit Inspector of Dist. No. 5, of Idaho states: "The Southern part of Idaho is second to no other part of the known world as a fruit producer, both in variety and quality."

HOMESEEKERS' ROUND TRIP TICKETS

will be sold to points in Idaho on 1st and 3rd Tuesdays of each month in 1907, good going, leaving selling station on date of sale and for return passage, leaving destination on day of execution which must be within final limit of 21 days from date of sale.

THE INGLENOOK

VOL. IX. SEPTEMBER 10, 1907. No. 37.

The Record of the Rocks

Robert E. Ericsen

I HAVE just been at work in the quarry. It is hard work, yet I enjoy it. Here, several hundred feet above sea level, I have turned over layer after layer of rock, showing the print of marine shells.

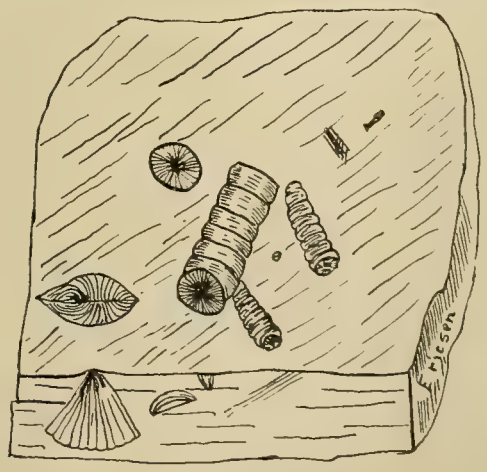
Here is a fine sandstone slab in the shade of a mulberry tree. Let us rest here and see what we can find. Notice that rock at your feet. It has a fresh fracture so we can examine both the exterior and interior. On the side see that print about the size and shape of your thumb nail. Clean the hardened clay from it and see the lines radiating from a point at one end. This is the print of a marine mollusk. On the upper surface you can see the upper portion of a shell, showing the hinge. There too, are several objects shaped like twigs. These are crinoids.

Here, in the ages long ago, when this old world was fresh from the hands of its Creator, the waves of ocean spread the glittering sand in sheets over vast layers of crinoids and mollusks. The ocean bed sank lower and lower till this bed of sand was deeply buried, and the enormous pressure soldified it into solid rock. Later it was upheaved and water eroded this valley, laying bare the rock.

Rocks are classed in two general divisions, stratified and unstratified. The stratified show the action of water, the others of fire. They are also called aqueous and igneous.

The common kinds of stratified rocks are,

1. *Calcareous,* which includes the limestone formations. They are composed principally of animal remains.



2. *Sandstone,* which consists of sand washed down from the land and settling in the water. Many fossil remains are found in this rock. The quarry where I have been at work consists of an unknown depth of the first, with a layer of the second, the one gradually blending into the other.

3. *Argillaceous,* or clayey sandstone. When it breaks into layers, it is called laminated.

4. *Shale* consists mainly of clay arranged mostly in layers, but breaking an all directions under the influence of heat or moisture.

The blackness of some shale is due to the carbon of plants and animals. When burnt, the carbon is consumed and the shale is white. For the same reason black limestone yields white quicklime.

Plants and animals have contributed much to the formation of rock. Limestone is formed mostly from shells, corals, crinoids and foraminifers, their contribution being carbonate of lime. Corals and crinoids are found only in ocean waters, hence stone abounding in their remains are of marine formation. The

Sandstone Slab.

coral, usually, has been pulverized by the waves, losing all trace of its origin, but foraminifers often form a fine-grained rock without grinding. Chalk, when viewed under a microscope, is seen to consist almost wholly of their remains.

The crinoids grew erect on a fixed stem. Pieces of these stems are often called "Indian beads" or petrified sticks. In the southern part of this county are limestone quarries where the layers are several feet thick and many fossils are to be found there.

From this ancient ocean bed we today take stone for walks, roads, walls and cement. Let us call noth-

ing useless. The waste of today may be the valued product of tomorrow. Let us, like the crinoid of old, fill the place assigned to us, believing that though we cannot see it, in the great sum of human existence we are not a cipher.

Mulberry Grove, Ill.

DANGER OF HEADACHE REMEDIES.

Dr. H. W. Wiley, chief chemist of the United States Department of Agriculture, utters a solemn warning in *The Ladie's Home Journal,* against certain headache remedies extensively used in this country. The new Food and Drugs Act requires that most of the drugs used in headache preparations be mentioned on the label of the bottle. But the fact remains that many people will not know their significance. Caffein and antipyrin are frequent ingredients of headache powders, but they are not required to be mentioned by the act. The people have therefore only a partial protection.

Now acetanilid, caffein, phenacetin, antipyrin and the many derivitives of these, when not used under the direction of a competent physician, are dangerous, and their mixture is apt to be deadly. They depress the nervous system; they disturb the digestion; they interfere with natural sleep; they require to be used in increasingly larger quantities as the system becomes accustomed to them; they are almost without exception excreted by the kidneys, thus adding an additional burden to organs already badly overworked. They produce a habit of gaining relief which soon asserts itself completely and becomes irrisistible.

This indictment does not lie against any one particular remedy, but against the whole system; and especially should we be on our guard against the manufacturer's and the druggist's practice of using fanciful names to cover up the sale of the drugs which enter into the composition of headache powders.

There is only one safe way to use a headache remedy, says Dr. Wiley. Go to a reliable physician and find out first from what kind of a headache you are suffering, for it should be remembered that one kind of headache is caused by the eyes, another by the stomach, and still another by some other cause, and each requires a different treatment. In most cases of headache there is a congestion of the blood-vessels of the brain and its membranes, and the natural remedial act to relieve pain would be to reduce the congestion. On the other hand, when a headache is caused by fatigue or lack of blood in the brain, just the opposite condition is present, and a stimulting treatment is indicated. Go directly to the root of the trouble, and let a physician discover where it lies. The headache remedy may be quicker in its result, but it is a poor result that alleviates a headache at the expense of the heart or the general health.

GOD IS LOVE.

RICHARD BRAUNSTEIN.

From this house of flesh incarnate
Within which my soul is stayed,
Looking out upon the beauties
Of a world divinely made,
Through the windows of the vision
Often have I looked above
For earth's beauties, pointing skyward,
Sweetly whispered—**God is Love.**

A BARROOM ADVERTISEMENT.

SELECTED BY EFFIE E. MILLER.

Tombstone, Arizona, claims to have the frankest saloonkeeper in the United States. He keeps the "Temple Bar" saloon and advertises as follows: "Friends and Neighbors, I am grateful to you for past favors, and having supplied my store with a fine line of choice liquors, allow me to inform you that I shall continue to make drunkards, paupers, and beggars, for the sober, industrious, respectable part of the community to support. My liquors will excite riot, robbery, and bloodshed. They will diminish your comforts, increase your expense, and shorten life. I shall confidently recommend them as sure to multiply fatal accidents and incurable diseases. They will deprive some of life, others of reason, many of character and all of peace. They will make fathers, friends, wives, widows, children, orphans, and all poor. I will train your sons in infidelity, dissipation, ignorance, lewdness and every other vice. I will corrupt the minister of religion, obstruct the gospel, defy the church, and cause as much temporal and eternal death as I can.

"I will thus accomodate the public. It may be the loss of my never-dying soul, but I have a family to support. The business pays, and the public encourages it. I have paid my license and the traffic is lawful, and if I don't sell it, somebody else will. I know the Bibe says. "Thou shat not kill," "No drunkard shall enter the kingdom of heaven" and I do not expect the drunkard-maker to fare any better, but I want an easy living and I have resolved to gather the wages of iniquity and to fatten on the substance of my fellow-men. I shall forever carry on my business with energy and do my best to demolish the wealth of the nation, and endanger the safety of the State, as my business flourishes in proportion to sensuality and ignorance.

"I will do my best to prevent moral purity and intellectual growth. Should you doubt my ability, I refer you to the pawnshop, the poorhouse, the hospital, the penitentiary, the Police Court and the jail, where you will find many of my best customers have gone. A sight of them will convince you that I do what I say.

Jonesboro, Tenn.

A People Without a Country

HAVE you ever thought that it is possible to find a large body of people, absolutely without a country that they can claim as their native land? Such are the gypsies. You have seen them everywhere, no matter where you travel,—a roving people,—here to-day and gone to-morrow.

The more they are persecuted the better they thrive. They may seem few, but they are millions strong. They may be hidden, but they are there in all castes, colors, characters, occupations, positions in society, degrees of culture.

There are gypsies and gypsies. Some wander on the road, some dwell in secret in the cities, some mingle with the great world, their nationality unguessed. John Bunyan is thought to have been a gypsy; Jane Welsh Carlyle, the brilliant wife of the brilliant philosopher, is thought to have been a gypsy. New York has had a gypsy member of the state legislature; Pennsylvania had a gypsy sheriff; Virginia had a large wholesale and retail cigar dealer who was one of the Romany Rye.

Peculiar Traits of the Gypsies.

They deal in horses and naturally are familiar with them.

They are without religion.

The women are fortune tellers, especially by palm reading.

They eat without scruple animals which have died a natural death, being especially fond of the pig.

They flay animals, carry corpses, and show such aptness for these and similar despised callings that in several European countries they have long monopolized them.

They make and sell mats, baskets, and small articles of wood.

Their hair remains black to advanced age, and is retained longer than with Europeans or ordinary orientals.

They speak an Aryan tongue, which points with many other indications to an Indian life.

They have shown great skill as dancers, musicians, singers, acrobats; and it is a rule almost without exception that there hardly is a traveling company of such performers or a theater in America or Europe which has not at least one person with some Romany blood.

Note of Sadness in Gypsy Song.

Among old Gypsy songs is this:

"I've known no father since my birth;
I have no friend alive on earth.
My mother's dead this many a day—
The girl I loved has gone her way;
Thou, violin, with music free,
Alone art ever true to me."

Americon Rovers Are Prosperous.

The American gypsy like all other sorts of good Americans, is celebrated for his prosperity. He does not beg, for one thing, and in all respects is a much improved race. Gypsies, like peacocks, it is said, thrive best when allowed to range far.

Long ago, when part of the south was under Spanish rule, there were gypsies who were supposed to have come from Spain. It was thought they married with the mulattoes, and that many of the mulattoes were partly gypsy. In Cuba are many gypsies, soldiers, musicians, dealers in mules, and red pepper, which business they almost monopolize; also jobbers and dealers in various wares, and innkeepers. In Mexico there are many.

There are a good many gypsies in New York—English, Irish, and continental. Some of them keep tin, crockery and basket stores. But they are all mixed gypsies, and many of them of fair complexion. For many years there has been a secret society of gypsies in New York. The principal or arch gypsy was a merchant who had a printed vocabulary or dictionary of the language, which was open only to the most thoroughly initiated.

The gypsy language has no alphabet or characters, far less books and literature. But it lives by verbal transmission. The gypsies are proud of being in possession of a speech peculiar to themselves, unknown to the public, and take great pains to teach it to their children, and when by themselves to use it for their ordinary affairs. But they hardly ever own to it before the "green gentiles."

Gypsies Do Not Kidnap.

The greatest fear of Gypsies exists among children, and this is due to the time honored superstitious fear of kidnaping. That Gypsies made a business of stealing children and holding them for ransom is widely believed throughout the civilized world, although police records of America and Europe reveal few authenticated cases. That Gypsies, seeking revenge, have stolen children of their enemies is undoubtful, but this does not account for the widespread belief. The best authorities believe that such a traffic actually existed among the Hungarian tribes many generations ago and that kidnaping for ransom was common.

In their domestic life the Gypsies are models even for the highest civilization, and the devotion of wife to husband, and of each member of the family for the others is notorious. The children are carefully guarded, and taught the lore of their forefathers, while such a thing as divorce practically is unknown among them.

* * *

WE cannot all play the same instrument, but we can all be in the right key.

WHAT'S IN A TITLE?

THE Puritan needed a vent for the energy repressed by his rigidly ordered existence. Shorn of ornament in dress and decoration, he evidently worked off a portion of his sense of the ornate in some of the titles of the religious works of the time. Many of them are sensational and alliterative enough to satisfy the yellowest reporter of to-day. The contents of the volumes thus labeled must be of lurid and strenuous nature, or else it might be said of them, as the dramatist wrote of the cognomen of humankind.

> The name is but a shadow, which we find
> Too often larger than the man behind.

"The Seven Sobs of a Sorrowful Soul for Sin, or the Seven Penitential Psalms of the Princely prophet David; thereunto are added William Humin's Handful of Honeysuckles, and Divers Godly and Pithy Ditties, Now newly augmented," is impressive, but a little cumbersome for ordinary conversation and advertising.

Another, inconveniently long, is:

"A Reaping Hook, well-tempered for the stubborn Ears of the coming Crop of Buscuit baked in the Oven of Charity. Carefully Conserved for the Chickens of the Church, the Sparrows of the Spirit, and the Sweet Swallows of Salvation."

After these, titles such as the following sound tame and hardly worthy of notice:

"The Spiritual Mustard Pot to make the Soul Sneeze with Devotion"; "The Shop of the Spiritual Apothecary"; "Matches Lighted at Divine Fire," and "Sixpenny-worth of Divine Spirit."

In a much milder and secular sort of a way the modern newspaper partakes of the spirit of its Puritan exemplar in the headings of the paragraph columns:

"Quirks and Quibbles"; "Nibbles for the Million"; "The Junk-shop"; "Crumbs for all kinds of Chickens"; "Paragraphical Pudding"; "Spice Islands Passed in the Sea of Reading."

DANGEROUS PIGS.

The Fearless Mexican Peccary Will Fight Man or Beast.

A WRITER in the *St. Louis Republic* say that the most vicious and fearless member of the brute creation is the peccary, or wild hog, of Mexico. This animal seems utterly devoid of fear and displays an intelligence in fighting man strangely at variance with its apparently complete lack of mental attributes.

Their ability to scent man is particularly marked. The only thing to do when they get after you is to run away from them as fast as a horse can carry you, and then there is no certainty that they won't catch you. They are nearly as swift as a horse, and their endurance is as great as their viciousness.

A friend of mine encountered a drove of them in a wild part of Mexico a few years ago, and his escape was almost miraculous. He very foolishly shot and wounded a number of them. Then he took refuge in a tree.

The peccaries kept him in the tree all that day and through the night. They circled round the tree, grunting and squealing their delight at the prospect of a feast. He soon exhausted his amunition and brought down a peccary at each fire, but this had no terrors for the beasts.

Toward morning they began to eat those he had killed, after which they formed in line and trotted off. If they had not had some of their own number to devour they would have guarded that tree until my friend through sheer exhaustion dropped from his perch and allowed them to make a meal of him.

The wildcats and tigers that infest the Mexican wilds flee from the peccaries with instinctive fear, and even rattlesnakes keep out of their path.

AMUNDSEN'S ADVICE TO WELLMAN.

CAPTAIN AMUNDSEN, the well-known Arctic explorer, has expressed very pessmistic views as to the possibility of Mr. Walter Wellman reaching the Pole by means of his airship. He has strongly endeavored to persuade Mr. Wellman and his companions to postpone their expedition for at least a year when certain improvements which have proved their worth on French and German baloons might be added to their outfit.

The captain is confident that within a few years balloons will be constructed which will make the exploration of the pole possible; at present the risk is unduly great. Mr. Wellman's only hope, he thinks, lies in a strong south wind which might drift him across the Pole to some part of America or Asia. Should progress be delayed by adverse winds or other causes, the airship might be weighed down by crust ice; in which case a return by dog sleds would be necessary. Whether his return would be feasible would depend on where the airship sank to earth.

Mr. Wellman has, however, considered the risks. The record of Arctic exploration is one of contending with obstacles; no expedition has yet started without knowing what it might be called on to face.

RAILROAD WRECKERS.

More Strenuous Workers than Fire Fighters in Big Cities.

THE career of the wrecker on a big railroad is like that of a fireman in the fire department of a big city, only more strenuous. Like the fireman, the wrecker is on duty every second day and night, and, like the fireman, the wrecker braves blizzards and sleet storms, often facing hardships and cruel suffering and even death for the saving of life and property. But where-

as even in emergency the fireman never covers an area greater than the most populous section of a city—the line traversed by the wrecker covers a hundred or more miles—and whereas the fireman is in touch with at least such comforts as he may snatch while on his feet, not infrequently the wrecker is landed in the heart of the wilderness miles and miles from the nearest town, and the pangs of hunger are added to privation.

Sometimes when a big wreck has happened and cars and engines are piled high on crushed and mangled bodies the wrecker is rushed through darkness and snowdrift to work from twenty-four to forty-eight hours without even a chance to take his cap off, and just as his "job" is nearly completed along comes another alarm that sends him sixty or seventy miles in an opposite direction, where box cars and coal cars have heaped themselves thirty feet high, paralyzing the road and costing thousands of dollars' worth of loss in time and prestige almost every hour.

Despite these hardships, the danger, the excitement and the bustle of the work endear it to the men.

WHY LATIN IS USED BY PHYSICIANS.

"I DON'T see," said the man who was leaning against the drug store counter, "why a doctor can't write his prescriptions in English instead of Latin."

The druggist said, "You think, I suppose, that the doctor writes his prescription in Latin so it can't be read so easily—so the layman can't steal his trade and learn what he is giving him. But that's all wrong. In the first place, Latin is a more exact and concise language, does not change, as all living languages do.

"Then, again, since a very large part of all the drugs in use are botanical, they have in the pharmacopœia the same names that they have in botany—the scientific names. Two-thirds of such drugs haven't any English names, and so couldn't be written in English.

"But suppose a doctor did write a prescription in English for an uneducated patient. The patient reads it, thinks he remembers it, and so tries to get it filled from memory the second time. Suppose, for instance, it calls for iodide of potassium and he gets it confused with cyanide of potassium. He could safely take ten grains of the first, but one grain of the second would kill him as dead as a mackerel. That's an exaggerated case, but it will serve for an illustration. Don't you see how Latin is a protection and a safeguard to the patient? Prescriptions in Latin he can't read, and consequently doesn't try to remember.

"Now for a final reason. Latin is a language that is used by scientific men the world over, and no other language is. You can get Latin prescriptions filled in any country on the face of the earth where there is a drug store. We had a prescription come here the other day which we had put up originally, and which had since been stamped by druggists in London, Paris, Berlin, Constanople, Cario and Calcutta. What good would an English prescription be in St. Petersburg?"

A TIMELY WARNING.

WHILE a British brig was gliding smoothly along before a good breeze in the South Pacific, three months ago, a flock of small birds about the size, shape and color of paroquets settled down in the rigging and passed an hour or more resting. The second mate was so anxious to find out the species to which the visiting strangers belonged that he tried to entrap a specimen, but the birds were too shy to be thus caught, and too spry to be seized by the quick hands of the sailors. At the end of about an hour the birds took the brig's course, and disappeared, but towards nightfall they came back and passed the night in the maintop.

The next morning the birds flew off again, and when they returned at noon the sailors scattered some food about the decks. By this time the birds had become so tame that they hopped about the decks picking up the crumbs. That afternoon an astonishing thing happened. The flock came flying swiftly towards the brig. Every bird seemed to be piping as if pursued by some little invisible enemy on wings, and they at once huddled down behind the deck house. The superstitious sailors at once called the captain of the brig, who rubbed his eyes and looked at the barometer. A glance showed that something was wrong with the elements, and the brig was put in shape to outride a storm.

The storm came about twenty minutes after the birds had reached the vessel. For a few minutes the sky was like the waterless bottom of a lake—a vast arch of yellowish mud—and torrents of rain fell. Why it did not blow very hard, no one knows; but on reaching port, two days later, the captain learned that a great tornado had swept across that part of the sea. The birds left the vessel on the morning after the storm and were not seen again.

COUNTERFEIT BILLS.

The Check Letter Test on United States Currency.

THE United States government prints its currency and numbers its bills in a series of four, so that every piece of paper money turned out bears one of the check letters—A, B, C, D. One of these letters is always found in two places on a United States bill, in the upper left hand corner and in the lower right hand corner. The placing of the letter on the bill is not determined by the number of the bill. The rule is to divide the last two figures on the note by four. Should the remainder be one, the check letter must be A;

should it be two, the check letter is B; three, the check letter is C, and nothing, the letter D.

For example, I have before me a five dollar certificate. Its number is 81489730. The terminal number is 30. Divide by four. The result is seven with two over. The check letter is B.

Here is a yellow back gold certificate with twenty-three as its terminal number. Divide this by four, and we have five with three over. C is the check letter.

Should this rule of four fail to work on any United States currency note you may bet all you have that the money is bad. Some counterfeit bills are right to their check letters, but a great many are not so if the rule of four works, the bill may be still bad, but if it doesn't it is surely bad. This rule applies only to United States currency and not to national bank notes. —*Minneapolis Journal.*

SOME BLUNDERS.

MAGGIE M. WINESBURG.

As a rule people don't like to remember the blunders they make through life, whether they are laughable or otherwise, for one mostly feels too much ashamed of his blunders, but a record of many of those blunders would drive dull care away and bring a smile to the sourest face.

I know that some of my own blunders look ridiculous to me now, althought I did not feel so much like laughing when they occurred.

One time I was going up street, and on a narrow crossing came face to face with a gentleman, who stepped to the one side to let me pass. I was of the same mind and stepped the same way he did. Thus we seesawed back and forth, each trying to make way for the other to cross and both of us stepping the same way at the same time. At length we both stopped seesawing and looked at each other and laughed. Then we got our bearings and passed each other without further trouble.

Then, another time, a friend and I were crossing a bridge in the city, and my friend said that he believed his train was coming into the depot. I turned to look at the incoming train, and did not see a man try to pass between me and the parapet of the bridge, and as I whirled face front again, I struck the unlucky fellow in the stomach with my elbow, and down he went on the parapet of the bridge. I begged pardon of course, but he did not pardon me; he only held his waistcoat and said "Oh!" I suppose he did not have breath enough left to say any thing else.

Still another time, I was in a crowded market house, and got into a jam of humanity, that had but little mercy on small people. The blockade above would not move on, and I was finally crowded up close to a "Chink," who was standing at a vegetable stall, with a two or three hundred pound man close behind me. Some desperate person tried to break through the jam, and the fat man surged against me, while I landed against the Chink's back, which caused him to sprawl into the vegetables on the stand, to the amusement of the owners of the stand. I begged pardon for what was no fault of mine, and the Chink laughed; but the fat man did not ask my pardon, for shoving me against the Chinaman.

A lady friend of mine was also the victim of a laughable incident. Their wagon on the market square was standing alongside of the crossing, and the lady attempted to climb into the wagon-seat over the front wheel, when her foot slipped and threw her on the back of a big negro, who was just crossing the street. Of course the darkey broke the lady's fall and she did not get hurt, but the poor darkey pawed the air for a few steps to save himself from hitting the pavement on his face. The lady's family had a standing joke about this incident for a long time.

A little girl whom I knew was once sent to the butcher shop for a porterhouse steak. She asked the butcher for a poorhouse steak. She got the steak all right, but when she came home, she asked her mother what kind of beef poorhouse steak was made out of.

Another laughable incident happened to a young gentleman of my acquaintance, who was hurrying to the restaurant for his dinner, and holding his hat on his head at the same time, to keep the high wind from carrying it away. With his head down he rushed around the corner, and plumped into the motherly form of a fat, black Aunt Dinah. The shock almost demoralized both of them.

Now every one of these blunders, caused at least some of the actors in them to feel ashamed, even while they laughed at the ridiculous side of their mishap. Blunders like those happen almost every day, so it is better to see the funny side, and laugh with the bystanders, for laugh they will, and I, for one, do not blame them for laughing.

Glen Easton, W. Va.

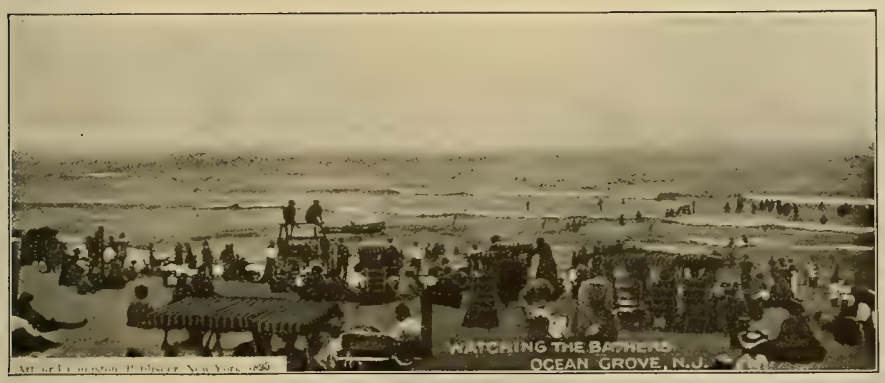
LIFE'S COMFORTERS.

MARTHA SHEPARD LIPPENCOTT.

The heart that has felt life's bitterest pain
And been in the depth of despair,
Remembers the pain, and sympathy gives
To those who have sorrows to bear.

The comforters they, of others, will be
And teach us to be more resigned
To trials that will come to every life,
And each of us will sometimes find.

Moorestown, N. J.



If you lose anything on the street, a lot of people help you hunt for it: not because they are sorry, but to have the credit and triumph of finding it.—*Everywhere.*

Ocean Grove, New Jersey

Richard Seidel

THIS charming resort was formed with a view of bringing the people under religious influence at a season when they are most at leisure, by locating these influences amid agreeable surroundings, and under a system the most rigid on the continent. Here 25,000 to 30,000 people are kept within the space of half a square mile under an autocratic from of government. The experiment is so extraordinary that the place merits the careful examination, even of those whose religious convictions or sense of individual dignity and independence revolt against such a form of administration.

The Vineland camp meeting grounds having proved unfit for the purpose, the coast from Sandy Hook to Cape May was explored for a more favorable site.

Ocean Grove was visited in February, 1868. It was a wild, wave-lashed solitude of sand, over-grown with pines and oaks and cedars, but the advantages of the location were apparent. Only one family then lived there, and there were only thirty-four people between the limits of Deal Beach and Ocean Beach. In July, 1869, twenty people pitched their tents at Ocean Grove and the first united religious service on this memorable spot was held in a tent July 31. Twenty-two persons were present. This was the beginning of the campmeetings at the place, which then received the name of Ocean Grove.

Satisfied with the point selected as a permanent religious resort, an association was formed Dec. 22, 1869, composed of thirteen Methodist clergymen and thirteen laymen, to put the proposed plan into execution.

Up to the time of the meeting above mentioned no land had been purchased excepting eleven acres on the beach for $50, but while two of the promoters were examining the new possession, one of them picked up an old Spanish silver dollar on the sand. It seemed a favorable omen, and soon after a further tract was purchased in the grove that grew a little removed from the beach. Other land adjoining was purchased by the Association until the present rectangular area of some 260 acres had been secured, surveyed and marked out with streets and lots. The risk attending the purchase of this land was unusual, for the enterprise was an experiment and the association had no private funds of consequence. It was essentially a faith undertaking, aided, however, by business shrewdness. Once fairly started, the enterprise went off with a rush. In 1870 to 1871 no less than 373 building lots were sold, and sixty cottages were up by the end of the year.

Now we find at Ocean Grove a flourishing community, which seems fairly to have passed from the period of experiment to that of actual success. The rules laid down by the Association, though maintained with unrelaxed severity, do not yet appear to check the growth of the place. Nature has admirably ministered to the maintenance of the characteristics of Ocean Grove. On the west it is enclosed by a fence and gates; on the north and south are two narrow lakes crossed by foot bridges.

On entering Ocean Grove the stranger is aware of something uncommon, as he reads the names of the principal streets. He passes from Pilgrim Pathway to Tabor Way, Herman Way, Embury Avenue, Whitfield Avenue, Carmel Way, Zion Way and the like. On Main Avenue is the Association Office, a neat brick building with a clock tower. Here also is the postoffice. Just north is the park, devoted to the special purpose for which Ocean Grove was established. So far as practicable, the evergreens of the primeval woods have been left to give beauty and protection to the immense covered enclosure called the Auditorium. Open on all sides except at the end where the platform stands, it allows the soft sea wind to cool the vast audience, which are often gathered there.

Ocean Grove is especially favored with an abundant supply of notable gatherings. The great Auditorium

is one of the best attractions of the camp-meeting city. It has a seating capacity of 10,000, and it is here that all the large gatherings are held. There is a permanent festival chorus of 1,000, and many special musical attractions from time to time during the season.

Ocean Grove is especially favored this season by a varied assortment of hotels and boarding-houses, a large number of bungalows and over five hundred tents, which are scattered throughout the resort.

Proceeding eastward down Main Avenue, the handsomest street of Ocean Grove, we come to the ocean. A metal statue of the Angel of Peace faces the Avenue, which widens at this end, producing an imposing effect, notwithstanding the somewhat crowded appearance of so many cottages and hotels. A broad space has been retained between the city and the beach. A fine driveway and a well-kept plank walk, about 6,000 feet long, extends on the entire ocean front. Pavilions and numerous seats have also been provided. The bathing grounds are at either end of the sea limit of the city, the bath-houses being arranged in compact rows, in front of which are extensive pavilions built over the water.

On the south of Ocean Grove is Fletcher Lake, a narrow-winding pond, crossed by two wooden bridges. On the north is the famous Wesley Lake, nearly three-quarters of a mile long and three hundred feet wide. It was one of the features which led to the selection of Ocean Grove and the disappointment was therefore great when, one morning, it was found to have vanished over night, having broken through into the sea. However the opening was eventually closed, and as this, like the other lakes on this coast is supplied by fresh water springs, it again became available for the row boats, which, on both these lakes, add so much to the pleasure of summer visitors.

Two handsome iron trestle bridges were completed in the winter of 188-90. The Association has established a thorough system of drainage, and, for the better health of the place, has artesian wells.

It is chiefly in the regulations by which it protects the ends for which it was founded, that Ocean Grove is most distinguished from other resorts. In order to maintain control over the character of the population, no lot is sold outright, but only leased for 99 years, with privilege of renewal. The lease carries with it the burdens of ownership in the way of taxation, improvements and repairs, and the privilege of ownership, including sale of lease during satisfactory tenancy and the fulfillment of the proviso that no liquor be sold or any nuisances created on the premises.

The sale of tobacco under any form is strictly forbidden, under penalty, and smoking is not allowed in the neighborhood of the camp meeting grounds.

The sale of spirituous liquors is forbidden under severe penalties, excepting under very strict regutions by the druggist. By special act of the Legislature, this prohibition extends for a statue mile from the limits of Ocean Grove.

No carriages are permitted on the beach, no bicycles, or wheelbarrows on the plank walks and it is forbidden "to discharge any cannon or other piece of artillery, or fire works within the limits of said Association."

No swearing is permissible in the boats, where it is presumed, parties might be inclined to indulge in unseemly speech, out of ear-shot of the Association. An efficient police is employed day and night to exclude tramps or other unsuitable persons, and enforce the other regulations. The gates are closed at 10 P. M., daily, and all day on the Sabbath, when no one can enter except by the bridges, which are carefully watched and only those desiring to attend services can then cross, paying no tolls, but liable to a fine of $10, if crossing for other purposes. No papers can be sold on Sunday, nor, by agreement with the authorities of Ashbury Park, within one block of the Ashbury end of the bridges. No boats are used on that day and no milk is distributed. Of course no bathing is permitted on the Sabbath.

The bathing question has received the serious consideration of the Association, lest the lessons of purity imparted at the camp-meetings should be forgotten. The following ordinance is posted in prominent places about the town: "Modesty of apparel is as becoming to a lady in a bathing dress as it is to a lady dressed in

silk and satin. A word to the wise is sufficient." For the sake of example, all respectable people are requested to discountenance the practice of the sexes in assuming attitudes on the sand that would be considered immoral at their city houses or elsewhere. If this rule is not observed it becomes the duty of the police to serve a small card on the offending person and if the thing is repeated, the offender must be ordered from the beach. As a rule respectable people retire from the beach at 10:30 o'clock in the evening. All persons are expected to be off the beach one-half hour before that time."

The throngs which flock to all the various gatherings and devotional exercises indicate that after leaving a wide margin for those who visit Ocean Grove from motives of curiosity, a large number remain from motives of earnest zeal and faith, while it may be reasonably assumed that of those who go "to scoff," some remain to pray.

IT'S LITTLE THINGS THAT COUNT.

MIGNON WHISLER.

An Arabian Princess was once presented by her teacher with an ivory casket not to be opened for a year. After a year's impatient waiting she unlocked the treasure. In the satin linings lay a shroud of dust the form of something beautiful, but the beauty now gone. On a note she read these words: "Dear pupil: Learn a lesson in your life. This trinket when enclosed had upon it only a spot of rust: by neglect it has become the useless thing you now behold,—only a blot on its pure surroundings. So a little stain on your character will, by inattention and neglect mar a bright and useful life, and, in time, leave only the dark shadow of what might have been. Place herein a jewel of gold and after many years you will find it still as sparkling as ever. So with yourself. Treasure up only the pure, the good, and you will be an ornament to society, and a source of true pleasure to yourself and your friends."

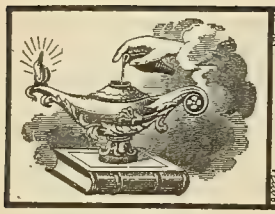
Character building is a silent but a momentous work. It is the tiny act that reveals your true make-up. More courage is required to do a seemingly insignificant work conscientiously and scrupulously, than to do a great one which is plainly visible to all the world. All preparations are made in silence and secrecy down beneath the tread of human life, but the results are manifest in the structure which for glory or shame mysteriously grows before our eyes. This life is, at best, only the scaffolding about our true life, which is immortal.

John Alexander Dowie, a well-built but unknown man, began about twelve years ago, to preach in a dingy, little hall in the pawn-shop and saloon neighborhood of Chicago. He surprised his audiences by claiming to heal their diseases. Newspapers joked about the matter, but nevertheless caused his name to become popular. Soon he rented a large hall and finally founded Zion City. His name, once a joke, now became well known. Once an obscure man, now, mainly because of the little fact that the reporters had made him famous by their humorous sketches, he became the controller of thousands.

Success depends largely upon apparent trifles. The ordinary man thinks that what he wants out of life can be gotten if he has the price. To get the price means success. This is the reward of endeavor, not of accident. The biggest human success is a complete man or woman, and that is more difficult than to be a statesman or a popular author.

We acquire an education only by beginning at the bottom, learning the little truths as they are given us. This education is able to do two things for us. It can add to our stock of knowledge and it can bring out our latent faculty. Walter Scott says, "The best part of every man's education is that which he gives himself."

Discouragements, if taken rightly are stepping-stones to greater achievements and to higher worlds. The worlds may not be seen at first, but a few more steps will reveal the beautiful to us.



We are apt to want to start big in life. Unless a big beginning is made, we are apt to doubt the big ending. If we want to found a church or a school, we must first have a showy and costly building before success can be assured. When a man first becomes a public speaker, he usually wants to tell all he knows at his first appearance. Soon he has it all told, too.

Why not start low—at the bottom—and mount toward the greater—the more sublime? Raphael in his earliest efforts had very few articles with which to work. Cheap canvases, few paints and fewer brushes, were what he used, even after his true genius was recognized. Lincoln, too poor to furnish better materials, used a pine board for a slate, and a bit of coal for a pencil. These men overcame adverse conditions, and filled the places that needed them. We may expect great things of life, and if we are willing to take the great things in small bits, we shall have them. "To be a part of God's great universe, to be one of his voices, to be a worker and a helper, means to me the fullness of satisfaction," says Ella Wheeler Wilcox.

"I know we are building our heaven
As we journey along the way,
Each thought is a nail that is driven
In structures that can not decay.
And the mansion shall at last be given
To us as we build it today.

Be *big*. A magnanimous mite out-credits a mean million, where accounts are kept in spiritual values.

THE QUIET HOUR

SERMONETTE.—"Beware Lest Thou Forget the Lord." Deut. 6: 12.

CHAS. O. BEERY.

Is this word of warning necessary? Is there a tendency for man to forget his Creator and Redeemer? The present indifference to God's law and the open rebellion to his will show that man does forget God. The vain struggle for wealth or pleasure occupies the mind more than the rememberance of the Lord.

Throughout this whole country wherever a railroad crosses a public road, there is some sign of warning: "Lookout for the cars," or "Stop, look and listen." May this text, "Beware lest thou forget the Lord," be a constant warning lest any Christian on the way should be sidetracked in the mire of sin and death.

"Beware lest thou forget the Lord," were God's warning words to the children of Israel before their entrance into the land of promise. God knew that the people would more likely forget him in the day of prosperity than in the day of adversity. So, immediately after the assurance of the wealth and plenty of the land, came the warning: "Beware lest thou forget the Lord."

To remember the Lord, to love him, one must remember his words: "Thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might. And these words, which I command thee this day, shall be in thine heart." Deut. 6: 5, 6. To forget God's Word is to forget God. So long as a child remembers his parents' words of loving council, he will not forget his parents. I can never forget my sainted father, for I remember his wise words of loving council.

In addition to having God's Written Word inscribed in our own hearts, another safeguard against forgetting the Lord is that we shall teach our children God's Word. As parents, do we do the teaching in our homes, that God expects and demands? May we not be expecting the Sunday-school teacher to do what God has commanded us to do?

"Remember Jesus Christ" is the New Testament appeal. How can we forget him, who died for us and is now doing so much for us? As we remember him and teach his Word, there is no danger of our forgetting the God and Father of our Lord Jesus Christ.

Tyrone, Pa.

TWO OR THREE.

There were only two or three of us
When we came to the house of prayer,
Came in the teeth of a driving storm,
But for that we did not care,
Since, after our hymns of praise had risen,
And our earnest prayers were said,
The Master himself was present there,
And gave us the living bread.
We knew his look in our leader's face,
So wrapt and glad and free:
We felt his touch when our hearts were bowed;
We heard his "Come to Me."
Nobody saw him lift the latch.
And none unbarred the door;
But "Peace" was his token to every heart,
And how could we ask for more?
And forth we fared in the bitter rain,
And our hearts had grown so warm
It seemed like the pelting of summer flowers,
And not like the crash of a storm.
"'Twas the time of the dearest privilege,
Of the Lord's right hand," we said,
As we thought how Jesus himself had come
To feed us with living bread.

* * *

GOD'S CURE FOR WORRY.

ANXIETY seems to be a kind of hysteria to which Americans are peculiarly susceptible. In suicide, at least, we seem to be in a fair way of outstripping the rest of the world. Some Hindus that Professor James was showing about Cambridge remarked upon the strained faces of Americans and their distorted limbs, in contrast to oriental placidity and grace. He said that it was the custom of Hindus to retire at certain times every day to relax their muscles and meditate on eternal things.

Has Christianity a cure for anxiety? The Christian is tranquil as regards provision for the future. He provides for the future, but without anxiety. Over and over Christ bids his disciples: Be not anxious. This does not mean that we are not to work hard and lay up against a rainy day.

The scriptures teach that righteousness is the parent of comfort. "Seek first the kingdom of God, and His righteousness; and all these things shall be added unto you." The universe is on the side of the man who does right. Exceptions to this are only apparent. The life of the individual is too short for the principle to work itself out completely, so that it stands out more clearly in the history of a family or of a nation.

It is not only provision for the future that is apt to make us anxious. We worry over our past. Now the Christian revelation provides a drug for these painful memories. We learn, like St. Paul, to forget the things which are behind. We cannot change the past, but we believe that all our sins are forgiven. Our very sins then become stepping-stones. They prevent presumption. They fill us with sympathy for the erring. We love God, because He first loved us.

Our work, too, often makes us anxious. We thirst for recognition or else we grieve over the meager and inconspicuous results of all our efforts. But the value of our work is determined not by the bulk of the result achieved, but by the spirit in which the work is done. It is only as we go deep into the work itself, without thought of the consequences, that we vitally affect the lives of others. Besides the chief value of our work is that it promotes ample and symmetrical self-development. God thinks more of a man than of his work. The work may be wood, hay or stubble, in the end burned up, but the man is saved.

We are employed by our Great Master to work by the day, not by the piece. Every day should have its ritual and it is more important to live by rule than to accomplish some great result. This is the secret of "Toil unsevered from Tranquillity."

The supreme crises of life are an even more fruitful source of foreboding than our past or provision for the future. This mind is infested with the thoughts of bereavement and with poverty, sickness and death and old age. Here, again, the Christian's eye is calmed by faith in the love of God. Providence is only another name for the love of God which anticipate these crises, so that when we arrive at them we see the traces of the Father's hand that has arranged them for us beforehand, either lightening the burden or strengthening our shoulders to bear it. Some of these things we may never have to experience at all, and why should we allow ourselves to suffer them in imagination? We have no right to occupy the mind with unpleasant things. The imagination has power to mass untoward events so as to produce the effect of their occurring simultaneously. Real evils come to us one by one and grace is promised for each day's need.

DON'T LET YOUR PAST SPOIL YOUR FUTURE.

THERE is nothing more depressing than dwelling upon lost opportunities or a misspent life. Whatever your past has been, forget it. If it throws a shadow upon the present or causes melancholy or despondency, there is nothing in it which helps you, there is not a single reason why you should retain it in your memory and there are a thousand reasons why you should bury it so deeply that it can never be resurrected.

The future is your uncut block of marble. Beware how you smite it. Don't touch it without a program. Don't strike a blow with your chisel without a model, lest you ruin and mar forever the angel which lives within the block; but the past marble, which you have carved into hideous images, which have warped and twisted the ideals of your youth, and caused you infinite pain, need not ruin or mar the uncut block before you. This is one of the merciful provisions that every day presents to every human being, no matter how unfortunate his past, a new uncut block of pure Parian marble, so that every day every human being has a new chance to retrieve the past, to improve upon it if he will.

Nothing is more foolish, more positively wicked than to drag the skeletons of the past, the hideous images, the foolish deeds, the unfortunate experiences of the past into today's work to mar and spoil it. There are plenty of people who have been failures up to the present moment who could do wonders in the future if they could only forget the past, if they only had the ability to cut it off, to close the door on it forever and start anew.—*O.*

LOVE'S OMNIPOTENCE.

EVERYTHING becomes possible to those who love. The commands of the Lord are no longer grievous. for the soul that loves is gifted by that love with fresh energies; it discovers in itself unsuspected possibilities and is supplied with overflowing currents of new vigor. We shall be enabled to do so much if we only love. We live by loving, and the more we love the more we live, and, therefore, when life feels dull and the spirits are low, turn and love God, love your neighbor, and you will be healed of your wound. Love Christ, the dear Master; look at his face, listen to his words, and love will waken, and you will do all things through Christ, who strengtheneth you.

A MAN was praying for his unconverted neighbor and said, "Touch him with thy finger Lord," when suddenly the thought came to him, "Am I not God's finger?" He concluded to see. His efforts won that neighbor to Christ and he learned the truth that God works through human agents in the winning of the world.—*Selected.*

THE true life is not thinking or dreaming, but doing. To wait for great opportunities, which may never come, is to miss the little within our reach. For as surely as the house is built brick upon brick and stone upon stone, so the little deeds, the daily trifles, the apparently ordinary actions, comprise the aggregate of human life and human achievement.—*Selected.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

UNCLE SAM'S BIGGEST ARMY.

WITH September opened the school year in the United States for eighteen million children. These mornings we can imagine the little brown-skinned fellows trudging down the pikes and the mud roads, across the fields, through the woods, over hills, climbing fences, etc., in childish prattle at every step. Those were glorious days when we, too, looked years into the future and saw our own picture of a renowned school-teacher, a wealthy farmer, or some eloquent statesman, when we mastered the Herculean task of repeating the multiplication tables, or spelled down an entire school, or received the teacher's public approval for conduct or good lessons.

And these little urchins are Uncle Sam's chief assets today. No other wealth of his is to be compared with them. On the playground of one of our little, red schoolhouses by the crossroads today walks and plays a future president; in some little breast are the elements that will help his nation to span the dark chasm of some national trouble. Then there is the genius, the poet, the laborer, the inventor, the missionary. Let us take off our hats in respectful salute to this army of little people,—some day they will rule the world.

THE CAUSES OF WAR DISAPPEARING.

IN a recent interview Prince Buelow, of Germany, expressed himself as to the possibility of wars becoming less frequent. As a reason for this he pointed out the fact that the interests of nations are so closely interwoven that the least disturbance to one affects all of them, more or less.

Now, Prince Buelow is a man of wide experience and his opinion deserves consideration. It is a very practical answer to those who speak of war as a necessity, as something that must continue as long as human nature is what it is. We are learning, though slowly, that there are better means of settling disputes than by a resort to brute force. Peace conferences are a help, perhaps, but not nearly as much so as the growing tendency to unite civilized nations by the bonds of mutual trade relations, which cannot be disturbed except at a loss to all concerned.

The growth of political power among the people, the spread of intelligence, the influence of industry and business are distinctly discouraging to the war spirit, as it is shown by the "jingo" politician or the sensational newspaper. People of today largely think for themselves and do not allow themselves to be led according to the ideas of scheming demagogues.

Then, too, the chances of war over unclaimed territory have nearly, if not entirely, disappeared, because there is little territory in the world that has not been seized or portioned out. China is saved because it is easier to agree to keep that country intact than to agree on a plan for dismemberment. Russia has evidently reached the limit of her ambition in Asia, and with the end of her intrigues the yearly output of war rumors has been about disposed of.

Evidently there will be fewer wars, both because the nations are knit together by the vastly increased importance of their business relations, and because there are so few things left to fight about. Men have dreamed about the golden age to come and wished it might be near at hand. That era will have dawned upon us when wars have entirely ceased, and love prevails.

USING OPPORTUNITIES.

YES, it is true, as we have often been told, opportunities are lying all around us, and the strangest of all is—we don't care. The late John J. Ingalls comes to us in the immortal lines of his poem and endeavors to rouse up our latent ambition in these words:

"Master of human destines am I!
Fame, love, and fortune on my footsteps wait.
Cities and fields I walk: I penetrate
Deserts and fields remote, and, passing by
Hovel and mart and palace, soon or late,
I knock unbidden once at every gate;
If sleeping, wake: if feasting, rise before,
I turn away. It is the hour of fate,
And they who follow me reach every state
Mortals desire, and conquer every foe
Save death; but those who doubt or hesitate,
Condemned to failure, penury, and woe,
Seek me in vain and uselessly implore—
I answer not, and I return no more."

The vital point is not whether there is only *one* chance as Senator Ingalls claims, or whether there are chances time and again, as we all know there are. The matter of greatest importance is whether we, as wide-awake men and women are prepared to grasp the opportunity as it comes to us.

The world has long worshiped at the feet of genius, and much homage has been bestowed upon that indefinable "something" that enabled one man to do what his fellows could not. Too often we forget that genius

is for the larger part a plucky determination to make use of the opportunity at hand and put plenty of hard work into the undertaking.

Opportunity knocks! It knocks today. "Awake, if asleep; if feasting, rise before it turns away!" Vast possibilities are before you. Will you grasp them?

MACHINERY AND LABOR.

When the McCormick harvesters were first put on the market, the farm hands made a very effective protest by burning the machine as it stood in the field. It was a foolish thing to do,—you might as well endeavor to stem the tide of the ocean as the onward progress of inventive genius. Then, also, these inventions, while dispensing with help in a given line of work, create a greater demand for it in some other. The farmer of today must have his self-binder and other labor-saving machinery to carry on his farming operations. Help is scarce enough then, though comparatively few men are required to do the work, as compared with former years. Machinery has multiplied the demand for mechanics faster than can be supplied by the labor available.

Farm labor conditions in the United States, however, will be readjusted in the not distant future. The immense foreign population, all the time coming to this country, with the fast increasing home population, will eventually reach the limit of expansion in land ownership on a large scale. The time will come when division and partition will go to the extent of putting a family on every 160 acres or less. There will be a more thorough utilization of every foot of ground, and it will be made to yield to the utmost.

Society will adjust itself to all new rising conditions. Machinery, new and improved, will still be invented to take the place of labor. Labor hours will be shortened in all the most toilsome and over-burdened callings of mankind. The adjustment will be made to give each one more time for mental and artistic culture and for those enjoyments that enhance the individual happiness and make for the general good of all.

NOTES AND COMMENTS.

Wireless telegraph service between Ireland and Canada will be in complete running order, as soon as the station in Canada is finished. The rate will be considerably less than the cable charges.

A remarkable illustration of the force with which a swordfish strikes a blow has recently been reported. While repairing a ship lately which had completed a long voyage in Pacific waters, a sword was found which had successfully pierced a sheathing one inch thick, a three-inch plank and beyond that four and a half inches of firm timber. It has been estimated that it would require nine strokes of a hammer weighing twenty-five pounds to drive an iron bolt of similar shape the same distance.

Even the fishing industry is giving up the time-honored ways of fishing in favor of improved methods. From Stavanger, Norway, comes the news that motor boats are rapidly displacing other vessels in the fishing industry along the Norwegian coast. United States Consul Rasmussen writes: "It was demonstrated during the Norwegian herring fishing this spring, that for all practical purposes and for all kinds of weather, the motor boat was far superior and the results so much better that it will replace the sail and row boats as fast as fishermen find means to buy."

Those who are interested in agricultural matters will be glad to notice the following item of interest: "A Belgian agriculturist, Monsier Le Breton, has recently made some experiments with barbed wheat to determine the effectiveness of the defense which barbs afford against the ravages of graminivorous birds. In the same field, near Antwerp, he sowed some barbed wheat and some Japhet wheat, which is without barbs. The Japhet variety grew rapidly, but every head was despoiled by the birds before the grain could ripen, but the barbed variety was so well guarded by its array of miniature spears that the attacks of the same birds were completely defeated, and the grain ripened in security. At the same time it was observed that the insectivorous birds were as busy capturing their prey among the barbed heads as among those that possessed no natural defenses."

An interesting phase of the question as to what a man may or may not do in or about his premises, was brought out in a late trial at Aurora, Ill. Through the efforts of the local union of plumbers an ordinance of the city requires all plumbing to be done by a licensed plumber. Mr. Nicholas Schlentz, a wealthy citizen, who is an expert in a mechanical way, did his own plumbing, assuming that he had a right to do as he pleased in his own house. A test case was made of the matter, and the offender fined $9 and costs by the justice court. The case was appealed to a higher court, and the outcome is awaited with interest. Some interesting queries occur to the average householder in thinking of the ultimate outgrowth of such ordinances, if applied to other mechanical details of a house. Will it be lawful, by and by, to make your own repairs of door or window, or put up a shelf, etc.? It seems to us that some of these restrictions are just a trifle burdensome.

Echoes from Everywhere

Of 6,933 Ohio divorces applied for, 4,975 were granted. Is marriage in Ohio a failure? Or is it that too many "marry in haste and repent at leisure"?

It will cost $140,000,000 to keep New York City going during the year of 1908, according to the estimate of the board of apportionment. Large cities require large revenues.

While Roy Knabenshue's airship was about 2,000 feet above the fair grounds, near Greenville, Ohio, Aug. 27, the balloon burst, causing the entire outfit to drop like a rocket. The aeronaut escaped unhurt.

Aug. 29 a whale of large size was seen near Sandy Hook, N. Y., a sight somewhat uncommon to that part of the Atlantic coast. As no one was prepared to engage in the capture of this monster of the deep, he escaped unhurt.

Investigation of the affairs of the Chemical National Bank, of New York, now in progress, is believed to have revealed a defalcation of about $200,000. The police are looking for a man missing from the cashier's department.

Pennsylvania will receive the handsome donation of $1,000,000 from Charles M. Schwab, the iron king, provided the State agrees to establish a large industrial school for the training of boys in useful occupations. Here is a good example for others.

General Grant's old farm, located outside the city limits in St. Louis county, Mo., was sold at auction Aug. 30 for $75,000. It comprises 438 acres and has long been a point of interest, as the old log cabin, once occupied by Grant, is still standing.

Arrangements have been completed for the organization of a $50,000,000 American syndicate, which plans to develop several million acres of oil lands in Mexico. It is purposed not only to supply the Mexican market, but to ship the product in competition with that of the Standard Oil company.

By utilizing the principle of the farmer's hotbed, exposing pipes of ether to the rays of the sun, under glass cases, Frank Shuman, a Philadelphia engineer and chemist, claims to be able to turn the sun's rays directly into power, sufficient for commercial uses. The development of his plans will be watched with interest.

Prof. Percival Lowell has during the past year made extensive observations of Mars, and has come to the conclusion that the planet is inhabited. A series of photographs, taken at different times, shows an intelligent arrangement and disposition of the canal system, and affords a ready means of watching the development of the same. Further discoveries by this well-known scientist will be awaited with interest.

Near Charleston, Ill., fifteen persons were killed, and fifty-two injuried, Aug. 30, when a trolly car on its way to the county fair was crashed into by a heavy-laden freight car of the same line. The motorman of the freight car was to blame for the accident, as he did not follow instructions to keep the track clear for the approaching car. He disappeared immediately after the crash.

Aug. 28 there was the most serious encounter between the French and the Moors since the occupation of Casablanca. It is estimated that at least 12,000 Moors were in battle array and their loss, though not fully known, must have been heavy, as many of the French war vessels participated in the battle, and showered shells into the hills where the natives were gathered. The result was a complete victory for the French.

It was reported some time ago that a lady at Port Jervis, N. Y., had been cured of cancer by a snake bite, and some were ready to affirm the efficacy of such a treatment for all cases. It is now stated by State Zoölogist Surface, of Pennsylvania, that there is no foundation whatever for such a claim. He says that from time immemorial there has been much superstition concerning the so-called medicinal qualities of certain parts of snakes, but that all such claims have no real foundation.

So largely has crime increased in France, that it is proposed to return again to the use of the guillotine as a means of capital punishment. Whether even this measure will adequately prevent crime, remains to be seen.

Col. Ivanhoff, governor of the political prison at Wiborg, Russia, was assassinated at St. Petersburg, Aug. 26. The assassin was arrested. The people of Russia will evidently see some turbulent times before settling down to satisfactory conditions.

Prince Wilhelm, of Sweden, after touring this country, arrived in New York Aug. 29 and is now viewing the sights of the eastern metropolis. He is reported as being somewhat fatigued by the continued sight-seeing and feasting. It is not to be wondered at, for only an iron constitution could withstand the enormous strain of such a trip.

Great excitement was caused at Pittsburg, Pa., Aug. 27, when Cedar, an untamed African lion, escaped from his cage at Luna Park. Before he was slain, an aged lady was fatally hurt and the entire crowd of people thrown into confusion. More than fifty shots were fired by the park policemen before the animal was killed.

Proprietors of St. Louis breweries are coming to the aid of temperance workers to the extent of forbidding the sale of beer on Sunday in any saloon supplied by them. It is a somewhat unexpected proposal, but not altogether a bad move for them, as thus they place the saloon business with the law-abiding institutions, as far as Sunday closing is concerned.

The French government is attempting to eradicate the many frauds in connection with the selling of adulterated wines. It is the intention that nothing be sold that is not in conformity with the label. So far nearly 5,000 prosecutions have been made. It would seem to be a safe plan for everybody to stick to temperance principles and thus run no chances of adulterated liquors.

Nelson Morris, the noted meat packer of Chicago whose illness was referred to in our last issue, closed his earthly existence Aug. 27. In his funeral sermon Jenkin Lloyd Jones, referring to the career of the departed one, said: "Let us take heart; let us climb with tender humility the steps that lead to the imperishable altar of character, the altar steps of simplicity and sincerity."

New York health authorities are waging a vigorous warfare against the spread of tuberculosis. An "instruction card" has been issued for distribution among the people and it is believed that much good will result from an intelligent understanding of the disease, —its prevention and its cure.

The plague, so prevalent in India, where 59,616 lives have been taken by the dread disease, seems to have taken a foothold in San Francisco. Up to Aug. 29 there have been nine cases and six deaths. Strenuous attempts are being made to stamp out the disease before further contagion results.

The $10,000,000 cantilever bridge, being constructed across the St. Lawrence, six miles from Quebec, Can., collapsed in part Aug. 29, carrying to their death eighty workmen, most of them skilled mechanics from the United States. It was to have been the greatest cantilever bridge in the world.

Because patrons of the saloons overtax their stomachs at the saloon free lunch counters, go home lacking appetites, and growl at the offerings of their wives, Aurora (Ill.) saloonkeepers have decided to do away with the saloon meal. Now there is just one more step they ought to take,—do away with the saloon, root and branch. The wives and children everywhere would rejoice.

If a man really wants to do something, he can do it even if he has but one leg to carry him there. Station agent, E. A. McGrath, at Stowell, Wis., saw a five-year-old girl playing on the track as a train was approaching. Hampered as he was, he hobbled to the rescue and snatched the child away just in the nick of time, saving himself only by dropping into the ditch alongside of the track.

The tallest building in the world will be the Singer skyscraper in New York, for when completed it will rise 612 feet above the ground. It will exceed the height of the Washington monument, which is only 555 feet. There will be forty-seven stories in this building, and in order to make everything perfectly secure, the foundation has been laid on solid bedrock, ninety feet below the level of the sidewalk. Eighteen elevators will be used to convey the 2,500 tenants to their offices. It will require 15,000 electric lights to illuminate halls and rooms. A powerful searchlight will flash forth from the top of the tower, visible for more than sixty miles out at sea. This light is intended to be a beacon to sailors. Truly, this is a day of large undertakings.

THE WIFE OF LOT

Hattie Preston Rider

In Two Parts.—Part One.

It was no thought of Lot Taber to deny that he gained his wife through another's defection. Doubtless he had faith, though, like most men who try the dangerous experiment, that in time he could win her away from that first memory. In any event, Mildred represented to him the whole excellence of womankind; and he had the patience which is an ear-mark of all greatness and simplicity of soul.

They went west. Lot had bought a tract of land well up the Redwood River. The task of bringing it under cultivation was an unceasing delight to him. As for Mildred, she grew strong and rosy, breathing the fragrance of the pines, busy with her household, and interested in Lot's plans for their future. Yet, somehow, back of it all lurked the old shadow. Now and then Lot found her weeping, but the discovery only drew from him redoubled gentleness, while he toiled and waited, trying to forget the man who had trampled with a beast's feet where he would have walked so reverently.

The pines were Mildred's only confidantes, in those days. They sympathized with her sore heart, her pain did not hurt them, as she knew it hurt Lot. For a year they were her solace, then her longing outgrew them. She put her cry of loss and bitter homesickness, of whose real depths Lot never dreamed, into a written story, with cleverly-disguised setting and plot. She had some literary experience already. After months of toil over detail of construction, the manuscript was sent to a distant publisher and accepted.

The first copy of his wife's work came into Lot's hands fresh from the press. He was not a bookish man. Mildred's literary attainments were to him good and desirable only as a part of herself, a pursuit in which she took pleasure. He read the story, however, and the keen eyes of his love saw between the lines its unsatisfied heart-hunger. The revelation came to him like a blow, and the faith that had lived within him, that he might sometime possess his wife as other men possessed theirs, died in that hour.

Mildred's book found favor with the critics. The little town of Woodville woke up, one morning, to find that its daughter had grown famous. Her success was the talk of their literary circles. One of the local newspapers had a cut of her birthplace, in an article written up by an enterprising young reporter. Then came a great social event,—the celebration of the town's semi-centennial; and the dignitaries of the occasion sent the newly-fledged authoress an invitation to be present as the guest of honor.

"You shall go, Milly," Lot decided, unselfishly, but it cost him a sharper pang than the thought of his prospective loneliness. Orson Randall still lived in Woodville. Mildred would inevitably meet the smooth-tongued lover of other days. Might not the freshening of old memories make her present chains doubly heavy? Lot no longer denied to himself that they were heavy; to his honor, he never once doubted her outward loyalty.

The girl who had gone away branded by pitiless gossips as jilted, came back a great woman, in Woodville's eyes. Everywhere she was flattered and courted; her most trivial sayings were remembered and repeated. On the eventful day she was the cynosure of all eyes, and none of them so brimful of admiration as those of Orson Randall, who, through a lucky speculation, had become the great man of the place. Woodville was punctilious as to its affairs of state. At the banquet it was he on whose arm Mildred's hand rested, as she passed down the long line to her place.

Now shortly something happened to Lot Taber's wife, that comes once in a while to women of her sort. It may have been the near presence of her old lover, the familiar glow leaping back into his eyes as they rested upon her; or it may have been the first intoxication of success and adulation, but from a shy, reticent girl she woke suddenly into a brilliant, self-possessed woman. It was a passing fancy that won Randall from her. Now, the change growing under his astonished gaze stung him beyond measure, for the loss of the jewel he had played with and flung away.

He told her so, before the evening was over, though not in so many words, but while she gave no sign, he knew by the deepening color in her cheeks that she understood.

"The air of the west has done you good," he had said, looking down at her ardently, as the others passed by them along the dining-hall. "Does the fragrance of the pines always give one such a bloom, Mildred?"

She glanced up at him.

"At least it is magical to clear one's existence of cobwebs," she retorted brightly.

He winced, flushing dull red.

"And to sharpen the tongue," was his addendum.

"Mine can endure a deal of that, they used to tell me," she answered, with a light laugh.

"I also can remember when it held only gentle speeches," he said, insinuatingly. "I wish that time were here again.'

Lot's face, aglow with honest tenderness, rose up before her, that instant. But a strange, sudden perverseness, unlike anything she had ever known and which she could not explain, seemed to lay resistless hands upon her.

"Being the time men designated as 'winged' though, it 'comes again no more,'" she answered Randall's suggestive speech, with a suspicion of mockery in her voice.

Elgin, Ill.

The Offended Member

Ida M. Helm

"Good-bye, papa, good-bye, mamma!" Five little children shouted these words after their parents as they rode down the lane, and little four-year-old Anna continued throwing kisses till mamma waved her handkerchief for the last time and the buggy disappeared behind a cluster of trees. Then they ran into the house.

"Oh we'll have a delightful time," said Faye, dancing about the room and clapping her hands.

"I guess we will, we'll play meeting and I'll be the preacher. Papa said women ought not to preach; it's in the men's place to preach and I'm the only man present except Johnnie and he's too little to preach," said Ralph with much self-esteem.

"But we can't spend all of the time playing," said practical Grace," we must do our work just like we would if papa and mamma were here."

"Of course we will do our work, but it's only nine o'clock and we won't have any work to do till noon, so there's plenty of time for me to preach a sermon before dinner. Now we'll play we are all church members; it's time to begin services now," Ralph replied.

Grace and Faye seated themseives on the couch and Anna placed her small arm chair in front of them and sat in it. Johnnie occupied the step at the stair door. Ralph laid the Bible on the writing desk; then he placed a foot-stool behind it, saying, "It will do very well for a pulpit." Suddenly he moved it away, saying, "Brother Trimble says when his mind gets over-full of good ideas he likes to walk around over the pulpit. My mind might get full of good ideas and I might start to walk and fall," he thoughtfully said.

"First we will sing a hymn. Grace you may get the hymn book and lead," said he.

Grace announced, "We'll sing, 'I am Jesus' little lamb.'" "Then she said, "You know little lambs are kind and gentle, and do not quarrel; if we want to be Jesus' little lambs we must never quarrel, but we must love each other and always be kind to every one. Miss Roberts says, when we sing we should always think about what the song means that we are singing. Now, while we all sing, let's think about what the words of the song really mean." They all did very well singing,

"I am Jesus little lamb,
Happy all day long I am.
He will wash me white as snow,
For I'm his lamb."

When they had finished the song, Ralph gave out his text, Heb. 12: 14, "Follow peace with all men." He then said: "This is the scripture text that I repeated to my teacher last Sunday, and I think it is a very good one. If people were peaceable and loving at all times, it would be a good thing. If any one quarrels with you, don't quarrel and he will have to stop quarreling. If any one strikes you, or pulls your hair, don't strike back, nor pull his hair, but be peaceable as a little lamb, like we sang. If anyone tells you to wash your face, or gather chips, or wash the dishes, or pick up potatoes when they are dug, don't say you don't like to, you'd rather play, but go right along, peaceable and kind."

Here the services were interrupted by a howl and when the audience looked toward the steps, they saw that Johnnie had left his seat and was lying on his face behind the couch.

The preacher at once left the pulpit and proceeded to take the offender back to his seat, but Johnnie kicked and positively refused to go. "You slapped me the other day when I said I didn't want to pick

up chips. Then, when I did'nt go right along to help you pick up potatoes, you came into the woodshed and took hold of my hair and led me out. Do you think I'm going to let you push me around any way that you please? I think preachers ought to do like they tell other people to do." pouted Johnnie.

At this point Faye remembered how Ralph had broken her doll and did not try to make amends for the mischief he had done, and she accused him of divers wrongdoings. "You are setting a bad 'ezample' for Anna. Mamma said we ought to set good 'ezamples' for people that are littler than we are," said she.

Grace saw that things were going from bad to worse and she would have to lend a hand to help matters. "We can't excuse the preacher for doing wrong but you must not try to make out that the preacher does all the bad things," said she. "If you will think about all the bad things that you have been doing, you will find yourselves not far behind him. By your quarreling you are setting a bad example for Anna. Don't you remember mamma said that every person is a preacher and that we preach the plainest sermons in our way of living? You got mad because what the preacher said hit you. Now you are quarreling with him although everything he said is true."

"I don't care, he don't do what he told us to do," said Johnnie.

"If he don't do right, that is no excuse for you to do wrong. You can preach good sermons for the right in your daily living if you will," sail Grace, and she continued, "every preacher that preaches in church preaches his most powerful sermons in his everyday life. Mamma said so."

Little Anna sat meekly looking on, and quietly waiting for things to come right, so that they could go on with their services, but Johnnie and Faye ran out of the room and it was plain that "playing meeting" was at an end for that day.

In every community the counterparts of these children can be found. Some go meekly and quietly about their work and if trouble arises among their neighbors or in the church, they pass it by and they patiently continue in their humble way of living. Like the modest violet they shed their sweetness about them. Others are ever looking around for more difficult work. When troubles arise they do all in their power to bring order out of confusion. They ever try to learn how they can best serve the church, their country, and their fellow-beings.

There is a class of people that see all the flaws and wrong-doings in others, and they seem to feel their best when telling some one of their discoveries.

How much better it is to lose sight of the bad in counting the many good and beautiful things in this world and in reviewing our blessings!

"Do not look for wrong or evil; you will find them if you do." Let us take a look at these children and see which one we should imitate.

Ashland, Ohio, R. R. No. 2.

DIDN'T THINK.

Used to let his poor old mother go and carry in the wood,
She was just a pack-horse for him, but he never understood;
Never thought of bringing water from the spring down by the lane,
Or of helping her to gather in the clothes before the rain;
Let her keep a-waiting on him, though her back was aching so—
'Twasn't cause he didn't love her—he just didn't think, you know.
After 'while the weary mother put her burdens all away,
And we went and heard the preacher praise her poor old soul one day;
And I stood and looked down at her when they pushed the lid aside.
Poor old hands! I didn't wonder that her boy sat there and cried
Just as if he couldn't bear it—just as if his heart'd break—
He had kind of got to seeing what she'd suffered for his sake.
There's a lot of kinds of sinning that the Good Book tells about—
Sins concerning which a body needn't even be in doubt;
But there's one sin that I reckon many a man who doesn't think,
Will be held to strict account for when he goes across the brink—
For the wrong that's done a person by another's want of thought
Hurts as much as though the injured was the victim of a plot!

APPLES AS MEDICINE.

CHEMICALLY, the apple is composed of vegetable fiber, albumen, sugar, rum, chlorophyll, malic acid, gallic acid, lime, and much water, says a writer in *Popular Science Monthly*. Futhermore, the German analysts say that the apple contains a larger percentage of phosphorus than any other fruit or vegetable. This phosphorus is admirably adapted for renewing essential nervous matter, lethicin, of the brain and spinal cord. It is, perhaps, for the same reason rudely understood that the old Scandinavian traditions represent the apple as the food of the gods, who, when they felt themselves to be growing old and feeble and infirm, resorted to this fruit for renewing their powers of mind and body. Also, the acids of the apple are of signal use for men of sedentary habits, whose livers are sluggish in action; those acids serving to eliminate from the body noxious matters which, if retained, would make the brain heavy and dull, or bring about jaundice or skin eruptions and other allied troubles.

Some such an experience must have led to our custom of taking apple-sauce with rich pork, rich goose, and like dishes. The malic acid of ripe apples, either raw or cooked, will neutralize any excess of chalky matter engendered by eating too much meat.

It is also the fact that such fresh fruits as the apple, the pear, and the plum, when taken ripe and without sugar, diminish acidity in the stomach rather than provoke it. Their vegetable salts and juices are converted into alkaline carbonates, which tend to counteract acidity.

A good, ripe raw apple is one of the easiest of vegetable substances for the stomach to deal with, the whole process of its digestion being completed in eighty-five minutes.

For the Children

YOUR OWN BOSS.

"Now and then I hear a boy say: "If I could only be my own boss, then I would be happy." Did you ever know anyone that amounted to much who was his own boss? The only one I ever read about was Robinson Crusoe, and he was glad to quit.

You have heard of the "independent farmer." He is dependent upon wind, water, and frost; he must be at home every morning and night to milk the cows. The physician must buy his clothes and groceries of his patients. Do you think that Marshall Field, the great merchant was independent? Not a bit. He carried two great stores around on his back. He would have been unhappy if he had not been doing something for the thousands in his great army.

No one can be his own "boss," unless he goes out of the world, into the wilderness, and then he will find himself dependent upon the berries and animals.

There is, however, one way of becoming your own boss. Let me tell you. It is to stay right where you are, and begin by ruling yourself. That is the first step. Then begin to help other people, and after awhile you will find them willing to do anything for you. Your workshops will become a throne.

PEGGY.

ETTA E. HOLLER.

YES, Peggy was just a common, black pig. She was the "runt" of a large family of pigs. After being given up to die, father gave her to me to "raise" if I could.

I was glad for her any way, and the first thing I did was to give her a genuine bath of warm water and soapsuds. From that time she began to grow, but no wonder, considering the amount of rich, sweet milk she drank.

She grew very rapidly, and now was as large as her brothers and sisters. She had an apartment occupied by herself alone. As she was wholly in my care, I saw to it that she had a clean bed of straw almost every day.

Peggy really was very particular with her toilet. She enjoyed her daily brushings. She would not move while I brushed her, except when I would tell her to lie on her side. She would do as I told her.

She knew my voice. She was not slow to show her appreciation of her kind treatment in many ways. She knew who cared for her. She would follow me all the time when I would be out in the lot or the orchard, where she could be, and when I would get out of her sight, she would utter a most peculiar noise, just like a pig will when lost.

Childlike, I thought her a great pet. Indeed she did show a remarkable degree of intelligence. "Yes," I hear you say, "a very desirable pet, indeed!"

Possibly not as desirable as some other pets, but she was a pet for me anyway. It was real comical to see some of her performances. She would flee from father as if in great danger, just because he did not care for her. If I was near, she would run to me and get as close to me as possible, as if to say, "Now I'm safe."

She enjoyed a game of hide and seek as much as I did. Many games did we have. If I would go into the barn, she would jump up too. Then I would hide, and she would hunt. All the time, while hunting for me she would run, and make the peculiar noise of a lost pig. Then, when she found me, she would jump, seemingly, for joy, and utter the low, guttural noise of a pleased pig. She would catch hold of my dress and shake it, until I would have to laugh at her pranks.

If she was at the far end of the field, and I would call, "Peggy, Peggy," she would come as fast as her short legs would carry her.

She would play until she become so fat that she could hardly get about, yet she tried to play. She would beg for her feed, and jump through a door, made for her. In many ways she showed her appreciation of my kindness to her, but finally she was sold, and went the way of all the porkers.

I had several pet pigs, but Peggy showed the most intelligence. They all showed to me that even a dumb animal is not without feeling, and not lacking in intelligence as much as some people think. Even a hog will manifest its appreciation of kindness and care.

Rude as the illustration may seem, yet it seems to me, we could learn some good lessons from a pig, besides being kind to them.

Do we heed our Master's voice? Do we show our appreciation of his loving kindness towards us, by our actions and works?

When the adversary is near, do we stay close to our Master? Do we follow him? Let us not be like a hog under an acorn tree. Rather let us look up to him from whom our blessings come, and thank him for them.

Hagerstown, Ind.

THE RURAL LIFE

The Boy with the Hoe

Say, how do you hoe your row, young chap?
Say, how do you hoe your row?
Do you hoe it fair,
Do you hoe it square,
Do you hoe it the best you know?
Do you cut the weeds, as you ought to do,
And leave what's worth while there?
The harvest you'll garner depends on you;
Are you working it on the square?

Are you killing the noxious weeds, young chap?
Are you making it straight and clean?
Are you going straight,
At a hustling gait?
Are you scattering all that's mean?
Do you laugh and sing and whistle shrill,
And dance a step or two,
As the row you hoe leads up the hill?
The harvest is up to you.

—Our Paper.

Farm Life Up to Date

About five years ago the old cook stove got so unpopular with women folk that we simply had to buy one of those big, steel ranges that set us back sixty dollars.

When this great bakery was installed it made some other things in the kitchen look like three dimes. A lot of modern steel and tin ware had to come soon afterward, the old things wouldn't work on that range.

Then a neighbor just the other day telephoned a testimonial about an oil stove just the thing for the kitchen in summer time, so we have got to buy one.

When the women got the kitchen work lessened they had more time for other parts of the house. Of course, one of the daughters in the family had taken some music lessons. She butted in and urged the purchase of a piano.

That piano of ours drew a new center table into the parlor, then a new-fangled lamp.

Two years ago the women took up the bath-room proposition. Now we have a bath room with a big porcelain tub in it; but before we got that outfit we had other rivers to cross; we had to drill a well, put in a windmill, construct a tower and build a reservoir.

Then there was a lot of piping and plumbing to do. And while we were at it we put in a lighting plant, acetylene gas. The windmill got lazy on still days on which there seemed more than wind enough, so we had to buy an engine to do its work.

Then there was more trouble. This engine was hard to keep in business—it cleaned up all the work we could find for it, so we had to get busy and devise new chores for it.

Why not buy a cream separator to run with the engine? Why not buy a feed grinder to work it? Yes, get a fanning mill, a new meat chopper, a sheep-shearing machine and a few other tools to work this devilish gasoline engine.

Now, efficient farm labor is getting scarce, and we are trying to reduce our requirements for it, so we purchase some two-row cultivators. Wanting to get the most out of our corn crop we have built a silo; that will call for a silage cutter, also a corn binder.

As hay is a short crop we are going to bale a lot of oat and wheat straw—this will compel us to buy a baling press. New ideas as to corn culture have caused us to invest in surface cultivators and one-horse harrows to use at the last cultivation. Of course, we must keep peace in the family, or, in other words, the women folk demand an appropriation for their department every year, and it is increasing right along. But the best of it is the more things we buy the more money we can make, and the better we can live, so I guess we are coming out all right after all.

Our women folk get to town more than ever before, read more and plan more. The men also get out and mix with one another and with business men. This broadens us and makes us want some of the things city people heretofore have had as their exclusive possessions. We are using printed stationary, we operate a typewriter and have a copy press.—*Agricultural Advertising.*

There is no way of stopping growth: the only question is, in which direction it extends—whether up or down, larger or smaller.

Home of the Honey Bee

D. J. Blocher

Transportation of the Honey Bee.

In this view we have several packages for the transportation of the honey bee. In years gone by the bees were excluded from the U. S. Mails as some bee men were careless in caging, and then the mail clerks would receive some pointers, too, on beekeeping. But now they are again accepted as mail, and rapid transportation is again had.

On top the large hive is our mailing cage, which has all the essential principles of any good cage. It has three compartments, one for candy, one for warmth, and one for ventilation. The card on the cage is pulled aside far enough so two compartments are seen. The cage is finely arranged for good traveling in the mails and does not injure the mails, if properly provisioned. Then, again their feed does not dry out, as the compartment is paraffined all around, except the small passageway which they enter to feed. Foreign cages are a trifle larger, but if good connections were made, the cage shown on the hive would carry its occupants half way round the globe.

Hives and Shipping Boxes.

In going long distances, such as to Japan or China, or other places of long travel, the bees must experience all kind of climatic conditions and it is little wonder that they sometimes perish.

In sending bees to Japan, we have lost about half the bees mailed. Long confinement under all kinds of climatic conditions, and delays on the road, makes their safe arrival a matter of consideration. Yet, when we remember that a queen bee of good stock, landed in some foreign shores in a healthy condition, is of inestimable value to that country, we do not feel discouraged knowing that one-half or at least one-fourth of the queens sent to foreign lands will arrive safely. At home this would not be tolerated and would be a very bad showing.

A breeder in Italy says that out of fifteen queen bees sent to the United States only four survived. This seems like a bad showing, yet those four imported queens will do wonders in improving a lot of stock in this country.

In beekeeping as in any other business, the farther any business is extended, the more dangers and obstacles are encountered, and the results therefrom are the only justifiable incentives for carrying on the work. It costs just one penny to send this little cage and its occupants to anywhere in the United States, Canada, Mexico, Cuba, Port Rico, Hawaii, Philippine Archipelago, Guam, Tutuila, or any other possessions of the United States. This one little penny, which is considered of little value, will carry something of value and far-reaching effect half way around the globe. All is made possible by the strong arm of the carrier and the proper relations existing between the sender, carrier and receiver. This little penny is also able to carry soul-saving news around the world if the proper relations exist between the sender, carrier and receiver. But how slow we are to believe and to act!

On every cage cover are the words, *"Queen Bee! Deliver Quick!"* In sending to foreign lands this is sometimes printed in several languages. The prime purpose in sending out queens of choice varieties is to improve the stock, or make good the loss of another queen.

On the ground will be seen three small hives. These are the same length and depth as the large one and are used in sending nuclei swarms by express. The object in sending bees in this way is, to build up new swarms and thus help the bees to start a hive or strengthen some weak colony. It is the cheapest, easiest and safest way to get started in bees. As the bees increase, they are given larger quarters, till the

full capacity of the hive is reached. These small hives are always screened on the top or bottom, or both, to give plenty of ventilation.

If the bees get too much heated, the combs melt down. To strengthen the comb, some fine wires are imbedded in the foundation which is seen in two frames near the hive. This is pressed wax, in the shape of cells and built in by the bees. This is fastened to the ends of the frame and gives much strength to the comb. It is very desirable all the time in handling the combs. Bees are sometimes sent by freight, in large hives. This is done more frequently, perhaps, where men send large numbers of swarms. They are sent in large hives, where they move large apiaries, or send bees by the car-load. Where bees go by the car load, an attendant goes with them. An enterprising firm sent a car-load to Cuba at once, after her independence. Many large apiaries are to be found in our country and all the bees are transported by one or the other of the packages or boxes shown in the view, with slight variations in arrangement.

Pearl City, Ill.

A Pennsylvania Canal Boat

S. Z. Sharp

In Two Parts.—Part Two.

In order to supply the Pennsylvania Canal with water, and to replenish what passed through the locks, numerous dams had to be built in the Juniata River from which the water was drawn as needed. These dams held a great deal of stagnant water, which produced a great deal of miasma, and bred fever germs all along the stream. Then, as regularly as the summer came, there was much fever and ague. When the Pennsylvania Central Railroad was built and the smoke from the locomotives, containing sulphur was distributed through the air, these sulphur fumes at once destroyed the fever germs, and sickness suddenly stopped. This blessing should be numbered among the many, brought about by the railroads.

Grain dealers generally hired boats to convey their grain to market and bring back store goods, but sometimes the owners of boats would carry the grain to market for the farmers at a certain rate per bushel and pay the farmers whatever could be realized in that way. Father preferred the latter method, and we remember with what interest we awaited the return of Henry Hertzler, of Mattawana, Pa., after he had sold each boat load of wheat, and made his tour on horseback among the farmers of Kishacoquillas Valley with his leather saddle bags, filled with gold. As he piled up the gold on our father's table, it excited greatly our boyish interest.

At that time we had no "greenbacks," or any other paper money for which the United States government guaranteed face value. The country then was flooded with counterfeit notes, and the many private banks issued notes under par, for want of sufficient capital. Some banks were discovered later to have had little or no capital at all. These last were called "wild cat" banks. Under these circumstances it was an important matter to get gold for produce sold, as there was not enough gold in existence to serve as a circulating medium for all transactions.

One of the important commodities carried by boats was coal, and you may imagine what a number of boats is required to supply all the large cities with that article. In no better way can we illustrate this than by stating that a coal boat carried from six to eight carloads of coal, the boats had to keep some distance apart to get through the locks. Now a train of coal cars, sixty to seventy, in number, will carry as much as ten boats carried then.

To prove that it would be impossible to carry the needed coal by means of canal boats, one need only to station himself at a certain point along the Pennsylvania Central Railroad and count the number of coal trains passing every ten minutes at a certain time of the day, each train carrying as much coal as ten boats could carry, and it must become apparent that the canal boats could not carry the coal needed if the boats touched each other in the canal and filled it from Pittsburg to Philadelphia, let alone the other traffic required. This gives some idea of the wonderful development of our country within the recollections of one man.

The Pennsylvania Canal was owned by the State and was rather an expensive luxury. High water in the river produced many washouts which cost much to repair them and the state officials were glad to get rid of it, hence it was sold to the Pennsylvania Central Railroad Company for $9,000,000. The purchaser kept it up for a while for the purpose of shipping coal which did not require to be delivered at once, but in the course of time the company did not think it paid to keep up the constant repairs and it was finally abandoned forever. Only the walls in some places along the river and a few other remains remind the traveler of what was once considered a stupenduous enterprise, and which was supplanted by another and mudh greater enterprise, the Pennsylvania Central Railroad, with its four tracks and its method of taking water while the train is running.

We remember the time when the first single track was being constructed, and when it was finished as far as Mill Creek, a station five miles east of Huntingdon, and the one nearest to our home. What a commotion there was in our community when it was announced that on a certain day the first train would reach this point. Few, if any, had ever seen a train of cars and every one wished to see the "iron horse and the queer-looking wagons."

Every man, woman and child that could do so started early for Mill Creek, to be present when the train would arrive. A long line of eager watchers stood on each side of the track all looking in one direction. Our patience was equal to the emergency. Even the continued drizzling rain could not dampen our ardor, as we had provided ourselves in the morning with umbrellas. At last a rumbling sound was heard in the distance; then a cloud of black smoke appeared and the iron horse, panting, heaved slowly in sight. The engineer was evidently a wag, for as soon as he came within speaking distance, he shouted: "Put down your umbrellas or you will skeer the horse." The umbrellas were folded, and the iron horse has been running along unscared ever since.

Fruita, Colo.

TEN ACRES ENOUGH.

Many a man who has gone into business with the notion that he must have an extensive plant in order to succeed has found that he has undertaken too much. This was the experience of an Arkansas farmer, who for many years fitfully tilled a farm of two hundred acres without making at any time a comfortable living. At last he sold the land to five Italian families, who took forty acres each. A northern traveler who passed that way and was attracted by the neatness and evident prosperity of the small farms entered into conversation with one of the proprietors.

"How much land have you?" he asked.

"Forty acres," said the Italian.

"Is it all in tillage?"

"No, indeed!" exclaimed the farmer. "Ten acres are all one man can attend to. I bought the rest for my sons."

Ten acres may seem like a small farm to most Americans, but carefully cultivated it produced for the Italian more revenue than two hundred had for the previous owner.

FEEDING GRAIN IN SHEAF.

THERE is quite a saving of labor when the hens can be made to do a portion of the work for themselves. A poultryman who has excellent success finds it more profitable to feed sheaf oats and sheaf wheat than to thrash the grain for the hens. He states that when he throws one or two sheaves on the floor the hens are compelled to work to get the grain. They do not cease their operations when they have secured all of the grain, but continue to get more if they can and work the straw over and over. He always cuts the bands and mixes the sheaves. Now that is an idea that is not new to some and it is not known at all. It shows how easily one may provide work for the hens and also save labor to a certain extent. The fowls are always willing to work for the food received if not given to them in a manner which requires no effort on their part. It is not inferred that such a mode of feeding is the best, as the hens should have something more than grain, but that is the way to feed grain. Where one must purchase grain let it be thrown in cut straw so that each hen can work and get her share instead of one domineering hen securing the larger portion.

FUNNYGRAPHS

A passer-by was amazed at seeing an Irishman poking a dollar bill through a crack in a board walk.

"What under the sun are you doing that for?" he asked.

"Why, y' see, sir," replied the Irishman without looking up from his work, "a minute ago Oi dhropped a nickel through this crack, an' now Oi'm puttin' a dollar through so's to make it wort' me whoile to pull up th' walk an' get th' nickel."

The wife of an army officer at a Western post recently had occasion to visit a small neighboring town, to do some shopping at what is called the General Store She was much entertained by the variety and antiquity of the stock of goods, and as she passed out her eyes were attracted by a pile of mottoes, elaborately lettered and ornately framed, the upper one being the Scriptural passage: "Walk in love."

As she paused, the clerk, a dapper young man of more affability than advantages, stepped forward with the remark, "Them are the latest things in mottoes. This top one is swell to put over a young lady's door—"Walk in love."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceedsix lines altogether.

For Sale.—An almost as good as new "Chicago" Typewriter at about half price. Alignment perfect, print very clear. Write for particulars at once to W. R. Miller, 466 Jackson B'lv'd., Chicago, Illinois.

Wanted.—Chief cook and janitor. Good positions. Apply at once. Address Manchester College, North Manchester, Indiana.

Wanted—Matron. Man and wife to cook Fireman. Fine position. Address: McPherson College, McPherson, Kansas.

NEFF'S CORNER

I have now been at Clovis two weeks and already a site has been selected for a churchhouse. The ground, 100x140 feet on a street corner, is to be donated and a good start is already made toward a building fund. Fifteen lots have already been purchased by Brethren. I am having a house built for a brother in Illinois, and am hurrying preparations for the building of my own residence, and though busy as I can be, I hope to begin soon on a house for a sister in California. I am expecting some brethren in from Illinois and Idaho next week, who come with a view to settling.

Several have written me concerning lots. Some think the price named, $125 for in-lots and $150 for corners, high. But remember these lots are in town. I could get cheaper lots for you by going out into the corn field or out on the commons where nobody lives and perhaps never will. But these lots you can now get at these prices are within one to three blocks of the church site and each one lies next adjoining or just opposite across the street from one that has a house on. They are also conveniently located with reference to the round-house and shops, though not too close. Remember you can get a lot so located and a house such as rents for $15 per month, all for $450. And did you figure it? $15 per month income on an investment of $450 is just 40 per cent per annum. I find I can get the lots for you on payments, so if you want a lot and haven't the ready money, write me and I will name terms. Or if you are interested in cheap farm lands, let me hear from you.

Address:

JAMES M. NEFF.
Clovis, New Mexico.

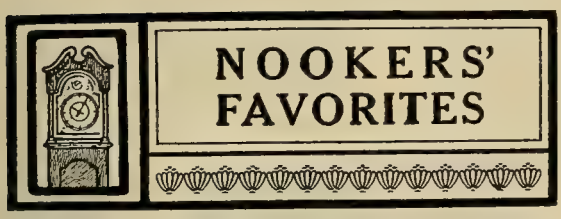
The Other Half of the Globe,	1.50
Brethren Family Almanac,	.10
The three are worth,	$2.35
All to new Subscribers for only	.95

We want to add 5,000 new subscribers to our list. We can do it if you will help us. If you are not a subscriber, send your subscription to-day. If you are, then tell your friend who is not a subscriber of this offer. The Book alone is worth much more than we ask for the combination. If you have a copy of the Book, you can tell them of its value.

The Other Half of the Globe

BY



D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

IN THE HOUSE OF TOO MUCH TROUBLE.

In the House of Too Much Trouble
Lived a lonely little boy;
He was eager for a playmate,
He was hungry for a toy;
But 'twas always too much bother,
Too much dirt and too much noise,
In the House of Too Much Trouble
Wasn't meant for little boys.

And sometimes the little fellow
Left a book upon the floor,
Or forgot and laughed too loudly,
Or he failed to close the door.
In the House of Too Much Trouble
Things must be precise and trim—
In the House of Too Much Trouble
There was little room for him.

He must never scatter playthings,
He must never romp and play;
Every room must be in order
And kept quiet all the day.
He had never had companions,
He had never owned a pet—
In the House of Too Much Trouble
It is trim and quiet, yet.

Every room is set in order—
Every book is in its place,
And the lonely little fellow
Wears a smile upon his face.
In the House of Too Much Trouble
He is silent and at rest—
In the House of Too Much Trouble
With a lily on his breast.

NEVER MIND.

Selected by Clara Fay.

What's the use of always grieving
At the trials we shall find
Ever strewn along our pathway?
Travel on, and never mind.

Travel onward; working, hoping.
Cast no lingering glance behind
At the trials once encountered.
Look ahead, and never mind.

What is passed is passed forever.
Let all grieving be resigned.
It will never help the matter.
Do your best, and never mind.

And if those who might befriend you,
Whom the ties of nature bind,
Should refuse to do their duty,
Look to Heaven, and never mind.

Unfriendly words are often spoken
When the feelings are unkind;
And sometimes they have no value.
Pass them by, and never mind.

Fate may threaten, clouds may lower;
Enemies may be combined,
If your trust in God is steadfast
He will help you. Never mind.

LITTLE BESSIE.

Selected by Susan G. Hause.

Hug me closer, mother, closer,
Put your arms around me tight;
For I'm cold and tired, mother,
And I feel so strange tonight.
Something hurts me here, dear mother,
Like a stone upon my breast,
And I wonder, wonder, mother,
Why it is I cannot rest.

All the day while you were working,
As I lay upon my bed,
I was trying to be patient,
And to think of what you said.
Then before the lamps were lighted,
Just before the children came,
When the room was very quiet,
I heard some one call my name.

"Come up here, My little Bessie,
Come up here, and live with me,
Where no children ever suffer
Through a long eternity."
Oh, I wondered, wondered, mother,
Who so bright upon me smiled;
But I knew it must be Jesus,
When he whispered, "Come, my child,"

Oh, at first I felt so sorry,
He had called and I must go,
Go to sleep no more to suffer—
Mother, don't be crying so!
All at once the window opened,
In the fields were lambs and sheep,
Some from the brook were drinking,
Others lying fast asleep.

There were little children singing;
Sweeter songs I never heard,
They were sweeter, mother, sweeter,
Than the sweetest singing bird.
Hug me, closer, closer, mother,
Put your arms around me tight.
Oh how much I love you mother,
And I feel so strange tonight.

Then her mother hugged her closer,
To her ever burning breast;
On her heart that near was breaking
Lay the head so near at rest.
In the solemn hour of midnight,
In the silence calm and deep,
Lying on her mother's bosom,
Little Bessie fell asleep.

In the quiet little churchyard
There is now a new-made mound,
And the form that was so cherished
Has been laid beneath the ground;
But up yonder in the portals
That are shining very fair,
Little Bessie now is sheltered
By the Savior's loving care.

A 25c Motto FREE

With each order for one dollar's worth of our Motto Cards as listed below.

No. 352—Cornflower Series. Size 8¼ x 4¼ inches. Corded. A pretty series of oblong text cards with designs of overhanging flowers. Assorted texts and designs.

SECOND EDITION

Annual Meeting Report

On account of the great demand for the report of our late Conference held at Los Angeles, California, we are compelled to run a second edition. The report is of more than ordinary interest this year for several reasons:

1. On account of the unique location.

2. The important questions discussed.

3. The valuable information along educational and Sunday-school lines.

4. On account of its value as a reference book.

If you have not sent your order, do so at once, for this edition will not last long and there will be no more published.

Price, each, ...25 cents

BRETHREN PUB. HOUSE,
Elgin, Illinois.

RAISIN CITY, CALIFORNIA

Owned and Controlled by BRETHREN

Over 2500 acres sold since Annual Meeting. Eld A. W. Vaniman and three others Elders and a number of Brethren have purchased land and will locate there this fall and winter.

J. S. Kuns of Los Angeles is erecting a hotel and store building which will be completed soon. A large tent 28x40 has been set up on the church site and will be used for Sunday school and preaching until a church house can be built.

Eld. A. W. Vaniman has located at **RAISIN CITY** and will be glad to give any desired information. For the present address him at Fresno, Cal.

Application has been made for a postoffice which we hope to have established at **RAISIN CITY** by Oct. 1, 1907.

RAISIN CITY is located on the Southern Pacific Railroad 14 miles from Fresno a city of 25,000.

DAIRYING AND STOCK RAISING.

This land is especially adapted to dairying and stock raising as it is the home of the alfalfa.

RAISINS, PEACHES AND FIGS.

Fresno Co., in which **RAISIN CITY** is located is the greatest fruit producing county in the world, 80,000 acres in grapes.

SOIL AND WATER.

The soil is a rich sandy loam, the land is level and ready for the plow; and abundance of good water.

PRICES AND TERMS.

We are selling the land at from $25 to $40 per acre on 4 years time at 6 per cent. Prices will soon be advanced to $50 per acre.

THE OLIVE BRANCH OF PEACE AND GOOD WILL TO MEN

BY S. F. SANGER AND D. HAYS.

Anti-war history of the Brethren and Mennonites, the peace people of the South during the Civil War, 1861-1865.

From Preface of Book.

Upon the whole, the object in publshing this little volume especially as it relates to the Civil War, is threefold:

First, to give a true and faithful rtcord of the sufferings and experiences, largely from the personal testimony of those who, through religious convictions, declined to bear arms against their fellowmen, believing that Christians should not take up the sword, but follow the teachings of the "Prince of Peace."

Second, to testify to God's goodness in protecting them in, and delivering them from, prison, as well as freeing them from military service during the remainder of the war from 1862 to 1865.

Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.

This is a book that every member of the Brethren church will want and ought to have. Very few of our people know what our forefathers during the Civil War had to endure. Neither do they know or realize how God in his infinite wisdom cared for and protected those who stood for the right tho' death stared them in the face.

AGENTS WANTED.

We want an active, live energetic agent in each congregation to sell this book. Liberal terms to agents.

The book is well bound in cloth with gold stamp and printed on heavy book paper.

It contains 232 pages with a number of illustrations.

Price per copy, prepaid.....$.75

Elgin, Ill.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,
CHAS. B. WESTOVER, Pres.

BUTTE VALLEY GRAIN FIELDS

H. F. Maust Cutting Wheat.

HERE are the pictures of Bro. Maust in his oats field and his self-binder at work in his wheat field. We promised these pictures a week ago and here they are.

Many of the Brethren, who attended the Los Angeles Conference, will remember as they passed through Butte Valley this wheat was just cleverly up, and now almost everyone who sees the grain thinks that the wheat will average from thirty to thirty-five bushels per acre. Mr. Manson, the chief of engineering corps, says that he saw in the northern part of Butte Valley some of the finest Scotch White Oats that he has ever seen this side of Scotland. In all probability the settlers will take advantage of this valuable find and make a specialty of that superior quality of oats.

A letter from the Valley says that fifteen families will move in this week, and on the evening of the 12th inst., Bro. Campbell and Bro. Wheeler left Chicago, over the N. W. & U. P. for Butte Valley with about forty people. Bro. Early says new settlers come into the Valley nearly every day. It begins to look as though the Valley would be thickly settled long before we anticipated it.

Lomita California

Water is here for use: Things are looking up and forward now. Improvements by home-making, water developing, and street-grading are in evidence. In this land of the afternoon sun, where things of beauty and useful productions come so readily, if given half a chance, it does not require much time to change from a state of wilderness to one of grandeur. It has not been long since that large party stood up under our camera, which failed to copy any one, until the now; but things look quite different from that barley field. And the fodder is not in the shock nor the frost on the pumpkin vine either.

The barley was a good crop. The berry was first class. And the corn—well, come and see. And the sea breezes are perfectly free. Heat that makes one swelter and wish for fans and ice is tempered by the placid Pacific here.

Yes, here the careful poultry raiser ought to find himself always on the highway of prosperity. He can raise alfalfa and corn and other food stuffs for his fowls, thus avoiding the high-priced feed which is solely controlled by the middleman. A minimum cost of food for your poultry and the high prices for eggs and meat simply put into possession of the careful poultry man advantages that must bring him satisfactory revenues. But the birds require attention daily.

Swine will do well at Lomita. With corn and barley and alfalfa, and no cold weather to check growth, what would a Kansas or an Illnois hog raiser accomplish here? Some of you come and try it. The conditions certainly are favorable for the pigs.

The California vegetable union has an immense demand for all kinds of vegetables, 300 acres of cabbage grown at Lomita would find ready market this winter; and peas by the acre would get ready sale at good prices. Cabbage and tomatoes can be planted with a machine and cultivated like corn. Tomatoes are set in May, cabbage yields about $100 per acre: tomatoes $150. Set your ground to cabbage in October, harvest in February and March. In April put potatoes in same ground, harvest them in June and July. Plant the same ground to potatoes in August, and harvest in October. This makes three crops in one year. On this account land and water are cheap at $350. per acre. Rightly managed the land will almost pay for itself in one year. We want good farmers.

The water is flowing in a beautiful stream, and those who are willing to join water with land are now sure of excellent results. Come! It is no longer a question of water, but of muscle and brain and will power. You can "look around" a great deal, but you can not look more surely than by getting some of this good soil in such a genial climate that will work crops for you all the year. Try it! Only $350 per acre. One fourth cash: balance one, two, three years at six per cent interest. Address:

W. I. HOLLINGSWORTH & CO.,
314-316 Wilcox Bldg., Los Angeles Cal.
M. M. ESHELMAN, Tract Agent,
Same Address.

Join Our Party Sept. 17th

And investigate the possibilities of the TWIN FALLS, north side tract to be thrown open for settlement

October 1

150,000 Acres of Land Under the Carey Act will be Thrown Open for Entry on that Date

This will be a great opportunity to the settler to secure a Homestead in a mild, equable climate, where crops grow to perfection by irrigation. No failure of crops on account of drought. This tract is on the North side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho.

The Brethren

should now be arranging to go to the opening of this 150,000 acres of land on the Twin Falls, North Side Canal for it will be taken up quick when once opened. Be there ready for entry Oct. 1. A good sized party have already made arrangements to go.

These lands are sold at 50 cents per acre and the water right $35.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms. Crops of all kinds are grown to perfection. Fruit growing is a success as well as the growing of sugar beets. To see these lands, take the Oregon Short Line, R. R., to Minnedoka; there change cars for Milner or Twin Falls.

"WE MADE NO MISTAKE"

Twin Falls, Idaho.

Twin Falls Land and Water Company.

Gentlemen: On the 6th day of April, 1906, I landed on the Twin Falls Tract to stay. I had been here twice during the winter "to see" and thought I had seen the opportunity of a lifetime for a man of small means to make a profitable investment and establish a comfortable home. Our experience has convinced us that we made no mistake.

Respectfully,
John R. Newton.

Pullman, Washington.

C. O. Morrell, Twin Falls, Idaho:

Professor Fulmer, Chemist, of Washington State University, has made his seventh test of soil from lands under the Twin Falls Canal system. He finds a small trace of alkali and thirty percent more plant producing qualities than in the Yakima Valley, and there is only one place on the Pacific coast where it is equaled, and that is in the Pajaro Valley in California. A. T. Farris.

Mr. B. F. Hurst, Fruit Inspector of Dist. No. 5, of Idaho states: "The Southern part of Idaho is second to no other part of the known world as a fruit producer, both in variety and quality."

HOMESEEKERS' ROUND TRIP TICKETS

will be sold to points in Idaho on 1st and 3rd Tuesdays of each month in 1907, good going, leaving selling station on date of sale and for return passage, leaving destination on day of execution which must be within final limit of 21 days from date of sale.

THE INGLENOOK

VOL. IX. SEPTEMBER 17, 1907. NO. 38.

How the Choice Was Made

Ida M. Helm

Wanted—A boy to do errands about my office. Good pay. Call at my office corner of East Main Street and Belle Avenue at 8 o'clock Thursday morning, August 22.
T. Goodyear.

FIVE boys read this notice with an extra long look at the words "Good pay," and immediately each little fellow began making preparation to secure the job. Tom Reed went to the pump with his tooth-brush and a large piece of charcoal in his hand. After rubbing his teeth for fifteen minutes, he gave his mouth such a complete washing as it had not received for many a day. I have heard that Goodyear is pretty particular about who he employs in his office, and he hates tobacco, cigarettes, and whiskey, so I must clean up or I'll get left. I will scrub my mouth again to-morrow; then Trursday morning I'll scour it again and I'll take a bath before I start. I never have had any tobacco about my new Sunday clothes, so I'll wear them and he will never suspicion that I use tobacco. It's an enviable job; all of the boys that work there like him, and he always pays well.

Clem Brown, Simon Swift and Hal Sherfey, all good enough boys in some ways but sadly lacking in others, each began to try to cleanse himself of different odors of tobacco, beer, hard cider, etc.

James Hawk never did like to work, or keep himself neat and clean, but his mother saw the notice and urged him to try for the place. At first he was rebellious to his mother's wishes, but when he read the notice and saw the two words, "Good pay," he agreed to apply for the place. His mother coaxed him to wash his hands, neck and ears; then she gave him money and sent him to the barber.

Two boys decided to apply for the place without any extra preparation. Sam Coxy, standing outside the horse-stable door, thinking about it, tossed the stump of a cigar to the ground, and gave a long whistle of determination, as he mentally said, That's the chance of a boy's life and I mean to try for *that job*. Then he lit another cigar and began smoking, and went on with his work as usual.

Earnest Winters read the notice then went on with his work as he did before. Although there was no visible sign of anything more than common, his mother accidently heard him say to himself, "I have heard that he is pretty particular about who he employs, but *mother* says I am a good boy and if he asks me whether I use tobacco in any form, or any kind of strong drink, or whether I swear or play cards, I can honestly answer, "No." If he will give me the job, I will do my very best at the work he gives me to do. If I fail to get the place, I shall stay at home and do the chores and errands just as I have been doing."

Clem Brown finding it hard to do without tobacco and disliking the job of keeping his teeth scoured for two days, dropped out of the contest. Eight o'clock Thursday morning found six boys at Mr. Goodyear's office, each one waiting for his turn to put in his application. Each boy except Sam Coxy had with him a certificate of recommendation from some one. Mr. Goodyear told them he would examine each boy; then he would make known in the presence of all whom he had selected and why he had selected that particular one.

Lawyer Goodyear was a large, imposing man, with very bright, black eyes that looked through large glasses and seemed to discern the thoughts that ran riot through the boy's minds. They felt considerably awed in his presence, and some of them became confused. Hal Sherfey was the first of the boys to come under the lawyer's scrutinizing inspection. He felt guilty, and when it was over, he felt sure that he had not answered the questions as he had intended; he knew he had contradicted himself.

Simon Swift's turn came next. Feeling conscious of the deception he had planned to practice on Mr. Goodyear, he could only stammer his answers in a half intelligible manner.

The next boy to pass under Mr. Goodyear's keen preception was Tom Reed who answered every question promptly and clearly, just as he had decided he

would. He considered himself very smart and he mentally saw Mr. Goodyear offering him the position in the presence of all the other boys. His pride received a shock when the examiner questioned, "Did I not see you coming out of the back door of Scroggs' drug store last Saturday afternoon? Tom's strong will came to his assistance and he quickly answered, "No, Sir," although he knew it was a lie.

Mr. Goodyear dismissed him and called Sam Coxy. He came forward with a cigar in his hand, and waited with a broad grim on his face for the first question. He answered every question truthfully. When the lawyer asked him, "Do you swear?" he answered, "Sometimes I do, when I'm mad." When the lawyer asked, "Do you ever take strong drink?" he said, "Not very often; I did several times when the fellows treated, but I like tobacco better and after mother gets her share of the money I earn, and I buy a few clothes and tobacco, I do not have much money left, so I cannot treat the other fellows, and they do not treat me any more." Then the lawyer asked him, "If I give you this place, will you use tobacco or strong drink, play cards, tell lies, swear, fight and steal things?" The grin left the boy's face and he said, "May I ask a question?" Mr. Goodyear answering in the affirmative, Sam asked, "Do you care if I do those things?" The lawyer answered, "Certainly I do *care;* if I give you the place you must be a good boy and not do any of the things I mentioned." "Well, I'll try, was his answer. Mother says when I say, I'll try to do a thing, I generally do it. I used to lie but mother didn't want me to, and so I quit. She says she has not caught me in a lie for three years. I cannot play cards as I never had nobody to play cards with. I don't steal; mother said she'd skin me if I did." A look of scorn came over his face as he said, "I don't want nothing that don't belong to me." He walked to the door and flung the cigar stump far into the street; then he looked straight into Mr. Goodyear's eyes as he said, "There, if you'll hire me, I'll never use tobacco again till you give it to me.

James Hawk's turn came next, but he walked in such a languid, tired sort of a way and drawled his answers in such a sleepy tone that the man behind the large glasses asked him but few questions.

Ernest Winters was the last one to bear witness for himself, and he answered all of the questions in an unassuming manner. Then he handed the examiner a letter that a lady who once visited his mother wrote, after she returned home. The lawyer took it read it so all could hear:

Mrs. Levi Winters:—

I would like to have a boy that is honest, industrious, and thoughtful for the interests of other people, to come and live with me and help cultivate my large garden, and take the vegetables to the market and dispose of them. I want a boy that I can trust at all times and while visiting at your house I found that your son Ernest is just the kind of a boy I want. If he will come I will pay him well.

Sincerely,
Mrs. Lottie Tucker.

Mr. Goodyear looked carefully over the letter and envelope, and saw that the handwriting and stamp address on the envelope was the same as the handwriting and address in the letter. He handed it back to Ernest; then he said, "I will not name any one; each boy knows how he witnessed for himself. One boy told two different stories. One stammered in such a way that I hardly knew what he wanted to say. One answered clearly and promptly but did not look at me once while he answered the questions. I saw the boy once, less than a week ago, with a cigar in his mouth. I always mark boys when I see them coming out of back-doors of drug stores where liquor is sold. One boy I hardly knew whether he was asleep or awake he walked so feeble and answered my questions in such a sleepy way. I am afraid he is not able to do the work attached to the position I have to give." Then he said, "Boys, remember,

"'Ill habits gather by unseen degrees,
As brooks make rivers, rivers run to the seas.'"

"Take my advice and begin your lives over, study the manners of industrious, truthful men and mold your characters after their pattern. You are all young in years and now is the time you are forming habits that will cling to you through life. I do not want a boy to work for me who tries to deceive me or is lazy. I have selected the boy whose mother received the letter from her friend. Every time he answered a question he looked straight into my eyes. A boy can not help but write his character in his countenance and I know the boy whom I selected has an honest, truthful face." He continued, "I have decided to give the boy who threw the cigar out of the door an offer. My hostler has told me several times that he wished I would get a boy to help him in the stable. I have been looking around for a boy, and this one answered all of my questions truthfully. He did not try to deceive me in the least, and he says he will be a good, obedient boy—and I will give him a chance for promotion. A man once found a diamond in the mud; it was rough and dull looking but when it was cut and polished it was of priceless value. There are human diamonds that are rough and uncouth before being taught and educated in the way of right, but when the rough marks of wrong and ignorance are rubbed off, their true beauty shows itself. An unadorned exterior often harbors a wonderful soul. I like to help boys who help themselves. Let us work for the true riches, and not think only of the 'good pay' of this world. Some men with millions are poverty-stricken. No other kind of poverty is worse than mental or spiritual poverty. Avarice is wrong

and intemperance will gradually destroy brains, body and soul."

Ernest and Sam promised to be on hand ready to begin work on Monday morning. Then the boys started home, two of them carrying very happy hearts. The others were sadder and possibly wiser boys. If not, it was not Mr. Goodyear's fault.

Ashland, Ohio, R. R. No. 2.

The Block System of Moving Trains

Robert E. Ericsen

WHAT is known as the block system of moving trains is being used on many of the roads of the United States.

Formerly all orders for trains were sent to the station agent who, in many places, attended to the freight and passenger traffic, besides being baggage master and express agent.

Now, at certain places along the railroad, towers are erected, their location being governed by the proximity of switches more than any other one thing, the distance varying ordinarily from three to six miles.

At each tower an operator, called a signalman, is constantly on duty unless temporarily excused by the chief dispatcher, the leave of absence being governed by the time when a train is due at that place.

The track between two towers is called a block and not more than one passenger train is allowed on a block at a time. More than one freight *may* be allowed under a caution signal.

Between the tower and the track is a post, about thirty-five feet high, called a semaphore post, from the top of which are two arms extending at right angles to the track like a capital T. No train is allowed to pass unless the arm to the right of the approaching train is lowered, which is done by the signalman, rods entering through the roof for that purpose.

When the board is perpendicular, the track is clear and the train may proceed. When partially lowered it is called a caution signal and the train may pass at reduced speed.

At night a light is placed on the post and the raising and lowering of the arm brings different colored glasses between the light and the observer. A red light signifies "stop," green "caution" and a clear light is called white and signifies "clear track."

Even in daytime these terms are used in regard to the signals—they are called red, green or white boards from the color of the light their position would show at night.

Like all other occupations, railroading has its slang terms, intelligible only to the fraternity. To "give the board" is to allow a train to pass. When the signal is given for a train to start it is "giving the high ball." When a train "goes in the hole" it goes onto a siding. An operator is a "ham" and when he sleeps at his post he is said to be "haying" or "in the hay."

In sending messages, the operator uses a species of shorthand, abbreviating in every possible manner. "R. u. tr?" is "Are you there?" "I" is an answer to calls equal to "I hear." "G. H." is "Go ahead." "N. m." is no more." By this means time is gained.

On a large sheet the signalman keeps a record of the time when a train enters his block, which information he receives from the tower where it enters. He must record the number of the train, the number of the engine, and the signals,—if any, displayed by them. (Trains are sometimes named for the convenience of the public, but to all railroad men they are known by numbers, the even numbers going in one direction and the odd in another.)

When a train passes his tower, he must notify the operator on either side, giving the time of leaving.

He must copy orders as directed by the dispatcher and deliver one copy to the conductor and one to the engineer of the train designated.

Sometimes a "19" order must be given, which means that the order is written on form no. 19 and given to the train men as they pass. This is one of the most risky of all his duties, because he must stand near the track and anything falling from a train going forty or more miles an hour might do serious injury. A hoop is made by twisting a wire around itself and the order is placed between the wires. He holds the hoop at right angles to the track and it is caught by thrusting an arm through. At night he must hold a lantern to indicate the position of the hoop.

Wrecks are sometimes caused by train crews not heeding signals. For instance, a red switch light shows an open switch, and white a closed one. Sometimes through the fault of no one, a switch light goes out, and then the engineer, instead of stopping to investigate, as the rules direct, takes chances and thunders past at unchecked speed.

The work of an operator is very confining—twelve hours a day, seven days in the week, he must be at his desk ready to answer all calls.

The engineer is a brave man and people so consider him, yet he is only running as ordered. But little notice is taken of the almost unseen fellow who,

often overworked (being sometimes at his post twenty-four hours or more without sleep), is giving him his orders from the despatcher. Should he fail to copy them correctly, even to the change of a letter or figure, fearful results might follow.

Though his responsibility is great, his salary is as small or smaller than that of any other position on the road.

THE TOWER MAN.

The operator in the tower sits,
Holding his nightly vigil all alone,
On him the care of many lives is thrown—
Many the souls dependent on his wits.

As o'er the rails the gleaming headlight flits
Shining an instant, only, then is gone.
And when the semaphore's white light is shown
Letting the train rush past he calmly sits.

Each night alone he waits while others sleep,
In his lone tower he must watch and wait,
Let us like him a constant vigil keep,
In all our deeds with "**Right**" co-operate,
Never repine when sorrows round us sweep—
God knoweth best, and heeds our ev'ry strait.

Mulberry Grove, Ill.

WESTERN NOTES FOR INGLENOOK.

H. M. BARWICK.

A Million Dollars to Move the Crop.

ONE million dollars was transferred from New York and other designated money centers to the West Aug. 23, to aid in moving the western crops to eastern centers.

The United States Government has directed this help for years and it is highly appreciated by the western farmer and grain men.

After Effects of Strikes.

At the time of the strike at Cripple Creek, Colo., a few years ago, the city numbered 16,000 inhabitants. Now it is barely 8,000. There is as much gold there as ever, the developed mines are there, mining is being done, but the push and life so characteristic of a thriving mining town is all gone.

The residents blame the strike for killing the town. Somehow the blight seems to have come to Cripple Creek to stay. But dozens of other cities have had the same experience. Strikes are local wars and war is devastating at all times.

Improvements in the Channels of the Mississippi and Missouri Rivers.

It may not be many years until the people of the United States will hear of internal improvements on gigantic scale. Especially will this be true if the people of St. Louis and Kansas City succeed in impressing President Roosevelt with the justice of their claim.

The two cities named have combined and on Oct. 3 the President will be piloted over the waters of the two rivers named with the expressed purpose of convincing him, and through him Congress, as to the necessity of preparing the river channels for larger steamboat service. The Missouri River channel is dangerous, but with a first-class water way for a few hundred miles, it is argued that the entire West would receive lasting benefits of great value.

Those of the West who know the truthfulness of their claim all join hands in asking Congress for a heavy appropriation to make their water ways serve the needs of the entire country.

Hundreds of millions of public money has been appropriated in the past for less worthy objects than that of opening up the Missouri River.

LEARN FROM THE ANIMALS.

IF man would stealthily observe the habits of animals during torrid weather, he might learn something to his advantage. The animal adapts himself to the weather when left alone. He refrains from drinking either whiskey or beer. He does not race up and down in the sun. He cuts down his rations a little, stays in the shade, snoozes at midday, and studies to be quiet. So he goes through a hot summer in fine shape, save when scourged and tortured by man. The most obvious rules of nature warn men not to give way to angry passions in such weather as this. War, personal conflict, or even bitter quarrels are hideously corrosive and destructive to the vital element. No man can possibly live long who flies into a passion every hot day. He sears his soul and shrivels up the juices of his body by such short-circuiting of his energy. There is no excuse for the brawling and quarreling and bellicose utterances that are heard on all sides. It is a confession of weakness more contemptible than the drunkard's. Let everybody brace up and resolve to keep cheerful! It is easy enough to any man who is a man. Then, when he makes himself cheerful, he will discover that he is cool.—*Washington Post.*

TWO MISUNDERSTOOD TITLES.

THERE is the widespread misconception about the title of the Emperor of Russia. He is almost universally called the Czar or Tsar. That is not a title at all, the word czar meaning simply king. He is never called that in Russia, the educated people calling him emperor, and the peasantry, gossudar, or lord. The Russian ruler has been officially and diplomatically known as emperor ever since Peter the Great obtained recognition as such. The other misunderstood title is that of the German ruler. He is not the Emperor of Germany, as so many persons call him, but the German emperor, a title that was expressly stipulated for by the German states when the confederation was formed, in the time of Bismark.

Indians in the Beet Fields at Rockyford, Colo.

N. J. Miller

In Two Parts.—Part One.

THE group of Indians shown herewith have made an exceptionaly good record in the beet-fields this season. The majority are spending their vacation from the government schools earning money to invest in sheep, goats, cattle and horses for their elders to care for in their absence. The youngest of this group is twelve, and the eldest about fifty-five. Each one is capable and willing to do a good day's work.

This group of Indians I have known to begin work at five o'clock in the morning and work steadily, except during the noon hour, until seven o'clock at night. One day, while under my direction, they even missed their dinner and the noon hour so as to gain extra time, never lagging a minute. The idea that the Indian is lazy and makes a poor workman does not hold true in this case.

Just Before the Dawn

Richard Braumstein

To one whose life is passed in pain and sorrow,
A stormy voyage on a violent sea,
A daily and a seeming endless struggle,
With cruel disease and chill adversity

"Be not afraid, nor let your heart be troubled."
But set your doubts and fears at rest;
The Father, loving all his wayward creatures,
Gives unto each the lot he knows the best.

'Tis alone the active soul that conquers,
Nor yet possesses bravest, noblest traits,
Nor aids the most in winning life's great battles,
He also serves who only stands and waits.

Although to you the world is sad and dreary
And hope and joy may seem forever gone,
Do not despair, but let your faith grow stronger:
The night is just before the dawn.

In God's own time the shadows all will vanish,
The mists of grief and pain will pass away
And from the dim and darkened clouds of sorrow,
Your life will shine forth into perfect day.

"ABIDE WITH ME."

RICHARD SEIDEL.

Abide with me, O Lord forever,
In the morning's ruddy glow,
When temptation's darkening shadows
In my pathway seem to grow.
Still be near me, ever guiding,
Up the steep and rugged height,
On whose glorious summit beaming,
Is a crown of golden light.

Still be with me at the noontide,
Through the heat and toil and care,
And though rough the toilsome journey,
May I know that thou art near;
Helping me to brave the tempest,
Guiding o'er the weary way;
Teaching me the blessed lessons
That thy love and truth portray.

And when evening's gentle shadows
Gather near and nearer still,
May I feel thou wilt not leave me
But thy promised care fulfill;
Then sweet peace shall crown my efforts,
And will be my true reward,
If aright I've turned my footsteps,
Upward to the throne of God.

Thus abide with me forever,
Make my heart thy dwelling place,
Where thy light in glory beaming
Every error shall efface.
And through phases ever changing
I will cling in trust to thee,
While my earnest prayer ascending.
Shall be Lord,—"abide with me."

THROUGH HOLLAND.

HERE is a pretty description of a day's travel through Holland: At Amsterdam I left the train and boarded a boat bound for the Helder, the northernmost point of North Holland, where the low-lying islands curve round to the horizon, looking as if they had been appointed ocean outposts to Friesland. The voyage might take a day, but what of that? There is only one to travel in Holland—by water. The boat glides through the brimming canal, passes the clean towns and the many windmills. Life persists; passengers and cargoes come and go, but you are no longer at war with the world or in trouble with it. You are a spectator, idling through a summer day, wrapped in aloofness, content merely to be moving through the moist and luminous air. When the environs of Amsterdam are left behind and the waterside houses give place to the reeds that bend as the backwash overtakes them and the factories fade into vast, bright meadows, the spirit of this land, wrested from the sea, obsesses the traveler. I forgot to count the windmills, was indifferent to the locality of the hut where Peter and the Great studied shipbuilding and was content with pretending to choose a habitation from among the dwellings whose gardens are washed by the waters of this great North canal.

"We passed through Alkmaar. On one side Dutch farmhouses, compact, four-square, stretching in an endless line along the waterway; on the other side the meadows and beyond them, far away, the sweeping line of the dunes. They rise above the North sea and on their sandy sides and heights men are forever on the watch against the encroachments of the the Ocean; they plant the 'shrub' called heim, that binds the sand together, making a bulwark against the rage of the waves. 'God gave us the sea, but we made the shore,' says the Dutchman. These flower-fruitful and pastoral meadows that outstretched as we glided northward were once submerged in water. The fight against the sea never ceases. As we moved northward the three great dykes loomed out. I gazed out at these hight bulwarks, patrolled and watched by day and by night, and mused on the legend that at Amsterdam there is one master key a turn of which, in times of peril from foreign invasion, will drown the land again.

"And as I mused there swept past a barge. The great sail was hoisted. The family—a mite of the 50,000 canal population who live out their lives on these floating houses—were gathered round the tiller, where mynheer smoked and steered. A barge—the symbol of this sea-conquering people. Below the Helder I landed. Beyond this is the fort, with the fringe of islands outposting Friesland, the fishing fleet and the gunboats, and the channel between the mainland and the Texel opening to the world. As I crossed the bridge I saw the sight of sights. There was no fuss, no shouting, no spilling of wine at that launch. The barge moved from her cradle, shot downward, took the water in a rush, pretended to capsize and all at once acquiesced. She had found her master."

REMARKABLE ENGINEERING FEAT.

COAL has been reached at a depth of 1,321 feet in Lord Londonderry's new colliery at Seaham harbor, in England, after a remarkable engineering feat. Owing to the presence of enormous quantities of water forming a quicksand, it was found necessary to freeze the ground to a depth of nearly 500 feet. Twenty-eight holes were bored in a circle about the shaft to a depth of 484 feet, and freezing tubes were inserted. Brine was the medium used to extract the heat from the strata. The length of time required to form a wall of ice was 185 days, the wall being maintained for 353 days. In the shaft bottom the frozen sand was so hard that it could be penetrated only by blasting.

SOME people cannot do anyone a service, without "bossing" them meanwhile, and trying to do so forever after.

What May Be Seen at Long Branch

Richard Seidel

THE general impression that Long Branch, like Monmouth Beach, Seabright and many other resorts on the coast, is a watering place of recent origin, is erroneous. It was known among Philadelphians who, by the way, were pioneer residents of the New Jersey coast, as early as 1788. Tucker's Beach and Long Branch, further south, were also visited by them at that time. In these old days the fishermen carted fish, oysters and crabs in shore wagons to Philadelphia and Trenton, and on their return trips conveyed the summer visitors and their household effects to the seashore.

Long Branch derives its name from the adjacent branch of the Shrewsbury river. It is known to have been in 1734 a camping ground of the Cranberry Indians, two of whom, Tom Store and Andrew Wooley, claimed the land between the Manasquan and the Shrewsbury. In 1753 a conference was held at Crosswicks, between the Indians and four settlers from Rhode Island, to arrange for the purchase by the latter of a portion of the state which now includes Long Branch. After much palaver, it was agreed that the settlers should be allowed to buy as much land as a man could walk around in a day, if one of them could throw an Indian champion in a wrestling match. John Slocum, a man of large size and athletic strength, was the champion for the whites. After a long struggle he threw his man.

At the outbreak of the Revolution, Long Branch is said to have been the property of Colonel White, a British officer residing in New York. He erected a summer residence on his seaside estate, which was, however, confiscated after the opening of hostilities. Others say that this house belonged to Ebenezer Wardell and was confiscated because he sympathized with the British.

In 1788, Mr. Elliston Perot, of Philadelphia, persuaded an old woman in charge of the house to allow him and his family to occupy it during the summer, on condition of providing the beds and food. Others begged the privilege of sharing the house with Mr. Perot, and this suggested to a Mr. McNight the idea of purchasing the building and establishing a public resort. Borrowing $2,000 McNight made additions to the dwelling and was so successful that he cleared $40,000 from his venture, a large sum in those days. The best families of Philadelphia resorted to it. McKnight's hotel was purchased in 1820 by William Renshaw, whose widow continued the house until 1837. The property then passed into the possession of James Green, who built the Bath Hotel. It burned down in 1867, the loss being $100,000. The Hotel Scarboro now occupies the site of the Bath Hotel. Besides McKnight's hotel there was another hotel established in Long Branch in 1792, by Herbert and Chandler. Gradually, but steadly, the importance of Long Branch increased.

Speaking of this famous resort, an old resident describes Long Branch as it was in 1840: "Then one little steamer made the trip from New York, rounding the Hook and making her way into the Shrewsbury through an inlet at Seabright (now closed) almost at the spot where the Octagon Hotel used to stand. The water rushed through it as in a mill race, and the passage through was an event of the day. From the little dock inside, stages with the tires of their wheels eight inches broad, toiled slowly along the sands to a farm, the borders of which is now Monmouth Beach, and thence to the upper end of Long Branch and to a low tavern, known as the Fish house, at about the point where the telegraph office used to stand. The telegraph office has been removed to a point further inland. The Fish House was then several hundred yards from the beach. There were but two other hotels—the Bath House, about half way between the present West End and Ocean, and the Conover House. Then all who came here drove from Philadelphia, Trenton, or Princeton, in their own carriages; few came from New York. The fare was

plain. Great dishes of boiled, hard-shell crabs and lobsters were on every table. There were beef, mutton and vegetables from New Jersey farms, and rich cream and milk, and in the kitchen were colored cooks from the South. People came here for their health and after supper every one went to the beach and there stayed until ten or eleven o'clock. Every one bathed in the sea; a white flag gave notice that it was ladies' hour, and no man except a husband then ventured on the beach. When the red flag was up the men crowded the surf. The hotels were then so far back that the bluffs concealed the bathers."

The Long Branch of today is a seashore cosmopolis. The features which attract the vast summer throng to it probably repel as many, if not more, from it, a circumstance to which the majority of the more rational resorts on the coast doubtless owe their origin. The leading characterisitics of Long Branch may be described in one sentence: It is the only resort on the coast which supports a synagogue; the "tiger" has several superbly appointed jungles, in one of which, at least, one man is known to have lost considerable money in one night. It is "fashionable" in the sense in which the word is used by those who fondly imagine that lavish display of wealth is evidence of high social position. In fact, the display of wealth, in the equipages on Ocean Avenue, in the costly fabrics and jewels of evening toilets, at the gambling table or on the race track, seems to be the chief amusement of a large majority of the successors of the worthy Philadelphians, who, over a century ago, discovered the resort. It may be judged from the foregoing that Long Branch is not a place whither a circumspect parent would take his family for a quiet summer by the sea; but for those who like to be in the whirl of a "fashionable" watering place, it is without rival, as it is also for the cynic who enjoys to view the "maddening crowd" as it goes by.

Yet, as there are islands in a rushing, roaring stream, so there are some spots in Long Branch where the noisy throng has not intruded. Besides many private cottages, there are the hotels, cottages and grounds of Hollywood, near the West End station, a settlement within itself, under one management, and including a huge bathing pavilion, shut in by high walls from the gaze of the curious, and for the use of the Hollywood guests only. Another pavilion is that of the West End. It is connected with the second floor of the hotel by a bridge and has 600 bathing houses. There are also numerous bathing houses under the Iron pier, the landing for excursion boats, which extends on a level with the 25-foot high bluff, 800 feet out over the ocean. The bathing hour, near full tide, is announced by the hoisting of a white flag on the hotels. The bathers are carefully watched by life savers in boats on the line beyond the surf, and should bathing be dangerous, the flag is not hoisted.

Ocean Avenue, toward evening, is probably the liveliest thoroughfare in the United States. Here one can see almost every kind of vehicle,—stages crowded with excursionists, buggies drawn by swift roadsters, automobiles, tandems, four in hands, T-carts, etc., many of them perfectly appointed and each interesting in its own way, as representing one of the many types of people to be found at this resort. Among the turnouts are many from the resorts north and south of Long Branch, whose residents doubtless look with quite amusement upon much of what they see. Even of those who would not care to live there, Long Branch is interesting, if only as an object lesson in certain extreme phases of American life,—phases which could manifest themselves only in a country whose society is still undergoing the process of fermentation.

Ocean Avenue itself is a beautiful thoroughfare, a broad driveway along the five miles of bluff, commanding a superb view of the ocean and swept by its cooling breezes. It is a part of the famous "Ocean Driveway," which extends from Highland Beach to Bay Head, a distance of about twenty miles.

Long Branch is abundantly supplied with pure water obtained from Green's Pond and Whale Pond Brook, the latter a stream which feeds Whale Pond, a picturesque lake between Elberon and West End. The system of pipes extends ten miles from Elberon to Highland Beach and is under control of the Long Branch Water Supply Company. A thorough sys-

tem of electric lights illuminates the avenue and beach and the promenades are kept in excellent repairs.

The fire ruins of the Rothschild cottage on the Ocean Driveway are a continual reminder of what inadequate fire protection means. In Long Branch six well distributed first companies can take care of almost any fire, if caught in time, but West End has only one fire engine company.

Long Branch practically includes North Long Branch (formerly Atlanticville); East Long Branch, Long Branch Village; and Branchport. Long Branch Village, accessible from the Branchport station as well as from the Long Branch station, is one mile from the beach and is a business place, rather than a summer resort. It was settled before the Revolution and in former years was locally known as "The Pole," owing to a lofty liberty pole, which stood near the center of the village.

Branchport, closely adjoining Long Branch Village, is pleasantly situated at the head of the network of creeks and inlets forming the Long Branch of the Shrewsbury River.

Charming Scenery of the West

Furman R. Cline

He who has eyes to see and sees not is worse than he who never saw at all, for we believe that God created all things for a purpose.

At the end of another very pleasant and profitable week, as we sit and meditate upon the experience of the past month, we must admit that our lot has been cast among the beauties and grandeurs of nature which California alone can furnish to the Easterner.

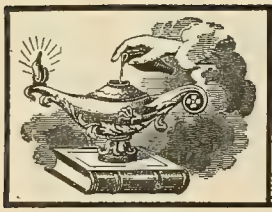
The duties of the week being ended, a day was set apart on which to visit Lake Tahoe before going farther west into California. Neither tongue nor pen can describe, with credit, this beautiful lake in its full grandeur as it sleeps quietly among the snow-capped peaks and sweet-smelling savor of the pines, which makes it a favorite place for hundreds of tourists who annually come to enjoy a few months of quiet rest. There is the choicest camping ground around its sides for over a hundred miles.

It extends over six hundred square miles and is from 1,500 to 1,800 feet deep. Fishing and hunting are indulged in freely and the sportsman is amply repaid for his time as game is plentiful.

Though one could write pages of its beauty and spend hours upon its banks, we must travel onward toward the Pacific. Slowly winding our way up across the Sierra mountains, we soon find ourselves looking with a wishful and longing eye at the acres of beautiful fruit land in the noted Sacramento Valley.

Though it was not our lot to stop in this place, we were bountifully supplied with the various varieties of the juicy fruit by the "coming financiers" of the land, who were eager for the loose change of the hungry passengers.

The San Francisco skyscrapers were next to greet our eager eyes as we crossed the beautiful bay and entered the "City of the Golden Gate."



For the first time we stood upon the banks of the Pacific and looked out upon the mighty deep as the waves came rolling towards us in all their grandeur. Then, as never before, did we fully realize the insignificance of man's power, as compared to the forces of nature which were continually at work.

So impressed were we with its grandeur that we were not satisfied until we were more than satisfied. Some thirty hours later, having ridden about three hundred miles up the coast and getting a slight touch of that pleasant sensation, known as seasickness. though we paid our fare at the start we could not help but offer our tribute to the waves occasionally, as they so boisterously pitched us from side to side and it was not with sorrow that we once again found ourselves on solid footing, and in the beautiful city of Eureka, in the northern part of the State.

To state that we are in the "Garden of Eden," expresses our thoughts but mildly. Though it may have its drawbacks we are looking at it from the aesthetic side and to see the spreading palms and towering redwoods, along with the many varieties of beautiful flowers which grow out of doors the year round, one feels like taking off his hat in their presence and yielding to their charming power.

Still realizing that the beauties of nature are not all stored in one little section of the country, we are desirous of pushing onward, eager to grasp all that we can and thus be of a little more use to our fellowman.

Rockyford, Colo.

THE QUIET HOUR

SERMONETTE.

G. A. SNIDER.

"Precious in the sight of the Lord is the death of his saints."—Psa. 116: 15.

As we look upon death, it means separation,—the removal of loved ones from our midst to the cold grave,—the departure of friends, from the land of the living to the silent city that awaits us all.

These thoughts are not the most pleasing or precious to us. We are looking from the shadow into the dark valley, and all is mystery and confusion to us. Our Lord is in the eternal sunlight and sees all from the lighted side of the valley. He knows of no confusion or mystery but that all is well.

I. Why is the death of his saints precious in his sight?

1. Because death means the returning of God's children to their long Home. God has no pleasure in the death of the wicked. The wicked refuse to be God's children by adoption. Saints are God's children. What event is more precious to the parent than the return of his long-absent child? That son who has climbed the mountains and crossed the deserts in the interest of his father's business, is now returning, foot-sore, careworn, to his father's house. Has not the father reason to rejoice?

Precious! Oh how precious, because it affords God an opportunity to administer to every need of the child. While in good health we are apt to feel strong and able to care for ourselves—death is utter helplessness. When all human help fails and friends and relatives can no longer comfort, The Great Physician, our Lord and Master, takes the patient into his mansion, where he alone can supply every need.

2. The death of saints is precious in his sight, because it means rest for his children. "Blessed are the dead which die in the Lord from henceforth." "Yea, saith the Spirit that they may rest from their labors." (Rev. 14: 13). "There remaineth a rest to the people of God." After the struggles and trials in this life of sin, God delights to have his saints at home with him, enjoying sweet rest.

3. Precious is this death because it brings joy to both the saint and our Lord. It is the passing of his child from this life of care, disappointments and sorrow, into the presence of Jesus where there are no sorrows, or discords, but all is harmony and love. It is the door that opens into the eternal mansions prepared in the Father's house. Joy, yes, unspeakable!

Again the death of his saints is precious, because it is used as an agency to draw the lost to Christ. The death of our precious children often causes us to open our doors and invite Jesus into our homes.

At the death of a tender, loving, little boy, hard-hearted and sinful parents have been turned to seek the Lord. Precious? Yes, because of its useful ministry.

CONCLUSION.

(1) Precious is the death, because of the opportunity afforded the Father of being with his children to administer to their needs.

(2) Precious because of the joy it brings to the child in being at rest with the family of God in the Father's presence.

(3) Precious, because the useful ministry it subserves in bringing the lost to Christ.

Fostoria, Ohio.

THE BRIGHT SIDE.

SOME Christians have met with a strange experience which has given them no little trouble. They had hoped that if ever they should be overtaken by affliction they would be so wonderfully supported by their religion that they could "rejoice and be exceeding glad." They had expected to "glory in tribulations also." But to their surprise they have not found it so. Instead of finding ecstasy in affliction, they have found depression. Their spirits have sunk like lead. They have been covered with clouds. In their distress they have concluded that they have no religion, or that religion is vain.

St. Peter refers to this experience in these words: "Though now for a season, if need be, ye are in heaviness through manifold temptations." Grace does not always produce ecstasy. It is sometimes accompanied with depression of spirit. The best men in the world may have this experience. It is written of the Son of God that when he entered the shadows of his passion he "began to be very heavy." Surely he "was tempted in all points like as we are." He traveled the whole length of the gloomy road. Then why should we think it strange if we also are depressed in spirit in time of affliction?

This experience may be inexplicable, but the brightest side of it is that there is joy in sorrow when grace is in the heart. Read again the words of Peter in

their relation to the whole sentence: "Wherein ye greatly rejoice; though now for a season, if need be, ye are in heaviness through manifold temptations." What a singular expression! "Ye greatly rejoice," and "Ye are in heaviness," at the same time. Does it seem strange? But it is even so. The heaviness will pass away, but the joy will remain. On the surface of the ocean there may be a current flowing toward the south, and in the same ocean at the same time, far down below the surface, there may be another current flowing toward the north. Two currents flowing in opposite directions at the same time in the same sea. And in the same heart there may be two currents of feeling flowing in opposite directions. The one seems to bear the soul downward into darkness, while the other bears it upward into the light. The one is on the surface, the other is in the depths of the soul. The one is caused by changes in worldly conditions, and will soon pass away; the other is caused by the love to God, and shall abide forever.

A SONG OF TRUST.

Behind the cloud the sun still glows;
Above the thorn there smiles the rose;
And side by side with sorrow goes
  Joy with his song and laughter.
God sends the stars into the night;
And grief shall give way to delight:
Trust him, and find the paths all bright
  That lead to the hereafter.

For every noble deed begun,
For every strife of conscience won,
For every kindly service done,
  The path of life grows clearer:
God's hand is ever at our side;
God's voice is ever close to guide;
Trust him, and so be satisfied:
  Each hour makes heaven nearer!

Great Thoughts.

WAYSIDE MUSINGS.

THE gold in the quartz is valuable, but the gold purified by fire is more valuable. The ordeal of suffering makes the good more beautiful. It is the smelting of the ore.

Charity should begin at home, but it should not stay there. Life is service. Service is a part of life; it is the only real human life, and from Christ's own existence we see the example of it.

God wants our life to be a song. He has written the music for us in his Word and in the duties that come to us in our places and relations in life. The things we ought to do are the notes set upon the staff. To make our life beautiful we must be obedient and submissive. Any disobedience is the singing of a false note, and yields discord.

The best things to give your enemy is forgiveness; to an opponent, tolerance; to a friend, your heart; to your child, a good example; to a father, deference; to a mother, conduct that will make her proud of you; to yourself, respect; to all men, charity.

The day is coming when the great ship of the world, guided by the hand of the Son of God, shall float out of the clouds and storms, out of the shadows and conflicts, into the perefct light of love, and God shall be all in all. The tide that bears the world to the glorious end is the sovereinty of God.

It is said there is no thought that is good in the mind but soon looks good in the face. Heart qualities are artists that work, indeed, behind the screen, yet at last they strike through the canvas and become manifest in the facial illumination. Contrariwise, in men long inured to vice and crime, sinful thoughts within have so disposed of the facial tissue without, that the countenance has in it something of the crawling serpent.

"Every day is a little life," was an old thinker's wise epigram. If each day gets the better of us, how we are going to conquer in life as a whole? Only as we make each day a victorious battle-ground, where selfishness and shirking and disobedience and discontent are overcome, can we make life a victory in the end. Lavater, the old philosopher, laid down the rule that "each day should be distinguished by at least one particular act of love." It is a rule which makes life happier for the doer, and for everybody else.

REST IN THE LORD.

EVEN in our supplications it is needful to "rest in the Lord." Perhaps it would be a good thing for many of us in our praying seasons if we were to say less and to listen more. "I will hear what God the Lord will speak." Listening might bring restfulness where speech would only inflame us. It is not an insignificant thing that the marginal rendering of that lovely phrase, "Rest in the Lord," is just this, "Be silent unto the Lord!" Perhaps we need a little more of the Quaker silence and respectiveness, and a little less of heated speech and aggression. At any rate, we must get the doubt wrinkles out of our prayers, and in our speech with God we must manifest the assurance of a calm and fruitful faith.

I call you then to rest! Nay, the Master himself is the caller: "Come unto me," thou strained and careworn church, "Come unto me," and I will distinguish thee from the world, for "I will give thee rest."

"Drop thy still dews of quietness,
  Till all our strivings cease;
Take from our souls the strain and stress,
And let our ordered lives confess
  The beauty of thy peace."

THE INGLENOOK

A Weekly Magazine

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

LOOKING ON THE BRIGHT SIDE.

"All I wanted was a little happiness" was the outcry of a society leader who, after a whirl of fashionable life, found herself worn out and nervous. Her days had been passed in idleness; she had no duties to perform, no work to do. No wonder she spent her time brooding over her supposed wrongs. To her happiness was unattainable because she did not understand the principles leading to it.

Happiness,—the bright side of life,—may be ours, but because we are so ignorant of its nature, many of us miss it. The simplest way to see the bright side is to resolve to look for it. If we imagine we have nothing to make us happy, let us stop right there—"count our blessings," yes, name them and note their number. Let us think of the friends we have, the loving family ties, books that cheer our lonely hours, work that our strength and ability enables us to accomplish for the world's welfare.

How prone we are to give our time to morbid brooding over conditions that confront us! We call it worrying and we know it is foolish, but we say we cannot help it. There is a way out, however,—*get in tune with life!* To be in tune one must learn to understand what life is, and what is one's personal relation to it. If prayer were made more especially a means of self-discipline rather than a request for special indulgences and selfish desires, we would rise to loftier views and nobler aims. Life would come to us as a sacred trust, and the bright side would be seen because we are prepared to see it.

Perhaps the happiest person is the one who loves the most. To do one's duty is not enough to create happiness. One must love to do the right,—make it part of his very being. Looking kindly at our duties, they will turn kindly faces to us. Don't worry over them, and they will smile at you in return and you will be happy with them.

If you want to be really happy, be sure that you have the source of joy within you. If you love some one who does not return your love, be happy, at least, that you are capable of loving. Love your family, your friends,—even your enemies! If you cannot have a certain thing you crave,—if to get it is beyond your honest endeavor,—do not lose heart on account of not having it, but rather pray to learn to accept your life without it. Put yourself in tune with life as you find it. Then you will be at peace, and peace is true happiness,—the bright side of life, enduring to all eternity!

LIFE'S FAILURES AND WHAT THEY TEACH US.

In these day of vast achievements, when glowing success is regarded as the highest and only thing worth striving for, we should remember that there are some lessons to be learned, also, from our failures. Real success has seldom been attained without incidental, small failures. With the attainment of success, however, we are very apt to forget the small discouragements of the past, and consequently we fail to point out the pitfalls to ourselves and others who might be helped. Why a man fails in some points is always as potent a factor in striving for success as is the manner by which he succeeded.

The sooner we learn to discover the reasons for small failures, the sooner are we likely to reach the end longed for. Men, with whom we necessarily have to deal in a business way, are the materials that will contribute to our failure or success. If we know the characters and tempers of this material, we have the right understanding, but first we must know our own ability, and also our own limitations.

When we ask why we have failed to impress a fellow-man favorably under certain favorable circumstances, we are reaching out for knowledge that will be valuable to us. Here is a chance to learn. Have we, at other times, succeeded, let us analyze the case and find out why. There is a possibility that, after a series of marked successes, our self-esteem may overreach itself. We lose our sense of proportion.

"Know thyself," said the sage of olden time, and in no way can we learn more about ourselves than by reviewing our failures and having them serve as stepping-stones to better things.

IS THE PEACE CONFERENCE A FAILURE?

Judging by the latest advices received from The Hague, there is no prospect to obliterate the recent demonstration of the hopelessness of accomplishing any practical good.

The delegates were prepared to find that serious obstacles must be overcome before permanent results in favor of peace could be attained, but they were hardly ready to witness the wrangling that characterized the recent negotiations.

Leaders of the conference who have left the military issue alone and devoted themselves to what they

call judicial organization along peace principles have made no progress. During the week ending Aug. 31, various projects were taken up, handled carefully and dropped.

The main trouble with the delegates from the various powers seems to be that each one appears to think a concession on his part would imply weakness on the part of the country represented. There can be no real good from a peace conference unless there is an honest desire on the part of each country to lay aside selfish ambitions, and work for international peace as a blessing to all concerned.

LABOR UNIONS vs. EQUAL RIGHTS.

THE recent application by a manufacturer for an injunction to restrain labor unions from boycotting individuals not belonging to their unions and manufactories employing nonunion labor, will mark a new epoch in labor union history, if the courts hold that such action is legal.

This nation was born during a struggle for God-given rights and equal liberty for all. It seems to be the effort of labor unions to change this law of equal legal rights among all men, from the poorest to the richest citizens, by making rules to ignore every man and every industry not inclosed within their jurisdiction, and this is today the greatest menace to our future progress.

We have only to inquire what relation capital has had in producing such national prosperity as we have experienced in the past, before labor unions began their work of industrial regulation, to find out the truthfulness of the claims of the unions.

Capital, without question, was the initial basis of our rapid growth as a nation. No railroads would ever have been built without it, and without railroads agriculture could not have flourished, for its products could not have been sold in distant markets. Capital started and carried on our factories, until now our nation is the richest one on earth, and better wages are paid than anywhere else.

Liberty of conscience, and liberty of brains and muscle, account for these results,—no selfish combination of laboring men could have done it. Labor unions probably represent less than ten per cent of the labor of the United States. True, they require fewer hours and more money for a day's labor, but what has been the result? They have increased the cost of living for the common people, for, as a natural result, every manufacturer who increases wages is compelled to raise the price of his products.

The common people are the ones most interested in curbing the influence of the unions, because such restraint is for their benefit. Think of less than ten per cent of laboring men presuming to dictate to the other laborers and their employers as to who shall or shall not work! Where is our boasted liberty? Let all give this matter serious consideration, and it will not be hard to determine the right course of action, in order that equal rights may be given to each citizen of the republic.

NOTES AND COMMENTS.

ELECTRICITY is being applied more and more to machinery used in British coal mines. Some mines are now so fully equipped that nothing workable by electric energy is otherwise operated.

A NEW source of fruit supply for the United States may be found in the Sandwich Islands, if the experimental shipment just made to Chicago should prove to be a success. The Hawaiians raise the best pineapples in the world and other fruits of equal merit. The main difficulty will be the distance to be traversed. However, the shippers have assurance from the railroads and steamship companies that rates will be reasonable. The present scarcity of fruit in the United States will make this new addition to our fruit supply especially desirable. A Chicago commission merchant says: "I am sure the time is not far distant when the Hawaiian pineapples will be the favored variety on the markets of the central and western states. They are far superior to the Florida pineapples, which are the main source of supply here now. The pineapple plantations in Hawaii are growing rapidly. While now the annual acreage is 3,000. I predict that within two years it will be twice that."

MENTION was made in these columns, a few weeks ago, of the sale of the Zion City lace factory to Marshall Field & Co., of Chicago. It is now announced that the new owners have also bought the candy factory and that $1,000,000 will be spent at once for new machinery in these factories. The deeds for the property are absolute warranties, and not merely leases, as had been the custom heretofore in Zion City. The deposed leader, Wilbur Glenn Voliva, expects to go to Las Vegas, N. Mex., in the interest of the new colony to be established there. He advised his followers to sell their Zion City holdings, and figured that the proceeds would net him $600,000, for which he could buy 60,000 acres of land from the Vegas Colonization Company. Whether Voliva will be able to coax away the people from Zion City just when a new era of prosperity seems to dawn upon them, owing to the enlarged factories, etc., is a little doubtful. Probably their experience with Mr. Dowie would lead them to be very slow about trying the experiment.

Echoes from Everywhere

GERMANY exports more than 3,000,000,000 lead pencils every twelve months. They are shipped to foreign countries at the rate of over 10,000,000 a day, counting six days to the week.

THE new owners of Zion City industries, Messrs. Marshall Field & Co., will continue the same restrictive principles in vogue heretofore. No tobacco or liquor of any kind will be permitted in or about the factories.

A MAN who has not been identified leaped from the suspension bridge over the river at Niagara Falls Sept. 6, while hundreds of persons, assembled to see the first illumination of the falls with colored lights, looked on.

ADVICES from St. Petersburg, Russia, under date of Sept. 4, report an alarming increase in cholera cases. Householders have been instructed to employ the strictest sanitary measures. Seven new cases are reported at Novgorod.

DAN O'LEARY, the famous pedestrian, began Sept. 8, at Cincinnati, Ohio, his proposed feat of walking 1,000 miles in 1,000 consecutive hours, walking one mile in each hour. Just what is to be gained by such an exhibition is hard to see.

POLAR BEARS, instead of dogs are to be employed in the polar expedition of Captain Ronald Amundsen, according to his recent lecture in Copenhagen, in which he gave an outline of his plans to reach the much-sought-for North Pole.

FIFTY persons are said to have been buried alive by a vast avalanche of snow that rolled down the mountain side Sept. 6, and obliterated the Chilean custom house at Juncal. This station is on the Argentine frontier, high up in the Andes.

AT Bayard, Iowa, the women and girls have formed a law and order league, to aid in the enforcing of the laws prohibiting the sale of liquor. As a consequence the backbone of the town officials has become wonderfully stiffened, and they are attending to their duties as they never did before.

IT was only a pig, and not very much to quarrel over, yet, during the exchange of words, Rev. John Grant, a Methodist pastor, killed the Rev. Martin Green, Baptist, at Galloway, Ark., Sept. 8. Another lesson as to the wisdom of settling disputes by the easy and safe way of the Gospel.

LUTHER BURBANK, the expert on plants, told the national irrigation congress at Sacramento, Cal., Sept. 6, that he was still trying to produce a thornless cactus. He predicted that his new cactus would become the great fodder of the arid region, for all kinds of stock relish it and fatten quickly.

INSTRUCTION in vertical writing, which of late years has been the vogue in the Greater New York public schools, was superseded at the opening of the fall term by instruction in the free-arm system. The free-arm system it is said, is widely different from the old methods and has done away with copy books for good.

OVER two thousand persons have already applied for quarters on the fleet of steamboats which is to carry President Roosevelt from St. Louis to Memphis. More requests will likely come in than can be granted. The governors of fourteen states and nearly one hundred United States senators and congressmen are in the list.

CLARENCE A. BYRNE, newly released from a cell where he had been confined for the death of his 6-year-old daughter, who was not allowed a doctor's care, renounced the Christian Science faith at a meeting Sept. 6. He declared that, while he still believed in its tenets, he had been deserted by those who should have helped him.

CHARLES M. SHELDON, the well-known author of "In His Steps," arrived at New York on the steamer "St. Louis," Sept. 7. He said he would like to write another book, entitled, "How Christ Would Run a Steamship." "If I had the money I would build a steamer the size of the largest now afloat, and run her between Europe and this country and not sell a drop of rum on board, nor permit any form of gambling," declared Mr. Sheldon. "It would be the most successful steamer in the service and would declare a dividend for religion."

An agency has been established in Chicago, to supply young women desiring to attend entertainments, etc., with suitably-attired escorts for the modest price of $1 per hour. The lady who hires the gentleman is expected to foot the bills. This is certainly a new idea, and we submit it to the criticism of the fair sex in our country districts.

Imagining that the Lord had commanded her to share the fate of Joan of Arc, Mrs. Joseph Lanolde, of St. Lazare, a small French Canadian village, burned herself to death Sept. 4 on a funeral pyre of her own making. Her purpose was not discovered until too late to effect a rescue. Another case of religious frenzy that led to sad results.

One result of the prohibition law in Georgia is likely to prove somewhat of a surprise. Ministers who administer the sacramental wine to their respective members, will be liable to indictment under the new law. As interpreted by the grand jury, these indictments will number as many counts as there are members in the congregation.

Contracts aggregating $2,000,000 have recently been awarded American firms for rolling stock to be used by foreign railroads. The American Locomotive works, the Baldwin Locomotive works and the St. Louis Car company will supply nearly one hundred locomotives and 300 cars, including a number of motor cars, to Japan, China, South America, Mexico and the West Indies.

After saving the lives of 300 passengers, Sept. 4, by repairing the track that had been tampered with by train wreckers, Francisca Levita, died four days later, in consequence of injuries sustained when struck by a train at the time of completing the repairs above referred to. Had he not succeeded in fastening the rail joint so as to secure the passage of the train, the entire train with its 300 passengers, would have been sent over the embankment.

The capitol grounds at Washington, having a lawn of about 40 acres, are being mowed by a motor mower. This machine is built on the automobile principle, mows the grass evenly, while its broad wheels roll it. It weighs 2,200 pounds and cost $1,500. It consumes only one gallon of gasoline per hour. Previously the work took several days; now the entire lawn is mowed in three hours.

Robert Jones, a brother of the late Sam P. Jones, has been holding meetings at Decatur, Ala. In the meeting held Sept. 8, no apparent results were visible, whereupon the evangelist poured the contents of a glass of water over his hands, saying: "I'll wash my hands of you. I have done my duty by you. If you want to continue on your road to hell it ain't my fault." Would it not be better if the reverent gentleman had a little more of the gentleness of the Master whom he claims to serve?

Delivering messages to trainmen while trains are passing stations at high speed, is being successfully accomplished by the Pennsylvania railroad. The orders are attached to hoops held by a post, and, in passing a station at high speed, the conductor simply runs his arm through the hoop containing his train orders, and thus gets them without further trouble.

A small steamer was being towed across the country by men and horses, recently, near Beulah, Mich., and was just crossing the Ann Arbor railroad track, when, unexpectedly, a belated express train thundered along, and with full speed crashed into the steamer. Men jumped from both the boat and the train, but no one was hurt. The engine was considerably damaged, and the boat lost its stern. Moral: Boats, like men, should stay in their rightful element.

An attempt was made Sept. 4 to wreck the St Petersburg-Berlin express train, near Berlin, Germany, resulting in the injury of several persons. As the Grand Duke Nicholas, of Russia, was supposed to have been on the train, it is now thought that anarchists or Russian revolutionists are responsible for the derailment of the train and the telescoping of several coaches. Such accidents as this one are hard to guard against, as the removing of spikes from the rail is generally not noticed until after the derailment.

By some writers this age has been called the cement construction age, and while much has been done in the way of more permanent buildings, we have a great deal to learn yet. Some lost arts will have to be rescued from oblivion, and learned anew. It has been for years a hidden secret of builders how the Roman masons, hundreds and thousands of years ago, managed to make mortar which practically defied the ravages of time. In the ruins of old castles, churches, etc., in Europe one frequently will see an overhanging arch, the other side of which has been battered down perhaps by cannon balls years ago. This fragment seems to defy the laws of gravitation owing to the excellent binding of the mortar. It now is stated that the Hungarian chemist, Brunn, has discovered the secret of this and has compounded a liquid chemical which renders certain kinds of matter proof against the effects of wind and weather. Prof. Brunn says that it doubles the density of nearly every kind of stone and renders it waterproof. It imparts to all metals qualities which defy rust and oxygen.

THE WIFE OF LOT

Hattie Preston Rider

In Two Parts.—Part Two.

He drew back, piqued and baffled, while she sat cool and smiling. It was exactly the sort of treatment to feed his rekindled fascination. Mildred's old friends, the gossips, watched them in astonishment, and whispered together:

"If she still cares for him, she puts it off well. That's what marriage will do for a girl. How do you suppose Lot Taber would fancy seeing Randall look at his wife like that?"

Left to herself, that night, after the affair was over, in the familiar little room of her girlhood Mildred closed the door, and walked straight to the tiny stand that held the old-fashioned service. She poured the bowl half full of water, and, with a whimsical laugh, plunged the hand that had lain on Orson Randall's arm into it, chafing and rubbing it vigorously. Then she dried it, and held it up for her own rueful inspection.

"It's not a stain; only a soil," she said to herself, shaking her head gravely, but with shining eyes. Then she thought again of Lot's face, and the crimson dyed her own.

The matter did not rest there, however. At every social meeting Orson Randall sought her out, till not even the gossips doubted the genuineness of his infatuation. It culminated, at last, in a scene Mildred never forgot, to her dying day. As for the rest of her visit, it was an ovation. She went home at its close with the reflected light still in her face, and an inscrutable look in her eyes.

From the window of the parlor car, in the great Union depot, Mildred beheld a new world. The passing crowd throbbed and surged with its life, taking on an interest for her such as she never dreamed. Through the throng, once, she caught a glimpse of a pair of broad shoulders that somehow reminded her of Lot's. She leaned eagerly out, but they were lost in the motley stream. Then she settled back, with her head against the cushions.

Three minutes later, the sound of a familiar voice sent her bolt upright, flushed and trembling; and all because a bronzed giant stood there looking down at her, an eager question struggling with the tenderness in his eyes.

"Lot!" she cried.

She held out her hands impulsively, and then withdrew them, in sudden shyness that amazed him. He took the vacant seat facing her.

"You weren't calculating on my meeting you here, were you, Milly?" he remarked, with satisfaction. The clang of the bell, as the train got under way, drowned her incoherent answer. He bent toward her, "Are you glad I came, little girl?" He had spent hours over the question, himself.

A choking sob rose in Mildred's throat, filling her eyes with tears. Her lashes drooped. Lot slipped to her side.

"Milly?" he said, in a shaken undertone, but she calmed as suddenly, like April.

"Don't!" she begged.

Along the rails, the wheels were beginning to throb monotonously. Grimy walls of the great city flitted past. Their fellow-passengers disposed themselves in comfort for the long journey. But Lot sat with his keen, puzzled eyes on his wife's face, mindful of nothing save how her color went and came under his glance. His claim on her had never seemed so unreal as at that moment. What did it all mean? In place of the reticent woman who had bidden him a passive good-bye at the little depot among the pines, a month ago, here was one flushing even at the lightest touch of his hand, yet ready with a laugh, quickly-repressed tears, or a bright repartee, for every speech look of his!

There had been no flutter of hopes and fears in that first wooing. Lot had gone to her, in the very hour of her humiliation with the offer of his honest heart and name; she accepted both, with, she believed, as honest assurance to him that, though her love was dead, her loyalty was his forever. Then there had been the cruel revelation of her book. But now, at the change in her, hope sprang to life again within him, fighting its doubts. Was the witching thing fluttering just out of his reach, his for the taking? With the whole strength and fervor of his long-repressed na-

ture, Lot wooed his wife all that homeward journey; and when he handed her down in the moonlight at the little depot among the pines, he knew that he had won. Together they stood a moment, watching the train as it sped from them down the shining track. Then Lot's eyes met Mildred's. He opened his arms, and she slipped into them, laying her head on his shoulder.

"I'm more blessed than that other Lot's poor wife, dear," she said to him with a happy laugh. "I'm like the Children of Israel entering the Promised Land, rather."

"It might have been the air of the pines that worked the miracle," Lot guessed, still half-incredulous, as he kissed her hungrily; but she shook her head, for in truth she knew the backward look had been her heart's awakening.

COMMERCIAL VALUE OF GOOD MOTHERS.

Boys recommend their mothers, we sometimes say, but mothers also recommend their boys. His mother's character, in a place where she is known, is a valuable part of the stock in trade of a boy just entering upon business. A striking instance of this has come to our knowledge in a most unexpected quarter—the liquor trade. A boy from the country applied for a position in a liquor store in Boston, and would have entered upon the work had not his mother objected. The proprietors made an effort to get her to withdraw her objection, and wrote as follows:

"We employ some fifty-odd men, and have not a single man who is not steady, upright, and industrious. We are even stricter and more particular than we would be if engaged in any other business, and, unless your determination is fixed, we would like you to come to Boston and see us. The fact that your son has a mother who is interested in, and watching over him is one of the strongest recommendations he could have for us."

This is much better testimony to the commercial value of a good mother than it is to the business which handles such dangerous goods that it is forced to insist that its servants shall be as unlike as possible to its customers.

HOW TO GROW LEAN.

The flesh-forming habit, when not congenital, is usually due to the fact that a person during youth and active life eats a certain quantity of food necessary to growth and sustenance, and then when maturity is reached keeps up the habit of eating after the body demands less.

The best way to avoid obesity as age creeps on is to cut down the rations so that they will meet only the demand and leave no excess, because nature, which is not wasteful, stores the surplus up as fat, to be held in reserve for emergencies. It is this surplus, this overstock, which in middle age causes people to grow stout.

The trouble is that long after the body demands less food people because of the pleasure they find in eating or from habit or indifference, continue to maintain the rations of younger days. The result is that the nutrition in excess of that demanded to maintain the system is piled up as surplus in the form of fat, anl this surplus fat, like fuel crowded into the furnace, is not conducive to the best health results, and is in fact absolutely injurious.

Some forms of food tend to produce fat more rapidly than others, namely the starches and sugars. Hence, where there is a tendency to produce fat a restriction in the quantity of potatoes, rice, and other starch foods is advisable. Sugar acts as starch in this particular, not only supplies heat and energy, but also fat. Strange to say, the eating of fat—that is butter and fat meats—does not tend to produce any excessive fat in the body, since the fat which is consumed is practically all burned, forming heat and energy.

The use of drugs to diminish avoirdupois is extremely reprehensible. There are no specifics that prevent the forming of fat. The only way a drug can diminish fat is by deranging the digestion, upsetting the stomach and thus preventing assimilation. Well corrected and systematic exercise is one of the best means of reducing surplus flesh, since exercise requires the consumption of fuel which otherwise might be stored as fat.

USES FOR BACON.

When your irons stick, rub them on a piece of bacon rind cut off before the bacon is sliced, then rub them well on paper.

When a boy runs a rusty nail in his foot bind a piece of fat bacon on the wound to take the poison out.

When Mary comes home with sore throat dip a piece of bacon in hot vinegar, sprinkle with pepper, and apply while warm to the throat.

When the baby is teething and fretful, give him a piece of fried bacon with the rind on to chew.

When frying pancakes cut a thick piece of bacon and use on a fork to grease the griddle.

Rub the nickel plate on the stove with bacon rind, then polish with a flannel cloth.

When cooking string beans add a slice of bacon for flavoring.—*Marie Brandenburg, in Chicago Tribune.*

AS A LITTLE CHILD.

As a little child they are leading him,
For his hair is white and his eyes are dim;
As a little child he is whispering low
To the phantom friends of long ago;
As a little child he is wandering back
In fancy over the golden track;
In the years that were and the days that fled
He is dreaming the dream of the dreamless dead!

As a little child they must humor him.
When the hair is white and the eyes are dim.
Ah, do not jeer at his peevish ways
That try one's patience through dreary days—
He's living over the life he knew
In boyhood's valley of gold and blue;
As a little child on a mother's breast,
His heart is weary; he wants to rest!

As a little child he must have his way,
In this thought of youth and his dreams of play;
He has forgotten his time and place
And lives in the joy of an olden grace;
As a little child in the childheart spell
He hears the chime of the fairy bell,
And thinks he is young as a boy again
In the rosy weather and country lane!

As a little child with his hand in theirs
They lead him forth as his fancy fares;
His hair is white and his form is bent,
And his voice is soft as a sacrament
When he calls the names that are on the tomb
As if they were sweet in the living bloom;
He is forgotten, he does not know
He isn't a child in the long ago!

Second childhood they call it. Yea!
Old heart grown young in the dream of play,
Feeble footstep and palsied hand
Are lost in the vision of childhood land!
He hardly sees and he seldom hears,
But ever the voices of vanished years
Are singing sweet as they sang of old
In the gates of youth and the fields of gold!

DRINKING TOO MUCH WATER.

Professor Millon comments on the habit which some children acquire of drinking large amounts of fluid during and between meals and at night. He adds that even in adults this habit of drinking copiously is easily established and soon becomes imperious. A man who is very thirsty during the first hot days of summer and drinks constantly, condemns himself to keep on drinking copiously all through the season. No one notices how much a child drinks, and by the age of ten or twelve, the habit becomes actual potomania, causing the ingestion of five or six quarts of water a day. The excess causes dilation of the stomach, but there is no vomiting, no eructations nor cutaneous phenomena, the symptoms being generally exclusively of a nervous order. Headaches, restless sleep, bad dreams, and even insomnia are frequently encountered in children who overdrink in this way. The child wakes with a frontal headache which may persist at times for days and weeks. The character suffers from the returning headaches and lack of normal sleep. The disturbances may be the result of irritation of the sympathetic nerves from distension of the stomach by the large amounts of fluid ingested. The dilatation of the stomach is not permanent, and all disturbances are soon corrected when the physician and parents succeed in restricting the ingestion of fluids within normal bounds.

CHOICE RECIPES.

Cocoa Pudding.—Make a custard with three eggs, two cupfuls of milk, three rounding tablespoonfuls of sugar, three level tablespoonfuls of cocoa, one-half teaspoonful of vanilla. Butter small moulds or cups and fill two-thirds with fine breadcrumbs, then pour in enough of the custard to fill the cups. Set in a pan of hot water and bake in a moderate oven until firm.

In my estimation, the best corn pone is made at the time of the year after the lard has been rendered. Then take one large pint of well-pressed "cracklin's" and mix with 1 quart of meal. Scald with enough hot water to make it sticky, then add 1 pint sour milk in which one teaspoonful of soda has been disolved, and 1 level teaspoonful of salt. Shape into pones and bake in hot oven.—*Old Virginia.*

Chicken Broth.—Take an old fowl (it makes better broth than a young one, if not too old), weigh it and cut it into small pieces removing the skin and cracking the bones well. Proceed as with "stock." Next day, or when thoroughly cool, take off the fat, and to each one and one-half quarts of stock allow a tablespoonful of raw rice. Proceed as with mutton broth. Add a little parsley.

Tomato Preserves.—Peel one peck of firm ripe tomatoes; halve crosswise, remove seeds, weigh and make a syrup of one-half their weight of white sugar. When the syrup boils clear, drop in the fruit, cook until clear, remove to a jar, and boil down the syrup one-half. Pour over the fruit and seal. A few minutes before the fruit is cooked, add thin slices of lemon, one lemon to one quart of the preserve.

Peach Catsup.—Pare and quarter one peck of firm, ripe peaches, add one pint of water to the peelings and one dozen sliced kernels; simmer thirty minutes, then strain, add peaches to the liquor and simmer another thirty minutes; add one cupful of vinegar, one-half cupful each of lemon juice and sugar, two teaspoonfuls each of ground cloves, mace and pepper, and boil very slowly until as thick as desired. Seal hot in pint jars.

PEACH PUFFS.—Beat two eggs very light, add one-half cupful of mik, a pinch of salt, one cupful of flour with which has been sifted one heaping teaspoonful of baking powder and one tablespoonful of melted butter. If necessary add one-half cupful more of flour. Butter small, deep cups, put in a spoonful of batter, slices of peaches and cover with the batter. Steam half an hour and serve with either hard or soft sauce.

TOMATO OMELET.—Scald and skin a large tomato, chop it up and mix in a little minced shallot. Beat the yolks and whites of three eggs separately; then mix the beaten yolks with the tomato and shallot, seasoning with salt and pepper to taste. Put one and one-half ounces of butter into an omelet pan, and when it is puite hot add the whites of the eggs to the other mixture, turn it into the pan and cook gently for three minutes.

SWEET PEACH PICKLE.—To four pounds of peaches allow two pounds of white sugar, one-half ounce each of mace, cinnamon and cloves mixed, and one pint of the best white vinegar. Pour scalding water over the peaches and remove the skins with a button knife; drop into cold water; stick four cloves in each peach. Lay the peaches in preserving pan with the sugar sprinkled over them; bring gradually to the boil, add vinegar and spice, boil five or six minutes. Remove the peaches and place in bottles. Boil the syrup thick, and pour over boiling hot.

For the Children

SELF SHOULD BE "NUMBER TWO."

"I tell you," said Robbie, eating his peach,
And giving his sister none,
"I believe in the good old saying that each
Should look out for Number One."

"Why, yes," answered Katie, wise little elf,
"But the counting should be begun
With the other one instead of yourself,—
And he should be Number One."

—Selected.

A HASTY INFERENCE.

"Now, Herbert," said the teacher to one of his smartest lads, "What is The Hague tribunal?"

"The Hague tribunal ar——" commenced Herbert.

"I'm surprised at you, Herbert!" interrupted his instructor sharply. You know very well you should not say 'The Hague tribunal are." Say 'The Hague tribunal is!"

"Yes, sir," said Herbert. "The Hague tribunal isbitrates national controversies!"

A CURIOUS MILL FOR GRINDING.

YOU have a mill in your mouth for grinding food, and a good one it is. It has twenty teeth in it on purpose to grind up this food, and while this mill is at work there are little factories there preparing a fluid to moisten it too.

And just so the food of plants needs moistening. The rain does that when it falls and soaks into the ground. In the spring of the year the farmer loosens the earth, to break up this food, so that the plants can use it better. If the rain does not come for a long time, the food is so dry that they cannot manage it well, and they wilt and die. The dry earth is to them just what our food would be if we had no fluid to moisten it. These saliva factories of ours do a great deal of good, and we could not well live without them.

A NOVEL IDEA.

FREDDIE despised the multiplication table. It made you ache all over to say your tables. And you couldn't remember.

Mamma got up and went out of the room. When she came back, she had a glass jar of tiny colored candies. She was opening it, and pouring out a splendid heap on the tablecloth.

"Now," said she, brightly, "here are five little candy dots in a row. Here are eight rows. How many candy dots?"

"Forty," promptly.

"Yes. Now make seven times five and four times five and the rest. When you have made the whole table, learn it. When you have learned it, eat it!"

"Oh!"

It was the most slpendid way to learn your tables. Freddie went to work with a will, and when the teacher (that is mamma) said, "School's out," he had learned his five table. He didn't eat it till after school.

The next day they went back and reviewed the table, and the next day after the threes, and the next day after the fours.

One day the next-door twins' teacher was making their mother a call. Freddie was making one on the next-door twins.

"Don't you go to school, little boy?" the teacher asked him.

"Oh, yes'm," he said politely.

"Oh, you do? Well, I suppose you think the multiplication table is perfectly dreadful, too?" she asked, smilingly.

"Oh, no'm," eagerly. "I'm very fond of mine."

"Indeed! How far along are you?"

"I've only eaten as far as seven times seven yet," said Freddie. And he went home, wondering why the next-door twins' teacher had opened her eyes so wide.

—*Home Herald.*

THE RURAL LIFE

TO THE APPLE.

Thy rounded form and ruddy cheek,
Thy full proportions' homely grace,—
What sturdy health they seem to speak,
How beams with cheerful smiles thy face!

Oh, let the orange flaunt her gold,
The peach her bloom seductive show,
The grape display her purple bold,
The cherry prank in gaudy glow.

I'd give them all away for thee,
Pomona's pride, New England's joy;
Thy devotee I'll ever be
To latest days, as when a boy.

Symbol thou art of sanity,
A soul serene, a temperate life;
In thee we find no vanity,
No idle pomp, no foolish strife.

Who would have health and length of days,
Who would look back on years well spent,
Oh, let him join in this thy praise
And learn the secret of content.

—Percy F. Bicknell.

HOW TO KILL PERNICIOUS WEEDS.

It frequently happens that a farm becomes infested by noxious weeds or plants that defy all efforts of the farmer to eradicate them. A farm that has always been free from such pests may be suddenly infested by their introduction in clover or grass seed purchased abroad. Two of such weeds have done much damage in my own neighborhood and are still unconquered on many farms. These are the red or sour dock and wild garlic, often called onion. The dock was brought in some years ago in some foreign grass seed. It grows about six inches high, has a very small leaf and forms and ripens its seed very early, which, as it ripens, turns red, and hence, its name. It fills the ground with a mass of roots, every piece of which will grow. No land is ever too poor for it to flourish on. I have seen it growing in the poorest clay gullies, but it is just as much at home on the richest soil and grows correspondingly thicker. When it once gets a foothold in a meadow, it is there to stay as long as the grass, and the worst of it is that it not only crowds out the grass, but the seed is ripe by the time the grass is cut and is carried to the barn in the hay and thence finds its way into the manure and is scattered all over the farm. Where it has first been discovered in small spots, I have known farmers to kill it out by piling straw upon it.

The wild garlic is equally as bad, but instead of frequenting the meadows, prefers the wheat fields. It also grows up before the wheat is cut and forms a bunch of "buttons" on the top of its stalks and high enough to be cut and bound up with the wheat. These are carried to the thresher and threshed out along with the wheat, and find their way with the grain into the half-bushel and sacks. There they send their onion odor all through the wheat so that when the miller examines it, his nostrils reveal their presence without question, and the farmer is docked more or less on the bushel, according to their abundance. I find, however, that if the wheat be held in sacks, or preferably spread out, much of the onion scent will evaporate, and after a few months pass away. This is the only remedy for those whose wheat is rejected altogether at the mill, as often happens. Every year the harvesting of the crops only serves to scatter these buttons all over the field and start thousands of young plants.

Now, how to exterminate such pests, is the question. Cultivating the fields in corn will not do it altogether, though it looks as if it ought to be effectual. There are two methods. One is to start a rapid rotation of such crops as occupy the land but for a short season and demand continuous cultivation of the soil, or cover the ground with a dense and smothering growth. Early potatoes fill the requirements of a short season and continuous cultivation, but many fields are too poor to make such a crop profitable. Corn is good if it be planted late and cultivated until it is in roasting ear, with the cultivation directed primarily toward the destruction of these weeds. Of short season cover crops we have a better variety. The principle in all this is that a quick rotation, involving several plowings a year, and heavy, fast-growing crops that shade the ground with a dense growth and thus discourage other forms of vegetation, will make it impossible for any kind of perennial weeds to survive. Such a crop we have in the stock pea, which matures its seed and vines in about three months from sowing.

Red clover is good if sown with the wheat and cut early and either cut a second time or immediately under and followed by peas or fodder, corn or sorghum, cane or millet. These are all good crops to combine in

a rapid rotation. Peas, sorghum, and millet all mature about the same time; follow them with another plowing or thorough disking, and sow to rye. Pasture the rye, turn it under the next May and sow to one of the above crops. The sorghum may be thickened by sowing peas with it. This will call for two plowings and affords two crops per year, if we may call the rye a crop.

A second way to fight these weeds, which might be more successful, depending largely on the individual farmer and the thoroughness with which it was carried out, is to summer fallow the land. By this, I mean to plow the land in the spring and keep its surface stirred until late in the fall. This could most easily, quickly, and effectively be done by a disk or cutaway harrow. It should and must be done often and regularly enough to allow no vegetation to much more than get its head above the ground. It is, I believe, conceded that no form of vegetable growth can survive a treatment that regularly suppresses all growth as soon as it appears all through the growing season. I believe that such a treatment would eradicate dock, garlic, or any other such pest. It would involve the loss of income from the land for one year as well as the cost of numerous diskings, but against this must be set the benefit the land would derive from such rest and thorough workings, and the utter eradication of not only certain weed pests, but all kinds of weeds of which there is always a large variety on the average farm.—*L. R. Johnson, in Rural World.*

THE FOOT OF A HORSE.

The foot of a horse is one of the most ingenious and unexampled pieces of mechanism in animal structure. The hoof contains a series of verticles and thin laminæ of horn, amounting to about five hundred, and forming a complete lining to it. In this are fitted as many laminæ belonging to the coffin-bone, while both sets are elastic and adherent. The edges of a quire of paper, inserted leaf by leaf into another, will convey a sufficient idea of the arrangement. Thus, the weight of the animal is supported by as many elastic springs as there are laminæ in all the feet, amounting to about four thousand, distributed in the most secure manner, since every spring is acted on in an oblique direction.

FEED THE COW.

A cow of one thousand pounds weight will eat one hundred pounds of hay a day. Sixty pounds of this goes to keep the cow in flesh and the other forty goes to meat or to milk. If the pasture will not allow her that much food every day, she should have enough of some other food to make good the loss. You need not expect a cow to give up any of her share of the feed to make milk for you.

DAIRY NOTES.

Every year the silo increases in favor with the dairyman.

The usual amount of salt for butter is a half ounce to the pound. However, this varies according to the taste of the trade.

A little grain while the cows are on pasture will make the herd more profitable.

Never fill the churn much over half full. If the temperature is right, the butter will come quickly.

Teach the boys to be gentle with the cows. Stoning and chasing will not do.

Warm cream should not be mixed with cold cream. Before mixing, cool the new cream to the same temperature of that in the cream jar.

A good cure for "lost cud" is a half pail of bran night and morning and a good pasture all day.

The small yield high, fat cows are a drag on dairying and dairymen.

It is not sufficient that cows have all the grain they can eat. The stomach of every animal needs something bulky upon which to work.

Good judgment, knowledge and skill are all necessary if you would be a successful dairyman. All can be attained.

Before butter is good it must escape the dangers from dust feed, stagnant water, foul odors, bacteria in pans, pails and strainers and overripe cream.

During warm weather one of the greatest difficulties is keeping milk sweet. Nothing should be put in it. Cleanliness and coolness are the two preservatives that should be used—and no other.

Let plenty of sunlight into the barns. Disease germs and harmful bacteria exist in dark places. They truly "love darkness rather than light."

Never use hard soap in washing dairy utensils. Soft soap should be used only when it is impossible to clean the pans and pails without it. Boiling water is much more satisfactory.

WATER FOR DAIRY CATTLE.

It is absolutely essential for the highest milk production for an animal to have good, clean water and plenty of it, says Professor Erf. About 87 per cent of the milk is water, and if the cow's supply of water is limited the milk yield is proportionately reduced. It pays to furnish pure, palatable water in summer as well as in winter. Cows should not be allowed to stand in ponds of water which become so filthy that the cow frequently will not drink enough to maintain a full milk flow. Such water is liable to taint the milk, and some of the filth which collects on the cow's body while standing in the water is apt to fall in the pail during milking. Milk contaminated in this way will frequently taint the entire output of the herd or of the creamery.

CARE OF HORSES FEET.

Broken and Diseased Hoofs Result from Ignorant Shoeing.

WHEN the hoof is gone, there is no horse left. There is an old adage to this effect, the truth of which is incontrovertible. Yet no part of a horse's anatomy is worse used than the feet, and there are no more frequent diseases brought to the notice of the veterinary surgeon than those of the feet. This comes of the unwise fashion of rasping, cutting, burning, tarring and greasing the hoofs.

Horn is a fibrous substance, which contains twenty-five per cent of water. When horn is deprived of water it becomes dry, hard and without elasticity. precisely like a piece of glue which breaks and splinters into glassy fragments.

The common practices of burning the sole to procure a fit for the shoe, or rasping the outer surface to get a good shape, and of tarring and greasing the hoof, all tend to drive the water out of the horn, and not only to harden and contract it, but to make it brittle.

The substance of the frog is horn, but is of a softer and more open texture than the sole and crust of the hoof. It is, therefore, the more easily affected by injurious conditions, and when it is deprived of its water it shrinks to a greater extent than the more solid horn.

From this explanation of the character of the horny covering of the feet any reasonable horse owner may learn how to treat the hoofs.

When a shoe is to be fitted, the edge or wall sole should be prepared by cutting or rasping, not by burning. Indeed, the shoe should be fitted to the foot, and not the foot to the shoe. When, from bad management, the sole and frog have become dry and contracted, no grease or tar should be used; but water should be used freely, and then the hoofs should be dressed with glycerine, which will mix with water and does not displace it.

Glycerine contains no acid or acrid properties, but is soft, bland, emollient and does not evaporate. It therefore softens the horn and allows the fibers to expand. Contraction is thus prevented, or is overcome when it has actually occurred.—*Sel.*

HOPPER METHOD POULTRY KEEPING.

Of late there has been much said concerning the "hopper method" of feeding poultry, says *Western Fruit Grower.* This method is to feed all dry food in a V-shaped hopper, with a small opening at the bottom to allow access by the fowls to the food contained in the hopper. The hopper is filled as often as necessary, and the fowls help themselves to what they want. The Maine and Connecticut experiment stations have both reported very favorably upon this method, and the claim is made that where fowls have access to different kinds of food they select a balanced ration which is better adapted to their needs than a ration that the poultryman might fix up for them. After having tried this method, the Maine station reports:

"We have never had so many eggs laid during the winter months by a like number of hens."

This statement is made by reason of their having fed five hundred and fifty Barred Rock pullets by the hopper method, all on dry feed. They further state that the number of hens lost during the winter was less than ever before. The Connecticut station makes even a stronger claim for this method. There were twenty-four Rhode Island Red pullets brought to laying maturity at four and a half months old. The saving of labor and expense by this method will be readily seen, as by the ordinary methods of feeding and watering, no one man could attend to such a number of birds.

FROM A FARMER'S NOTE-BOOK.

CLICKETY clatter goes the mowing machine. Many a machine is "pounding" at the pitman. It needs tightening.

"Is it hot enough for you?" is heard on every hand. No. Not yet. Hot weather is what we are praying for in the corn belt.

It doesn't pay to forget to oil the windmill these days. If it is squeaking look after it.

The mower should run quietly and smoothly. It will cut better if the sickle runs close in the guards. A rubber band around the levers will stop the rattle of the release rods and trigger. It should not be necessary to yell at the horses to make them hear.

A top dressing with manure-spreader on the clover-stubble field will give a good second cutting or aftermath. Can't make better use of manure than to turn it into protein roughage for the calves, sheep, etc., next winter.

There is such a thing as trying to work too fast. I find it pays to take a long nooning and then step a little livelier in the afternoon. Beats lagging all day.

Rest comes quickly when a man goes out in the shade of the old apple tree, lies flat on his back and forgets work for a few minutes.

Have you neglected putting a shade over the hog pen? The pen is a mighty hot place in the summer.

It beats all how many leave their hayloaders standing in the field all winter. They are mean things to stow away, but, my land! it doesn't pay to be reckless with so much money.

No great loss without some small gain. It will make a difference perhaps with the codling moth crop because the apple blossoms were so generally frozen in May. Maybe that is nature's way to keep pests in check.

While eggs are cheap and not much desired in the bill of fare, why not put a few dozen away for next winter. Use ten per cent water glass solution. Put only strictly fresh eggs in storage.

Don't let the boys kill the bumble bees they may find in the field. It may be necessary to plug the nest while getting the hay there, but don't destroy the nest. These bees are necessary to fertilize the red clover. No bees, no clover seed.—*Successful Farming.*

BRISTLES.

BY GEORGE.

Be sure that the pigs have clean, dry beds in their sleeping places.

If pigs are obliged to sleep in damp beds, especially as the cool nights come, they will not thrive.

If it is not already done, separate the fattening pigs into different feeding lots, according to size and age.

Do not keep swine on one pasture until it is eaten bare. Change as soon as eaten down and allow a fresh start.

Feed vegetables, apples and soft corn with the grain ration.

Pigs fatten best and most rapidly when they can have some grass with the grain ration.

Give sweet corn-stalks,—anything for variety. Give pumpkins and sweet apples.

Do not feed the pigs selected as breeders as you do the fattening ones. Keep them growing but guard against overfatness.

Feed wheat-bran middlings, roots and grass but no corn to the breeding stock.

While a pig will drink dirty water, clean water will make better pork. If a pig is allowed to wallow in a barnyard pool, he will never get over the habit, but will always return to it.

When hogs get a habit of catching and eating hens, you may be sure something is lacking in their ration. Vary it, right off. Feed a variety of things till the hog gets the thing it lacks.

Push the most mature for the early market.—*Farm Journal.*

IMPERFECT MILKING.

Cows that are imperfectly milked, from whatever cause, either carelessness or imperfect milking from the fault of the milker or from the difficult task by reason of the anatomical construction of the udder, are converted into worthless animals. The milk that remains in the udder from imperfect milking is that which is held by the small pouches or milk vesicles up in the bag and will form a curd that will excite inflammation and destroy the secreting function of its mucous lining or cause the adhesive and complete closure of the cavity or pouch.—*W. R. Gilbert.*

FUNNYGRAPHS

"What made your husband's hair turn so gray? He's still a young man. Was it the result of some terrible fright?"

"No. He once tried to have a house built."

Giles: "My wife can drive nails like lightning."

Miles: "You don't mean it!"

Giles: "Sure I do. Lightning, you know, seldom strikes twice in the same place."

"Come, now," the bad boy's mother cried, "it's time you realized the futility of struggling against the inevitable. Do you know what that means?"

"Sure," replied the bad boy. "It means it's no use for you washin' my face an' hands, 'cause they'll only get dirty again."

Minister (on return from holiday)—Well, Daniel, my good man, and how have things been going on in my absence?

Daniel—Deed, sir, a' things been gaun on brawly. They say that you meenisters when ye gang frae hame aye tak' guid care to send waur men than yourselfs to fill the poopit. But ye never dae that, sir!

Conjurer: "My assistant will now guess without assistance how many hairs any gentleman present has on his head."

Shock-headed Member of the Audience: "How many are there on mine?"

Assistant: "Two million four hundred and fifty-seven thousand six hundred and twenty-four."

Conjurer: "The gentleman may count his hairs if he likes, when he will see that the number is exact."

An old negro who lives in the country came into town and saw an electric fan for the first time in his life. The whirling object at once attracted his attention, and after intently gazing at it for several minutes, showing all the while the greatest astonishment and curiosity, he turned to the proprietor of the shop and said:

"Say, boss, dat sottenly is a lively squirrel you got in dis yeah cage. But he's shorely goin' to bus' his heart ef he keep on makin' dem resolutions so fas."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceedsix lines altogether.

For Sale.—An almost as good as new "Chicago" Typewriter at about half price. Alignment perfect, print very clear. Write for particulars at once to W. R. Miller, 466 Jackson B'lv'd., Chicago, Illinois.

Wanted.—Chief cook and janitor. Good positions. Apply at once. Address Manchester College, North Manchester, Indiana.

Wanted—Matron. Man and wife to cook. Fireman. Fine position. Address: McPherson College, McPherson, Kansas.

NEFF'S CORNER

I clip the following from a current issue of the Clovis Chronicle:

Build Houses.

There is a large demand for rent houses in Clovis, and the demand is going to increase from this time on. In a short time the fast freights to and from the Pacific coast will be run over the Cut-off and this will necessitate train crews living here, and many of them will be men with families and they will want houses. It is expected that these fast trans will be put on about the 15th of next month, which means that a number of crews will be located here permanently within a month. Again, it will not be long until the Cameo branch is completed, and when this piece of road is completed the Pecos Valley trains, both freight and passenger, will run through Clovis, adding more train crews, switchmen, hostlers and the like to our population, making a further demand for houses. As every house in Clovis is occupied as fast as completed there is bound to be great demand for houses of all kinds, and especially small cottages. Houses wil demand good rentals and will be a good investment. Fifty additional houses in Clovis would find tenants immediately and the demand is going to increase with each succeeding month.

If you are interested in an investment of this kind that promises an income of 40 per cent, write me for particulars.

JAMES M. NEFF,
Clovis, New Mexico.

Elsie Dinsmore

By Martha Finley.

This is the first, and acknowledged by many to be the best, of that famous series of books known as the "Elsie Series."

This is an exceedingly fascinating story and one that would be beneficial to every boy and girl who would apply the lessons that it teaches.

Only 34 Cents.

This is the only book of the series that is published in a cheap edition. The other books of this series are sold only in a $1.25 edition.

This volume is well bound in cloth with a beautiful cover design. It contains 342 pages and the print is large and clear.

Our price, only .....34 cents

The Gospel Messenger

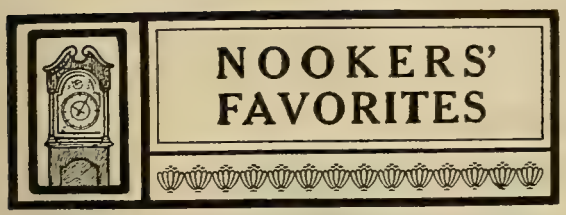
To New Subscribers Only

Gospel Messenger to January, 1908,	$0.75
The Other Half of the Globe,	1.50
Brethren Family Almanac,	.10
The three are worth,	$2.35
All to new Subscribers for only	.95

We want to add 5,000 new subscribers to our list. We can do it if you will help us. If you are not a subscriber, send your subscription to-day. If you are, then tell your friend who is not a subscriber of this offer. The Book alone is worth much more than we ask for the combination. If you have a copy of the Book, you can tell them of its value.

The Other Half of the Globe

BY



D. L. MILLER

Any person at all interested in Africa and Australia would no doubt be delighted with this splendid volume.

In workmanship the book is in every particular, first-class. The best of book paper is used, so as to show up the 125 fine pictures to the best advantage. The book is set up in large clear type and bound in good cloth. It contains nearly 400 pages and is about 5¾x8½ inches in size. Worth $1.50 or more. Can be secured only by subscribing for the GOSPEL MESSENGER.

Tell your friends who are not subscribers, of our wonderful offer above. Tell them to act now before the books are all taken. Sample copies of the Gospel Messenger are sent free.

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

A HUNDRED YEARS FROM NOW.

Mrs. Mary A. Ford.

The surging sea of human lives
Forever onward rolls,
And bears to the eternal shore
Its daily freight of souls;
Though bravely sails our bark today,
Stern death sits at the prow,
And few shall know we ever lived
A hundred years from now.

O mighty human brotherhood!
Why fiercely war and strive,
While God's great world has ample space
For everything alive?
Broad fields uncultured and unclaimed
Are waiting for the plow
Of progress that shall make them bloom
A hundred years from now.

Why should we try so earnestly
In life's short, narrow span
On golden stairs to climb so high
Above our brother man?
Why blindly at an earthly shrine
In slavish homage bow;
Our gold will rust, ourselves be dust,
A hundred years from now.

Why prize so much the world's applause?
Why dread so much its blame?
A fleeting echo is its voice
Of censure or of fame.
The praise that thrills the heart, the scorn
That dyes with shame the brow
Will be as long-forgotten dreams
A hundred years from now.

O patient hearts that meekly bear
Your weary load of wrong,
O earnest hearts that bravely dare,
And striving, grow more strong.
Press on till perfect peace is won,
You'll never dream of how
You struggled o'er life's thorny road
A hundred years from now.

Grand, lofty souls, who live and toil
That freedom, right and truth
Alone may rule the universe,
For you is endless youth.
When 'mid the blest with God you rest,
The grateful land shall bow
Above your clay in rev'rent love
A hundred years from now.

Earth's empires rise and fall, O time!
Like breakers on thy shore;
They rush against thy rocks of doom,
Go down and are no more.
The starry wilderness of worlds
That gem night's radiant brow
Will light the skies for other eyes
A hundred years from now.

Our Father, to whose sleepless eyes
The past and future stand,
An open page, like babes we cling
To thine protecting hand;
Change, sorrow, death, are naught to us
If we may safely bow
Beneath the shadow of thy throne
A hundred years from now.

(Selected by Forest R. Riley.)

BEAUTIFUL THINGS.

Beautiful faces are they that wear
The light of a pleasant spirit there—
It matters little if dark or fair.

Beautiful hands are they that do
Work that is noble, good and true;
Busy for others the long day through.

Beautiful feet are they that go
Swiftly to lighten another's woe,
Down darkest ways, If God wills so.

THE TWO SINGERS.

A singer sang a song of tears,
And the whole world heard and wept,
For he sang of the sorrows of fleeting years
And the hopes which the dead past kept;
And souls in anguish their burden bore,
And the world was sadder than ever before.

A singer sang a song of cheer,
And the great world whistled and smiled,
For he sang of the love of a Father dear,
And the trust of a little child;
And the souls that before had forgotten to pray
Looked up and went singing along their way.

DESTRUCTION OF SENNACHERIB'S ARMY.

The Assyrian came down like the wolf on the fold,
And his cohorts were gleaming in purple and gold;
And the sheen of their spears was like stars on the sea
When the blue rolls nightly on deep Galilee.

Like the leaves of the forest when summer is green,
That host with their banners at sunset were seen;
Like the leaves of the forest when autumn hath blown,
That host on the morrow lay withered and strown.

For the Angel of Death spread his wings on the blast,
And breathed in the face of the foe as he passed;
And the eyes of the sleepers waxed deadly and chill,
And their hearts but once heaved, and forever grew still!

And there lay the steed with his nostrils all wide,
But through it there rolled not the breath of his pride;
And the foam of his gasping lay white on the turf,
And cold as the spray of the rock-beating surf.

And there lay the rider, distorted and pale,
With the dew on his brow and the rust on his mail;
And the tents were all silent, the banners alone,
The lances unlifted, the trumpet unblown.

And the widows of Asshur are loud in their wail,
And the idols are broke in the temple of Baal;
And the might of the gentile, unsmote by the sword,
Hath melted like snow in the glance of the Lord!

Lord Byron.

Lady Canvassers

Successful in Selling the

INGLENOOK COOK BOOK

Lady canvasser can and do make just as much money canvassing as men when they take the right article. We have a number of both lady and gentlemen canvessers selling the Inglenook Cook Book, and the ladies are taking the banner. Hear what a few of the many have to say.

32 SALES ONE DAY.

I have found the Inglenook Cook Book a splendid seller. Better far than I expected. I have sold 127. The most I sold in one day was 32. Send me 150 at once. Grace Gnagey, Meyersdale, Pa.

41 SOLD FIRST DAY.

Another agent says, "The first day out I sold 41 copies. It sells much better than I expected."

SOLD 31 IN ONE DAY.

Find enclosed draft for 200 Cook Books. I am getting along well and like the work fine. The most books I have sold in a day was 31. Suppose I would have sold more, but finished the town and had to quit. Ida Brower, South English, Iowa, June 25, 1907.

HELPING WOMANKIND.

"I do not feel that I could devote my whole time in selling the Inglenook Cook Book just at present, but would like to work at it what I can. I feel it will be helping womankind to introduce it into these homes for the recipes are so easy to understand and so many every day wholesome things that it makes any one hungry just to read them. Please send me a cook book to use in selling the same." Mrs. J. W. Hoover, Sunfield, Mich., July 15, 1907.

REMEMBER

that these reports are nearly all from inexperienced canvassers.

$2.00 TO $5.00 PER DAY.

Ladies can you make anything like that at your present vocation?

SECOND EDITION

Annual Meeting Report

On account of the great demand for the report of our late Conference held at Los Angeles, California, we are compelled to run a second edition. The report is of more than ordinary interest this year for several reasons:

1. On account of the unique location.

2. The important questions discussed.

3. The valuable information along educational and Sunday-school lines.

4. On account of its value as a reference book.

If you have not sent your order, do so at once, for this edition will not last long and there will be no more published.

Price, each, ...25 cents

Webster's Unabridged Dictionary

This is the original Webster's Unabridged Dictionary, with supplement and revises by Chauncey A. Goodrich, of Yale College. An American dictionary of the English language, containing the whole vocabulary of the first editions and the corrections and improvements of later editions. To this is added a table of synonyms, peculiar use of words and terms of the Bible. If you do not care to spend $9.00 or $10.00 for Webster's International Dictionary, which is the latest and best made, then get this book, which, for nearly all practical purposes, will serve you quite as well. It is printed from good, clear type and contains 1,600 pages. Cloth, $1.25.

Brethren Publishing House, :: Elgin, Illinois

The STORY of the HYMNS and TUNES

By Theron Brown
and
Hezekiah Butterworth

A new book that will interest and bring joy to all lovers of music.

In the introduction Mr. Brown writes: "In the following pages no pretense is made of selecting all the best and most used hymns but the purpose has been to notice as many as possible of the standard pieces, and a few others which seem to add or reshape a useful thought or introduce a new strain." The story of hundreds of hymns with their tunes are given. The portraits of twenty-four noted musicians are inserted in the book.

The book contains nearly 600 pages and is bound in good cloth binding.

The fine gilt top and gilt stamping on the cover makes it a very attractive book.

If you are a lover of music you will want this book.

Price, prepaid, ...$1.50

BRETHREN PUB. HOUSE,
Elgin, Illinois.

Eternal Revenue Stamps

A carefully-selected collection of 120 Scripture verses, beautifully printed in three colors on gummed paper and perforated to tear out like postage stamps.

They are neatly bound in book form, with a stiff cardboard back and with waxed tissue paper between the pages to prevent sticking. Every page is printed in a different combination of colors, giving a variety in color, as well as in verse.

The stamps are classified under twelve different headings, making ten different texts on each of the following subjects:

Invitation, Salvation, Prayer, Purity, Faith, Love, Courage, Comfort, Integrity, Prohibition, Deportment, Miscellaneous.

A traveling man writes from Centralia, Ill., saying: "Enclosed find one dollar. Send me Eternal Revenue Stamp Books for it. I got three of them yesterday from a man in Paris, and Christian workers who saw them to-day persuaded me to part with them and send for more."

Price, each, ...10 cents
Per dozen, ...$1.00

Elgin, Illinois.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,

CHAS. B. WESTOVER, Pres.

Usual direct ticketing routes, except that tickets to California points will not be sold via Portland, and tickets to points in Oregon, etc., will not be sold via Sacramento. Rates to intermediate points will not be higher than to points beyond.

Corresponding rates to other points in related territory.

Favorable stop-over privileges at and west of Pocatello, Idaho.

Stop-over of five days at all points in California **except San Francisco and Los Angeles** on tickets to California destinations.

Proportionate rates from all points East. Be sure to buy your ticket over **THE UNION PACIFIC RAILROAD** known as the **Overland Route,** and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

Farming Lands in California can be bought from $25 to $40 per acre. Printed matter free. Write to

UNION PACIFIC RAILROAD,
OMAHA, NEBRASKA.

Developement of Butte Valley

The growth and development of Butte Valley has been no less than remarkable. The two years have not yet elapsed since the very first movement was made to open this territory to the world. The first advertisement was written in the beginning of 1906. An excursion was made in the following August. Several settlers made purchases of land. The advertisement at the Annual Meeting at Springfield interested a great number of brethren who now have their homes in the Valley. In October another excursion carried several eastern brethren to this land of future prospect.

The natural consequences were that these people who had found the valley more than it had been represented to be wrote and told their many friends, which they are still doing. En route to the Los Angeles conference a great many brethren had an opportunity to see the valley that otherwise might not have had. They saw the temporary houses in which the people were living while larger ones were being constructed. They saw spring crops just coming up, which now have been harvested. Last week's Inglenook showed some scenes of grainfields that have been a surprise to everyone.

The demand for labor in California is something wonderful. It has been necessary for the state authorities to appoint a promotion committee to gather all the data possible concerning those who want labor and those who want laborers. Wages are high there. Climate and living conditions are desirable, and there are very attractive opportunities in the agricultural district for workmen to acquire homes of their own. In a San Francisco bulletin of Aug. 28th is a statement that in San Francisco at present are needed plasterers, lathers, stair-builders and plumbers. And in the State at large laborers of all kinds, and especially laborers for the extension of railroads, are wanted. The same is true of sawmills and lumber-camps. Lumbermen wages reach as high as $4.50 per day.

Fourth of July Picnic on Butte Creek.

Among the parties who left on the evening of the 12th a large number were settlers, making Butte Valley their permanent home. The same will be true of the party of the 20th inst. There are quite a number leaving for Butte Valley on that evening and a party of fifteen or more are coming from Canada to locate in the valley within the next few days. Those who want to accompany the next excursion should write Geo. L. McDonough, Omaha, Nebr., and also address

A Word About Testimonials

It is not what a manufacturer says about his remedy that should carry conviction, but the word of those who have used it. Letters of testimonial are not new things. There is probably not a medicine on the market, however worthless it may be, but what has its so-called "testimonials" attached. This very fact detracts in a measure from the value of testimonials in general. Letters of testimonial however, like individuals, possess character. The bonafide testimonial is easily recognized by its ring of truth, its spirit of sincerity.

We, ourselves, believe in testimonials. When we buy an article, we are influenced in a measure by the word of those who have used it and are familiar with it, if it happens to be someone we know, our confidence is all the stronger.

A STIRRING TRIBUTE FROM A MOTHER.

Springfield, Mass., April 30, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs: I consider it my duty to write to you a few words in regard to my health so that others may read and profit thereby. I do this as I think every mother of a family should do. For five years I suffered very much. I was treated by doctors but it seemed impossible for me to obtain even fairly good health. I had spent over $500.00 to no avail before I found the real remedy, a remedy which has given me new life. I was terribly thin and emaciated and could neither eat nor sleep and expected that my death was near. I prayed God to spare my life and through an article which I saw in our family paper, I learned about Dr. Peter's Blood Vitalizer. It is this remedy which has saved my life. I am, since using it, in perfect health and I only wish that every one who is sick and ailing would use this grand medicine, and experience its wonderful benefit.

Very Gratefully,
Mrs. Joseph Thauvette.

178 William St.

FEEL LIKE NEW PEOPLE.

Bainbridge, Pa., July 26th, 1907.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—The Blood Vitalizer which we ordered of you reached us all O. K. We can truthfully say that we already feel like new people. The world seems bright to us again and we thank God, the giver of all good. Both sister and I are chronic liver and stomach sufferers, so the medicine has been put to a severe test.

After spending over a thousand dollars on doctors and hospitals, we praise God for such a medicine as the Blood Vitalizer.

Sincerely yours,
Barbara Dayer.

There are letters of testimonial published in the INGLENOOK, week after week, concerning Dr. Peter's Blood Vitalizer, the old herb-remedy, that ought to set people to thinking. It would be hard to read them, knowing the circumstances under which they have been received, without forming the conviction that the remedy spoken of must be above the ordinary and possessed of real merit.

If you are interested in such a medicine and are deferring a trail, owing to the lack of faith, let us hear from you and we shall, in all probability, be able to place you in touch with some one who has used it, whom you know personally or by reputation. In this day of high handed commercialism with all kinds of "schemes" and "cures" so freely exploited, skepticism is indeed pardonable and in place of being a reflection, it is tribute to one's intelligence.

Dr. Peter's Blood Vitalizer is not to be obtained in drug stores. It is not an article of commercial traffic, but is supplied direct to the people through the medium of local agents appointed in every community. Address at all times the sole proprietors,

DR. PETER FAHRNEY & SONS CO.,

112=118 South Hoyne Avenue, CHICAGO, ILL.

RAISIN CITY, CALIFORNIA

Owned and Controlled by BRETHREN

Over 2500 acres sold since Annual Meeting. Eld A. W. Vaniman and three others Elders and a number of Brethren have purchased land and will locate there this fall and winter.

J. S. Kuns of Los Angeles is erecting a hotel and store building which will be completed soon. A large tent 28x40 has been set up on the church site and will be used for Sunday school and preaching until a church house can be built.

Eld. A. W. Vaniman has located at **RAISIN CITY** and will be glad to give any desired information. For the present address him at Fresno, Cal.

Application has been made for a postoffice which we hope to have established at **RAISIN CITY** by Oct. 1, 1907.

RAISIN CITY is located on the Southern Pacific Railroad 14 miles from Fresno a city of 25,000.

DAIRYING AND STOCK RAISING.

This land is especially adapted to dairying and stock raising as it is the home of the alfalfa.

RAISINS, PEACHES AND FIGS.

Fresno Co., in which **RAISIN CITY** is located is the greatest fruit producing county in the world, 80,000 acres in grapes.

SOIL AND WATER.

The soil is a rich sandy loam, the land is level and ready for the plow; and abundance of good water.

PRICES AND TERMS.

We are selling the land at from $25 to $40 per acre on 4 years time at 6 per cent. Prices will soon be advanced to $50 per acre.

For descriptive folders and full information address,

LOS ANGELES, CALIFORNIA

THE OLIVE BRANCH OF PEACE AND GOOD WILL TO MEN

BY S. F. SANGER AND D. HAYS.

Anti-war history of the Brethren and Mennonites, the peace people of the South during the Civil War, 1861-1865.

From Preface of Book.

Upon the whole, the object in publishing this little volume especially as it relates to the Civil War, is threefold:

First, to give a true and faithful record of the sufferings and experiences, largely from the personal testimony of those who, through religious convictions, declined to bear arms against their fellowmen, believing that Christians should not take up the sword, but follow the teachings of the "Prince of Peace."

Second, to testify to God's goodness in protecting them in, and delivering them from, prison, as well as freeing them from military service during the remainder of the war from 1862 to 1865.

Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.

This is a book that every member of the Brethren church will want and ought to have. Very few of our people know what our forefathers during the Civil War had to endure. Neither do they know or realize how God in his infinite wisdom cared for and protected those who stood for the right tho' death stared them in the face.

AGENTS WANTED.

We want an active, live energetic agent in each congregation to sell this book. Liberal terms to agents.

The book is well bound in cloth with gold stamp and printed on heavy book paper.

It contains 232 pages with a number of illustrations.

Price per copy, prepaid.....$.75

Write for full particulars regarding agency at once to

BRETHREN PUB. HOUSE,
Elgin, Ill.

TWO EXCELLENT LITTLE VOLUMES

BOOK OF PRAYER FOR EVERYBODY AND ALL OCCASIONS.

A manual of everyday prayers carefully selected from many sources for those who desire greater unction and more freedom in prayer in public. It contains a large variety of prayers for church service, family worship, prayer meeting, Sunday school, etc. You are sure to receive much benefit from this little volume.

Handy pocket size. Price in red morocco binding, ...35 cents

THE DAILY ALTAR.

By J. H. Jowett.

This is a new book just out and promises to be a valuable one. A brief suggestive prayer for each day of the year. To follow these throughout the year as a morning meditation, for a few moments along with your regular scripture reading cannot help but be productive of good. 32mo. Cloth bound.

Price, each, ...25 cents

Brethren Publishing House,
Elgin, Ill.

Investigate the Possibilities of the TWIN FALLS, North Side Tract to be Thrown Open for Settlement

October 1

150,000 Acres of Land Under the Carey Act will be Thrown Open for Entry on that Date

This will be a great opportunity to the settler to secure a Homestead in a mild, equable climate, where crops grow to perfection by irrigation. No failure of crops on account of drought. This tract is on the North side of Snake River, opposite the Twin Falls Tract and near Twin Falls and Shoshone Falls in Idaho.

The Brethren

should now be arranging to go to the opening of this 150,000 acres of land on the Twin Falls, North Side Canal for it will be taken up quick when once opened. Be there ready for entry Oct. 1. A good sized party have already made arrangements to go.

These lands are sold at 50 cents per acre and the water right $35.00 per acre. Twenty-five cents to the state on making filing and $3.00 per acre for the water right at time of filing. Terms on balance in ten annual payments. This is an excellent opportunity to secure fine farms. Crops of all kinds are grown to perfection. Fruit growing is a success as well as the growing of sugar beets. To see these lands, take the Oregon Short Line, R. R., to Minnedoka; there change cars for Milner or Twin Falls.

"WE MADE NO MISTAKE"

Twin Falls, Idaho.

Twin Falls Land and Water Company.

Gentlemen: On the 6th day of April, 1906, I landed on the Twin Falls Tract to stay. I had been here twice during the winter "to see" and thought I had seen the opportunity of a lifetime for a man of small means to make a profitable investment and establish a comfortable home. Our experience has convinced us that we made no mistake.

Respectfully,
John R. Newton.

Pullman, Washington.

C. O. Morrell, Twin Falls, Idaho:

Professor Fulmer, Chemist, of Washington State University, has made his seventh test of soil from lands under the Twin Falls Canal system. He finds a small trace of alkali and thirty percent more plant producing qualities than in the Yakima Valley, and there is only one place on the Pacific coast where it is equaled, and that is in the Pajaro Valley in California. A. T. Farris.

Mr. B. F. Hurst, Fruit Inspector of Dist. No. 5, of Idaho states: "The Southern part of Idaho is second to no other part of the known world as a fruit producer, both in variety and quality."

HOMESEEKERS' ROUND TRIP TICKETS

will be sold to points in Idaho on 1st and 3rd Tuesdays of each month in 1907, good going, leaving selling station on date of sale and for return passage, leaving destination on day of execution which must be within final limit of 21 days from date of sale.

Charity's Sting

Martha Shepard Lippincot

How sad when charity we give
With such a grudging care
That poor recipients of it
Are hurt each time they share
The little help we deign to give,
And feel they'd rather be
In want than even to accept
Our heartless charity;

Which brings no sympathy for them;
But cold, reproving words,
To make them feel they are of less
Account than cared for birds;
When not a sparrow ever falls,
But what the Father knows;
While for the falling of mankind
The world, small mercy shows.

How many who are poor and sick
Will often suffer so,
Because the world, real charity,
Will seem so loath to show;
They cannot bear the grudging gift
That brings no sympathy,
You'd understand it all yourselves
To, in their places be.

Then let us give our gifts with love
And every kindly thought,
So those receiving needed help,
No bitterness are taught;
But feel they've found a friend at last,
Who fully under-stands,
And tries to brighten their sad lives
With loving, willing hands

The Baltimore Oriole

Mrs. M. E. S. Charles

WE are told that the oriole gets its name from its colors, which are black and orange, these being the colors of the arms of livery of Lord Baltimore, formerly proprietor of Maryland. In his "Life Histories of North American birds," Major Bendire gives ten orioles, but so far, I think, but two have been identified in this part of the United States, the Baltimore and the orchard orioles.

In summer the Baltimore oriole is found thoughout the northern half of the United States, east of the great plains, and is welcomed and loved in every country home in our land.

Brilliancy of plumage, sweetness of song, and food habits to which no exception can be taken, are some of the striking characteristics of this beautiful bird, the most beautiful perhaps, of our summer visitors. There is no mistaking the oriole if one remembers his colors. The head, neck, fore part of back, part of the wing feathers, also some of the tail feathers of the adult male are black. The whole of the under parts, some of the wing feathers, and the posterior of the back, are bright orange, tinted with vermilion in the neck

and breast. The female is not so gaily dressed as her mate, though the colors are the same in subdued tones.

The males come north first. About April 10 I begin to listen for the call of the oriole. They always come in the night and early in the morning I hear their "Come to me, dearie; come to me, dearie," as

they restlessly flit among the branches of the apple trees, hunting for insects, of which the oriole eats an enormous quantity. It is etimated that during the whole season an oriole's food consists of 83.4 per cent of insect matter that is injurious to the farmer's crops. He is very fond of caterpillars and the various kinds of beetles. His bill is well proportioned and well adapted to the taking of his food.

By some authorities the orioles are said to mate for life. When the female arrives, the male seems delighted, and they soon make preparations for housekeeping. The mother oriole is a wonderful weaver, and her nest when completed is our finest specimen of bird architecture. The nest is in the form of a long pouch, and is usually suspended from the extremities of the limbs of the trees upon which they are found, and trees with long drooping branches, such as the elm or willow, are most frequently chosen, although their nests are often found in other trees. Across the street from my home stands an elm tree that each season shelters one or more orioles' nests, although the tree is not more than fifteen feet from the trolly line. The materials used in making the nests are mostly fibers of hemp, milkweed, and when near a house, of horsehair, bits of twine, yarn and grapevine bark.

So far as my observation extends, the male does not assist in building the nest, not even so much as helping to gather the material. He does, however, remain on guard near by, and encourages his mate by his cheery song. The eggs are a pale gray, dotted with purplish spots around the large end, and covered at the smaller end with a great number of fine intersecting lines of the same hue. It takes fourteen days for the eggs to hatch, and in about the same length of time the young are ready to leave the nest. The poet Lowell in a poem, entitled, "The Nest," describes the oriole's nest with a rythm that is truly delightful:

"Then from the honeysuckle gray
The oriole with experienced quest,
Twitches the fibrous bark away,
The cordage of his hammock nest,
Cheering his labor with a note
Rich as the orange of his throat.

"High o'er the loud and dusty road
The soft gray cup in safety swings,
To brim ere August with its load
Of downy breasts and throbbing wings
O'er which the friendly elm tree heaves
An emerald roof with sculptured leaves."

The note of the oriole is more of a whistle than a song—clear, distinct and resonant. It has a carrying quality that enables one to easily locate the bird. Some one has said that the oriole's song is exasperatingly cheerful. I have never found it in the least degree exasperating, but I have often found it impossible to sleep after four o'clock in the morning, after the arrival of these birds in the spring. They are the early singers, beginning at the first streak of dawn.

By the middle of summer the song has lost in quality until it is but a cheery call of one note, and by the latter part of August the old birds have donned their sober-colored traveling costumes and soon after start for Mexico and the West Indies to spend the winter.

Spiceland, Ind.

The Immigration Problem

William L. Judy

If there is any vital question before the American people today—a question that demands their earnest attention, that cannot be put off longer, and that has baffled the minds of our statesman, it is the question of immigration. What are we going to do with the thousands of foreigners who crowd our shores annually? The last few years have been record-breaking ones. There are coming into our midst throngs of immigrants of different races, creeds, and languages. Should we allow them to continue entering, or should we impose heavy restrictions? That is the question which demands a solution.

In considering the problem, it is very necessary to bear in mind from the beginning that the "quality" of the present immigration is far below that of a half century ago. The population of the United States according to the census of 1790 was 3,929,214. Today the population is estimated above eighty millions. Such an increase could come about only through external additions. The arrivals from the close of the Revolutionary War to 1820 numbered 250,000. England furnished almost 75 per cent of these, Germany, France, and Spain followed in order. The first record kept (1820) shows the number for that year to have been 8,385. The number increased to 724,564 in the twenty years following. From 1840 to 1870, a period of thirty years, the total reached 6,500,000. Up to this time (1870) there was scarcely an immigrant except from kindred or allied races. The majority hailed from the mother country. Indeed, they were not regarded as "foreigners." All intended to reside here permanently. Our ways and customs were not so new to them. Our nation welcomed them and encouraged such immigration. We needed them in order to develop and settle the country. They

made industrious and enterprising citizens. Of such immigration we can not have too much.

But a great change came about 1870. Not even one per cent of the total immigration was from Austria-Hungary, Italy, Poland, and Russia combined in 1869. The percentage was "seventy" in 1902, or, to put it in another way, in 1869 the immigrants from these countries were about one-hundredth of the number from the United Kingdom. France, Germany, and Scandinavia. The immigration by countries in 1903 follows in order: Italy, 26. 9. per cent of the total; Austria-Hungary, 24; Russia and Poland 15.9; and Norway and Sweden, 8.2. These numbers show a marked "change in nationality." Now they come from Eastern and Southern Europe. The English make up only three per cent. The Latin element greatly predominates. Our language, our political ideas, and our institutions are a blank to them. No small number leave their families at home. Their intelligence, physical endurance, and their wealth are far below that of the early immigrants. From what has been said it is easy to see that the "quality" of immigrants has greatly decreased and that many are *undesirable.* Just a word about the present number. 1,026,499 foreigners arrived in the year 1905—26 per cent more than the preceding one, which was also a record-breaking year. Twelve thousand immigrants entered New York harbor inside of twelve hours, May 7, 1905. Thus we see that both in the number and quality of the present day immigration there is great danger to our nation.

The causes of such unprecedented immigration are obvious. Naturally the overgrowth of population results in an exodus. Religious persecution and political oppression are not so instrumental now as formerly. The Jews of Russia furnish a good instance of this. The open opportunities in the western world attract the foreigner. What a contrast he see between it and his own land and government! Wonderful reports of America's prosperity reach the remotest parts of the Old World. America is only another name for opportunity—it is the land of promise to them. This is the chief cause of immigration. They are only too glad to leave a land misgoverned and oppressed for ages, where they enjoy no political freedom, nor can earn a mite above the necessary expenses of a meager living.

Another reason must not be passed by, namely, the "facility and cheapness of tran-it." Once ships were few; the trip was wrought with many dangers of the sea: and the cost of transportation ran high. A century ago one who was able to endure the hardships of a journey across the sea and pay his way, was regarded as thrifty and enterprising. Such is not the case today. There are many ships, no dangers, and exceedingly low fares. Attractive inducements are offered by steamship lines. A large part of the present immigration is neither normal nor spontaneous. Frequently the glowing descriptions of prosperity and plenty are o'erdrawn by the steamship agent, who finds it to his advantage to encourage migration.

No one can say definitely as to the results of the present immigration. Who knows but in a generation or two hence the traits on which the stability of our government depends—the love of constitutional freedom, the sturdy self-reliance, and the veneration for the sanctity of the home,—may become so changed that those other traits, born of years of oppression, and social and political heresy, will become predominant? Such a possible contingency will certainly check the vainglorious advocates of the doctrine that our country is an "open asylum for the opprest of all nations."

The racial, economic, social, and political effects are everything but good and desirable. There is no definite American type of physique because of the many nationalities. The absence of a national character is a great loss. The question of racial bias effects our prosperity more than ourselves; and for them we are in part responsible. Still more harmful are the economic effects. The railroads, mine owners, and contractors, in behalf of their own interests, have caused a great demand for the cheapest labor, that of the unskilled immigrant,—the "dago" or "hunky," in common parlance. The argument that foreigners have come to do the lower work that Americans will not do, is fallacious. As long as society was "homogeneous" such was not the case. The American with a family to support is not able to cope with the average foreigner, who has no family, works cheap, and lives still much cheaper. Immigration of a low type prevents the immigration of the better class of foreigners, who know that they will be considered in the same class as the "dagoes." Consequently we find that the English, Irish, German, and Scotch go to Australia or South Africa, for there they find no Italians, Poles, or Sicilians.

The application of labor-saving machinery has lessened the demand for skilled labor. The effect on wages vitally concerns the American laborer. As has been said he can not work on a par with the foreigner. The latter usually live in groups and settlements and work in gangs. Therefore, they usually dominate an industry, accepting a rate of wages lower than the current rate. This deplorable condition is greatly the result of the "padrone system." Contractors induce foreigners to come over in crowds. Immediately upon their arrival, the contractors take charge of them and send them in gangs over the entire country. The necessary result follows: Quite a number of American laborers are thrown out of employment. Truly the economic effects are doing much harm to native industry.

The social effects show themselves in "illiteracy, crime, insanity, disease, pauperism, congestion in large cities, and the perplexing problem of assimilation." *An illiterate man can never be an intelligent citizen* in our democracy, whose perpetuity and success depend on the education of the people, the possessors of all power. Twelve and nine-tenths per cent of the immigrants in 1900 were unable to read or write their own language, much less the English. Crime, insanity, and pauperism cannot be separated from the immigrant. A visit to the jails and asylums fully justifies the above statement. The beggars in our cities are recruited mainly from the foreign element.

The immigrant comes with very little money; oftimes this is borrowed from friends already in the country. Consequently he can pay his way little further than the port of arrival. New York City has 1,270,080 foreign-born inhabitants as a result of this condition. Cities are rapidly developing, hence they attract the immigrant. There the foreigners congregate by nationalities—a great barrier to assimilation. This last term (assimilation) possesses more moment than the American people realize at present. They adopt an easy-going optimism in regard to it. Assimilation, so they argue, was an easy problem in the last century; thus will it be in the present century. But bear in mind that in the last century the immigrants could readily be assimilated, being of kindred or allied nationalities and eager to adopt our ways. Today they come from different nationalities; their purpose is not the same nor as commendable; they have far less ability. Where two races meet, one must rule; the other withdraws itself socially and politically, and no longer does universal democracy exist where this is true.

It yet remains to speak of the "political effects," which have been touched upon somewhat. Bad economic and social effects go hand in hand with similar political effects. When we consider that most immigrants are of voting age, that naturalization is easily secured, that an ignorant citizen is unfit to be an intelligent citizen, that a far greater number of those coming in are more illiterate than a generation or more ago,—when we consider all these things, we can see the great danger of our government, its stability, and its institutions. Having come from a government which places the power and government in the hands of a few, who rule the many, and who are accustomed to place their interests in the hands of others, they do not take kindly to our political ways, in which each and every citizen has a share in the government. The inevitable tendency is toward socialism. The effects of the undesirable immigration (which makes up a great part of the entire immigration), have been discussed briefly. We shall now merely mention the different methods proposed for restriction.

First of all, popular sentiment is unanimously in favor of more stringent laws to restrict immigration and especially to exclude more of the undesirable class. Everywhere the "hunky" is looked down upon,—treated with disdain. The Americans have nothing but contempt for them and do not care to associate with them any more than is necessary. They feel that the "hunkies" have no right here.

Space requires that the proposed restrictive measures be named only. They are (a) head tax and money test or requirement; (b) physical test; (c) illiteracy test; (d) consular inspection at the port in Europe whence they sail; (e) minor methods: total suspension of emigration for certain periods; exclusion of certain races; limitation of numbers, socialists, those who do not at once declare their intention to become citizens of our republic; bad characters, "birds of passage" (those who stay several years in the country, then return to their home country; after a short time they return to the United States; this they do sometimes as often as six times in a few years), persons without families; aged persons; and lastly, extending the period of deportation. Most of these restrictions are self-explanatory. The most widely discussed and most popular method is the illiteracy or educational test. Such a test excludes directly those undesirable on account of illiteracy, and "indirectly" those undesirable for other reasons. It is significant to notice that there is a marked "relation" existing between illiteracy, the amount of money, the standard of living, the tendency toward crime, and the liability to assimilate. The educational test would greatly reduce the total number of immigrants and eliminate most of the undesirable. Of course no single method will exclude all of the undesirable ones but the illiteracy test will keep out a far greater number than any other single method. There is no doubt concerning the practicability of imposing restrictions if our Congress wishes to do so. Various bills intending to restrict have been presented but no radical method has been passed.

It might be well in this connection to give the present immigration laws as far as concerns restriction (passed by Congress on March 3, 1902). The following classes are forbidden to land: Idiots, insane persons, epileptics, persons insane any time during the five years previous to their arrival in this country, two or more attacks of insanity any time in their previous life, paupers, persons likely to become public charges, beggars, those affected with a dangerous contagious disease, convicts, prostitutes, and persons whose passage across is paid by others except relatives. Most of the few really sent back by the immigration officers are those who come under the class "likely to become public charges." Next come those affected with insanity or with a dangerous contagious disease. The fact that at present there are in the country many foreigners who are in no way desirable, and who have

come in under the present laws, is evidence enough to show that the present laws do not restrict near enough undesirable foreigners.

This problem demands immediate attention. There is no sound argument in favor of non-restriction. No man can tell the future results. American ideals, institutions, and industries must suffer. Assimilation is not the work of the day or year, nor is it, as is commonly regarded, such an easy problem of little importance. Who dares to deny the menace to our nation caused by illiterates who know not the price of freedom or how to keep it when once secured. President Roosevelt has truly said of immigration: "We can not have too much of the right kind, and we should have none at all of the wrong kind." We do not need the vast throngs of ignorant menials who crowd our shores every year. "Must" we open our doors and accept the diseased, the insane, the convicts, and the anarchists of other lands? Is America the dumping place for all the rest of the world? The American laborer, the institutions of democracy for which our fathers fought and died, the ideals of liberty and freedom, the stability of our government, our social life, our morals, our civilization, our posterity—all demand that stringent restrictions on immigration be enacted at once.

WHATEVER IS IS BEST.

ROBERT E. ERICSEN.

No I am not a fatalist. By the above caption I do not mean to convey the idea that our lives are irrevocably foreordained for us, and that all our efforts to alter the course of events would be futile. Such a belief is fatal to progress.

All fatalist nations are no more advanced than they were centuries ago. This belief is a bar to mental, moral, and social progress. My belief is in an overruling Providence that can and does prosper the good, and turn the evil (including natural calamities) to some *future* good.

To illustrate, let us notice the following: Ages ago the earth was in many places a foul, reeking morass, filled with rank vegetation in all the stages of growth and decay. *Today* those swamps are our planes of coal storage supplying us with fuel which Providence has held in concealment till needed.

The crinoid and allied forms swam the seas in such innumerable hosts that their dead bodies, falling to the ocean's bed in a perefct shower, for indefinitely long periods of time, formed vast deposits.

Today we quarry their forms from the earth where the sediment of ages has solidified them into stone. On my little Southern Illinois farm where I live, several hundred feet above the present sea level, I have quarried sandstone and limestone richly interspersed with marine shells.

America lay for centuries, her immense forests, broad prairies, fertile valleys, and boundless mineral wealth apparently idle, useless, wasted.

But while the conflict between human liberty and kingly oppression was raging during the dark ages, this land was secluded and preserved for future use. When human freedom began to assert itself, and Europe needed, as it were, a safety valve for her overcrowded population, then was the great discoverer directed westward. Hither came the oppressed of all nations, bound together by the common bond of love of liberty, and founded a mighty nation to be a model for others and from which shall go forth missionaries to revolutionize and evangelize the world.

The apostles followed Christ in hopes of being the favored ones when he should establish an earthly kingdom. They were doomed to disappointment, but their years of service fitted them for the task of establishing the Christian religion, the grandest institution the world has ever seen, or ever will see.

When the little band of believers at Jerusalem was scattered by persecution, no doubt they felt disheartened, but that, instead of crushing them, scattered them to all parts of the world, where each became a missionary; while, had not persecution scattered them, the spread of the Gospel might have been long delayed.

Alexander the Great carried death and destruction to all parts of the known world in his efforts to spread his kingdom. Wherever he went the Greek language was established and later, when the disciples were dispersed, they had no need of an interpreter.

All living languages change constantly. The Bible was written in Hebrew and Greek, which languages have since become dead, thus preserving the scriptures in their original purity.

We may strive honestly, faithfully, patiently, and to mortal eyes may fail. We may labor to do good and see our work, apparently, come to naught. We may see all our efforts for our financial improvement frustrated. Yes, all this may happen to a man and yet he may be a grand success.

Lincoln was a very unsuccessful man, judging him by the common standard, but his perseverance, in *spite* of defeat, developed the sturdiness of character necessary to accomplish his work.

What we call success may be a failure, and what we call failure may be a grand success.

Such are some of my reasons for believing that if we honestly strive to do what we think is right and best, at the same time endeavoring to learn better than we now know in the final grand total of the world's deeds, what we have done will be for the best.

Mulberry Grove, Ill.

Indians in the Beet Fields at Rockyford, Colo.

N. J. Miller

In Two Parts.—Part Two.

THREE good specimens of young man-hood. The one to the left has worked in the beet fields four consecutive seasons. The smallest one has completed the sixth grade in public schools, speaks English fluently and has hopes and ambitions to become a mining engineer. The second to the left is a good type of the Navajos. One notes easily that he has more prominent cheek-bones and is more "raw-bony" than the round-faced Hopi Indians on either side.

Red, white, and green are the Indian's favorite colors. Those not students are fond of displaying their Navajo blankets and hair braided in furs. Perhaps the older individuals will never outgrow the blanket habit.

* * *

REAL FAMILY LIFE.

NOTHING impresses an American more in England than the contentment of the middle and upper classes with their home life, the entire absence of the craving—so ever-present in America—for publicity, and the conservative character and tone of all amusements. Of course, London and the large cities of the kingdom have the characteristics of all cosmopolitan places, but the small towns and the country-side are a homeland, a garden inclosed, a region of privacy and family life, which neither desires nor allows public intrusion. Its beauties are for a chosen circle, and its pleasures are those of simple and family character which have no sympathy with crowds and noise and popular demonstrations. This is why England is so restful to an American visitor, especially if he is so fortunate as to have friends in the mother country who are outside of diplomatic and fashionable life. Those who know only London and its fashionable life, or the public side of English character, can have little idea of the peace and healthful influence of a great part of English living.

STARVED ROCK

O. H. Kimmel

THOSE who have passed along the Illinois River in the southern part of LaSalle county, Illinois, have noticed the high massive rock that rises perpendicularly from the water's edge, standing as a stately forelight on the southern bank of the stream.

The rock itself is simply a huge mass of St. Peter's sandstone which seems to be indigenous to that neighborhood,—a fact which carries with it its own geological story. This sandstone may be said to be an outcrop, just in this community, and Starved Rock is the highest point of the outcrop. All around this region is found the soil common to the northern half of Illinois, and the vegetation is of the same class. But

Starved Rock, which Reaches a Height of 157 Feet Above the Illinois River.

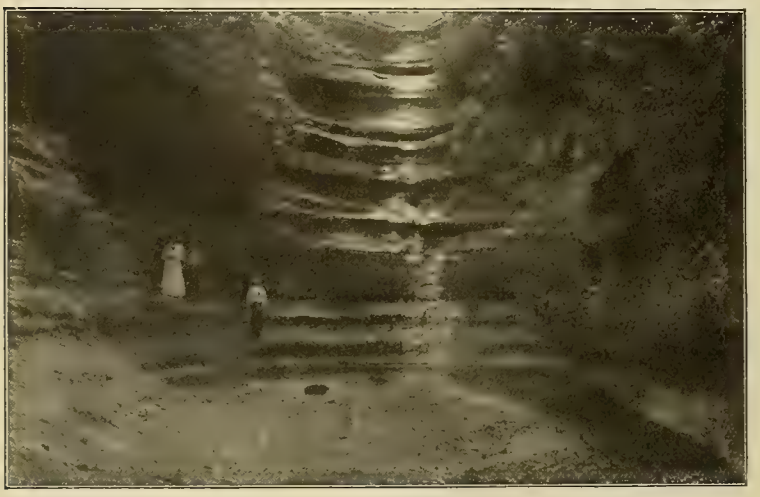
in the vicinity of the rock and on its summit is found vegetation, which geologists say, was indigenous to this region at the preglacial times. Such trees as hemlock and pine are quite common on the rock, and in the canyons around it. Peculiar ferns and berries are seen on every hand, growing in secluded places, much perhaps as they grew there before the ice sheet came down and surrounded them.

But the geological story of Starved Rock and the recital of its probable past geographical relations, are of secondary interest, as compared with its significance in the early history of this country. The interesting days at Starved Rock were centuries after the ice sheet had retreated, when a new climate, a new vegetation and new era had come to the vicinity. These days were the days of the red man and the early Frenchman in America. These were the days when the wandering tribes in their primitive civilization and customs were trying to work out their uncertain destinies, and establish themselves as nations over other nations of the same race. In the working out of this purpose, an event, which we shall soon relate, gave this peculiar rock its name.

Perhaps the first white man that ever saw this rock was Marquette, early in the sixteenth century. He, with Joliet, and his company of Frenchmen, was descending the Illinois River from Michigan on his way down to a great river of which they had often heard the Indians speak, and which they afterwards found to be the Father of Waters.

When they reached the Rock on the Illinois, they found a village of Illini Indians, consisting of about seventy-five lodges and perhaps fifteen hundred Indians. Here Marquette stopped and preached to the Indians, and remained with them for some time. While here, he changed his plans about descending the Illinois, and, after some delay, started to return to Michigan. He fell sick in the region of the Chicago River but after some time recovered and finally, in about the year 1675,—which must have been about a year after his previous visit,—he returned to the Indian village on the Illinois. Here, things had changed. Instead of the peaceful village of a year before, everything was noise and bustle. It now contained many hundred lodges and thousands of Indians.

On inquiry he learned that the Iriquois Indians were planning on attack on the Illini, and the Illini had assembled at the rock in order to make a grand stand against the intruding enemy.



The Illini seem to have had implicit faith in Marquette, for they seated themselves in a circle, and listened to an address from him. In this circle of auditors were some five hundred warriors, fifteen hundred young people and enough old men and squaws to make an audience of between four and five thousand people.

It seems that Marquette now left the village and did not return. In the year 1679 Marquette's coworkers and trader, LaSalle, came to the village and found another and very startling change. Instead of the

thousands of Indians he found the town empty, but everything in excellent shape. The four hundred sixty lodges were in good shape, and many of the Indian utensils and tools were in them. On closer investigation, however, he learned that the entire town of Indians had gone hunting. It seems that, at this time, they were in no fear of the Iriquois for they left the town entirely unguarded. LaSalle found some corn in the village and took some of it for his men and stock, resolving however to pay it back on his return.

He now started southward, on his way to the "great river," but when he reached the region where the Illinois widens into a lake,—now at Peoria,—he found the Indians encamped. Later he returned to this place and made his headquarters there with the Indians.

The Illini did not find in LaSalle, who was a cunning and shrewd trader, the same kind of sympathy and compassion as they had found in Marquette, and they soon began to suspect that he was in league with the hated Iriquois. Not being able to disprove this successfully, he soon left the vicinity, not however until he had built a strong fort near the Illinois River in an attempt to prove his faithfulness to the cause of the Illini.

French Canyon, Back of Starved Rock.

A year later when he returned to the vicinity, he found the fort burned to the ground and the Indians as sullen as ever, so he left the place and sent Fanti, a friend and coworker, to represent his interests at the Rock. It is uncertain what the village at the rock was called at this time, but there is some evidence that it was called Le Rocher by the French, and probably Kaskaskia by some of the Indians. We know, of course, that the permanent village of Kaskaskia did not exist for some years after these events had taken place, and then, at a point further south in the State.

Tonti, it seems, could not get along well with the Indians and he, too, soon fell into suspicion. One day a young Indian, returning from a hunting expedition, informed the village that a band of Iriquois, led by a large body of Frenchmen, were advancing on Le Rocher. Tonti, in order to prove to the Indians that he was true to them, went in person to meet the foe. In reality a band of Iriquois were advancing upon the village in full array for war, but no Frenchmen were among them, of course. Tonti led the fore guard in defense against the enemy and was wounded. The Illini saw this and thereafter believed in Tonti, and respected him. The attack ended in disaster to the Iriquois.

The Illini at Le Rocher and the French now made an alliance and a fort was built on or near the rock called Fort St. Louis. Before many months the village had grown into a large town containing thousands of inhabitants. But about this time political changes in Canada,—the seat of the French Government for this region,—caused unrest and disappointment to the Indians. Frontenac, the friendly French governor of Canada, was dislodged by an enemy and the French-Illini alliance finally died out.

The Illini constantly hearing of the marauding expeditions of predatory parties of the Iriquois, off to the eastward, gradually drew away to the southwest and built up Kaskaskia, which afterwards became the first capital of Illinois, and Cahokia, which became the county-seat of the first county in the State. Only a small settlement of Indians seem to have remained in the vicinity of the Rock.

It may be well to state here that the Illini Indians consisted of a confederation of the tribes found in this region. They were the Metchiganies, Kaskaskias, Peorias, Cahokias, and Tammarois. After their scatterment southward, the territory, as we know, finally drifted into the hands of the English, and Pontiac was killed by a faithless Peoria Indian, and the Illini confederation began to fall apart. A band of Pontiac's friends are said to have banded together for the purpose of punishing the Illinois tribes for their treachery in encompassing the destruction of Pontiac. So relentless were the enemy that extermination threatened the Illinois.

Finally, after being pursued from place to place, tradition says that they resolved to make a final stand at the site of their ancient village, near the Rock. After resisting a relentless attack for many days, the Illini retreated, one stormy night, to the

rock, which they climbed, and whereon they made their last desperate stand. Being surrounded on three sides by the enemy, and by water on the fourth side, the Illini found that they must either surrender or starve. Tradition says that they decided to do the latter and that the entire remnants of the tribe died of starvation on the rock. One story gives it that one brave escaped to tell the horrible story, and another states that eleven strong warriors made their escape from the starving pen.

Whether this story is true in whole or in part, can never be known, as it is an Indian tradition. It seems feasible that the part reported by the Frenchmen is quite true. But when they retreated into Canada, and leave to us only the Indian version of succeeding events, we can not be so positive of the truthfulness of the traditional stories. Of one thing we are certain,—not all of the Illini Indians could have perished at the Rock, and it is hard to believe that any enemy could be so thorough in its hunt as to succeed in surrounding all of the Indians in so wide a territory and drive them to destruction. But while some of the data may be doubted, we have evidence that it must have been founded on some truth, and, at any rate, the event has been perpetuated in history by the name "Starved Rock," which it has permanently bestowed upon the great rock of the Illinois.

THOUGHTS ON NATURE.

RICHARD BRAUNSTEIN.

"We never grow tired so long as we can see far enough." I read the sentence again, then laid down my book and thought about that sentence. It still haunts me. I had been reading Emerson's "*Nature*," and when I reached this sentence, it soothed me as a cup of cool water on a midsummer's day.

Often had I felt the truth of these words, but in a vague, unexpressed way. In my early days, the days of dreams and day visions, it had taken the form of a strong desire to let my eyes look across a stretch of landscape so illimitable that only the horizon in the distance should be visible. I did not care for mountains—the thought of them smothered me—I wanted to see, to have free range for my sight, not to be hedged in by oppressive towers of earth. It may have been provincialism, being prairie-born, but I longed to feel the breeze that came from the misty rim of the South, and blew across the intervening stretch, free and unchecked to the misty purple of the North.

That, I take it now, was merely an expression of the "deathless heathen." As the instincts of primitive man concern the physical, so in the child are the senses first appealed to.

Gradually, the intense desire to view the infinite with my physical eyes lessened, or rather, turned into a new channel. With the first glimpse into the realm of science, I realized that here was a well so deep that its waters could never run dry. The only limit was that of my own capacity, and I soon realized how restricted that was.

And yet, this thought did not tire me. Instead it was the inspiration that kept me from growing weary. Had I been able to comprehend all, how cramped would have been the boundaries of the universe, and how savorless existence in its self-sufficiency!

Nature took on a new immortal loveliness: the marks that had heretofore been but marks of beauty, became revelations of wonder. The veining of a leaf was no longer a beautiful witchery—it held the essence of a world and the seed which had sent up the tiny shoot, was more marvelous, in its inherent power, than the force which built up the Pyramids of Egypt.

Then came the sight of the spiritual. The physical and mental had been stepping-stones to the height from which we view, with mortal eyes, the things of immortality. Here, indeed, was the horizon boundless. At first the very vastness seemed overwhelming and there came back again something of that sense of awe of the incomprehensible which the child had felt in the presence of the night, when the heavens had been illumined with its myraids of stars. But just as the stars gradually brought assurance of the all-pervading goodness, so the illuminations of experience which time brought forth, softened the feeling of awe and brought with them a sweet sense of nearness to the Great Presence.

The scientists tell us that atmospheric pressure at sea level is fifteen pounds to the square inch. Estimating that the earth's atmosphere extends forty-eight miles up into space—and it may extend a good deal higher than that—each square inch of that air, reaching form the earth's surface to the top of the atmosphere, weighs therefore, about fifteen pounds. Now, if we could gather up all that atmosphere and put it into a gigantic balance, we should have put into the opposite scale a solid globe of lead sixty miles in diameter to equal the weight. Air is not so light as some persons think it is you see.

In ancient times the great engineering works were costly in human lives. The making of the Red Sea canal is said to have involved the loss of no fewer than 120,000 Egyptians. Buckle's examination made him believe the number to have been somewhat exaggerated, but he gives it as still a guide to the enormous waste of human life in those days. The men who kept 2,000 slaves engaged for three years bringing a single stone from Elephantine to the pyramids did not care a great deal so long as in the twenty years in which one of the pyramids was building there were forthcoming the 360,000 men required for the work.

THE QUIET HOUR

SERMONETTE.—Ps. 103: 8.

THE Lord has shown his mercy toward us, by regarding our weak natures. He has properly estimated our strength and asks only such things of us as we are able to do.

"His commandments are not grievous." On the other hand it is a source of strength and eternal joy to fellowship God in communion and service.

The Lord is gracious in his settlement with sinners. "He knows our frames," "pities his children," and is moved with compassion. God not only assists us all along the way by his Spirit, but has actually laid on his own Son "the iniquity of us all." Isn't that grace? Yes, amazing grace!

Man forfeited all right to God's goodness by willful disobedience and it is only by grace that sinful flesh is allowed to assist in God's work of redeeming lost souls. How can God permit the blasphemer and ungodly to approach the altar, claim his favor, and then begin telling the story to others? It is only by grace,—such grace as the world never fully knew until Christ came.

"There's a wideness in God's mercy, like the wideness of the sea." Whenever the newly-born child of God's sees the unfathomed depths of God's grace, he will be confounded, for such heights and depths, such glory and raptures of joy will bring us all to the cross in sackcloth and ashes, will kindle a flame of love, devotion and praise, that all the gold of Ophir will seem as filth in comparison.

May God help this wicked world to get a glimpse of his love and grace which passeth all understanding.

H. M. B.

DR. CHAPMAN'S TRIBUTE TO HIS DEPARTED HELPMEET.

STANDING at the grave of his beloved wife, Dr. J. Wilbur Chapman, paid the following tender tribute to the partner of his joys and sorrows:

"Twenty years ago our lives came together, and the stream of love has broadened and deepened until to me, at least, it is well night immeasurable. She was a school girl and I a young minister weighed down with great burdens. I beheld her face first wreathed in smiles and from that day to this her life has been to me one constant display of sunshine. When she came to me she found me with a little motherless girl, and from the moment she gave me her life she loved us both with all the strength of her great nature.

"Our marriage was sanctified by the birth of a baby boy, and he no sooner drew out the tendrils of our hearts than he went back again to God, taking the best part of our lives with him. One day, after she had evidently thought it out and prayed it through, she said to me: 'It is all right, I will care the more tenderly for Bertha, and her mother in heaven will care for my little Robert.' * * *

"She has been my counselor. Many a friend has given me credit for this or that, the laurels might more fittingly have been placed at her feet. When I was unknown and practically unused in any special way, it was she who told me she thought I might do more for God and men, and then she helped me with all her might. I testify publicly today that I owe more for what I may have been permitted to do to the sweet influence of this angelic soul than to any one else this side of heaven. Her personality pervades many of my sermons, and she has animated the most of my illustrations.

"She early came to Christ. When, she could not tell. They welcomed her into the church when she was a mere child, and she smiled to think she might have come earlier so far as her faith was concerned. She was the most consistent Christian I ever knew. She lived with me nineteen blessed, happy years, and never spoke a word that had the faintest suggestion of impatience about it, or of disloyalty to Christ. I have suffered what seems to me to be an irreparable loss. My counselor, my strong rock; my sympathetic listener, my tireless helper, my true love, the mother of my children, and the wife of nineteen years, is gone. I do sorely need your sympathy. Yet we are not rebellious. So sweet, so good, so true was she that her children rise up to call her blessed; her husband too, for he praiseth her."

At the close of the address the doctor holding himself in control, said: "I ought to add, 'Though he slay me, yet will I trust him.' This is the day of a new consecration for myself and my family. Blessed God and Father take out of this sorrow its sting. I put myself and family upon thy help. And in this room where my dear one lies I erect a Holy of Holies and call upon the name of the Lord."

THE WISER WAY.

"A merry heart doeth good like a medicine."

If thy friend is sad and weary,
Rest him for a while.
If his way is dark and dreary,
Light it with a smile.
Let some helpful word be spoken,
Give a tender, loving token,
It may cheer a heart that's broken,
And its grief beguile.

Like a medicine that healeth
By its subtle art,
Is the sunny ray that stealeth
From a merry heart.
As the song of some sweet bird
Holy memories oft hath stirred,
So a kind and hopeful word
Will its strength impart.

Thou canst lessen pain and sorrow,
Lessen it by half,
By the magic thou canst borrow
From a happy laugh.
Let thy light shine full and free,
Bid the darksome shadows flee,
Till the sad ones turn to thee,
As their stay and staff.

Carry, then, a face that's smiling,
With thee everywhere.
From its weariness beguiling
Many a life of care.
Soothing oft a heart of sorrow,
Teaching it some hope to borrow,
That will gild the coming morrow
With its rainbow fair.

—Mrs. Mary B. Wingate.

BIG MISTAKES.

Preachers who get sour and scold when things do not go to suit them, make a big mistake.

People who leave their politeness at home when they travel on railway trains, make a big mistake.

Young people who put off becoming Christians because they think they have fifty years to do it in, make a big mistake.

Men who are afraid to give their wives a word of praise, for fear it will spoil them, make a big mistake.

Parents who want their children to keep out of the church until they are old enough to understand all the doctrines and decide for themselves, make a big mistake.

Farmers who feed their pigs and cattle good corn, and pay no attention to what kind of books and papers their children are reading, make a big mistake.

Women who are overly anxious about their complexions, and underly anxious about their salvation, make a big mistake.

Young men who think they know it all, and that father and mother don't know anything, make a big mistake.

Fathers who whip their boys for doing on the sly what they themselves are doing openly, make a big mistake.

People who expect to get to heaven, just because they have shaken hands with the preacher and had their names enrolled on the church book, make a very big mistake.

GEMS OF THOUGHT.

Repentance is the first conscious movement of the soul from sin toward God.

Thank God, this old world has never seen the time when it did not take off its hat and pay homage to a good woman.

Religion is like the measels; if it goes in on you it will kill you. The trouble with a great many Christians is, religion gone in on them. Keep it broken out on hands, feet, and tongue.

Everybody ought to keep good company. There is not an angel in heaven that would not be corrupted by the company that some people keep.

Old sinners are not satisfied with us unless we live better than they do.

You have no more right to flaunt your riches in the face of the poor man than you have to shake bread in the face of a hungry man and not give him any of it.

THE BLESSING OF CHEERFULNESS.

God bless the cheerful people—man, woman, or child, old or young, illiterate or educated, handsome or homely. What the sun is to nature, what God is to the stricken heart, are cheerful persons in the house and by the wayside. They go unobtrusively, unconsciously, about their mission, happiness beaming from their faces. We love to sit near them. We love the nature of their eye, the tone of their voice. Little children find them out quickly, amid the densest crowd, and passing by the knitted brow, and compressed lip, glide near, laying a confiding hand on their knee, and lift their clear young eyes to those loving faces.— *A. A. Willits.*

That we have merely come up from a submersion in water is no proof we have "risen with Christ." That we have buried the old nature together with all its grovelling proclivities and unhallowed idealism, and changed our affections from things on the earth, and are illustrating in our lives the principles of Christ's charity, benevolence, loving kindness, and holiness is far more satisfactory proof of our having risen. The formal doing of things enjoined in the Scriptures is but one wing by which we rise; the other is the inner possession of the spirit of which these formal procedures ought to be the natural expressions.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter

HOW THE NEGRO HAS DRIVEN WHISKY OUT OF THE SOUTH.

THE negroes have clung like a leech to the South. They can neither be scared out, coaxed out nor killed out. There are there to stay. The white people of that section have lamented the fact of being surrounded, outnumbered and outvoted by the black man, but it looks as though Providence would yet compel the southern people to drink the bitter ashes of their own golden calf.

For many years the white man made mammon of his dark-skinned brother and now at last, unexpectedly, the servant has become too big to handle easily. But lamentations do not change these conditions and matters get worse from year to year.

The negro population has nearly trebled itself in the past few decades, while in intelligence and citizenship it has not made proportionate advancement. At least, there is more stir about the matter than there used to be, and our leaders wonder what the outcome will be.

While this confusion is in our minds, let us discern one good result from it all. The landlords of the South formerly kept an abundance of whisky on the plantation, so that on Saturday night the negro would spend his week's wages for the landlord's whisky. Thus the masters thought they were receiving two profits,—cheap labor and quadruple profit on their whisky. It looked like this would make wealthy men of the farmers, but somehow unrighteousness always has some unknown leak holes about it, and just so it was in this case. The full time of an honest workman proved to be the only source of wealth, and so, instead of losing half of the time by drunk negroes, the landlords began to see that whisky was causing a dead loss to them.

To compete with conditions of labor elsewhere, and to protect women and children from the terror of drunken negroes, the landlord was forced to keep whisky out of reach of the black man. This was hard to do until it was also out of reach of the white man, and so whisky went, until now the southern States are the strongholds of temperance. About all of the southern States are as dry as enforced prohibition laws can make them.

The northern States are away behind the South in this respect although the temperance sentiment of late years has gained wonderful momentum in the North. If the South can do without whisky why can't the North also? A white man, full of bad whisky, is no better than a drunk black man. In short, a white man is always as good as a darky, if he behaves just as well, but whisky makes men of both colors crazy.

We gladly anticipate the day when we shall be able to speak of a temperate United States, instead of praising only small sections of our great republic, while the Government at large continues to make people crazy with legalized whisky and then hangs them for getting crazy and doing wrong.

RECKLESS AMERICA.

ALONG with our virtues are to be found weaknesses that must be dealt with candidly and rigidly if our national character is ever to achieve the standard which every loyal child of the republic longs for. The following authentic report goes a long way toward establishing the truthfulness of the charge made in the heading to this article. Herr Guillery, a German official of railway administration in Prussia gives the following comparisons of fatalities on railway travel of the various nations:

Out of every thousand railway employés the ratio of the number injured each year is as follows: United States, 43.5; Switzerland, 25.3; England, 11.8; Belgium, 11; Germany, 2.4. Out of every 10,000 employès, the relative figures of killed are: United States, 26.1; England, 12.3; Switzerland, 8.2; British India, 6.7; Belgium, 4.1. In 1902, there was 376,500 persons injured by the railways of the United States, 60,000 of this number were employès. In the same year 9,800 were killed, of whom 3,600 were employès. France holds the lowest record in fatalities. The United States shows proportionately forty times as many injuried as Russia, twenty-two times as many as Italy; twenty times as many as England; eight times as many as Belgium; fourt times as many as Switzerland; twice as many as Germany.

There is no explanation or excuse for such a deadly record. Recklessness is the word that covers more of this criminal characteristic than any other word. It looks as though the public were invited to a wholesale slaughter of human beings.

The above record was even worse until President Harrison urged railroad legislation about fifteen years ago which resulted in automatic couplers for cars. The railway officials knew long before that time that automatic couplers would save human lives by the

thousands every year and so did the public, but everybody went recklessly ahead, mangling the poor brakemen until one man with authority took time to speak a word for the sake of the helpless.

It is now boldly rumored that the only reason why our railroad magnates do not doubletrack their roads and adopt other life-saving appliances is because they have figured up how much cheaper it is to pay for human lives and crippled bodies caused by the collisions and wrecks each year than to add the needed improvements, and, of course, they adopt the cheaper method although it is a blood-shedding method.

It is easily seen how by the above system the railroads are necessarily throwing upon the public charity of the nation, several thousand cripples and dependents.

Some plan of pensioning these unfortunates by the railroads should be adopted by our congress without delay and other measures taken to protect the traveling public as well as the poor railway employe who risks his life daily to serve the public.

But the evidence of recklessness does not stop with the above testimony. Even our homes manifest a recklessness, also, concerning the worth of human blood and child life that is not far removed from the horrid historical account of uncivilized nations in bygone days. We now refer to the table of fatalities generally published on the fifth day of July each year, as a result of our national custom of showing gratitude for constitutional liberty.

From 130 to 175 deaths and several thousand injured is the annual offering. One year of such slaughter ought to be enough but somehow there is a demand next year for the same bloody slaughter of just as many, or more, children as we read of the year before. The present method of celebrating Independence Day is heathenish in its very nature, at least intelligent beings and grateful hearts know of saner methods to keep alive a national spirit than the present method. Enough people have been killed by July Fourth fireworks to equal in number all the dead heroes that fell in all our bloody wars from 1812, to 1860, and it is likely to continue a few decades longer. Even Christian people share in this ignoble custom both in money spent and by giving their presence to the public lust for sensational attractions instead of assembling in solemn praise meetings to the Creator who has multiplied national blessings upon us without a parallel in history.

Yet another phase of national recklessness can be pointed out in the public demand for deadly athletics in the way of certain games. Authentic statistics of deaths and injuries cannot be given but the fatalities are enough, to say the least. Public judgment and taste has become so degenerate that he who needlessly risks and loses his life before a public audience is looked upon as a hero and paves the way for others of a sporty nature also to sacrifice a part or all of life in order to win the applause of a few sensual sports.

The fact that some colleges have begun to regulate the athletics on their grounds shows that some people of ethical natures begin to see the useless sacrifice of young lives in public games.

And, again, the very safeguards needed by ball players in the way of steel masks for the head and other heavy pads for other vital parts of the body, shows what a violent and dangerous game baseball is.

Some one will reply that fatalities occur elsewhere, other than in the places named in this article. That is true, but this paper points out a few of the ways in which fatalities could be lessened.

Accidents in legitimate work and under normal conditions do not show recklessness, but the present public demand for human blood to be spilt in order to satisfy the national appetite of our people, seems very close kin to the old Roman gladitorial feats when slaves were matched against each other or against hungry lions.

Public sports are and always have been an unmistakable criterion to the mental and moral trend of a nation, so that our present status can be correctly estimated from this standpoint.

Other alarming tendencies can also be pointed out in which millions of our people weekly give evidence of a corrupted and vitiated nature.

It is paramount that Christian people should study the question of athletic sport, and it may yet become even a Christian virtue to safeguard the playground of our children by legislation. Play is a part of life, a legitimate part, hence it is a parents' duty to prepare and oversee the environment of playgrounds.

Later articles in this department, or some other department of this paper, will deal exhaustively with this very question. A competent student of child-life will give us something to think about and we ask every reader to be on the lookout for these valuable papers.

In many a home the happiness of all is sacrificed to the wilfulness and selfishness of one member. The girl who makes an ambition in life the main issue of her existence, notwithstanding that in order to accomplish it she must ride rough-shod over all those who are related to her by ties of blood, is laying the foundation of her own personal unhappiness, which will as inevitably follow as day comes after night. It is doubtful if we can perform any truly selfish act in this world without suffering therefrom. There seems to be in nature a law of compensation which exacts payment for everything.

Bravery like the ocean, has several different depths: and that which makes the most show at first, is generally the shallowest.

Echoes from Everywhere

It is believed than in China there are twenty times as much coal as in all Europe.

New York State recently honored the memory of Wm. McKinley by erecting a white marble obelisk 86 feet high in Buffalo, where the president was shot.

Even warts are said to be contagious. If blood and tissue from the wart of one person is placed under the skin of another the warty growth begins at once.

The Danube flows through countries in which fifty-two languages and dialects are spoken. It bears on its current four-fifths of the commerce of eastern Europe.

A clock has been invented that will run four hundred days with one winding and has no sound of tick about it. What next?

In the new directory for New York City there are thirty-seven columns of Smiths, twenty of Browns and ten and one-half of White. Then follows Greens, Blacks and Grays.

Switzerland's greatest industry, the entertaining of tourists, has been officially computed to bring $23,000,000 a year, $7,000,000 more than the public revenue of the whole confederacy.

The hawk can see a bird twenty times as far away as can a man. All birds of prey have very keen sight and smell as is seen by them darting down into a bunch of grass to seize a mouse, lizard or other small creature.

Cement telegraph poles to take the place of the ordinary poles of cedar are receiving a good deal of attention. It is believed that the extreme climatic conditions of summer and winter will have no effect upon them. A pole of re-enforced concrete is wonderfully elastic, a thirty-foot pole being able to bend thirty-one inches at the top without cracking the concrete. This pole, it is computed, has three times the strength of the ordinary pole, and while the average cedar pole lasts about twelve years, the life of the concrete pole is believed to be practically unlimited.

In Brazil every placard is taxed. Even a "house for rent" must bear a revenue stamp. In a country of much advertisements like the United States this would mean quite a revenue.

The small country of Belgium has a great ambition as is seen in its recent action to spend $28,200,000 in making Antwerp the largest harbor in all Europe and thus increase the trade of the nation. After the harbor is enlarged then other millions are to be spent in fortifying the city against future enemies.

New York City is after the vertical style of writing. Several years of use in the public school has satisfied them and a return to the old free running hand is now recommended. The one great gain in the old system is speed, and where much writing is required time is often the chief item instead of artistic features.

Doctors can tell the age and sex of a person by the pulse beat. Baby girls have a pulse beat of 160 at birth, while the beat of a boy's pulse is only 150. This pulse rate decreases with age until some old people have had only 45 pulse beats per minute. Women's pulse runs from 5 to 10 more beats per minute than does men's

Scientists claim that a man weighing 140 pounds would weight but 53 if transported to Mars. The difference in weight would be caused by the difference in the force of gravity. But if the same man should stop on the sun's surface he would weigh 3,500 pounds and his present muscles and bones would crush under his own weight.

Oiling public highways has got to be almost a fad in some places. Both towns and country thoroughfares are being tested with various degrees of success. In California the oiled roads seem to be a success. The oil allays the dust, and gives a firm, yet, spongy foundation on which to travel. Where the crude oil can be had, and enough is applied after the road has been properly prepared there is no doubt as to the benefits of oiled roads. This is one of the first steps towards a national movement for good roads, for increasing traffic of the country demands better roads.

Scientists well know that sunlight is deadly to most disease germs. Heaven is revealed as a place of intense light and of course health is perfect in such a place. Filth, disease and sin all abide in dark corners. Germs of tuberculosis, diptheria, typhoid and cholera all perish in a few minutes when exposed to the direct rays from the sun.

Across the Yadkin river, near Salisbury, N. C., a dam has been constructed 46 feet high and 917 feet feet long. This is second only to the great natural dam at Niagara Falls, and was built to obtain mechanical energy by which to operate a number of mills which have been built in that vicinity. Man is rapidly learning how to make nature assist him in producing the commodities of life.

It looks as though the white man would eventually adapt himself to the tropical climate of Africa and compete with the native in longevity and endurance. The Nile and southern Africa are already given up to be the white man's country and the Congo district and Sahara are showing signs of his presence in increasing quantities every year. One thing sure, if money can be made in those districts easier than elsewhere the Yankee will soon forget the torrid temperature and become a citizen of Central Africa.

Congress has been investigating the emigration question from the European standpoint and finds that the nations on the continent also dread to have their subjects desert their homeland in such large numbers. It breeds restlessness on the part of those who remain at home besides making labor help very scarce. The chairman of the committee who went abroad says that the generous reward for common laborers in America, together with the presents and sums of money sent to relieve the loved ones at home begets the inspiration to emigrate to this country.

"Typhonoid," a word derived from a Greek term meaning whirlwind, has been applied to a new type of boat invented by a French engineer, who seeks to do away with the present-day screw propeller. The new screw is placed at the bow of the boat instead of at the stern and it is believed that by it the centrifugal displacement of the central void of the present type are converted into benefits and the limit to the advantageous increase in velocity of rotation of the propeller is removed. The apparatus is designed to work by suction in the manner of a waterspout. The inventor figures that his boat, with a 32½-inch screw, will go through the water at a rate of more than sixty-two miles an hour.

A new law has just gone into effect that may work againt certain foreigner who have become naturalized in this country. The law says that when any naturalized citizen who shall have resided in the foreign country from which he came two years, it shall be presumed that he has ceased to be a citizen of the United States and his general abode shall be deemed the place where he has resided these two years. Many foreigners come to this country, are naturalized, and when they have amassed a considerable amount of money, go back to their home country to spend their last days; and as they have severed allegiance to their former country, they will be without citizenship in either country.

Very few people seem to realize the alarming condition of our forests. Wholesale fires for years past in addition to the wholesale consumption of timber has dwindled our lumber regions down to a small amount in proportion to the future demand of building material. To offset this condition the Santa Fe R. R., has begun to grow forests for their own use, or for railroad ties at least. In one grove in Southern California they have 9,000 trees growing and this is only a start in the business. At other points over their system they have similar groves and more are to be planted each year. In the dry west the eucalyptus tree is most desirable because of its very rapid growth and durability when used as a post or tie. Farmers and nurserymen have also planted large orchards of this tree so that the emergency will likely be met without serious trouble. The Santa Fe R. R. uses 2,250,000 ties annually to say nothing of the other systems operating throughout the country. Railroads both east and west are trying hard to grow their own ties, at least, so as to have them ready for use inside of fifteen years.

What is the difference between a pebble and a fly? The flowers know. The sundews are attractive little plants found commonly in bog districts. The leaves of all the members of the family are densely covered with clubbed hairs and a fly settling among the tentacles immediately is enclosed by these organs. Meantime, a digestive fluid is exuded from the glands of the leaf. An interesting experiment may be conducted with the sun dew. This experiment consists in placing a tiny pebble against the tentacles. These at once close in, it is true, but not the least attempt is made to put out the digestive fluid. How does the sun dew know the difference between the fly and the pebble? Still more remarkable are the investigations which prove conclusively that the leaves of the American sun dew know the proximity of flies even when there is no direct contact. Fixing a live insect at a distance of half an inch from a healthy leaf, the experimenter finds that in about a couple of hours the organ had moved sufficiently near to enable it to secure the prey by means of its tentacles.

Home Again

Home again! Mother, your boy will rest,
For a time at least, in the old home nest.
How good to see you in your cornered nook
With knitting or sewing, or paper or book!
The same sweet mother my boyhood knew,
The faithful, the patient, the tender and true.

You have little changed; Ah well! maybe
A few gray hairs in the brown I see;
A mark or two under smiling eyes,
So lovingly bent in your glad surprise.
'Tis I who have changed, Ah, mother mine,
From a teasing lad to manhood's prime.

No longer I climb on your knee at night
For a story told in the soft firelight;
No broken slate or book all torn
Do I bring to you with its edges worn;
But I'll come to you with my graver cares,
You'll help me bear them with tender prayers.

I'll come again as of old, and you
Will help the man to be brave and true;
For the man's the boy. only older grown,
And the world has many a stumbling-stone.
Ah, mother mine, there is always rest
When I find you here in the old home nest.

Grouchy Charlie

Ida M. Helm

"Oh dear!" squalled Charlie. "I don't want to have my face washed, nor my hair combed. You nasty old nurse, stop kissing me. I don't like you."

Charlie was five years old and he dearly loved to play in the dust and sand and to slide down the straw-stack, but he hated to wash his face. In fact, he never did really wash his face. When he was told to do it for himself, he would merely place the palms of his hands against the surface of the water. Then he would touch his cheeks with them, after which he would take the towel and put it against his face. Then he would say he had washed. He had long curls and when they were combed, they were very beautiful, but he hated the sight of the comb and he tried to make his mother believe that he was afraid of having them all pulled out through combing and that he had better not comb. So you see either his nurse or his mother had to wash and comb him and he would always kick and cry during the process.

At the table he often wanted to eat as much pie and cake as his little stomach could hold, and if his mother would tell him that it was not good for him and that it might make him sick, and if she would give him bread and butter, he would kick and scream, till she hardly knew what to do with such a naughty boy.

One day his grandmother came and she brought him two pounds of candy. This pleased him so that he did not kick once when she kissed him but he actually smiled. Then he sat down and wanted to eat it all without stopping. His mother told him that he should eat only part of it and put the rest away for some other time, but he kicked and screamed and said that he wanted to eat all of it right away. She gave him as much as she thought he might eat without making himself sick; then she put the rest away and it made him so mad that he started down the road, saying that he was running off.

About a quarter of a mile from home, he stopped and sat down in the middle of the road to play in the dust. Soon a band of gypsies came along and at sight of his curls, they stopped and asked him where his home was, and he told them that his mother was mean and wouldn't let him eat candy when he wanted to and combed his hair when he didn't want it combed, and that he was running away and therefore he had no home. They told him if he would go with them, they would never comb his hair. Charlie thought it would be very nice never to have his hair combed, so he allowed a young girl to lift him into the wagon, but he had not counted on seeing so many strange men and women, and the room in the covered wagon did not look nearly as pleasant and comfortable as the rooms in his home, and immediately he began to feel homesick and he commenced to cry and scream, and a very homely, old woman said if he would scream once more, she would whip him. She looked so determined and ugly that Charlie was frightened and he hated the thought of having her whip him, so he kept

quiet, and he began to wish that he was back at his home.

They rode on and on and finally Charlie went to sleep curled up on a box. When he awoke the gypsies had stopped and were eating their supper. They gave him a bowl of soup. He did not know what kind it was, but he didn't like it and he screamed and said he wanted cake, but the ugly old woman said, "You never will get any cake while you live with me."

He couldn't eat very much of his soup, for it wasn't good, so he handed the bowl back to the old woman. She set the bowl down and picked up a pair of shears, saying, "You don't like to have your curls combed, so I will cut them off. They are beautiful and I can get ten dollars for them." Charlie felt glad and he thought, "Now I will not need to have my hair combed. After they were cut off he went and looked in a glass but he did not look like himself and he turned to the old woman and said, "Mamma won't know me."

"Your mamma won't never see you again," was her reply.

"Mamma never see me again?" he thought. Then he commenced to cry.

It was getting dark and he was hungry and sleepy and he said, "Oh I want my mamma. I don't want to be a gypsy any more. I want to go home."

Then the ugly woman said, "You won't never see your mamma again. This wagon is your home; lie down on that bed and go to sleep. Charlie looked around and saw that what she called a bed was only a pile of old rags in a corner of the wagon. He cried but that did not help matters, so he lay down and sobbed ,and wished he were at home. He thought, "If I ever get back home to my papa and mamma, I will never run away again, I'll wash all over my face, and I won't cry when mamma combs me. Then his tired little eyes closed and he was sound asleep.

The next thing he knew he heard some men talking very loud and soon a big, fat man came into the wagon and carried him out, and gave him into his papa's arms. Charlie was so glad that he couldn't keep from crying.

When Charlie's parents missed him, they began searching every where for him and when they got on the trail of the gypsies they followed them and rescued their little boy, but they hardly knew whether it was their boy or not, for his lovely curls were all gone, and all that they could do was to take the curls along home. They kept them and every time Charlie was naughty and disobedient, they would show him his curls, to remind him of the mistake he made when he got mad and started to run away from home.

Disobedience to the wishes of good parents, to God, or to the laws of the State, always receives punishment in some way, sooner or later. Sin, if indulged in, will always rob us of some dear treasure. It would be well for us, if when we do wrong, we could always have something to keep that would serve to remind us not to repeat the mistake.

R. D. No. 2, Ashland, Ohio.

DO YOU KNOW—

That if you rub grass stains with molasses they will come out without difficulty in the ordinary wash?

That spots may be removed from gingham by being wet with milk and covered with common salt? Leave for an hour or so, and rinse out in several waters.

That you can make a faded dress perfectly white by washing it in boiling cream of tartar water?

That salt disolved in alcohol will often remove grease spots from clothing?

That mud stains can be removed from silk if the spots are rubbed with a bit of flannel, or if stubborn, with a piece of linen, wet with alcohol?

WORTH REMEMBERING.

A spot on polished wood made by placing a heated dish on it will disappear if a little salt and salad oil are poured on it and allowed to remain for an hour or so, and then rubbed off with a soft cloth.

To Remove Dried Tea-Stains.—Apply equal parts of yolk of egg and glycerine to the stain, and allow to dry. Rinse well in clean, cold water. This will be found excellent for an afternoon teacloth which must not be boiled on account of its delicate coloring.

If your white and enamel pots become discolored from cooking place one tablespoonful of chloride of lime and two tablespoonfuls of washing soda in the pot; then fill with boiling water and place on back of fire for five of ten minutes. This will remove any stain that may be in the pot and saves much labor in the hot summer months.

Curtains and Carpets.—If when drying curtains they are hung double over the line they will not stretch at all, as is often the case when hung up by the edge. To clean painted walls, dip a damp sponge in soda and wipe the wall. Wash off with warm suds and wipe dry. Carpets can be cleaned on the floor so they will look bright as new. First select a firm, heavy broom, then sweep the carpet the way of the nap (to brush it the other way brushes the dust in). Attend to the stains, first mixing four teaspoonfuls of amonia to a bucketful of hot water, and scrub with a medium brush; then wipe with a cloth. Now apply the same treatment to the whole carpet, changing the water frequently. Leave the windows open and the carpet will soon dry.

METHODS IN FRYING.

THERE is nothing harder to teach than new methods in housework. It usually takes a generation to introduce a decided change. Our mothers served their fried food soaked in grease, and it is quite likely that the same fashion in frying will prevail to some extent for some time to come. It is curious to see how our leading cook-books denounce such frying on one page and yet by mere force of habit countenance it on another. Every good housekeeper knows, theoretically that there are only two ways of frying.

One is in some delicate fat like butter, using only enough to prevent the article fried from sticking. The frying-pan is moved rapidly during this process. During the process the butter used is absorbed, but it is used in so small a quantity that it is only enough to dress the fried articles properly, and not enough to make them greasy. Oysters are nice cooked in this way.

The second method of frying is in deep fat, in the way doughnuts are cooked. The greater part of French frying is done by this method. There must be a depth of fat enough to cover the article put in it, and the fat must be hot enough to form a thin crust over the mixture the instant of its immersion. Croquettes, breaded meats, and potatoes are all cooked by the last method. The instant they are removed from the fire they must be laid on brown paper and slipped from that to a hot dish and served. If properly cooked they will be so free from grease that they could be eaten with the fingers without inconvenience.—*The Christian Advocate.*

A PNEUMONIA CURE.

TAKE six to ten onions, according to size, and chop fine, put in a large spider over a hot fire, then add the same quantity of rye meal and vinegar enough to form a thick paste. Stir it thoroughly, letting it simmer ten minutes. Then put in a cotton bag large enough to cover the lumps and apply to chest as hot as patient can bear. In about ten minutes apply another, and thus continue by reheating the poultices, and in a few hours the patient will be out of danger. Continue always until the prespiration starts freely from the chest. This remedy was formulated many years ago by one of the best physicians New Elgland has ever known, who never lost a patient by the disease, and won his renown by simple remedies.—*Leslie's Weekly.*

HOW TO CURE DYSPEPSIA.

No Nostrums Needed—Merely Observe a Few Essential Rules.

IT is amazing that so common a difficulty as dyspepsia should be so little understood by the general public, and that its remedy should be so hard to find, says the *Metropolitan*. But it can be cured, and without any marvelous nostrums, by observing a few important rules of health. The dyspeptic must first fix in his mind the fact that his ailment is the result of bad habits of eating and living and that these must be changed, and that drugs will do him no good. He must begin by avoiding all starchy foods, as potatoes, rice and oatmeal, beans, etc. Meats, soft-boiled eggs, milk toast, zwieback, etc., are the best foods for avoiding fermentation, and the gas that causes dyspepsia pains. In serious cases buttermilk is one of the best dependencies; another is boiled milk with a slight addition of limewater. Either of these will enable the most chronic dyspeptic to procure some sustenance without serious distress. He should drink freely of hot water, at least two quarts a day, always taking a glass half an hour before meal time. He should not crowd his meals close together, as with an impaired digestion it is often best to have the meals six or seven hours or more apart. The rule to be followed is that a new meal should not be eaten until the previous one is digested, or out of the way, and the stomach has had a little rest and there must be further rest after eating.

It is absolutely essential to eat slowly and chew with the greatest thoroughness. Complete chewing in the mouth, permitting no washing down with coffee or tea, salivates the food so that it is ready for digestion when it goes into the stomach and persistence in the practice will put good flesh on any lean dyspeptic. There is a theory that when solid food is chewed in the mouth to an absolute pulp that the organs in the back of the mouth exercise a selective action and send to the stomach only that which is fitted to be converted into blood and tissue, thus relieving the digestive organs of handling the waste. Whether or not this is correct is for the science of the future to determine; certain it is that nature gave us grinding teeth for the purpose of chewing our food and never intended that we should swallow it unchewed, as do those animals having more than one stomach.

COOKING RECIPES.

GRAHAM PUDDING.—One heaping cupful of graham flour, one-half cupful of molasses, two-thirds cupful of sour milk, one teaspoonful of soda, one cupful of chopped raisins, a little salt. Steam one hour and serve with brandy sauce.

BEEF PATTIES.—Mince cold cooked beef, fat and lean, very fine; season with chopped onions, pepper, salt and gravy; half fill patty pans with this, and then fill them with mashed potatoes. Put a bit of butter on each, and brown in a hot oven.

DUCHESSES.—Take mashed potato, work into it a little butter, a gill of cream, the yolk of an egg, pepper, salt and chopped parsley; make into small cakes,

which should be lightly handled, rolled in flour and fried a delicate brown in hot butter.

SWEET CORN BAKED.—Cut the corn from the cob and with the back of the knife scrape out all the pulp. Put into a baking dish, season with salt, a piece of butter and a little sugar if desired, add enough milk, or part cream, to cover the corn and bake twenty-five minutes.

SMOTHERED TOMATOES.—Cut four small tomatoes in halves, crosswise; melt two tablespoonfuls of butter in the blazer, arrange the tomatoes in the pan, skin side down, sprinkle with a little fine mixed parsley, cover and cook until soft; season with salt, pepper and a little sugar if desired.

BEAN SALAD.—String young beans; break into half-inch pieces or leave whole; wash and cook soft in salt water; drain well; add finely-chopped onions, pepper, salt and vinegar. When cool add olive oil or melted butter. Garnish by slicing hard-boiled eggs and laying around the beans.

For the Children

WHEN TEACHER GETS CROSS.

When teacher gets cross, and her brown eyes gets black,
And her pencil comes down on the desk with a whack,
We chilluns in class sits up straight in a line,
As if we had rulers instead of a spine!
It's scary to cough, and it's not safe to grin
When teacher gets cross, and the dimples goes in.

When teacher gets cross the tables all mix,
And the ones and the sevens begin playing tricks;
The pluses and minuses is just little smears;
When the cry-babies cry all their slates up with tears;
The figgers won't add, and they act up like sin—
When the teacher gets cross, and the dimples goes in.

When the teacher gets cross, the readers gets bad:
The lines jiggle round till the chilluns is sad,
And Billyboy puffs and gets red in the face,
As if he and the lesson were running a race!
Till she hollows out, "Next!" as sharp as a pin—
When the teacher gets cross, and the dimples goes in.

When the teacher gets good, her smile is so bright,
The tables get straight, and the readers get right.
The pluses and minuses come trooping along,
And figgers adds up and stops being wrong,
And we chilluns would like (but we dassent) to shout,
When the teacher gets good, and the dimples comes out.

CHINESE PECULIARITIES.

THE Chinaman shakes his own hand, instead of yours.

He keeps out of step when walking with you.

He puts his hat on in salutation.

He whitens his boots, instead of blackening them.

He rides with his heels in his stirrups, instead of his toes.

His compass points south.

His women folks are often seen in trousers, accompanied by men in gowns.

Often he throws away the fruit of the melon and eats the seeds.

He laughs on receiving bad news. (This is to deceive evil spirits.)

His left hand is the place of honor.

He says west-north, instead of north-west, and sixths-four, instead of four-sixths.

His favorite present to his parents is a coffin.

He faces the bow when rowing a boat.

His morning color is white.

To bore a hole he uses an instrument that works up and down instead of around.

The children of a Chinese school study out loud.—*Selected.*

HOW RUTH FILLED THE CUP.

"CAN I help, too, grandma?" asked Ruth, as she sat down in the old-fashioned kitchen.

Grandma was making pudding for company, and Hannah was stuffing a big, fat goose. Aunt Katie and mamma were setting the long table, and everbody was busy.

"Yes, my dear, you can pick me a cup of raisins," said grandma.

Ruth went to work with a will and picked the raisins very fast, but somehow the cup didn't seem to get full.

Grandma looked up just as Ruth was putting a great juicy raisin into her mouth, and then she discovered the reason.

"When you pick raisins, Ruth, you must always whistle," said grandma, solemnly.

"Why, grandma!" exclaimed Ruth, "mamma says its not well-bred for girls to whistle."

"If you whistle, you can't eat, my dear, and the cup will get full quicker; but singing is every bit as good, and I would like to hear you sing about little Jack Horner."

And wasn't it queer? When Ruth began to sing that, the cup was full in a jiffy.—*Selected.*

DUG UP A BLIZZARD.

FRED and Frank were visiting grandpa in the country. One day they were interested in a stone wall which grandpa was laying. In moving a stone, a lizard crawled out, and the boys at once ran to their mother.

"Mother," said Fred, "grandpa just dug up a blizzard."

"O, no," said Frank, "that was not a blizzard, but it was a wizard."

THE RURAL LIFE

Some Facts for the Farmer

O. H. Kimmel

THE people connected with the Farmers' Institute and the Agricultural College Extension are doing the greatest work for the farmer, in the land today. In conversation, recently, with one of the state workers in this State, I learned from him that their work is unappreciated by the great mass of farmers, and some actually don't believe in it, but he added: "Many are getting their eyes opened to the advantages that can be gained from scientific farming."

The idea that an understanding of the soil, its needs, and how to supply them, the idea of the relative value of food stuffs, and the idea of the improvement and adaption of various crops, are all new ideas to the farmer and they must endure their due amount of skepticism, inattention and unbelief before they can arouse the general public.

The analysis of different kinds of hay from a scientific viewpoint reveals much. For example, in every 100 pounds of timothy hay there is 2.8 pounds of digestible protein; 43.4 pounds of digestible carbohydrates, and 1.4 pounds of fats. Scientists figure protein at four cents a pound. Thus the protein would cost 11.2 cents in 100 pounds of hay. Carbohydrates are worth four-tenths of a cent per pound, so the carbohydrates in a hundred pounds of hay are worth 17.36 cents.

Fats, figured at the scientists' value of one cent a pound, would make the fat worth 1.4 cents, hence the cost of these three, in 100 pounds of timothy hay, would be 30 cents, and in a ton, twenty times thirty cents, making a value of $6.00, the real relative feed value of a ton of pure timothy hay.

So many agricultural sections still hold timothy hay of higher value than clover, yet, when the relative value of the two is figured out, it is seen conclusively that clover is worth much more, per ton as a food product, than timothy.

To be of value as a food, anything must contain protein (nitrogen) carbohydrates (salts or starches) and fats. Now, when we figure a hundred pounds of Alsike clover in the same way as we figured the one hundred pounds of timothy hay, we find the following: 8.4 pounds of protein, 42.5 pounds carbohydrates and 1.5 pounds fats per 100 pounds. This figures 52 cents per hundred or $10.40 per ton.

Thus we see established the relative food value of these two products and we notice that every ton of clover raised is worth $4.40 more than the same weight of timothy, yet, as I said, it is often sold at a smaller market price than timothy.

It is learned, on investigation, that the reason for this lies in not knowing how to feed clover. One, used to feeding timothy, usually feeds it in large quantities, and in feeding clover, feeds the same amount as timothy, resulting in the horses becoming short-winded or heavy, when, in fact, the evil results are not due to the feed at all, but to the overfeeding of the product to the stock.

Again as an acre will produce two or three or even four times as much clover as it does timothy, the farmer should look more to it and try to get the market into the right knowledge, concerning it, so that he could raise it more and more.

Again it enriches the soil by capturing the much needed ingredient, nitrogen, from the air, giving it to the bacteria in the soil, enabling the soil to carry on its function with such results as to insure better and heavier yields of crops.

HIGH QUALITY BUTTER.

Some Hints For the Buttermaker by an Ohio Dairywoman.

ONE may delay the doing of many things without loss, but to put off churning when the cream is ripe is not in the list, writes an Ohio dairywoman in *American Agriculturist*. The mistake must not be made of thinking that butter is made by churning. It is being made from the time the milk is drawn until it is churned. No amount of doctring will cure a poor quality of butter. It is of the utmost importance that the churn be scrupulously clean and sweet smelling before using. In order to have it so it must be washed immediately after using, scalded and set where it will be thoroughly aired and dried. Rinsing in lime-water occasionally is of benefit and will remove the

musty odors which sometimes linger around churns. The putting of cold water into the churn after cleansing, as practiced by some dairymen, is not to be recommended, as every unpleasant odor will be developed in a day or two, especially if the weather is warm.

After scalding the churn preparatory to using it must be rinsed in cold water or else a woody smell will be imparted to the cream. All wooden utensils used in dairy work should be washed in tepid water first and afterward scalded, rinsed and dried. The dishcloth must never be used in dairy work. If a cloth is ever necessary it must be for that one use. Woodenware can be cleansed more rapidly, neatly and satisfactorily with the aid of a brush. Either rice straw or a bristle brush should be kept for this purpose alone.

We prefer to salt butter after it is removed from the churn rather than brine salt it. We salt at the rate of one and one-half ounces salt per pound and think it adds to the keeping qualities of the butter better than the ounce to the pound method. Patrons find no fault with our butter so prepared. We work lightly, just enough to incorporate the salt evenly without mashing and smearing it. We press and touch it lightly, shape it or cut it into any desired form and pack it ready for market. The sooner it is delivered the better.

The delicate aroma which all well made butter has is very evanescent, and when made in rolls or packages exposed to the air soon dissipates this delicate flavor. Cold storage does not help to retain this flavor. Packing in jars so as to exclude the air is the only way to retain it. The market value of butter depends upon its flavor more than any other quality. Appearance should be given due prominence, but flavor is paramount.

FITTING THE SOIL.

No hard and fast rule can be given for the best depth to plow. The question must be determined for each field from the conditions of season, soil and crop. Plants derive their nourishment mainly from the surface or dark-colored soil, and if the unweathered subsoil is turned up, it more often than otherwise results in a loss of productiveness. Subsoil-plowing may be resorted to when it is desired to loosen the subsoil without turning it to the surface. The surface soil should be kept rich and full of humus, and, if shallow, may be gradually deepened by going into the subsoil little by little.

Professor King, of the Department of Agriculture, says that it is very desirable to develop and maintain a deep soil; but when a soil is thin and the subsoil close and heavy, it is only safe to deepen it gradually by plowing a little farther below the surface each year or two, turning under as far as possible coarse manure, stubble and green crops to make the soil open and to form humus therein.

The soil is in the best condition for plowing when the amount of moisture is such as to leave the best texture after plowing, requiring the least amount of work to put it in fine condition for crops. If the ground it too wet, the crumb structure so essential to a clay soil will be partly destroyed and the soil puddled. If too dry, the furrow-slice will not shear in thin layers, and the soil will not be finely pulverized. Professor King says that the water content of the soil at the time of plowing should be such that the damp earth squeezed in the hand will hold its form, but will easily crumble to pieces and not be at all pasty.

The harrowing of the field is an important part of the preparation, and is receiving much greater attention than formerly. The process of fining the surface and keeping it in condition acts as a blanket to the field and prevents evaporation. Careful harrowing, from the reason that it conserves moisture, is the basic principle of what is termed "dry farming," and in the less humid districts of the West the harrow follows in the track of the plow as soon as possible.

Too much care in preparing the seed-bed is rarely taken by the American farmer. It is however, the essential part of farming to start the crop right, and many a man spends more time explaining his failure to his neighbors than it would have taken to insure success by a proper fitting of the soil.

HAY FOR CALVES.

The time when hay is placed before a young calf is too frequently delayed, with the mistaken idea that he will not touch it, says a dairyman. I believe in allowing them to nibble on it just as soon as they can be induced to do so. But as these little animals are dainty creatures they prefer their hay fresh every day, and it should be renewed whether they have eaten much of it or not. Bright heads and leaves of clover are more tempting than timothy, which is not desirable as food for any young animal.

PIGEONS FOR PROFIT.

Brains will accomplish more than luck.

A little knowledge is just as dangerous in the pigeon business as in any other vocation.

Let your efforts be directed toward the improvement of stock by means of judicious mating.

Tobacco stems, tobacco dust and air slacked lime will not injure anything but lice.

The carneaux pigeon is now being boomed as the bird which will revolutionize the squab business.

Hard luck is generally brought about by some mismanagement.

The Value of Alfalfa

Wm. Mohler

CENTURIES ago the value of alfalfa, as a forage crop, was known in Asia and Europe. It is only a few years since that the American farmer learned of its great value and that it can be profitably grown in almost every State in the Union.

About 1850 Jesuit missionaries brought seed from Chile to California, where its value as a hay crop was soon discovered. Visitors to that State often brought home some of the seed to grow as a fad or curiosity. These small sowings failed to such an extent that it was thought that alfalfa could not be profitably grown east of the Rocky Mountains, except in a few especially favored localities. Here and there a sowing proved successful. A field on the Republican River, near Guide Rock, Nebr., that was sown 1878, is still producing fine crops. It was several years later that it was found out that the sub-irrigated lands of Kansas and Nebraska were the very best of Alfalfa lands. It was still later when it was discovered that it could be grown without either surface or sub-irrigation, and that it would do well anywhere in the above states that corn could be grown, and in many places where corn can not be grown.

The many failures in the introduction of alfalfa in the eastern States were mainly due to the planters not knowing how to rightly prepare the soil, when to sow the seed and in not getting seed adapted to their locality.

Alfalfa is quite slow in adapting itself to changed conditions. Seed grown on irrigated land does not do well on lands not irrigated. Southern grown seed, when taken north, is apt to be winterkilled. The experienced planter tries to get seed grown under similar conditions to his own, that grown near his plantation being preferred. August is generally considered the best time to sow the seed. When sown later the plant often fails to make sufficient growth to withstand the following winter.

Where the soil is free from weed and grass seeds, earlier sowing is advisable. I have succeeded in getting a fine stand by sowing in April, but too often, when sown early, if the weeds do not smotther the young plants, they enfeeble the growth to such an extent that the plants are not as strong the next spring as the plants grown from later sowings.

At all times the soil should be put in the finest condition possible. Any neglect here means loss. The ground should be broken several weeks before time to sow, so that the soil may be well settled before seeding. In spring seeding better success has been secured by disking and harrowing than by plowing and harrowing. Seed sown on freshly plowed lands is almost sure to fail if followed by dry weather. In Nebraska but few fields need inoculation, since the bacteria, so necessary to the growth of alfalfa, are already present in most of the cultivated fields. There is also a sufficient supply of potash and phosphorus, but in parts of the country where these things are deficient, it will be necessary to supply them to get the best results.

The best way to inoculate a field with alfalfa bacteria it to take soil from an old alfalfa field or from where sweet clover (*melilotus alba*) has grown for sometime, and sow it at the rate of a bushel to the acre in the new field. In acid soils lime should be used to neutralize the acid, because the bacteria can not live in acid soils. Alfalfa will not succeed in sour, wet soils, in soils that overflow, or in soils where the water stands near the surface. If a few plants have lived and thrived in fields where alfalfa has failed to live, these few plants indicate that alfalfa can be grown there. Seed from the remaining plants are almost certain to succeed in that locality. Alfalfa will be grown in many places where it is now thought that it cannot be grown at all.

Falls City, Nebr.

GAPES IN CHICKS.

A Disease Which Usually Carries Off Many of the Youngsters.

GAPES is one of the most serious causes of loss among chicks. It is caused by the small worms that accumulate in the windpipe until the chicks suffocate. The affected chicks constantly try to dislodge the worms by gaping and shaking the head. If the chicks are quite large, they can usually manage to throw off the disease. If, however, the disease attacks small chicks, they usually succumb to it or become stunted.

There are several ways of treating gapes, but in all cases the first thing to do is to separate the unaffected ones from the rest and move them to fresh ground, as the disease spreads rapidly if this precaution is not taken. The common earth worm is said to be a means of spreading the disease, as it is very frequently found to be a host for gape worms. If there is danger of the gapes, use solid floors in all the coops and keep the chicks confined when there are many earthworms on the surface.

Several patent devices for the treatment of gapes are on the market. Some of them are very good for the purpose, while others are of doubtful value. If the chicks are considered worth the trouble, the quill and turpentine treatment is probably about the best and is used as follows: Dip a quill in turpentine

and then insert it gently into the windpipe. The quill must of course enter the windpipe in order to effect any cure. The operator will see the opening of the windpipe at the base of the throat. Numerous complaints are made that the treatment does no good because people frequently insert the quill into the gullet instead of the windpipe.

A looped horsehair may also be used for disloging the gape worm. Insert it into the windpipe, give it three or four turns and then remove, after which the chick will cough any worms that have been dislodged.

Gape worms may be killed by placing the chicks in a closed barrel or some other convenient receptacle and forced to inhale strong tobacco fumes or those of a similar nature. This method is not recommended very highly, as it is extremely dangerous. The treatment will of course kill the chicks if continued too long, and thus an inexperienced operator finds it difficult to use.

In combating this disease, as well as all others, healthy, growing chicks are much more likely to overcome the trouble than weak, neglected ones.

THE COLOR OF EGGS.

THE following is from a bulletin issued by the Department of Agriculture at Washington:

There is no constant relation between the color of the shell and the composition of the egg, although there is a popular belief in some localities that the dark-shelled eggs are "richer." That there are no differences in the physical properties and chemical composition between brown-shelled and white-shelled eggs was shown by investigations carried on at the California and Michigan experiment stations, this work having been summarized in earlier publications of the department. The color of the shell has, however, an effect upon market value, the brown-shelled eggs bringing the higher price, for instance, in the Boston market, and the white-shelled eggs in the New York market. In New England the preference is decidedly in favor of the tinted egg. One great advantage which all breeders producing tinted eggs possess is that they are generally better winter layers than the varieties producing white-shelled eggs, this being perhaps due to the fact that they are usually very good sitters and mothers, and so obtain a rest during the spring and summer months.

Horse Talk.

Don't compel me to eat more salt than I want by mixing it with my oats. I know better than any other animal how much I need.

Don't think because I go free under the whip I don't get tired. You would move up if under the whip.

Don't whip me when I get frightened along the road or I will expect it next time and maybe make trouble.

FUNNYGRAPHS

"Professor," said a senior, trying to be pathetic at parting, "I am indebted to you for all I know."

"Pray don't mention such a trifle," was the reply.

"If I were president, I would never appoint a baldheaded man on a diplomatic mission."

"Why not?"

"Why, not, stupid? How how could a baldheaded man split hairs!"

Tommy—Ma, may I play make-b'lieve I'm entertainin' another little boy?

Mother—Certainly, dear.

Tommy—All right; gimme some cake for him then.

"When I was preaching at Wallawalla, Washington," said a Kansas clerygman, "there was no negro preacher in town, and I was often called upon to perform a ceremony between negroes. One afternoon, after I had married a young negro couple, the groom asked the price of the service.

"'Oh, well,' said I, 'you can pay me whatever you think it is worth to you.'

"The negro turned and silently looked his bride over from head to foot, then slowly rolling up the whites of his eyes said:

"'Lawd, sah, you has done ruined me for life; you has, for sure.'"

A frail-looking little Irishwoman was asked how she had been able for years to follow a very hard and wearing occupation without breaking down, and it was hinted that she must have had a fine constitution, in spite of her delicate appearance, to have enabled her to work so many years in that way. "Sure, darlint, 'tis not the constitution, but the resolution, that kapes me at it so well," was her merry reply. And there's a truth for us all to ponder over.

A visiting bishop in Washington was arguing with a friend of his on the desirability of attending church. At last he put the question squarely: "What is your personal reason for not attending?" The gentleman smiled in a non-offense-intending way, as he replied: "The fact is one finds so many hypocrites there." Returning the smile the bishop said: "Don't let that keep you away; there is always room for one more."

"It costs a lot to send an expedition to the north pole," said the scientist.

"Oh, I don't know," answered Mr. Cumrox, "not so much more than to go to some of the other summer resorts."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceedsix lines altogether.

Wanted.—Chief cook and janitor. Good positions. Apply at once. Address Manchester College, North Manchester, Indiana.

Wanted—Matron. Man and wife to cook. Fireman. Fine position. Address: McPherson College, McPherson, Kansas.

NEFF'S CORNER

The following clipping from a local paper may interest you:

"Eastern New Mexico is now feeling the influence of the homeseeker. The range cattle and the drift fences are disappearing, the flocks of sheep are moving back to the mountains, and where a short time ago the long horn, the jack rabbit and the lean coyote held undisputed possession, the homeseekers shack, his three-wire fences and waving fields of corn, maize, kaffir, etc., cover the plains.

"For years the little cattle men and the Mexicans have raised small crops of feed stuffs for their cattle and sheep. They did not have use for much feed and wanted the impression to go out that nothing could be raised here so that they might have use of unlimited range for the stock. Talk to the old timer and he will now tell you that he always made good crops, but that he did not want the homeseekers here.

"Last year was the first year for the homeseeker here. Only a few small crops were planted, but enough to show the possibilities of the country. This season there are a great many more farmers here and the country has been given a very fair test. Most all the crops are on sod, yet our crops of corn, maize, kaffir, millet, sorghum, garden truck, melons, pumpkins, etc., will compare favorably with crops on the $50 and $100 per acre land back in the states.

Editors can write, printers can print, and real estate men can puff and blow, still the farmer's blunt statement, "I like the country and am satisfied," is what takes with the prospective homeseeker. Talk to farmers or write them, if you number any of them among your friends, and see how they like the country."

Homestead relinquishments can be bought at from $50 to $3,000 per quarter section. Some deeded lands can also be bought cheap. There should be a strong settlement of Brethren here and you are invited to come and investigate.

JAMES M. NEFF,
Clovis, New Mexico.

CATALOG 254

Our new Sample Book of **Straw Cloth, Silk, Net and Braids for BONNETS** will be sent upon request, postpaid. Write name and address upon a postal card, asking for our **No. 254 Catalog** and it will be sent at once. Samples of **CAP GOODS** will be found in each catalog. A line of samples complete in every way. **WE MAKE** Bonnets and Caps to order and guarantee satisfaction. Our sample book tells **how** to order, how to take measurements, gives prices in full.

Note.—All made-to-order bonnets and caps should be ordered early to avoid delay. April and May are very busy months in this department.

Dept. 21 **ALBAUGH DOVER CO., CHICAGO.**

A PRAYER.

Not mine to sing life's greatest songs,
But, Father, may I be
In good attune if thy dear hand
Should wake by minstrelsy
The little songs of common things,
Which wise hearts know are best;
The lullabies of babyhood,
The songs of peace and rest.

Just as a child who knows not how
To form her letters, yet
Looks up from her long striving,
Perchance with eyes tear-wet,
And lets the teacher hold her hand
To write where she could not —
So, I, dear Father, look to thee;
Define and shape my lot.

WE SHALL KNOW.

When the mists have rolled in splendor
From the beauty of the hills,
And the sunshine, warm and tender,
Falls in kisses on the rills,
We may read Love's shining letter
In the rainbow of the spray,
We shall know each other better
When the mists have cleared away.—
We shall know as we are known,
Nevermore to walk alone,
In the dawning of the morning,
When the mists have cleared away.

If we err in human blindness
And forget that we are dust,
If we miss the law of kindness
When we struggle to be just,
Snowy wings of peace shall cover
All the pain that hides away,
When the weary watch is over,
And the mists have cleared away,—
We shall know as we are known,
Nevermore to walk alone,
In the dawning of the morning,
When the mists have cleared away.

When the silvery mist has veiled us
From the faces of our own,
Oft we deem their love has failed us
And we tread our path alone;
We should see them near and truly,
We should trust them day by day,
Never love nor blame unduly,
If the mists were cleared away.
We shall know as we are known,
Nevermore to walk alone,
In the dawning of the morning,
When the mists have cleared away.

When the mists have risen above us,
As our Father knows his own,
Face to face with those that love us,
We shall know as we are known;
Love, beyond the orient meadows,
Floats the golden fringe of day;
Heart to heart we bide the shadows,
Till the mists have cleared away.
We shall know as we are known,
Nevermore to walk alone,
When the Day of Light is dawning,
And the mists have cleared away.

—Annie Herbert

THE MORNING GLORY'S MORAL LESSON.

Whenever trouble seems to be
Too plenty in this life o' mine
I mind th' hint that come to me
From one smart mornin' glory vine.
It started growin' in th' yard
Three feet away from an ol' stump;
I sez to it: "Your luck's plumb hard,
'Cause mornin' glory vines can't jump."

Well, sir, it didn't hesitate—
Jest started right away to climb;
It found a weed that bore its weight
An' kept a boostin' all th' time,
Until at last it struck th' top,
It seemed to get some worried there.
I sez: "Old man, you'll have to drop—
You can't climb, nohow, through th' air."

Looked like I's right; it sagged an' dropped
An' twisted half a dozen ways
Till it was knotted, wrapped and looped—
It kep' this up for four-five days,
An' I was tickled; says I:
"I've often felt the same as you—
Found out I couldn't get up high
'Ithout no ropes to grip on to!"

Seem' like that mornin' glory knowed
That I was viewin' it with doubt
It sent out feelers till it showed
It knew jest what it was about.
At last it struck th' stump! An' then
It seemed to laugh at me all day
An' sort o' chuckle now an' then
"You see, I got here, anyway!"

A moral goes with this, I guess;
It is that almost any man
Won't climb so very much, unless
He grabs to somethin' where he can.
Them plucky morning glories, now,
All they ask for is elbow room
An' they'll keep goin' up, somehow,
Until they laugh themselves to bloom.

REST.

Rest is not quitting
The busy career;
Rest is the fitting
Of self to one's sphere.

'Tis the brook's motion,
Clear without strife;
Fleeting to ocean
After its life.

'Tis loving and serving
The highest and best;
'Tis onward unswerving—
And this is true rest.

SENGER'S
SOVEREIGN BALM
BABY POWDER

CORRECTS all Irregularities of the STOMACH and BOWELS in INFANTS and CHILDREN

Such as indigestion, bloating, vomiting, wind colic, sour stomach, diarrhœa, green discharges, constipation, and all troubles that arise from these causes and that lead to cholera infantum. It tones, strengthens, and invigorates the stomach and bowels so that the child can digest and assimilate its food. It is a companion preparation to our **Sovereign Balm of Life for expectant mothers.** Those who have used it for their little ones say it is fine. It is free from all opiates, and just the thing to have on hand when any irregularities are observed. Price 25 cts. per bottle. Ask your druggist or order direct from

Lady Canvassers

Successful in Selling the

INGLENOOK COOK BOOK

Lady canvassers can and do make just as much money canvassing as men when they take the right article. We have a number of both lady and gentlemen canvassers selling the Inglenook Cook Book, and the ladies are taking the banner. Hear what a few of the many have to say.

32 SALES ONE DAY.

I have found the Inglenook Cook Book a splendid seller. Better far than I expected. I have sold 127. The most I sold in one day was 32. Send me 150 at once. Grace Gnagey, Meyersdale, Pa.

41 SOLD FIRST DAY.

Another agent says, "The first day out I sold 41 copies. It sells much better than I expected."

SOLD 31 IN ONE DAY.

Find enclosed draft for 200 Cook Books. I am getting along well and like the work fine. The most books I have sold in a day was 31. Suppose I would have sold more, but finished the town and had to quit. Ida Brower, South English, Iowa, June 25, 1907.

HELPING WOMANKIND.

"I do not feel that I could devote my whole time in selling the Inglenook Cook Book just at present, but would like to work at it what I can. I feel it will be helping womankind to introduce it into these homes for the recipes are so easy to understand and so many every day wholesome things that it makes any one hungry just to read them. Please send me a cook book to use in selling the same." Mrs. J. W. Hoover, Sunfield, Mich., July 15, 1907.

REMEMBER

that these reports are nearly all from inexperienced canvassers.

$2.00 TO $5.00 PER DAY.

Ladies can you make anything like that at your present vocation?

Webster's Unabridged Dictionary

This is the original Webster's Unabridged Dictionary, with supplement and revises by Chauncey A. Goodrich, of Yale College. An American dictionary of the English language, containing the whole vocabulary of the first editions and the corrections and improvements of later editions. To this is added a table of synonyms, peculiar use of words and terms of the Bible. If you do not care to spend $9.00 or $10.00 for Webster's International Dictionary, which is the latest and best made, then get this book, which, for nearly all practical purposes, will serve you quite as well. It is printed from good, clear type and contains 1,600 pages. Cloth, $1.25.

Brethren Publishing House, :: Elgin, Illinois

The STORY of the HYMNS and TUNES

By Theron Brown
and
Hezekiah Butterworth

A new book that will interest and bring joy to all lovers of music.

In the introduction Mr. Brown writes: "In the following pages no pretense is made of selecting all the best and most used hymns but the purpose has been to notice as many as possible of the standard pieces, and a few others which seem to add or reshape a useful thought or introduce a new strain." The story of hundreds of hymns with their tunes are given. The portraits of twenty-four noted musicians are inserted in the book.

The book contains nearly 600 pages and is bound in good cloth binding.

The fine gilt top and gilt stamping on the cover makes it a very attractive book.

If you are a lover of music you will want this book.

ALBERTA

Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

Why not join the Brethren already there and enjoy some of the material benefits as well as help build up one of the largest Brethren Colonies in the Canadian West.

We have excursions every first and third Tuesdays of the month.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words

This is the Only New and Complete Webster Dictionary Issued Since 1890

FOR IT IS THE ONLY "WEBSTER" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations. It contains also, among other special features,

A MODERN GAZETTEER OF THE WORLD.

A DICTIONARY OF AUTHORS with the Titles of their Principal Works.

A DICTIONARY OF NOTED NAMES IN STANDARD FICTION.

A DICTIONARY OF FOREIGN WORDS, Phrases Noteworthy Sayings and Colloquial Expressions from the Latin, Greek and Modern Languages, used in Current Literature.

A PRONOUNCING DICTIONARY OF SCRIPTURE PROPER NAMES AND FOREIGN WORDS, with their Meaning, and Place in the Bible in which they are to be found.

A PRONOUNCING DICTIONARY OF GREEK AND LATIN PROPER NAMES.

A DICTIONARY OF ABBREVIATIONS AND CONTRACTIONS.

A PRONOUNCING DICTIONARY OF BIOGRAPHY.

SIGNS AND SYMBOLS Used in Writing and Printing.

MARKS USED IN PROOFREADING.

VALUES OF STANDARD FOREIGN COINS.

A LIST OF AMENDED SPELLING recommended by the Philological Society of London and the American Philological Association.

A DEPARTMENT DEVOTED TO FAULTY DICTION (which no other Webster ever contained), treating over 1,000 subjects. A feature of incalculable value.

TESTIMONIAL.

Park Row Bldg., New York.

"Webster's Imperial Dictionary has been in daily use for the past eight months and I can unhesitatingly say it meets all requirements and leaves nothing to be desired. I find the comparative treatment of its synonyms of special value; they enable one to get out of an old rut of expressing himself, both in conversation and composition. I could not ask for a more thorough, concise and really interesting dictionary than the Imperial."

Respectfully,

CHAS. B. WESTOVER, Pres.

Has Created a Post Office in

BUTTE VALLEY CALIFORNIA

Read this letter

Mr. E. M. Cobb, Elgin, Ill.

Dear Brother:—I am glad to inform you that Bro. W. C. Heisel, of Morland, Kans., moved into the Valley the first of the week and has gone right to work. He has bought a good team and expects to build a house immediately. Bro. Heisel has a family of six children and all of school age. We will have quite a large school here this winter.

Bro. Saul, of Sunnyside, Wash., was here several weeks ago and looked the Valley over and liked it very much. To my surprise last night he returned, bringing his son-in-law and another gentleman and expects to locate while here this time. He remarked to me this morning that the more he looked the Valley over the better he liked it.

I am also pleased to inform you that we now have a postoffice at Macdoel and hereafter please address me at Macdoel, Siskiyou county Calif.

The railroad is being pushed more rapidly than ever. A large force of men and teams will be brought down from Klamath Falls tomorrow and within the next two weeks the graders will be at work on the grade through Macdoel.

Have had a number of inquiries for town lots recently, especially from those who live in the Valley and some railroad men who have taken in the situation all along the line and think that we have the best proposition they have seen.

Yours fraternally,

M. D. Early.

RAISIN CITY, CALIFORNIA

Owned and Controlled by BRETHREN

Over 2500 acres sold since Annual Meeting. Eld A. W. Vaniman and three other Elders and a number of Brethren have purchased land and will locate there this fall and winter.

J. S. Kuns of Los Angeles is erecting a hotel and store building which will be completed soon. A large tent 28x40 has been set up on the church site and will be used for Sunday school and preaching until a church house can be built.

Eld. A. W. Vaniman has located at **RAISIN CITY** and will be glad to give any desired information. For the present address him at Fresno, Cal.

Application has been made for a postoffice which we hope to have established at **RAISIN CITY** by Oct. 1, 1907.

RAISIN CITY is located on the Southern Pacific Railroad 14 miles from Fresno a city of 25,000.

DAIRYING AND STOCK RAISING.

This land is especially adapted to dairying and stock raising as it is the home of the alfalfa.

RAISINS, PEACHES AND FIGS.

Fresno Co., in which **RAISIN CITY** is located is the greatest fruit producing county in the world, 80,000 acres in grapes.

SOIL AND WATER.

The soil is a rich sandy loam, the land is level and ready for the plow; and abundance of good water.

PRICES AND TERMS.

We are selling the land at from $25 to $40 per acre on 4 years time at 6 per cent. Prices will soon be advanced to $50 per acre.

THE OLIVE BRANCH OF PEACE AND GOOD WILL TO MEN

BY S. F. SANGER AND D. HAYS.

Anti-war history of the Brethren and Mennonites, the peace people of the South during the Civil War, 1861-1865.

From Preface of Book.

Upon the whole, the object in publshing this little volume especially as it relates to the Civil War, is threefold:

First, to give a true and faithful record of the sufferings and experiences, largely from the personal testimony of those who, through religious convictions, declined to bear arms against their fellowmen, believing that Christians should not take up the sword, but follow the teachings of the "Prince of Peace."

Second, to testify to God's goodness in protecting them in, and delivering them from, prison, as well as freeing them from military service during the remainder of the war from 1862 to 1865.

Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.

This is a book that every member of the Brethren church will want and ought to have. Very few of our people know what our forefathers during the Civil War had to endure. Neither do they know or realize how God in his infinite wisdom cared for and protected those who stood for the right tho' death stared them in the face.

AGENTS WANTED.

We want an active, live energetic agent in each congregation to sell this book. Liberal terms to agents.

The book is well bound in cloth with gold stamp and printed on heavy book paper.

It contains 232 pages with a number of illustrations.

Price per copy, prepaid.....$.75

Write for full particulars regarding agency at once to

Twin Falls, Idaho.

Twin Falls Land and Water Company.

Gentlemen: On the 6th day of April, 1906, I landed on the Twin Falls Tract to stay. I had been here twice during the winter "to see" and thought I had seen the opportunity of a lifetime for a man of small means to make a profitable investment and establish a comfortable home. Our experience has convinced us that we made no mistake.

Respectfully,
John R. Newton.

Pullman, Washington.

C. O. Morrell, Twin Falls, Idaho:

Professor Fulmer, Chemist, of Washington State University, has made his seventh test of soil from lands under the Twin Falls Canal system. He finds a small trace of alkali and thirty percent more plant producing qualities than in the Yakima Valley, and there is only one place on the Pacific coast where it is equaled, and that is in the Pajaro Valley in California. A. T. Farris.

Mr. B. F. Hurst, Fruit Inspector of Dist. No. 5, of Idaho states: "The Southern part of Idaho is second to no other part of the known world as a fruit producer, both in variety and quality."

HOMESEEKERS' ROUND TRIP TICKETS

will be sold to points in Idaho on 1st and 3rd Tuesdays of each month in 1907, good going, leaving selling station on date of sale and for return passage, leaving destination on day of execution which must be within final limit of 21 days from date of sale.

TABLE OF RATES

THE INGLENOOK

VOL. IX. OCTOBER 1, 1907. NO. 40.

On the Way to Cuba

Grant Mahan

THE feeling which comes over one as he leaves his native land is peculiar, even when he expects to return within a short time. We Americans may not love our country more than other people do theirs; yet it seems to me that we have many reasons for doing so. We have the best country in the world, and if we do not realize this fact as we should it is because we have not learned to know our advantages. But to many, no matter how dear the homeland is, there comes the necessity of leaving it for a time; and since all things in this life are uncertain he who leaves his home may never have the privilege of returning. One cannot but wonder when and under what circumstances he will be permitted to revisit the scenes of earlier years; and the uncertainty of it all causes one to think seriously as he goes away.

So it was with us as we left our home in Elgin for a sojourn of some months in Cuba. What the future has in store we do not know, but we hope for renewed health and ability to work. After following one line of work for several years it is hard to change, for the work has become the main part of the man.

Our route was by way of New Orleans, and our first visit to the city was full of interest and pleasure, though our time in it was much shorter than could have been used to advantage. But we hope to see it again. We could not tell even a small part of the history of New Orleans and its present position. Yet we can say that our rides and walks about the city gave us much pleasure. On every hand are evidences of the fact that the people of the South—those of means especially—know how to enjoy themselves; for their beautiful homes, containing and surrounded by all that nature and art can do, are a joy to behold. And then there is the majestic Father of Waters sweeping by. River boats and ocean boats come up the river or down to its wharves, and they are laden with articles of commerce that increase the wealth of both buyer and seller. Here is one of the best places in the world to see cotton and sugar. Then there are beautiful parks and cemeteries. What a feeling of awe fills one as he walks beneath the trees or through the paths between the tombs of the departed. And New Orleans has several cemeteries crowded with monuments erected in memory of the loved departed, and they excel those of many other cities. The work of those who sleep beneath the sod is done and their destiny for eternity is fixed. The living have paid the last tributes of respect. And what a waste there is of respect and other things when death comes! How much of it is caused by remorse? Who knows?

And this city has a history. If the result of the battle of New Orleans had been known before the treaty of peace was signed by England and the United States in 1814, we may be sure America would have profited more from that conflict. Also during the Civil War this city was an important point, eagerly contended for by both Federal and Confederate. But now peace and prosperity rule, and there is no limit to the possibilities for growth in wealth. May there be also a growth in the character of its citizens.

But we leave on the *Excelsior,* and in about two days reach Havana. Going into port in a new country causes peculiar sensations, for one cannot even guess what may be in store for him there. When he passes into the harbor and see Morro Castle standing sentinel at the entrance, and farther on the wreck of the ill-fated *Maine,* he thinks of the terrible oppression to which the people were long subjected, their desperate efforts to gain freedom, and the short war entered into by America in order that peace might rule. And when he sees and hears so many Americans on the streets of Havana he cannot but realize that our influence will be very great, the destiny of the island depending very largely on what the American government does. It is a serious responsibility, and one which we hope may be discharged in a way to bring the highest good to the greatest possible number of Cubans. But that is for the future, the very near future, to decide.

There are many things on the island which are of interest to the average American, and of a few of

these we shall likely have something to say to the readers of the INGLENOOK as the months pass; and we trust that what is written may serve a good purpose, leading us to take a greater interest in the welfare of the nations who look to the people of the United States as their guide in learning to govern themselves.

Omaja, Cuba.

A TALE OF A BOOTJACK.

MARY I. SENSEMAN.

In Two Parts.—Part One.

"MA! Ma! Hannah!" Calvin Weaver's voice sounded so insistent and appealing as it reached his wife's ears that that little housewife hurried in some alarm in the direction from which the call seemed to come.

She entered the "old house," which was still in the rear of the one the family now occupied and which was used as a general catch-all and storage building. She could hear Mr. Weaver shuffling about a little in the attic that constituted the upper story.

"What do you want, Calvin?" Mrs. Weaver inquired, leaning against the stairway and peering up through the evening darkness into the loft.

"Do you know where that bootjack is? I surely saw it up here not long ago."

Well, I don't think you could find it in the dark if it was up there. And it ain't there," replied Mrs. Weaver. "I took it over to Jane Gilbert the other day to have her gild it. It's a regular keepsake. Why, I read," she said backing away as Mr. Weaver descended the stairway, "I read that a man tried to get hold of a bootjack, that he hadn't seen one for years, and he couldn't find one aynwhere."

"It didn't mention that it was Cal Weaver, did it?" queried that worthy gentleman, as he followed his wife back to the lighted kitchen.

"It's laid around for years, and you've never wanted it." retorted Mrs. Weaver. "I'll telephone to Jane right now and tell her not to do anything to it."

"Hello! How are you?" she called, when her friend's familiar voice greeted her.

"Oh! tired," answered Jane. "Steve's were up,—Steve Jackson's. They have their farm paid for and they said they felt like celebratin' some way."

"How are they?"

"Just the same Steve and Anna. Just as much hustle about them as ever. I guess they pressed all the enjoyment possible into this day of visiting.

"Have you seen the new kind of gypsies, Hannah?"

"'The new kind of gypsies,'" repeated Mrs. Weaver.

"Yes. They're camped in a corner of our new-ground. They're two young preachers travelin' 'round in what they call a 'mission wagon.' They've been down where Steve's live. Anna says they're nice fellows. Everybody down there went to hear 'em preach."

"Do you know when they'll preach here?" asked Hannah.

"No, not yet. They just got here about noon. Anna says they go 'round to the houses and give pamphlets and invite people to their meetin's. She says the women fix up baskets of stuff for 'em to eat, too. When they preach you and Cal must go."

"I expect we will. But I'm 'most forgettin' to say what I called you up to speak about. Pa was huntin' that bootjack this evening and I told him I'd tell you not to fix it up. It'll be all right, won't it?"

"Yes, that's all right," said Jane.

"Good-bye."

Not more than ten minutes after the two receivers had clicked into place the Weaver telephone bell jingled urgently.

When Hannah had delivered the perfunctory dissyllable, Jane's words came to her, sounding a little tense and nonplussed: "I can't find your bootjack! I was so busy today that I never thought of it. Steve's had little Paul along and mebbe he found it and was playin' with it. If we can't find it in the morning I'll write to Anna and have her ask Paul about it. I'm just as sorry as I can be."

"Oh, I don't blame you." said Hannah. "I guess the bootjack will be found. Paul wasn't off the place, was he?"

"No. He's only five."

The next morning the two young men of the mission wagon called, one at the Weaver home and the other at Gilberts'. Their calls were generally brief, for they understood that at that season farmers would dislike encroachments on their time; and, consequently, the "mission" would thwart itself.

The various families of the neighborhood were most cordially invited to attend the outdoor services that would be held that evening on the edge of Horace Gilbert's clearing.

The greater part of them took advantage of the invitation. They returned to their homes refreshed by the wholesome young lives with which they had come in touch.

After the meeting closed Jane drew Hannah aside.

"I didn't find it, and I sent a letter to Anna," said Jane.

"Mrs. Gilbert and Mrs. Weaver, don't you think we ought to fill our baskets for these young men?" said a woman, joining them.

"Yes, I wanted to speak about that," answered Jane. "Brother Steve's was up yesterday, and these preachers had been through their neighborhood, and Anna, Steve's wife, said that the women down there fixed up lunches. Just a little from each family wouldn't be any trouble."

Thus, during the week while the mission wagon remained, housewives, by twos or threes, carried baskets of substantials and delicacies from their own tables to the busy young men.

The last day of the week, when Calvin Weaver and Horace Gilbert had each sent his eldest son with a horse to draw the mission wagon to its next halting place, the Gilbert mailbox yielded up to Jane a letter from her sister-in-law.

"I have questioned Paul close," wrote Anna, "and all I can find out about the bootjack is that he tied it on a goat's horns."

"Well, that's a good deal," said Jane, evidently much enlightened. "That old goat of Burns's was here and Paul was a-playin' with him. It's not hard to see now where that bootjack is."

She decided to go to Burns' at once, and telephone to her friend when she would have returned with the bootjack.

She slipped on a fresh calico dress,—"though my old one wouldn't matter, considerin',"—and departed on her errand.

The Burns' were shiftless,—"do-less enough to keep a goat,"—was the voiced sentiment of their neighbors. Mrs. Gilbert, on entering the house, found the head of that establishment lounging on a hillocky, three-legged sofa. His clothes were ragged, and his big, dirty hands and wrists, sticking out from his sleeves, were employed in protecting himself against the too enthusiastic onslaughts of a fat, gurgling infant.

Mrs. Burns was in the act of spreading some bread with molasses for a chubby boy and a rosy-cheeked girl.

"Come right in, Mis' Gilbert," said Mrs. Burns. "Ben's been havin' rheumatiz' ag'in."

"Ben" sat up on the sofa and Jane seated herself gingerly on a grimy chair. The baby crawled across the littered floor to its mother and mounted upon her ample lap.

"Don't you think them fellows had good meetin's?" went on Mrs. Burns, brushing her straggling locks back from her face. "I so wanted Ben to go more, but he just got there last night."

The two older children were sidling toward the sofa, molasses dripping here and there as they progressed. When Mrs. Gilbert looked at them they would flush and shyly nibble their bread.

"I had a job o' ditchin' over at North's. But these spells come an laid me up fur weeks. Seems's if I can't hold down a job 't all any more," drawled Ben.

Mrs. Gilbert was wondering how she would introduce that matter that occasioned her presence there. It seemed that her courage was sapped by the sight of the baby nestled in Mrs. Burn's arms and of the other children sitting on either side of their father.

Jane stayed in the house fully a half hour and afterwards she could not remember that she had uttered a word during that time.

The baby went to sleep, the boy and girl nibbled up all their bread, Mrs. Burns lasped into silence, and only Ben's tongue wagged stolidy on.

When Jane arose to leave, he concluded, "But I tell 'em as long as we have plenty o' potatoes we won't starve."

A goat was in the doorway, whither the whole family had accompanied their parting guest.

Mrs. Gilbert in desperation, spoke abruptly, "*Did* your goat carry a bootjack home?"

Mrs. Burns turned inquiringly toward her husband. "I never seen one," she said.

"We used to have one at home," Ben said, "They look like a swing board with only one crotch. Did you chil'ren see the goat have a funny lookin' board?"

The children shook their heads.

"One got lost from our house," explained Jane. "My little nephew said he tied it on a goat's horns, and I thought I'd come here and see about it."

"It ain't showed up here; but if we see it we'll let you know."

"Thank you," murmured Jane. "Come down to see us some time. Good-bye."

She reported the story of her quest to Hannah, But the summer passed and no trace of the bootjack was obtained.

The summer passed, and with it the mission wagon ceased its journeyings.

The two theological students, Luther Mitchell and his cousin, Harvey Linden, were going to return to school.

The wagon had been drawn into a shed. Mr. Mitchell, stooping to mend a broken board inside the shed, saw, beneath the wagon-bed, what he at first thought to be some awkward repair work.

A few minutes later he was standing in the house speaking jocularly to his son and nephew:

"Is this what you do as you ride over the country,—collect bric-a-brac?"

The young men looked with amazement at the object Mr. Mitchell held up before them.

It was a bootjack!

(To be Continued.)

COMMUNION with God has the effect of making us joyous. The Lord does not like to see any of his disciples looking sad. When men seek to entice you to forego communion with God and to follow the world with them, let your face shine with the brightness that comes from your communion with the Master, and they will cease to trouble you. Christians can sometimes do more by shining for God than by speaking for him.

A VICTORY FOR THE WORKING GIRL.

The New York legislative session lately come to a close, was one of unusual interest in the matter of labor legislation. On one of the first days the Page eight-hour bill was introduced, prohibiting all children under sixteen years of age working more than eight hours in factories of the State of New York. This soon became one of the most popular measures of the session. The especially valuable feature of the law which distinguishes it from any other child labor statute in this country is the requirement that these eight hours must fall between 8 A. M. and 5 P. M.

Lively opposition against this particular feature of the bill developed in the lower house. Opponents denounced the inelasticity of this argument as unreasonable and several attempts were made to amend it; but in the end the particular merit of this bill was recognized, inasmuch as it makes for real enforcement. In future, factory inspectors will not have to discover how many hours a child has been at work in any factory, but its mere presence there before eight in the morning or after five in the afternoon will in itself be a violation.

A wave of public sentiment carried this humane measure triumphantly through the legislature. It was a foregone conclusion that Governor Hughes would sign the bill, as he had recommended this very step in his inauguration message.

The law marks a real gain for the working child. In New York City, especially, where the distance between factory and home is often very great and the transportation facilities poor, a working child often rose at 5:30 A. M. in order to reach work at seven o'clock; and even if he left work at six o'clock, he was forced to travel home in the great crush hour, when facilities are at their worst, and travel is most exhausting even for adult men and women.

This beneficient legislation will, therefore, give the working child an additional hour for sleep in the morning, and an hour for recreation at night.

A HELPING HAND.

MAGGIE M. WINESBURG.

There is a question that I have often asked myself and the question is this: "Why don't we lend a helping hand oftener than we do? Every day there is a chance for us to lend a helping hand to some one if we would only take notice of it. I know that I have carelessly passed by a many a one, to whom I might have given a helping hand, by a little work, if I had only known how sadly they stood in need of just such assistance.

By lending a helping hand I don't mean that we should always give money, for not every one is blessed with cash enough to give in every case, but we can often lend a helping hand in other ways that will do as much good as money can do.

Let us see how many different ways we can lend a helping hand, when our purse is limited.

We can often help some one else out of a difficulty, by telling him a little of our own trials under similar circumstances, and how we overcame them, or got worsted in the effort to overcome them. Often through our failures, others may find a way out of their trouble.

And then we are lending a helping hand when we speak words of encouragement to some one of our toiling brothers or sisters, who is feeling discouraged and almost ready to give up trying to better his condition. Perhaps we may lend a hand when we amuse some sick, fretful child until the tired mother gets a rest.

Then we are lending a helping hand when we aid some overworked housekeeper to get through with her work, so that she can enjoy an evening outside of her kitchen.

I have often overheard one woman say to another, "I have just been in to see poor Mrs.—— and I tell you I pity that woman, for one of the children is sick, and she has no one to help her and everything is upside down."

Now, did that woman pity poor Mrs. —— with a helping hand, and help her to turn things rightside up again, or did she just pity her with her tongue? If our pity don't extend to our fingers, or down into our pockets, it don't do the needy one any good, and we might as well keep our pity to ourselves.

Pity may be all right, but if we don't pity the object of our pity enough to lend them a helping hand, our pity is only on our tongue, and don't have even a tiny corner in our hearts.

A gentleman of my acquaintence, whom I have often heard expressing pity for others, extended the helping hand to those of his own church, who needed help. I also heard him say once, that he had never in his life given a penny to a beggar, because it might encourage idleness.

Sometimes a helping hand with a nickel in it may mean a loaf of bread to some starving beggar, and keep him or her from seeking the waters of the river for relief from hunger.

A helping hand at the right time, may prevent some young life from being stained by the crime of stealing, for there are many who would not steal under ordinary circumstances, yet will steal before they will starve or see some one they love starve. But in that case I have no doubts as to where the sin belongs,—to the one that steals or the ones who refused to give the helping hand, which, if given, might have prevented the theft. An empty stomach don't make Christian children.

Right here, in my own native town, there are wealthy people who will extend the helping hand to

the churches, and the sufferers from floods or fire, but they give not a nickel's worth of help to the ragged newsboy or to the old, blind beggar.

There are some people in this world too selfish to lend a helping hand to anyone,—not even to their own brothers or sisters. It is help yourself with them. Some only lend a helping hand, that they may brag about it afterward.

The true helping hand, is the one that helps with a heartfelt desire to make some one's way brighter, whether it be with money from their purses, or a few hours' work with their hands, or brains, or just a pleasant smile and a kind word.

If we are poor in purse, I am sure that kind words and cheery smiles won't bankrupt any one, neither will an hour's work, for a friend in need of it, hurt our hands, or bodies. It will do others more good than pity will, without the helping hand.

ROAD CUSTOMS.

THE rule of the road is curiously different in different parts of the Anglo-Saxton world. When, for instance, an American who is riding or driving meets another rider or conveyance in the road, he turns to the right. The Briton, on the contrary, turns to the left. But if a walking Briton meets another pedestrain in the road or on the sidewalk, he turns to the right.

The requirement to turn to the left is a matter of statute law in Great Britain, having been a part of the highway act of 1835. In the United States the exactly opposite rule has been enacted into law in several States and in the other States is so much a matter of common usage that a driver who violates it is responsible for the damage caused by a collision. In the continent of Europe it is the general rule to turn to the right. Turning to the left seems to be an insular peculiarity to the United Kingdom.

Why opposite rules should prevail in England and in a part of the United States which, like New England, derived all its ordinary customs from old England, is not clear; but the reason for turning to the left is perfectly plain. It is the custom not only in England but in America, for the driver to sit on the right side of the vehicle; and the driver who sits thus can keep his wheel in view, and also that of the passing conveyance, much better if he passes to the left, and keeps his right shoulder to the other man's right shoulder.

It may be, therefore, that the practice of turning to the left with vehicles has grown up since the times of peace and security on the road have made weapons unnecessary. In America we may have preserved the earlier usage of England itself, as has been the case with other customs that have been dropped there but carefully preserved here.

THE POWER OF INFLUENCE.

RICHARD SEIDEL.

AROUND each person is a subtle atmosphere in which he lives and moves. It is a part of himself—it is his personality, and whether it be weak or strong, it leaves an impression on his associates.

This power, when exerted to sway the feelings or conduct of another, is called influence. An influence for good, like the sunshine, is cheering, life-giving, invigorating, while its opposite could better be compared to a poisonous vapor, blasting, deadening to soul life and growth.

Influence is very subtle in its action, working gradually to its culmination. We can hardly estimate what our influence means to another. It is not only felt today, tomorrow, or next week, but it reaches forward even to eternity. On every page of history we see the effect of conditions and events of the past. We read of what powerful minds have done in bringing order from chaos at the time when we were without a settled government. We see the degrading effect of slavery upon the people and the country, and later we see the influence of the Civil War. All this is felt by us today, though we may not be aware of the fact.

Paul said, "None of us liveth to himself and no man dieth to himself." He also admonishes us to put no stumbling block in another's way, but rather to "bear the infirmities of the weak," and set a noble example to our brethren who are weak in the faith. "If meat make my brother to offend, I will eat no flesh while the world standeth." Doubtless these words have influenced thousands of earnest souls, and will many more. Evidently it becomes the duty of all Christians to resolve,—If an unpleasant and wrong act, look, word or manner, will cause my friends to fall, I will deny myself of them "while the world standeth."

Not only great apostles, like Paul; great preachers, like Beecher; great generals, like Grant; or great men and women in other vocations wield a powerful influence, but every one, has a mighty power for good or evil in the circle in which they associate. There is nothing of so much value as the human soul, and it is a very solemn matter that we are accountable for the influence of our example in the sight of all men.

"If any little word of mine
May make a life the brighter;
If any little song of mine
May make a heart the lighter;
God help me speak that little word
And take my bit of singing,
And drop it in lonely vale,
And set the echoes ringing.

A NEW YORK editor chaffs a brother of the quill for writing an essay on "Bustles." Well, some bustles project sufficiently to write an essay upon them.—*Boston Sunday Budget.*

Baily's Falls and Deer Park

O. H. Kimmel

The average person, I am told, considers any allusion to Illinois natural scenery as a jest too ludicrous to command a moment's serious consideration.

Deer Park Canyon, LaSalle County, Ill.

Yet for all this, the great old state of the prairies surprises those who acquaint themselves with its length and breadth of continuous territory. To be sure, the level plains of the north, the middle, and well down into the south, give little toward breaking the monotony of like things. But yet interspersed between the plains and prairies and woodlands, here and there, are some places of considerable natural beauty.

Two of these places are Bailey's falls, and Deer Park. One may approach near the Falls which are located in an arm of the Vermilion River in LaSalle county, only a few miles from Starved Rock—by taking the Illinois Central Railroad out from LaSalle. On leaving the train in the vicinity, the sound of the falls some one fourth of a mile away gives us the secret of direction, and soon we may wander right up to the phenomenon.

There, sure enough, before our eyes is quite a large stream of water rolling over a bed of Trenton Limestone into a sandy gorge below. As the stream approaches the falls the water spreads out in a shallow rock bedded channel, which is usually not too deep to wade. Persons enjoy wading into the stream up to the shoe tops and stand by the edge of the falls and watch the clear water roll downward into the stream below. By climbing down on the rocks one may walk in under the falls behind the rolling water and imagine, for a time, that he is in the cave of the winds at Niagara.

The scenery in the vicinity of the falls is quite picturesque, and quite different from the great stretch of country all around. From this region, across the country to Starved Rock, a few miles distant, almost all of the way is a continuous stretch of broken and picturesque country, which, in its geological formation, stands, in Illinois, almost in a class to itself. The falls, gorges, potholes and canyons with their peculiar vegetation are quite foreign to the greater stretch of the remainder of the state.

Deer Park, a few miles away from the falls, is a strip of rugged and beautiful country on the banks of the Vermilion river, which has been purchased by a philanthropic gentleman and set aside as a nat-

Baileys Falls, LaSalle County, Ill. Notice the Persons Standing in the Water Watching the Falls.

ural park. In approaching the park one has the thrilling experience of walking over a swinging footbridge in crossing the Vermilion river. Within the park are wonderfully beautiful canyons, springs and sparkling streams. The walls of the canyons are of St. Peter's sandstone, which is a beautiful color. They extend upwards probably seventy-five or eighty feet, giving, for Illinois, that strange, wild experience which is not looked for beyond the Alleghanies until the Rockies are reached.

As we look upward from the bottom of these canyons, and then across their width we could not help meditating on their age and the wonders that have been achieved here by "little drops of water." At one place a very small stream was rolling from its upper bed into the canyon, breaking into mere spray as it reached the rocks below. At another place the stream,

Swinging Bridge Leading Into Deer Park, LaSalle County, Ill.

at times when the flood was high, had penetrated the softer strata of sand rock and cut a tunnel across a bend in the canyon. The streams at the tops of these canyons are very small, and when one takes into consideration that they have cut great gorges into solid rock so deep that a man can scarcely throw a stone out at the top, and the width of the chasm as wide as a broadway in a large city, there can be no doubt that a person will wonder at what he sees.

Many beautiful, and some strange plants grew along the sides of the canyons. The rock, in many places, had been colored by the action of atmospheric agents, and in other places it was as white as snow. In some places little springs gushed forth and sent their yellowish streams splashing down the rocky side. Here and there are boulders strewn across the bottom of the canyons, and often small cavities in the canyon's rocky bed are filled with sparkling clear water. True, this scenery is small and insignificent by the side of Niagara, and the Grand Canyon of the Colorado, but occurring, as it does, in a state famed for its level prairies and its monotonous stretch of cornfields it is very interesting and it invariably surprises the sight seeing parties as to its size and grandeur.

QUAINT AND CURIOUS EPITAPHS.

"My name, my country,—what are they to thee?
Or whether high or low my pedigree?
Perhaps I far surpassed other men;
Perhaps I fell below them all—what then?
It sufficeth, stranger ,that thou seest a tomb:
Thou knowest its use,—it hides—no matter whom."
—From a South Carolina cemetery.

(The following is a copy of the epitaph of a watchmaker, written by himself, in which he is compared to a watch that has run down.)

"Here lies, in horizontal position, the outside case of George Ritter, whose abiding place in that line was an honor to his profession. Integrity was his mainspring, and prudence the regulator of all the actions of his life. Humane, generous, and liberal, his hand never stopped till he had relieved distress. He never went wrong, except when set a-going by people who did not know his key. Even then he was easily set right again. He had the art of dispensing his time so well that his hours glided by in one continual round of pleasure and delight, till an unlucky minute put an end to his existence. His case rests and molders and decays beneath the turf, but his good works will never die."

A Requiem.

(While this is not wholly an epitaph, yet the last three lines have been graven on the tomb of their gifted author, Robert Louis Stevenson, who lies buried in far-away Samoa.)

Under the wide and starry sky,
Dig the grave and let me lie.
Glad did I live and gladly die,
And I lay me down with a will.

This be the verse you grave for me:
Here he lies where he longed to be;
Home is the sailor, home from sea,
And the hunter home from the hill.

PETITION.

RICHARD SEIDEL.

Search Thou and try me Lord, and see
If all my powers are turned to Thee;
If all my motives, aims and strife,
Tend only to a nobler life.

Search Thou and try me, Lord and find
If in all cases, I'm resigned
To be, to do, to act or share
The burdens which are mine to bear.

Search deeper still my heart, I pray,
Until the record of each day
Meets Thy acceptance fully, Lord,
In thought and purpose, deed and word.

OUT OF WORK.

One of the senators from Georgia tells of a darky in that state who sought work at the hands of a white man. The latter inquired whether the negro had a boat. Upon being answered in the affimative, he said: "You see that driftwood down the stream?" "Yassah." "Then," continued the other, "row out into the river and catch it. I'll give you half of what you bring in." The darky immediately proceeded to do as instructed and for a while worked hard. Then of a sudden, he ceased to labor and pulled for the shore. "What's the trouble?" asked the employer. "Look hyar, boss," said the darky indignantly, "dat wood is jest as much mine as yours. I ain't gwine to give yo' any. So I'se outer work again!"

"WHO ARE YOUSE, ANYHOW?"

Toward the northern end of the long, narrow island over which New York's piles of brick and stone are spread, stands a fine, old colonial mansion. Before it one day last summer stood a number of children from the East Side, listening eagerly to a sweet-faced woman.

Two rough-looking boys, not of the party, presently appeared at the edge of the group. They were dirty, ragged, and by no means prepossessing of contenance.

"Who are youse, anyhow?"

The harsh demand, proceeding from one of the new arrivals, interjected itself with startling effect into a pause of the talk. The children turned hastily, and the speaker's cheeks reddened, but she checked herself. Then, leaving her talk momentarily, she replied with the utmost courtesy to the rude challenge, quite as if some one had asked her to have another cup of tea.

"I'm a nature-teacher from one of the vacation schools down-town," she said, pleasantly, "and these are my pulpils. We've just been visiting Fort Washington Park, to study these trees, and now we're looking at this delightful old Morris House, where General Washington once stopped—"

Here Miss R. returned to her theme, paying no further heed to the boys, although leaving them to listen with the others, if they liked.

"My work accustoms me to rough manners," said Miss R., relating the incident, "but there's something peculiarly irritating in that slangy challenge to one's identity. I very nearly rebuked the boys, for an example, as we try to teach politeness as well as nature and history.

"But *I'm* learning some things myself—in particular, that if one refuses to take offense, the offense, even when purposely offered, seems to get lost. And I'm finding this discovery of mine—that it takes two to make an offense—of the greatest use in dealing with children whose ways are anything but gentle at first."

Ten days later Miss R. looked up from her desk to find the two boys before her, their heavy faces lighting up marvelously at sight of her. For they had tramped for days, from one East Side vacation school to another, to find the sweet-faced woman who had so courteously answered their question, and at her feet they sat until the summer session closed, learning whatever she wished to teach them.

"You see," concluded Miss R., "that question was really put in good faith, to ascertain who we were and what we were doing. This was a case where no offense was offered, though you wouldn't have guessed it. And seeing the change in these boys, I'm truly thankful that I stopped to explain who 'youse' might be, 'anyhow'!"

GOOD COUNSEL.

R. T. LOCKWOOD.

Let no bad word be spoken
Let every heart be true
Be no fair promise broken
Both wisely think and do.
Let not the soul grow weary
Nor faint the wounded heart
The world, though cold and dreary
Will yet some bliss impart!

Mankind are near related
In all their loves and hates
And well, or sadly fated
Each shares in life's estates!
Kind mother nature ever
Will pass each saddened soul
Beyond grief's realm forever
To heaven's blissful goal!

Then kindly aid each other
With charity all bless
Regard each man a brother
And heal all sore distress
Then all will be the better
And peace and joy control
Thus breaks the last sad fetter
From off the human soul.

CONSIDERING THE PROBABLE.

So long as marriages are made and the homes must be kept, just so long will women be expected to shoulder the responsibility for the happiness of either. As about every girl expects to marry and have a home to keep, it is just as well to give each of them at least a preparatory course in the education demanded by either. Not all girls take kindly to housekeeping, any more than every boy looks to mechanical labor as his life work; but both boys and girls should be taught that there are certain inevitables in life—especially in married life—from which there is no getting away, no matter how much love and unselfishness there may be on either or both sides. It is admitted that the husband should be the bread winner, and that the wife will do her part if she "stays by the stuff" while her

warrior goes down to do battle with the world's work. When this is done, it is but just to the wife that the two should "part alike" in the spoils—that the wife be considered an equal partner with the husband, if she cares for and looks after the spoils of the industrial fight the husband wages. No woman can do this, however, if she is ignorant of the simple elements of good management, and the bitter lesson learned through the wasteful school of experience does not always make for the highest happiness of either party to the marriage contract. The fact that the home-making is given over to the woman does not mean that she can or should do nothing else; but that she can do this better than any other person, and because the home-making instinct is born in every woman in some degree. If she marries, she must accept this fact, and should be prepared for its responsibilities, though it does not necessarily follow that all labor must be performed by her hands, or that the means and methods admit of no variation from prescribed rules. But it does mean that marriage is not to be entered into without seriously considering its demands and responsibilities, and if these are understood and accepted, a consecration of our best powers and abilities to the work of making the home life a permanent one. And for this, much preparation is demanded.—*The Commoner.*

THE GRANDEUR OF WOMEN.

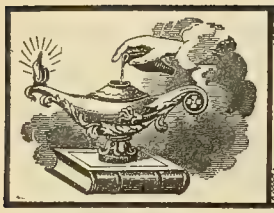
When you want to get the grandest ideas of a gueen, you do not think of the great queens of the great countries of the world, but when you want to get the grandest idea of a queen, you think of the plain woman who sat opposite your father at the table, or walked with him arm-in-arm down life's pathway; sometimes to the Thanksgiving banquet, sometimes to the grave, but always together—soothing your petty griefs, correcting your childish waywardness, joining in your infantile sports, listening to your evening prayers, toiling for you with needle or at the spinning-wheel, and on cold nights wrapping you up snug and warm. And then, at last, on the day when she lay in the back room dying, and you saw her take those thin hands with which she toiled for you so long, and put them together in a dying prayer that commended you to the God whom she had taught you to trust—oh, she was the queen! The chariots of God came down to fetch her; and as she went in all heaven rose up. You cannot think of her now without a rush of tenderness that stirs the deep foundations of your soul, and you feel yourself as much of a child again as when you cried on her lap; and if you could bring her back again to speak once more your name as tenderly as she used to speak it, you would be willing to throw yourself on the ground and kiss the sod that covers her, crying, "Mother, mother!" Ah! she was the queen—she was the queen!

CANAL BOAT ROOF GARDENS.

Family Parties from Up State in Comfort at New York.

This is the season when the Erie canal navigator, sometimes irreverently referred to as a canaler, takes along his family, generally numerous and nearly always a bit brighter than the average up-state residents, to keep him company, says the *New York Sun.*

The canal boat owner, as a rule, the skipper also, is the properest man between Buffalo and New York city in the period when his children are on vacation. He believes in education and he sees to it that the little folks get as much of it as may be had by attendance at the public schools of the various towns along the line of the Erie.



The youngesters look forward to July and August, because they know that they will get a fleeting glimpse of many cities of their state and maybe a week or more of pleasure in the biggest show town of the continent. It is not far from Erie Basin or Coenties slip, where the boats tie up while waiting for cargoes, to Coney island. Life aboard the boats, the cabins of most of which are nearly then the dining rooms of the average country home, is not half so bad as life in the usual run of flats hereabout.

The skipper is not the man depicted by the old-time generation of humorist. He does not swear at his mules, many of which nowadays are horses, and he even frowns upon the driver who indulges in cuss words.

Between this port and Troy, where the horse or mule power is turned off or on, depending on the direction the boat is going, the skipper's boat forms part of a big tow and he has to do practically nothing except to see that his animals are looked after properly. He keeps them in good shape, because if he does not they may fail him in emergency. It is pleasant sailing from Troy, and after the cargo, usually grain at this season, is discharged, the boat ties up with a lot of other mastless craft and the family particularly the little ones, go in for a good time.

They put on their store clothes, take rides and strolls through the city and trips to Coney. They do not come back to stuffy rooms. On the after deck, completely covering the top of the cabins, on all boats owned by their skippers are spread awnings sometimes of the regulation striped stuff and sometimes of canvas.

Whatever adds in even the smallest way to the world's brightness and cheer is worth while. One who says an encouraging word to a disheartened neighbor, gives a look of love to a lonely one, or speaks a sentence which may become strength, guidance and comfort to another, does something worth while. It is always worth while to live nobly, victoriously, struggling to do right, showing the world even the smallest fragments of divine beauty.

THE QUIET HOUR

SERMONETTE.—God's Presence.

"I will not leave thee, nor forsake thee."—Josh. 1: 5.

WHILE God does not promise the *same* amount of help to each worker he does promise a *sufficient* amount. Difference in kind of work requires difference in amount of skill, so that our needs vary with our callings in life. The work of Moses was that of a moral and civil law-giver, while the work of Joshua was largely that of an army general, but the same God supplied strength for these two men by the same spirit.

The same promise of God's companionship is made real and actual in the life of every worker in God's kingdom today, although some believe or experience this until after the task is done or the trial is past. Then after the self weakness and failures become bare they can discern the unseen hand that filled up, culled out and guarded against, and perfected the work. Leadings, overrulings, strengthenings from God follow us all our lives. Perhaps the reason why some do not experience these things is because they have never undertaken great things for God, but have lived with self as their sole object. We prefer to give the Lord the truth of his promise to helf us and whenever you strike that plane of life his promise will face you every day as plainly as does the golden rainbow in the clouds.

How much better it would be for his children and for God could everybody incorporate this promise into his daily work. It would save nervous energy and complete more of the plans of life. To be conscious of infinite help in case of need is inspiring and strengthening. God's assurance of victory is life giving. When an official of the U. S. goes forth to his work he knows that the government is behind him. Eighty million people are his servants. Just so when God says "go," his universe of infinite power upholds our efforts. Thanks for this cheering promise, "I will never leave thee nor forsake thee." Nothing better could be given.

I KNOW THAT MY REDEEMER LIVES.

I know that my Redeemer lives,
What comfort this sweet sentence gives!
He lives, he lives, who once was dead;
He lives—my ever-living Head.

He lives, to bless me with his love;
He lives, to plead for me above;
He lives, my hungry soul to feed;
He lives, to help in time of need.

He lives, and grants me daily breath;
He lives, and I shall conquer death;
He lives, my mansion to prepare—
He lives, to bring me safely there.

He lives, all glory to his name!
He lives—my Jesus, still the same;
O, the sweet joy this sentence gives,
"I know that my Redeemer lives!"

Samuel Medley.

IT PAYS TO BE CHEERFUL.

FROM a purely selfish point of view it pays to be kind and pleasant. Nobody can succeed who is churlish and unkind. If one is obliged to say no he can say it in a pleasant way and not leave a sting behind. It is to the pleasant clerk, the cheerful agent, the kind doctor, the optimistic business man, one invariably goes. Good nature is capital, to say nothing of being an aid to digestion. Trouble, annoyance, disappointment come to all. This world has enough of sorrow without hearing your plaint. Be self-centered and hide your trouble under a calm exterior. It will not aid you to be cross and grumpy and spiteful. Be above such petty meanness. Learn to be strong, to be courteous, to be kind. Be wholehearted and generous as befits your station. "Neither a spend-thrift nor a miser be." Do these things and you will make the right kind of friends ,and what is of still greater importance—hold them to the end of life.—*Selected.*

"As a man thinketh, so he is." The condition of the mind has a wonderful influence upon the state of the physical health. To be bouyant, elastic, and cheerful, is to give corresponding activity and elasticity to the varied vital functions, while to be gloomy, and depressed in mind, is to depress the functions of liver, stomach, bowels, kidneys, skin, and so torpify the general powers of life. Cheer up, reader, throw away gloomy thoughts, and enjoy the sunshine.

"This world is not so bad a world
As some would like to make it.
But whether good or whether bad
Depends on how you take it."

Cultivate a faith in nature's God; let that sour discontent disappear, and the sweet, loving ministries of nature shall cheer thy heart, and cause gratitude as well as charity to overflow. Cheer up, chase away the frowns and cultivate the smiles; banish the tears and learn to enjoy life, as only those can who love its Author.—*Health Journal.*

WHAT A KIND FRIEND DID.

NORA KINGERY.

SITUATED near the bank of a small creek in Carroll Country, is a house of worship. In this sunshiny place, one beautiful morning in September, everything seemed to be in the spring-time of life. You could see flowers in the fullest of bloom. You could hear birds singing their choicest songs, and children join in the chorus, to drown the silence of nature.

But was everything in the spring-time of life? No, not everything. One heart, of which I was the owner, seemed to be in the depth of winter. But why? Just as I was about to enter the temple of the Lord, my heart grew heavy. For just outside the door, two friends were conversing together and something seemed to tell me that they were speaking of me. Those two friends were soul-winners for the Lord, and they were planning some way by which they might win my soul for Christ.

After entering the church and seating myself by the side of a friend, I witnessed those two missionaries coming up the aisle. They seemed to be searching their minds for an expression that would turn the hard heart of a sinner. It may be they were asking the Lord to help them, for they knew without him they could do nothing.

Presently I heard a kind voice say to me in a soft tone, "Are you going to let Satan control you?" No one except those, who have had experience along this line, can know what an impression it had upon my mind. It sent a chill of fear through my veins. Why? Because I had not until that moment fully realized that I was under the control of Satan.

Those words haunted me day and night for some time. I could think of nothing to do or say but what they would first present themselves into my mind. That kind friend had pasted them so firmly on the walls of my mind, that I could not forget them.

Finally, one beautiful afternoon I was left alone to do as I liked. Being glad for the chance. I sat down and began to wonder what to do to rid my mind of the terrible burden, that was resting upon it. I asked myself this question, "If other people are so anxious about my soul, why am I not anxious about my own soul?" I could find no answer that satisfied my mind. All that I could think of did not relieve me of my burden, but caused it to grow larger and larger. I could not rest. My heart was longing for something that would give me peace. Being satisfied that Satan would never give me peace, I set to work to find the treasure. Did I find it?

That night as I was seated among a large crowd, that had gathered together to hear the Word of God, a Friend came to the door of my heart and softly knocked. I opened the door wide and bade him in, and to my surprise he brought me a precious gift. That gift was peace, the peace I had been seeking. It soothed my longing heart and brought the blessed Spring-time to my soul. The heavy burden that was reting upon my mind disappeared. Why? Because, I was no longer under the control of Satan, but accepted Christ as my guide.

Those words, "Are you going to let Satan control you?" spoken by that kind friend and by the aid of our heavenly Father, caused me to turn from the sin of this world and put on the armor of God. May the Lord bless and strengthen that dear friend, that he may be the means of leading many souls to Christ. May he never pause a moment in asking a sinner, "Are you going to let Satan control you?"

Bringhurst, Ind.

CONVERSATION.

THE tone of good conversation is flowing and natural; it is neither heavy nor frivolous; it is learned without pedantary, lively without noise, polished without equivocation. It is neither made up of lectures, nor epigrams. Those who really converse, reason without arguing, joke without punning, skillfully unite wit and reason, maxims and sallies, ingenious raillery and severe morality. They speak of everything in order that everyone may have something to say; they do not investigate too closely, for fear of wearying; questions are introduced as if by-the-by, and are treated with rapidity; precision leads to elegance, each one giving his opinion, and supporting it with few words. No one attacks wantonly another's opinion, no one supports his own obstinately. They discuss in order to enlighten themselves, and leave off discussing where dispute would begin: everyone gains information, everyone recreates himself, and all go away contented, nay, the sage himself may carry away from what he has heard matter worthy of silent meditation. —*Northwestern Christian Advocate.*

BY an exchange six reasons are given for lean Christians:

(1) They own Bibles, but feast on newspapers.

(2) They sing about peace, but do not surrender to it.

(3) They pray that the kingdom of heaven may come, but block the way by worldly living.

(4) They listen to sermons on unselfishness, but hamper themselves on food and dress.

(5) They wear crosses, but shrink from bearing them.

(6) They declare Christ with their lips, but declare the things he did wholly impracticable.—*Exchange.*

IF we have but the faith and wisdom to perceive it, we shall see that all things and everybody are contributing to the purposes of Christ.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, $1.00 per Annum, in Advance.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

ONE OF CANADA'S GOOD LAWS.

CANADA has recently added new laurels to her name by placing all differences of agreement between employer and employee under government authority and supervision. If a labor organization becomes dissatisfied with labor conditions, it must first appeal to the federal court for investigation and adjustment before declaring a strike. Severe penalty is inflicted if the leaders fail to do so. On the other hand, before a corporation can cause a lockout or make changes that may precipitate a strike, it, too, must submit to the same federal tribunal, or else become criminal in the eyes of the law. There is such a fairness about such sound sense legislation that evidently labor and capital will agree to such arbitration without a murmur. We may expect this law to minimize the number of strikes and materially reduce the unfriendly feeling that exists between the two classes.

That the government should have the right to oversee and look into all labor disturbances goes without question. At least it is time to give the government authority to protect the innocent public from the rash acts that invariably accompany strikes. An army of men have been murdered in the United States during strikes. Guns, dynamite, bombs, knives, etc., have been the weapons so far to enforce justice. But injustice on one side never begets justice on the other. Billions of dollars worth of property has been destroyed and a demoralized condition of society exists today because of the frequent labor wars in the United States. National Commissions have been appointed for questions of far less magnitude in times past and it seems like an opportune time to attempt to settle labor wars by arbitration, since all the world is in session, trying to abolish the horrors of other wars.

Why it has taken our representatives so long to see the virtue of such legislation, is hard to tell, but let every lover of peace and justice urge his local representative to bring about a court of appeal, where labor and capital can plead their cause in fairness, and receive justice at the hand of intelligence rather than by trickery.

The past methods of adjusting these differences have bred a spirit of anarchy that threatens to deluge the nation with human blood at no far distant day, unless present tendencies are shut off. Simple justice and plain common sense demands our attention to these social and economic questions.

A WORD TO INGLENOOK AGENTS.

WE wish to announce that a great deal of new matter and somewhat of a new policy has been provided for the NOOK. New life, new interest and subscribers in large numbers are expected as we go along.

If you are wanting a good watch, fully guaranteed for either men or ladies, just look in the NOOK in a few weeks and see the offer we make. We refuse to give any shoddy premiums of any kind for if we can not secure you the best paper, with the best reading, and best premiums we will quit short off. An accurate timepiece in best case for only a few subscribers is our offer.

Then there will be a bicycle for the boys and girls. Also a set of dishes for the women. And all of the above for a few hours work.

We repeat that it will be to your interest to wait a few weeks and see our offer.

Those who want something more valuable, we promise to assist in securing a college education. We have arrangements completed with one first class college by which we can grant you a year's tuition for a few day's work.

Then we expect to offer a high grade piano, worth not less than three hundred and fifty dollars, for those who want something in that line. Sets of books,—a child hand organ perfect in tone and accurate in delivery—and smaller articles are also being provided for those who want them.

It is our intention to begin an enthusiastic campaign for INGLENOOK subscribers within a month and double our present list. You may put it down, that such offers as we make are very rare. Nothing but the best articles, and all of them on very easy terms. Tell your friends that the INGLENOOK has something in store for them in the way of fresh, racy, original and helpful matter. The NOOK is not ashamed of its past clean record at all but it does promise the greatest amount of clean reading matter for the price that can be found anywhere, when the entire makeup of the paper is considered.

Get in touch with the NOOK MAN and he will help you get ready for the work.

A THING is never worth while doing if it does not do us some distinct good, if it does not make us better, whether spiritually, mentally, or physically.

POSITION AND ABILITY.

He who would have position should first seek ability for it. Many persons forget this, and hence we see incompetent men depending upon their subordinates for skill and wisdom to exercise their proper functions. Such men are necessarily despised by those beneath them. He who would control and direct matters needs to have, not perhaps all the special knowledge which the whole of his subordinates combined possess, but a general understanding of the management of affairs, more extensive than that of any of those beneath him. In that case, instead of looking upon him with disguised contempt, as an intruder and interloper, they turn to him with confidence for direction and for aid in time of emergency. He who fills any place of responsibility should have such acquaintance with its affairs as to be able to respond to any call which shall be made upon him by adverse or dangerous circumstances. He should be a man to whom men cling, and in whom they can trust in time of trial and calamity; unshaken in his integrity, unblemished in his life; with a mind quick and ready for any special need. Such a man will command the respect and win the love of his associates, for they will see that he has ability as well as position, that he occupies a place of honor because he is fit to bear its responsibilities.—*The Amory.*

A PAIR OF ELEPHANT TUSKS.

An extraordinary pair of elephant tusks lately shown in London measure in length eleven feet five inches and eleven feet respectively, but each has a girth at the base of only eighteen and a half inches, and together they weigh but 293 pounds. The great length and slenderness of these tusks as contrasted to the usual comparatively short and stout ones have suggested to Professor Rowland Ward that there may be two races of elephants in east Africa, the supposed source of the tusks. Absence of wear at the end of the tusks indicates that the elephant differed from the common ones in not digging for roots.

Religion is something which a man can not invent for himself, nor keep to himself. If it does not show in his conduct it does not exist in his heart. If he has just barely enough of it to save himself alone, it is doubtful whether he has even enough for that. Religion ought to bring out and intensify the flavor of all that is best in manhood, and make it fit, to use Wordsworth's noble phrase,

"For human nature's daily food"

Good citizens, honest workmen, cheerful comrades, true friends, gentle men—that is what the product of religion should be. And the power that produces such men is the great antiseptic of society to preserve it from decay.—*Henry Van Dyke.*

THE LARGEST RIVER.

A sea rather than a river is the Amazon with 160 miles of width at its mouth. The Amazon drains a territory of 2,500,000 square miles, ten times the area of France, and in connection with itself and its tributaries there are said to be 50,000 miles of navigable water, one-half of which is suitable for steam navigation by large vessels. The number, length, and volume of the Amazon's tributaries are in proportion to its magnitude. More than twenty superb rivers, 1,000 miles and upwards in length, pour their waters into it, and streams of less importance are numberless. At the junction of the Ucayali with the Amazon, a line of fifty fathoms does not reach the bottom, and in breadth it is more like a sea than a river. The longest tributary, the Madeira, has a length of 2,000 miles. The distance from the source of the Amazon in the Andes to the Atlantic ocean is 2,000 miles in a direct line, but by the course of the river it is nearly 4,000 miles.

We can serve God acceptably in any sphere; every calling may be made a divine vocation. The great mistake of many is that they feel they must leave the carpenter's plane, give up the trowel, and enter some learned profession. God says, "What is that in your hand?" In Moses' hand was the shepherd's crook, in Solomon's the scepter, in David's the sling or the harp, and in Dorcas's the needle. The Bible is God's tool-chest. The Word of God is adapted to every purpose.

A clergyman relates that early in his ministry he and another brother were conducting a meeting in which there was much religious interest. An old man gave expression to his joy by shouting, and continued it until it began to interrupt the services. Brother H— said to brother W—, "Go and stop that old man's noise." The shouting man at once became quiet. Brother H. asked brother W. what he said to stop him so quickly. Brother W. replied, "I asked him for a dollar for foreign missions."

A MISTAKE CORRECTED.

Last week the inking rollers pulled out the first two letters in W. A. Dickey's advertisement of an "Indestructible Fence Post," which made it read "Destructible Fence Post."

Accuracy and justice in all matters is our aim and those who receive a Nook with that mistake in it will please bear our correction in mind. How many copies went out before the mistake was corrected we do not know, but we give this free notice of his fence post which will fully offset the error of last week.

Echoes from Everywhere

A WASHINGTON dispatch says that it will take 253,000 tons of coal to transport the Atlantic fleet to the Pacific coast.

THE apple crop this year promises to be one of the shortest for many years. The frosty month of May over a large area of the United States made the entire fruit season unfavorable.

THE Japanese government has awarded W. D. Stevens and H. W. Dennison, two American lawyers, $10,000 each for legal services rendered during the late Russo-Japanese war.

NINE torpedo boats were recently contracted for at $3,000,000. Should war cease the government would be puzzled to know how to spend all her money for useful articles.

ONE of the newspapers of Peking, China, lately celebrated its five-hundredth anniversary. Many of the former editors were beheaded for objectional news and comments, but the paper lives on.

IN Mississippi they believe in bringing railroads up to the letter of the law. Every railroad in that State was recently indicted for failure to report some phases of their business which the law said should be made public.

THE Civil War was ended forty-two years ago, yet there are nearly 1,000,000 people drawing pensions for some disaster of that bloody strife. The number is now gradually decreasing, having reached the maximum in 1905.

The next new fad about to be sprung is the growing of weeds for medicinal use. At present medical herbs are nearly all imported, although the last few years the Yankee has begun to see big profit in the business and now burdock, golden seal, pokeweed, boneset, lobelia, etc., are being planted in many sections.

8,000,000 acres of land in the Everglades of Florida are being drained and fitted for farming. Uncle Sam has enough spots like this scattered over his domain to home the entire present population. Arid lands, mountain valleys, swamp lands, etc., are yet to be made habitable by man's skill.

ONE of the novel features at the National Corn Exposition at Chicago, October 5 to 19, is a model farm in miniature. Everything on the farm is supposed to be arranged perfectly so as to give an object lesson to those who come there to learn.

THE telegraphone is coming into use. This machine records the human voice on thin sheets of steel which can be mailed in an ordinary envelope, and the receiver can place these sheets on his machine and reproduce the voice of the original speaker. Private matters can thus be transmitted more safely than over the telephone.

AMERICAN civil engineers are in great demand abroad. Many of them are building gigantic structures in South America, tunneling mountains and directing industrial undertakings by the score in that country. Just recently Mr. Jacobs, of New York, secured the contract from the French government to tunnel under the Seine River for one mile for $10,000,000.

WE complain much about the heavy immigration to this country, and yet in proportion to area England annually receives more emigrants than the United States. If misery likes company this ought to give some relief. The facts are these: 38,527 Russians, Poles and Hungarians settled in England last year,—that is one emigrant to each one and one-third square miles, while the million and over who came to the United States only rated one to each three square miles of territory.

A SPECIAL commission headed by James B. Reynolds, assistant secretary of the treasury, is investigating export prices and foreign market values in Europe. It is only a question of time until the markets of the world will be fixed on a reciprocal basis. Indeed, the many modern treaties all partake more and more of a commercial nature. Would any one ever dream of some future magnate getting a corner on the world's commodities? Great, world-wide events are becoming easier than ever before.

INCREASED growth and traffic keeps New York in a congested state all the time. Underground railways have become common and more are to be built. Just now a tunnel under the neck of Long Island Sound into New Jersey is being pushed. It is claimed that this tunnel would shorten the time to Chicago fully one hour, since it would give trains a free course to go right ahead instead of being bothered with so many street crossings, as it now is. From Broadway to Jersey City in three minutes instead of an hour is what this engineering feat would accomplish.

THE annual soil production of the United States is estimated at $4,000,000,000. The farmers receive this much, but the consumers pay $12,000,000,000 for these same products, leaving a gain of $8,000,000,000 to the middlemen. It does look as though some system ought to be devised soon that would equalize this unreasonable, large profit to the nonproducer. In short, it costs two dollars to sell one dollar's worth of produce in our present system. Mr. James Wilson, Secretary of Agriculture, has given out the above figures and calls attention to the matter.

A SHARP feeling is growing rapidly in the grain regions of this country between the grain raiser and the grain buyer. All over the West the farmers are building coöperative elevators in which the profits revert to the farmer. Very severe claims are brought against the grain buyers in which the farmer claims to be robbed of his hard-earned share of profits. One organization of late years has gained a membership of several hundred thousand among the farmers, who aim to hold their produce and thus force higher prices. but to suit some the price must always be a little higher than before.

IT is not generally known how dogs are used as reinforcements to man in some very important work. In Paris dogs are used on wharfs to save people from drowning who for one reason or another are unfortunate enough to fall into the water. Some city policemen have large dogs as assistants. Thus as life savers and detectives they prove their value. Some of them even develop the judgment to discern the character of a man, and if a suspicious looking fellow picks up a bundle in some railway waiting room the watch dog takes hold of him at once and makes him prove his identity and rightful ownership.

IN the attempt to abate the nuisance of big and unsightly bill-boards, the Municipal Art Society of New York has urged the plan of taxation. It is recognized that within limits the owner of land has the right to do what he pleases with it; but it is believed that a law taxing revenue-producing bill-boards would be declared constitutional by the courts. The society submitted a bill to the state legislature providing that all surfaces above eight feet square used for outdoor advertising purposes shall be taxed twelve cents a square foot unless permanently painted in oil, in which case the tax shall be eight cents. Rocks, trees and other natural objects, when devoted to advertising, are scheduled at a higher rate, in addition to a special tax of five dollars a year. The society has also prepared, and will urge, an amendment to the city ordinances, limiting the height of roof signs to five feet above the cornice, and imposing a tax of twenty-five cents a square foot. For city fences and bill-boards, the tax asked for is two cents a square foot. The society does not aim, or hope, to eliminate outdoor advertising, but merely to restrict it to displays of reasonable size and attractive character.—*Pathfinder.*

SOME BEST SPEED RECORDS OF OCEAN STEAMERS.

QUEENSTOWN to Sandy Hook, 5 days, 7 hours and 23 minutes. By Lucania.

Southampton to New York, 5 days and 20 hours. By Kaiser Wilhelm der Grosse.

Sandy Hook to Pylmouth, 5 days, 11 hours and 58 minutes, a distance of 3,112 miles, or an average of 23.58 miles per hour.

Best day's run by the Deutchland was 676.61 miles, over 28 miles an hour.

Kaiser Wilhelm II. on one trip developed 42,400 horsepower, burning as high as 693 tons of coal per day.

Lusitania made her record recently of 5 days, 1 hour and 25 minutes.

INDUSTRIAL MURDER.

THE report of the coroner of Allegheney County, Pennsylvania, for the month of August shows that there were killed in that county—Pittsburg being the metropolis—fifty-nine men, thirty in railroad accidents and twenty-nine in the manufacturing plants. During the same month more than 300 industrial workers were more or less injured. This is a record equal to some battles which have been recorded in history. During that same month there were killed and wounded in industrial circles in the United States more workmen than there were American soldiers killed or wounded during our war with Spain. In one year American railroads kill and wound more than were killed and wounded on either side in any one battle of the Civil War. Yet this annual slaughter—which is industrial murder—calls forth only casual protest.—*Commoner.*

MORNING IN SEPTEMBER.

JENNIE TAYLOR.

Out through the sweet fresh country side,
Gayly the echoes ring clear and strong,
Up in the branches of bush and tree
The birds are trilling their morning song;

Hidden away 'mong the leaves secure,
The insect host is loud in praise.
In gowns of gold, blue, white, maroon,
Fall flowers salute September's days.

Down in the hollow and up on the hill
Droop the damp masses of golden rod,
Cooled by the breezes that idly blow
Over the stretches of stubble and sod.

Over the land swings a purple mist
Burned by the sun to a silvery hue
Which, ere the noontide's mellowed hour,
Slowly floats through a sky so blue.

All through the glinting dew-gemmed glade,
Hung to the stems of frailest reeds,
Glisten the filmy gossamer threads—
Silken webs among the weeds.

Mildly the light of broad day breaks
On ripening corn, on fruits and flowers;
The outdoor world rejoices now
In bright September's morning hours.

Tipton, Iowa.

A HELPFUL LITTLE GUEST.

IDA M. HELM.

"COME, Betty, it's time to get up," called mamma from the foot of the stair steps. Betty yawned and stretched and turned over in bed.

"Oh dear I wish I was a fine lady and could do as I please. I wish I could lay in bed till I feel like getting up," thought she. Then she turned over again and began dozing. Soon her mamma called again,

"Come, Betty; breakfast is almost ready, it's six o'clock."

Betty slowly arose and sat on the bed rubbing her eyes. "My I wish my folks wouldn't get up so early," she soliloquized, "I'm not more than half done sleeping. I wish I lived in town like Jeanette Bebee does, I wish my folks kept servants like her folks do. When I visited Jeanette we got up when we pleased and if breakfast was over Chloe prepared breakfast for us and washed the dishes. We didn't have to work but we went riding and calling and picnicking and we played games and sang and enjoyed ourselves as we pleased all day. Oh my! There I hear them sitting down to the table, I don't care much I don't like to get up so early," she said in a very ill humor.

Betty came into the dining room soon after the men had left it and when she sat down to the table she complained because her breakfast was not kept warm. Her mamma reminded her that this was the day that Jeanette was coming to repay her visit of the preceding summer and she said they would have to hurry and start for the station as soon as possible or Jeanette would arrive and find herself in a strange place and there would be no one there to meet her.

"Now if we had a hired girl we could get ready and go right away and leave her to do the work," said Betty.

"As long as we are well and strong and able to do our own work we don't need a hired girl," replied her mamma. "If we had nothing to do but play, life would lose half of its charms for me. Try to be contented and do all the good you can where God placed you, for you know the Bible says that godliness with contentment is great gain. And, Betty, don't forget the proverb, 'Satan finds some mischief for idle hands to do.' When we are busy we don't have time to get into mischief; it is when we have nothing to do that we are apt to get out of the right way and onto the road that is beset with so many snares."

As they rode along toward the station Betty kept wondering what Jeanette would think of her home and she almost wished that her mamma had not insisted on inviting her to come. So busy was she with her dread forebodings that she did not notice the beautiful scenes that were spread out with loveliness all about her.

They had only a few minutes to wait till the great engine came puffing and snorting up to the station. Betty cast quick glances from one to another of the car windows and she waved her handkerchief in welcome when Jeanette's bright eyes met hers. Jeanette was so full of life and eager anticipation of having a very enjoyable time with Betty in the country that some of her gladness was transmitted to Betty and half of her foolish fears took flight.

It was an ideal day, the birds sang sweetly, the flowers refreshed by the morning dew were looking their prettiest, and the stately corn stalks waved their long leaves as if they were saluting an old friend and the round-faced sun had on his very brightest smile. Jeanette's visits to the country were few, she could remember of only three times that she had been in the country before and then it was only for a day. And her face dimpled with smiles as she mentally took note

of birds and landscape and wide spreading shade trees.

When they came to the foot of the hill over which their home lay Betty closed her eyes and kept them shut to avoid seeing the expression of pity that she felt sure would come over Jeanette's face at sight of their house, but when they reached the top of the hill she opened them in surprise for she heard Jeanette say "Is that lovely place your home Betty?" Lovely place? Betty could hardly believe that her ears were not deceiving her. Ever since her visit to the city she had thought her home was very lowly and homely, but she only answered "Yes that is our home." As they walked along under the grape arbor, up the shaded path of the well-kept lawn, past the flower garden with its wealth of beauty and perfume, and onto the broad porch shaded with glossy green vines, Jeanette could not conceal her admiration. And when they entered the large airy living room she turned to Betty and said "You have a beautiful, ideal home Betty, are you not glad you do not have to live in the city in the summer time?" Ever since her visit to the city Betty had despised her home and she hardly knew how to answer. And she said "Thank you, but I liked your home equally as well.

When it was time to begin dinner Betty was surprised to see Jeanette come into the kitchen with a large apron on and offer to help with the work. Betty protested but Jeanette said, "I don't have a chance to learn to cook at home and I have been planning to learn while I am here and you shall be my teacher." Betty agreed to instruct her as best she could, but she said, "I will tell you at the beginning that experience is the best teacher in learning to cook."

During the day Jeanette found many things that were new and interesting to her and with such a keen observer as Jeanette for leader Betty began to see beauties in the things that she had formerly passed and scarcely noticed. Very early the next morning Betty was awakened from a sound sleep by a quick jerk at the elbow and Jeanette's voice saying, "Come, Betty I want to go to the woods after the cows while the sun is rising and the dew is on the grass and I want you to go with me."

Betty sat up and said half dreamingly, "I thought you stayed in bed till seven or eight o'clock?"

"I often do at home, but I have no woods to go to, no flowers to look at, no chickens to feed, no work at all to do so I stay in bed till late in the morning. But I have been longing to live in the country and get up early and go after the cows and feed the chickens like mamma says she did when she was a little girl and lived in the country. I have been planning for it."

"Betty found getting up at half past four a very disagreeable task and she protested against it but Jeanette was anxious to go to the woods while the sun was rising, so Betty to accommodate her friend arose and Jeanette promised that hereafter she would not get up till five o'clock.

They had a lovely time going down the long lane that was shaded by locust trees. The baby birds were just getting awake and their mammas were bringing them their breakfast, and beautiful strains of music rippled forth from their little throats as they made their journey in quest of food, the fresh, cool air was invigorating, and the drops of dew on the bright petals of the flowers looked like small crystals of ice.

When they reached the meadow they walked over the soft grass to the edge of the woods, then they stopped to consider which way to look for the cows and while they were debating the question they saw daddy-long-legs and they caught him and inquired of him where the cows might be found and after observing in which direction his long, slender limbs seemed to point they let him go on his way and followed his advice, how they both laughed when they found the cows in the direction he had pointed out to them.

"I am going to learn to milk and make butter while I am here," announced Jeanette. Mamma said I might. We miss the nicest part of the day when we stay in bed till so late in the morning," said Betty. And both girls agreed that the pleasantest time in the day is when everything is awakening from the night slumber and all nature seems glad and refreshed.

They reached home just as Betty's mamma was putting the breakfast on the table.

Day after day the girls worked together and helped each other. Betty learned to rightly appreciate her home and her friends and to fill her small niche in life as best she could. And Jeanette while she was enjoying herself learned many things that will be useful to her in after life and she returned to her city home with a determination to live nearer to the One who made this beautiful world and nourishes all that it contains.

God placed us in this world to be useful and helpful to each other and to fill the world with his praise. And he wants us to work and care for the things he gives us for our pleasure and comfort. Our brief day of life is given to us in which to work and prepare to live in a brighter world. If we are idle and slothful and spiritually asleep our opportunities for laying up treasures in heaven will slip away with all the value and beauties they contain and we will never find them again. The command is "Remember thy Creator in the days of thy youth." If we begin in the morning of life to train our hearts and lives for love and service to God and to our fellow-beings, we will have all our lives to grow more and more like the perfect One.

Ashland, Ohio, R. R. No. 2.

HINTS FOR NOOKERS.

NANCY D. UNDERHILL.

To keep flies off the screen doors in rainy weather, brush the screens with a cloth saturated with coal oil.

To keep milk from scorching when placed on the stove for custard, or pudding, add a little sugar.

Ripe peaches will not hurt the teething babe; give him all he wants, without pealing.

If baby's digestion is not good, try feeding fresh milk warm from the cow. Let the child drink as much as it will, morning and evening. If the cow is a jersey, the milk may need diluting with a little warm water.

An Indian guest says, "I know a cure for rattlesnake bites. Mash red ants, and apply to the wound."

Collbran, Colo.

STIFFENING CANE SEATS.

How many housekeepers know that if the seats of cane-seated chairs have become sagging and limp, they can be tightened by giving them a thorough washing with hot water, in which a little soda has been dissolved, and then putting them in a current of air to dry?

THE HOME DOCTOR.

To Prevent Flesh Forming.—A simple and effective way to prevent flesh from increasing is to avoid drinking at meals, and to take a cup of hot water an hour before each meal, exercising as much as possible during the day.

An Inflamed Toe-Joint.—A boracic poultice is excellent for this. Steep a piece of lint in boracic acid solution, lay this on the joint with a piece of oiled silk over, keeping it in place with a narrow bandage. Do not wear shoes that press the feet in any way.

A hot salt bath, prepared by adding a teacupful of sea salt, purchased from your druggist, to the water, which must be warm as possible to stand, then rinsing off in clear water, followed by a good rubbing will be found to be real strengthening for a child just recovering from the numerous diseases of children.

In the treatment of bruises where there is extensive discoloration of the skin, if olive oil be freely applied without rubbing, the discoloration will quickly disappear. Absorbent cotton may be soaked in the oil and applied. If the skin is broken, a little boric acid should be applied over the abrasion. A black eye thus treated can be rendered normal in a few hours, especially if the oil be applied warm.

DROPSY.

Dropsy is not a disease in itself, but it is a symptom associated with a number of different diseases, chiefly of the heart and kidneys. It consists in the effusion of a watery fluid either into the loose tissues lying beneath the skin, into the cavities of the body, or into the deeper parts and tissues of the organs.

The term edema is applied to a dropsy of the deeper parts of the body as well as to that of the tissues just under the skin. The effusion of fluid into the abdominal cavity is called ascites.

The fluid of dropsy is usually clear and of a pale amber color, although it may be cloudy or even milky, or it may have a reddish tint. The swelling of edema can be distinguished from swelling due to other causes by the fact that if the finger is pressed firmly on the skin for a moment a depression, or pit, will be caused, which will remain for a time after the finger is taken away.

Dropsy usually begins in the dependent parts of the body, the feet and ankles if the person is out of bed, either sitting in a chair or walking about. This swelling at first disappears during the night, while the patient is in bed, but returns again toward evening of the following day. Finally it increases so in amount that it persists through the night unaffected by the removal of the pull of gravity.

Dropsy may be due to a number of causes; it usually is associated with advanced disease of the heart or kidneys, but it may also occur when the blood is watery or when it contains some poisonous material which affects the lining of the minute arteries, and permits a leakage of fluid.

There are various local forms of edema which may be very serious, such as edema of the larynx or of the lungs or of the brain, but in general the condition is one which does not in itself add materially to the danger of the disease in which it occurs as a symptom.

When the amount of fluid is very great an effort may be made to reduce it by increasing the excretion of fluid by the skin, kidneys, or bowels; or in cases of extreme accumulation in the abdominal cavity a fine tube is sometimes passed through the wall of the cavity and the fluid allowed to drain away.

TO INSURE BEAUTIFUL TEETH.

No woman can be pretty, no matter how perfect her features may be, if her teeth are yellow and neglected looking. A really beautiful woman loses all her loveliness the moment she speaks if her teeth are bad, while a plain woman often appears fascinating

when she laughs or shows her teeth. The chief causes of decay in teeth are an accumulation of tartar upon them and the retention of small portions of food between the teeth, which, by fermentation that reacts on the enamel, disintegrating it, causes decay.

To preserve the teeth and save dentists bills, one should remove by perfect cleanliness these deposits before they have time to work mischief. Brushing the teeth is not merely rubbing a brush across them. Instead, it is more important to rub the brush up and down between the cracks. After each meal dental floss should be drawn between, taking out the particles that a brush cannot remove. Under no circumstances should a toothpick or hard point be used, for it will loosen a filling or scratch the enamel. Though brushing should be done vigorously care must be taken not to injure or weaken the gums. That will cause them to draw away from the tooth, exposing the root. This is more apt to happen to eye teeth, which are on the turn of the mouth. Little can be done to a tooth thus exposed, or to receding gums.

Nothing is better for cleaning once in a while than finely-powdered, pumice stone. With an orange wood stick, wet and dipped lightly in the powdered pumice, one should scour the teeth thoroughly, neglecting not even the least little crevice.

When the tartar is obstinate wet the stick in lemon juice, dip in the pumic stone, and scour the teeth. Following this by rinsing the mouth with lime water to neutralize the acid of the lemon juice, so it cannot harm the enamel of the teeth.

Teeth naturally strong and white require only simply cleaning powders, and an excellent one to make at home is composed of two ounces of gum camphor, two ounces of precipitated chalk, and three ounces of orris root. Mix the camphor in a mortar with a few drops of alcohol, add the powdered orris root; mix, and strain several times through the finest sieve to be had. The quantity of ingredients, of course, can be reduced. Camphor is excellent for the teeth and gums. It is not a bad plan to wash out the mouth each time after taking food with a little alkaline wash, as, for instance, a few grains of bicarbonate of soda in a wineglass of water.

At least twice a year everybody should go to the dentist, have his or her teeth thoroughly looked over, and if anything is required have it done. By this general oversight, and things that one can do oneself, every woman can prevent her teeth not only from decaying but frequently can improve them.

WHAT WOULD YOU DO?

BARBARA MOHLER CULLEY.

WERE you ever a prisoner for any length of time by reason of illness or accident in a season of severe weather when your friends found it task enough to get about to attend to necessary matters, to say nothing of making calls on the invalid or the lonely shut-in?

If so your mind was made up on one point and that was, that thenceforward from the time of your recovery one of your first duties would always be to remember the sick and afflicted.

There are various ways of making yourself useful to these unfortunates. If there is a trained nurse in the house you are not needed to help with the nursing of the patient. But that nurse is made of flesh and blood and nerves just the same as you are. Her duty to her patient requires her to take care of her own health. And if she is able to do her best for her patient she must have regular intervals of relief and rest.

Now, naturally, you do not come in here, unless you happen to be a nurse and familiar with the case and we are not supposing that you are either. Some member of the family is the proper one to take the nurse's place while she goes out for a little fresh air or puts herself properly to bed for some uninterrupted sleep.

Where there is sickness in the family there is extra work, added to the care and anxiety that in a measure unfits the well members of the family to do it. Here is your chance. Go into the kitchen and wash the dishes and sweep the floor if that is all you can do. Borrow the baby for an hour or two, take the little children out for a walk or a ride if the home chances to be blessed with the presence of a baby or little children. Bake a dish of beans or marcaroni or even a pudding or a cake—anything that saves them cooking and take it to the people. Perhaps the patient is restricted to liquid diet. At any rate the Doctor is particular about the patient's diet and what you might take to the patient would very likely be the wrong thing but you can't miss it by taking something ready cooked for the remainder of the family.

Never let yourself be converted to the idea that if the patient has a trained nurse there is nothing left for you to do, for the fact is you may be of more real assistance than if there were no trained nurse in the question.

The writer once knew a case where two farmers' wives left their own families for a day and went to see a friend who was very ill. They were not even allowed to see their friend for a minute, but what did they do? They did what their hands found to do and that was the family washing and ironing.

You are a woman with a woman's quick sympathy, and a woman's ingenuity and faculty for finding a way where there's a will, and "a hint to the wise is sufficient."

Elgin, Ill.

THE RURAL LIFE

THE DAY THAT SUMMER DIED.

The day that summer died we saw a change
Creep slowly o'er the sunshine of her face—
A fleeting beauty, dim and wholly strange,
Unlike the brightness of her earlier grace.
We felt a chill in every breeze that blew,
And saw across the meadows green and wide
A veil of frost that silvered all the dew—
The day that summer died.

The day that summer died a red leaf fell
From out the maple's green and stately crest,
And all the slender fern leaves in the dell
In robes of white and palest gold were dressed.
A late rose shed its petals one by one,
The poplar stirred its trembling leaves and sighed;
A glowing dahlia blossomed in the sun—
The day that summer died.

The day that summer died the forest stream
Crept forth to catch the blueness of the skies;
The hills grew dim and hazy as a dream,
Or like a vision viewed by tearful eyes.
A glowing shadow, chill and vaguely drear,
Swept o'er the landscape like a rising tide;
And Winter's footsteps sounded all too near—
The day that summer died.

—Emma G. Watson, in Youth's Companion.

HOW TO MAKE A SMALL FLOCK PAY.
